No. 1.

LIBRARY extension, in the sense of the development of individual libraries, made the opening year of the new century a remarkable one in American library history. There has probably never been any record of public benefaction equalling that made by Mr. Carnegie during the twelve-month just closed, which in the library field alone reached the immense sum of nearly fourteen million dollars. Mr. Carnegie's gifts have ranged in amount from millions to hundreds; they have been scattered through thirty-three states, Porto Rico, the Dominion of Canada and British Columbia; reaching in all 153 places. Nor have they meant simply the establishment of so many public buildings. The conditions upon which they are granted involve the introduction, where it did not already exist, of a new feature into civic life, ensuring at least a permanent foundation, and holding great possibilities for the future. Indeed, this general development of, and interest in library buildings, give opportunity, as never before, to put into operation the theories and ideals of library work evolved during the last quarter century, and to a remarkable degree the activities of the past year have been directed to the improvement of mechanism and the co-ordination of effort. In both directions a first place has been taken by the Library of Congress, which is now assuming its proper place as a national center of information and practical help; while in the establishment of the great Carnegie Institution at Washington there is foreshadowed for the new year a further agency for the development of bibliographical research and efficiency.

INTERNATIONAL library gatherings were not a feature of the year. Abroad the English, German and Italian associations held their annual conventions, and at home the American Library Association conference at Waukesha was one of the largest and most varied in the history of that body, admirably repre-

sentative of the enthusiasm and energy of the middle west. The extreme east will be the meeting-place in 1902, and the Boston and Magnolia conference, set, as it will be, in the region where libraries are most plentiful, is likely to make a record of its own in the point of attendance. State library associations, while not increased in number, held successful meetings, and in New York and Massachusetts plans for direct local work by means of "library institutes" were developed. The list of state library commissions has been extended by four—Nebraska, Washington, Idaho and Delaware; and a beginning has been made toward co-operative work among the commissions, at least in the selection of books and the issue of lists and bulletins.

BIBLIOGRAPHICALLY, the year's record included the "American Catalogue" volume for 1895-1900; the revision of the "A. L. A. Index" to general literature; the "abridged Poole"; and the several catalogs and check-lists issued in handsome form by the Library of Congress. The long-expected Larned bibliography of American history was again deferred, but should make its appearance early this year. The Chicago co-operative list of serials and transactions, published under the auspices of the Chicago Library Club, appeared as an admirable example of the sort of work that may be usefully undertaken by local library associations; and the literature of classification was enriched by the scholarly monograph of Dr. E. C. Richardson. The transfer of the issue of printed catalog cards from the A. L. A. Publishing Board to the Library of Congress has relieved that body from a large burden of current work, and leaves it free for other bibliographical undertakings; while the enterprise of the Library of Congress in this direction, bearing, as it does, immediate relation to all the libraries of the country, was easily the event of prime interest and importance in the year.

Communications.

COUNTY LIBRARIES IN WYOMING.

CINCINNATI and Van Wert, Ohio, each claim the distinction of priority in the matter of inaugurating the county library movement. Indiana has also been heard. Before the discussion is closed I wish to call attention to a law passed by the territory of Wyoming in 1886. It provides that when a suitable place for the library is guaranteed the county commissioners of any county shall levy annually a tax of one-eighth to one-half mill for the establishment and maintenance of a public library. It shall be located at the county seat, and be free to all the residents of the county. Control of the fund and management of the library are vested in a board of three trustees appointed by the commissioners. When no other place can be secured without expense, accommodations shall be provided in the best situated school building available. The trustees shall appoint a librarian, keep full records, and make detailed reports. "The best possible provision shall be specially made for the convenient use of the books by the residents out of the town wherein the library is situated."

Although this is the only law in the state at present providing for local libraries, it belongs under the head of county library legislation.

WILLIAM F. YUST.

STATE LIBRARY, {
Albany, N. Y. }

TO LIBRARIANS OF NEW YORK STATE.

THE 1901 meeting of the Library Association of New York State emphasized the possibility and desirability of mutual help. Since the meeting, the officers of the association have had opportunity to observe some valuable work which has been done in the state; for example, the librarian of Ilion Public Library has prepared for publication a very excellent little list of references for Sunday school workers; the Webster Free Library has held an exhibit of North American Indian curiosities which the *New York Sun* noticed at length.

The Ilion list would be almost, if not quite, as useful elsewhere as in Ilion, and the *Sun* article has much that might be suggestive to other libraries.

Unquestionably, numbers of other individual lines of activity are at work in all parts of the state which the officers of the association have not seen, and which are generally unknown.

The officers of the association believe it to be possible and desirable to start a sort of clearing house where information of all these lines of individual effort will be gathered, and from whence the information so gathered can be again distributed to other libraries

which could appropriately gain suggestion for adaptation to their own needs.

The officers of the association therefore ask every librarian throughout the state to send to the president, Miss M. E. Hazeltine, James Prendergast Free Library, Jamestown, N. Y., every little list that they publish, every item of library news that is published in local papers, short accounts of any experiments that they may make throughout the year. This request is not made for Miss Hazeltine's benefit, but that she may have opportunity to collect and compare ideas of library progress to redistribute for intelligence throughout the state. No one library originates all the bright and useful ideas.

If every librarian in the state will respond, the officers of the association believe that the body of material brought together and the power of inspiration concentrated may mean much to the library intelligence and progress of New York state.

THERESA ELMENDORF, *Secretary.*

NEW YORK LIBRARY {
ASSOCIATION. }

COLLECTION OF DR. KAIBEL.

THE writer has been asked to make known through the medium of your paper that the library of the late Dr. Kaibel, Professor of Greek and Latin at the University of Göttingen, will be offered for sale in its entirety, and that a manuscript catalog in a few copies is being prepared to be sent to libraries for inspection. Applications should be made to Professor Dr. Carl Dziatzko, Universitäts-Bibliothek, Göttingen, Germany. The library contains about 4000 bound volumes in good condition and some 3000-4000 pamphlets, and is particularly rich in periodicals, reproductions of inscriptions and reprints.

AKSEL G. S. JOSEPHSON.

THE JOHN CRERAR LIBRARY, {
Chicago. }

ANNE MANNING: A FINAL WORD.

IF C. Dalmas will again read the article Rathbone, Hannah Mary, in the "Dictionary of national biography," he will find that Anne Manning and Mrs. Rathbone are *not* "one and the same person." The writer of the article is comparing "Lady Willoughby's diary" with Anne Manning's "Life of Mary Powell," and nowhere states that Mrs. Rathbone "in 1850 published Anne Manning's 'Life of Mary Powell.'" Since the appearance of my query in the October LIBRARY JOURNAL, I have received the Supplement to the "Dictionary of national biography" and in v. 3, p. 137 is given a good account of Anne Manning, which confirms what I then suspected, that the "American catalogue, 1895-1900," and Kirk's "Supplement to Allibone" were wrong in calling her Mrs. Rathbone. CATALOGER.

SHELF CLASSIFICATION OF MUSIC.

By CLARENCE W. AYER, *Librarian Brockton (Mass.) Public Library.*

To the library world in general the classification of music, particularly of music scores, has, up to within a few years, been of little moment, in spite of the widespread interest in music, from its special nature and appeal as one of the fine arts. Every library, no matter how small, must procure books on music: something of history and biography, a little theory and technique, methods of vocal hygiene and the like, because of their comparative popularity and cheapness in price. But beyond an occasional opera or oratorio, song-book or collection of piano-forte duets—often the result of random gifts—few libraries of moderate size have as yet been obliged to make any special provision for music *scores*: for the music itself, as distinguished from what is written about it. The needs of large college and public libraries, however, and the accidents of large gifts, liable anytime and anywhere, even to small libraries, call for adequate provision by classification, not less for music than for any other special subject.

Of the systems of music classification that have come especially to my notice, I may claim familiarity from experience with two—that of the Dewey Decimal classification, longest and best known throughout the country, and that of the Harvard College collection which I helped to make—a newcomer of only four years' standing. Of the others one is so simple as to be capable of dismissal with a word of explanation and commendation, that of the excellent library of the Y. W. C. A., of New York City. This employs the Dewey classification for works on music, but shifts, for collections and scores, to a compact and comprehensive notation like that now used by many public libraries for the class Biography. A capital M, standing for the class Music, is followed by the Cutter symbols, to three figures, for individual composers and compilers. An opera of Wagner's, for instance, would be numbered M-W135.1, decimal dots marking the accessions.

Another system, although simpler still, compels recognition because of the importance of one large library that employs it, the Boston

Public Library. This is little more than a *shelf* arrangement in the most limited sense of the term. In some portions of the new and magnificent Allen Brown collection, as well as throughout the old music stack, the size of shelf determines the place of the book, scores in quarto form and 12mo works on music being consigned to separate alcoves or other portions of the stack room, sometimes regardless of composer or class. A fixed-shelf numbering, moreover, precludes, once for all, the possibility of class or composer grouping for future accessions. Only the remarkable completeness of the new Allen Brown collection, especially with respect to opera scores, disguises the insufficiency of the shelf arrangement, for each new score added by the continued interest and generosity of the original donor must be relegated to a new corner of the music room, far away, maybe, from its fellows.

This fixed classification would, to my mind, be intolerable for any collection with open, or even restricted, access to the shelves. It serves, however, its purpose for the Allen Brown collection, because its shelves are inaccessible even to specialists, except through the medium of the shelf attendants within the room. It serves well enough, also, for the old stack, so long as it remains sealed to the public, but such an arrangement hardly deserves the name of classification. The books could be found, to be sure, in the course of time, but so could they in a library of 1,000,000 vols., if numbered merely by accession, from 1 up to 1,000,000, but that would not be classification.

There remains, for consideration in passing, Mr. Cutter's disposition of music in his new Expansive classification. His scheme for music has been for some years in contemplation and experiment, first, at the Boston Athenæum, and next at the Forbes Library, Northampton, by collaboration with Professor Gow, then of the music department of Smith College, now of Vassar College. A copy of this scheme proved of great service when I began work upon the Harvard collection, and for it I now express publicly to Mr. Cutter

my deep gratitude. The classification not having yet been put forth in its entirety, being one of the latest classes of the Expansive classification to receive the author's final attention, it is not in the same position for comparison as the others. Its outline, as far as already published, suggests a cross between the D. C. and the Harvard classification in respect to grouping of details, leaning towards the former, in the separation of scores of individual composers according to class, and towards the latter, in the order of arrangement for the divisions under the works on music.

Undoubtedly the most elaborate and exhaustive classification of music yet devised and put to the test of successful operation, is that of the large and valuable collection of the Harvard College Library. After the enlargement of the stack, in 1896, by the rebuilding of the old reading room in the transept of Gore Hall, the music collection was among the first to be reclassified, and enjoys the distinction of being the first to be completed. The brief outline of its scheme of shelf-classification and notation to follow, will have, perhaps, an added interest in that it may illustrate the newer Harvard system of shelf-classification in general, as applied to all the newly-arranged groups of subjects, Fine arts, Philosophy, Economics, etc., and as distinguished from the older groups of Language, History and Literature (American, English, French, and German). The latter had long ago been arranged under an elaborate and ingenious system of fixed-shelf numbering, far superior to that of the old Boston Public Library, and indeed developed from it by the late Justin Winsor, but now found to have become inadequate to the needs of large and rapidly increasing subdivisions of important groups like American and English history and literature.

A consideration of the scheme of notation for the Harvard collection will make plainer its scheme of classification. The class mark for music is the recognized dictionary abbreviation, Mus. Divisions and subdivisions of the general subject are given running numbers from 1 to 895, all well within three figures. Under each division and subdivision the books are entered simply by accession (Mus. 1.1, Mus. 1.2, etc.), unless otherwise specified, letters for indicating notation being

avoided after the general class mark for Music, (Mus.) Important and growing divisions are given alphabetical numbering, by the use, as needed, of 26 running figures. The series of nearly 900 numbers is apportioned according to an arbitrary and elaborate, but logical arrangement of all musical knowledge and literature, as based upon an actual, working collection of over 5000 volumes.

In this apportionment of numbers the first large block is taken up by the *Works on Music*, employing about one-half the whole series of running numbers, from 1-400; the second large block, from 401 to 600, is given to *Collections* (in the limited, technical sense of books containing works by more than two composers); the third block, from 601 to 895, disposes of the largest group of all, *Scores of Individual composers*, including individual biography and criticism under each composer. This last and most important group is arranged alphabetically by composers, the numbers from 601 to 895 being made into a two-letter alphabetical table, adapted and enlarged from the older one of Mr. Cutter's. In shelf space, as at present adjusted, the Harvard collection of music occupies four long rows of the new stack, with nine upright sections to each row, and from five to eight shelves in each section. This adjustment does not imply close shelving, as in the Allen Brown collection, but rather the distribution of gaps after all important groups, which will allow ample provision for growth for at least ten years to come.

CONDENSED OUTLINE OF CLASSIFICATION:

I. WORKS ON MUSIC (Mus. 1-400.)

- | | |
|----------|-------------------------------------------------------------------|
| Mus. | |
| 1-26 | PERIODICALS (A-Z). |
| 30 | Societies. |
| 35-42 | BIBLIOGRAPHY, with subdivisions. |
| 45. 50 | Dictionaries, directories. |
| 52, 55 | Year-books, programmes, etc. |
| 57 | Festivals and celebrations. |
| 59 | TRACTS (General bound miscellany). |
| 60-85 | GENERAL WORKS (essays) (A-Z). |
| 87-98 | General specials—Influence of music, Women in music, etc. |
| 100 | Aesthetics. |
| 105, 107 | BIOGRAPHY—Collected, general and special. |
| 110-135 | Individual—Singers, players, et al., <i>not</i> composers, (A-Z). |

- 140-165 HISTORY — General (A-Z).
 170-177 By periods, ancient, mediaeval, modern.
 180-200 Local—By countries (special list).
 202-204 Special — Arabian, Hebrew, savage nations.
 210-230 By classes — Sacred, with subdivisions.
 240-270 Secular, with subdivisions.
 272-280 Instrumental, with subdivisions.
 282-9 THEORY AND COMPOSITION — History — General and General special.
 295 Elements.
 298 Composition — General.
 300-325 Harmony and thorough bass (A-Z).
 327-8 Counterpoint, canon and fugue.
 330 Form and analysis.
 335 Instrumentation and orchestration.
 340-2 INSTRUMENTS — General — History, construction, technique, instruction.
 345-9 Individual — Piano — History, etc.
 352-5 Organ — History, etc.
 357-8 Violin — History, etc.
 360-385 Other (A-Z), by English names.
 390 VOICE AND SINGING—Physiology and hygiene.
 391 Technique.
 392-4 Instruction — Single voice, etc.
 396-400 School song books.
- II. COLLECTIONS (Mus. 401-600).
 [Books containing music by more than two composers.]
 401-5 COLLECTIONS — General — Ms., etc.
 408 Instrumental — General.
 409-418 Orchestral and chamber music.
 420-445 Special instruments, not piano or organ (A-Z).
 446-8 Piano — Eight and four hands etc.
 450-3 Four hands (duets) — General and special.
 455 Operas and overtures.
 456-7 Marches and dances.
 460-7 Two hands (solo)—[Cf. 450-7.]
 470-2 Organ — General and special.
 475-8 COLLECTIONS — Vocal — General.
 480-2 Sacred — General and special.
- 483-495 By kinds, oratorios, masses, etc.
 496-7 Solo songs, special voice.
 500-2 Secular — Operas.
 504 Cantatas, odes, incidental music,
 505-523 Part songs, quartets, etc. (mixed, male, and female voices).
 525 Solo songs — General.
 528 Special voice.
 530-549 Local, national, etc., by countries.
 550 Minstrel songs.
 552-6 Patriotic and war songs.
 558 Society songs — Masonic, etc.
 559-564 Students' songs (male and female voices).
 567 Temperance songs.
 570 COLLECTIONS — Texts and librettos—General.
 571-596 Individual (A-Z), by original title.
- III. INDIVIDUAL COMPOSERS (Mus. 601-895).
 [Including Individual biography and criticisms. Distribution of Composer numbers according to a two-letter alphabetical table adapted and enlarged from that of Mr. Cutter.]
 BOOK NUMBERS, following Composer numbers (1-999).
 1-50 COMPLETE WORKS (with Thematic catalogues).
 SEPARATE WORKS — Instrumental [by classes, as above].
 51-280 Orchestral — Symphonies, overtures, concertos, etc. (full scores and arrangements).
 281-400 Chamber music — Nonets to duos.
 401-500 Solo — Pianos, organs, and other instruments.
 501-600 Vocal — Sacred — Oratorios to songs.
 601-750 Secular — Operas to songs.
 751-999 LITERARY WORKS — Autobiography, letters, etc.; Biography and criticism.
- [The distribution of book numbers may be varied for composers no longer living, like Handel and Wagner, whose works belong chiefly to one class. With such the numbers for that class may be extended back or forward through several hundreds.]
 From this outline of the Harvard scheme

of shelf-classification it may be seen that the division *Periodicals* occupies the first place, and logically so, I think, as compared with the D. C. This division forms, also, the first alphabetical arrangement (Mus. 1-26). The numbering, therefore, for the first periodical whose title began with A would be Mus. 1.1; for the second, Mus. 1.2; and so on, by accession, letters after the class mark forming no part of the Harvard notation. The first periodical whose title began with B would take the mark Mus. 2.1; the second under the same letter would be Mus. 2.2; and so on, the number for each letter being drawn from printed tables at hand, for all later alphabetical divisions, as well as for *Periodicals*.

Next in order stands the closely related group, *Societies*. Its shelf number, Mus. 30, and the skip over the intervening numbers, 27 to 29, illustrate the next fundamental characteristic of the newer Harvard shelf-classification, namely, the distribution of the divisions and subdivisions of the subject at varying intervals of the numbering series. This detail is of great importance. By providing elasticity for the introduction of new divisions and subdivisions, perhaps not now foreseen or needed, it ensures the logical permanence and workability of the whole scheme, without resort to the complication of the notation by sub-dots from any group; and it further overcomes the insuperable objections to a fixed-shelf classification, if classification is to count for anything at all.

As to the significance of the divisions and subdivisions following the first two just described in detail, the reading of the condensed outline must now suffice. At every step the main object and purpose of the classification was kept in mind—convenience of study and reference in college work. Only advanced pupils in attendance upon the courses in composition given under the direction of Professor J. K. Paine, head of the Music Department at Harvard, and a few other musical specialists, are allowed free access to the shelves; but for them an adequate arrangement, especially of scores, in the way they should be most likely to study them, would bring economy of labor and time in their work of research. Elaborate, indeed, as the classification is, it is based upon the existence of books to justify it, and almost every

subdivision, no matter how minute, means at least one book behind it, and not a mere scheme upon paper. Still, great care and study were also shown in the apportionment of numbers, and of gaps between them, in order to provide for the expansion of headings, and for all future needs, in so far as they might be anticipated.

The inclusion of all the works by one composer under one general group, and the consequent disregard of grouping by class, make the last of the main divisions of the whole subject far larger and more important than any one group of the Decimal or the Expansive classification. This is inevitable and to be desired. Full recognition, however, is made of class grouping by the book—or score—numbers under the Individual Composer, as shown in the scheme at the end of the outline. For each composer of importance the arrangement of his works upon the shelves is as comprehensive and detailed as that of the best dictionaries of music, Champ-lin and Aphorpe's being first in mind for comparison. This coincides, however, with that given for the large group, *Collections*, editions of complete works being placed first, followed by editions of separate scores in the order of kind and form, the larger work preceding the lesser. The entries under each subdivision are by accession, and as far as possible by opus marks, the principle of leaving gaps for editions of full scores and arrangements being employed here, as before in the general scheme.

This scheme of numbering for the works under each composer is, as must be admitted, approximately *fixed*, and consequently liable to objection because it may at some time and place run short. Yet it is so extended and comprehensive that it has proved adequate to the demands of the most prolific and versatile of composers. With composers no longer living the problem is a comparatively easy one; but it is less so with living composers. Cases have arisen, too, in which departures from the strict numbering for individual scores have been made to great advantage, as with Handel and Wagner. The chief works of the former being oratorios, of the latter, operas, two-thirds of the whole series of score numbers might be assigned to each group, and the elasticity of the distribution increased to that extent.

The consideration of the notation will not be complete without an illustration of the actual process of assigning a number to a score of some special composer, similar to that given of the first group *Periodicals*. Take, for instance, a full score of the first symphony of Beethoven. From the two-letter table beginning with 601, the composer number for *Be* is found to be 628. Prefix to this the class mark Mus.: add .1 to 628 for the first *Be* (for Beethoven); and to that suffix .61, from the scheme of classification for book, or score, numbers, and the complete number for the work will then be Mus, 628.1.61. From this it may be observed that double dots, or decimal points, form a common characteristic of the Harvard scheme of development for subdivisions.

This classification of the Harvard collection has been explained in some detail, not only because it is newer and less generally known than the D. C. or the E. C., but also because, to my mind, it stands upon a more logical and practical basis. It has worked well for four years in a large college library. Copies of it have been requested by a number of large and important libraries throughout the country, from the Library of Congress at Washington to McGill University at Montreal. It represents, indeed, principles of shelf-classification new and original. Modified and condensed, it might well serve the purpose of the smallest library, for its main outlines are simple, even if its details are elaborate.

The very limited call for scores, especially those for full orchestra, and their great expense, as compared with that of the average work *on* music, will, I am free to admit, prove prohibitive barriers to their purchase for small libraries. I recognize, also, that libraries, large or small, which follow the D. C., the E. C., or any other classification, would naturally and wisely hesitate to make radical departures from the classification already in use, in the interest of any special group like Music.

Still, it is worth while to note the shifts for convenience of shelving made by various libraries. Miss Hewins, of the Hartford Public Library, meets the difficulty by placing all her music scores on special shelves in the reference library, quite apart from the rest of the books of the group. The Brookline Pub-

lic Library, which has already one of the best collections of music in New England, finds its old numbering scheme, which is a free modification of the D. C., unsatisfactory and cumbersome, but it adheres strongly to its preference for the arrangement of composers by classes. A most simple and ingenious modification of the D. C. for separating scores from works *on* music, and incidentally the larger from the smaller books, has been adopted by the Somerville Public Library. This consists merely in prefixing a capital M to the D. C. figures of the Music group (780-9) in the mark for scores. This has much to commend it, because it helps to solve the difficult question of shelving, upon which I have had little time to dwell. Most scores, being quartos or large octavos, demand wide shelving; most books *on* music being 12mos, need only ordinary shelving. In all this the D. C. fails: the Harvard classification gains, chiefly because of its adherence to the composer arrangements for scores. For small libraries book-dummies may serve for marks of separation, and be adequate for all ordinary needs. The moment, however, the collection begins to grow on the side of scores, the usefulness of dummies is much lessened.

A gift to the Brockton Public Library of a music collection containing over 100 scores, chiefly church music, brought home to me the advisability of an attempt to combine some of the advantages of the Harvard scheme with those of the D. C., which is there followed for the main scheme of classification, but with radical modifications, as made long ago and to excellent purpose, by a former librarian, Miss Myra F. Southworth, now librarian of the Public Library of Keene, N. H. The result of the modification was shown in the "Special list" for the Brockton Library *Bulletin* of last June and July, and by it has been gained, as I think, greater clearness and consistency in details and greater simplicity of notation, without disturbing the general scheme.

This modification of the D. C. may be tabulated as follows, the numbers being changed from 580-589, as marked in the *Bulletin*, to 780-789, for the sake of conformity with the older usage:

780 MUSIC, General works *on*. [As D. C., without subdivisions.]

- 781 THEORY. [As D. C., with insertion indicated below.]
- 782 DRAMATIC MUSIC, Works *on*.
- 782.1 to .5 Opera scores. [As D. C.]
- 782.6 Light and comic opera; opera bouffe.
- 782.7 Cantatas and operettas.
- 782.8 Pantomimes; masks; incidental music.
- 782.9 Opera Librettos (by original titles).
- 783 SACRED MUSIC, Works *on*.
- 783.1-9 Music, under subdivisions as D. C.
- 784 VOCAL MUSIC (secular), Works *on*.
- 784.1 Instruction and exercises; methods; schools; tonic sol-fa.
- 784.2 Collections—Solo and General.
- 784.3 Part-songs, duets, trios, quartets, choruses, etc.
- 784.4 Popular ballads; national songs, etc.
- 784.5 Negro minstrelsy; plantation songs.
- 784.6 College, society songs, etc.
- 784.7 Festivals.
- 784.8 Other.
- 784.9 Individual composers (A-Z).
- 785 INSTRUMENTAL MUSIC, Works *on*.
- 785.1-9 Music, under subdivisions as D. C.
- 786 PIANOFORTE AND PIANOFORTE MUSIC. Works *on*. [History, manufacture, etc.]
- 786.1 Instruction and exercises; methods.
- 786.2 Collections—Two hands (solo), including arrangements of orchestral works.
- 786.3 Four hands (duets) and more, including arrangements of orchestral works.
- 786.4 Dances and marches.
- 786.5 Individual composers (A-Z).
- 786.6 ORGAN, Works *on*. [History, building, etc.]
- 786.7 Instruction and Collections; organ methods and schools.
- 786.8 Individual composers (A-Z).
- 786.9 Cabinet Organ; melodeon, etc. [History, music, etc.]
- 787-789 STRINGED TO PERCUSSION INSTRUMENTS, as D. C.

From this modification it may be seen that the groups *Music* in general (780), *Sacred Music* (783), *Instrumental music* (785), and

the last three groups of *Stringed*, *Wind* and *Percussion instruments* (787-9) remain the same, the first group (780) having no subdivisions whatever. Under *Theory* (781), Canon and Fugue should be included with Counterpoint (781-4), and the reference in the D. C. Index should be enlarged accordingly.

Under the group *Dramatic music* (782), no separate provision having been made for Librettos, the subheadings *Comic and Satirical opera*, and *Opera bouffe*, are combined under (782.6); the subheadings which follow are pushed back one number (782.7, 782.8); the latter enlarged so as to read: *Pantomimes*, *Masks*, *Incidental music*, etc.; and *Librettos* placed last (782.9), with alphabetical arrangement by original title.

The group *Vocal Music* (784) is much changed, being made to include all works on secular vocal music, general and special, not books of instruction or method. The latter, being generally of distinct character and large size are placed next (784.1). With this subdivision ends the Works on vocal music, all the remaining subdivisions being used for vocal music itself: *Collections* (784.2 to 784.8, rearranged) and *Individual Song Composers* in one alphabetical group (784.9).

In this concentration of individual song composers into one group is shown a first application to the D. C. of the leading principle of the Harvard classification of scores, but this is still within the group Vocal music. Viewed from this standpoint, the D. C. subdivisions for vocal scores seem exasperatingly elaborate and superfluous. It is classification gone mad for no purpose. There is, to my mind, no gain whatever, from any standpoint, in spreading the secular songs of one composer over a half-dozen subdivisions, granting that he should write in as many forms. Better place them all together under one subdivision, even if the principle of grouping by Individual composers is carried no farther.

The next group to undergo considerable modification is *Piano and Organ* (786). Under this whole number are included Works on the Pianoforte (a better form) and Pianoforte Music, general and special, history, manufacture, form, etc. The first subdivisions (786.1) includes (as under 784.1) books on instruction and method. *Collections* of piano-

forte music take three more subdivisions (786.2 to 786.4). The next subdivision (786.5) marks another radical departure from the D. C. similar to that made under *Vocal Music*, by grouping together all Individual composers of pianoforte music, regardless of class.

The latter portion of this group is condensed from the D. C. for the *Organ*: Works about the instrument, history, building, etc. (786.6); *Instruction and Collections* (786.7) — a double group for the special reason that most books of instruction are virtually collections; *Individual Organ Composers* (786.8) and *Cabinet Organ*, etc. (786.9), as with the D. C.

Of the remaining groups under Music (787-789) it can now merely be said that their arrangement shows logical consistency at the expense of practical convenience. For the sake of the look on paper *Percussion Instruments* are given a whole number (789), which is then subdivided in the usual decimal way. It is indeed a pity that a large and important group like *Pianoforte Music* could not have had the benefit of the Harvard scheme of running numbers, say the whole of 786 and 787, with their decimal subdivisions; and that the relatively unimportant

group of Percussion Instruments might not have been relegated to a high dot, 789.91, for instance, which would be sufficient for every ordinary purpose. This is again a radical objection to many other portions of the D. C. Indeed, right within the D. C. it is possible to adopt the Harvard scheme of arrangement for *Individual Composers* with the slightest inconvenience, simply by thrusting back this tail-end group of *Percussion Instruments* to a high dot under the preceding group, *Wind Instruments*, and taking the released number (789) for the purpose, with the Cutter symbols for the Composer number.

After all existing schemes of shelf classification have been duly considered, there is opportunity, in my opinion, for the devising of a still more practicable and serviceable scheme than has yet appeared. When devised, it will probably be based upon figures, rather than letters, and combine the advantages of the Harvard scheme of running numbers with some indisputably possessed by the D. C. and with others possessed by the E. C. Co-operative cataloging is soon to be realized — the most important single step in the development of library science; co-operative shelf classification may follow in due course of time.

THE PUBLIC LIBRARY AND THE PEOPLE.*

BY AGNES HILLS, *Librarian Bridgeport (Ct.) Public Library.*

THERE are moments when the reader of library journals and the attendant at the larger library conventions feels as though he had taken a long step backward in time — out of the reign of law into the reign of miracle, into a land where effect bears not the slightest relation to cause, and where two and two eternally make five. For the common school and the public library, in spite of their constant shriek of "Progress," are really perpetuating more outworn ideas than any other institutions. The librarian, like the teacher, associates almost exclusively with members of his own profession. He gets a little out of touch with the rest of the world; he forms part of a great mutual admiration society; and if he is at the head of a large

library and rarely comes into actual contact with the rank and file of the public, he is apt to think that the problems of his relations with them have all been practically solved. Such beliefs may be held quite honestly by people who administer their libraries by what the Christian Scientists call "absent treatment"; but librarians whom necessity or choice compels to face the public daily know better. They feel that after twenty years of immense library activity we have still much to learn in the art of dealing with the great careless kindly public whom it is our pride and pleasure to serve.

When a librarian sets out to see things for himself the first discovery he makes is the salutary one that the world does not precisely take librarians at their own valuation, and that the space they fill in it is not quite

* Read before Connecticut Library Association, at Salisbury, Oct. 29, 1901.

as large as that assigned to them by the library conventions. When the average American speaks of a public library, he almost invariably means a library building. If his town possesses a showy edifice, he boasts of its magnificent library. If it owns an admirable collection of books, admirably administered, but poorly housed, he tells you with shame that his town has no library worth speaking of. Women usually describe the woman librarian as a "walking cyclopædia." It is somewhat remarkable that the masculine librarian is never so cataloged, and indeed there is some reason to believe that the masculine librarian keeps out of the reach of women's clubs. It is, however, customary to describe him as a very smart man. Still, although the average American speaks well of his librarian, he has no definite or lofty ideals of librarianship, and in many places he probably would not be greatly scandalized if he suddenly found his public library conducted by the butcher or the baker, the milliner or the cook.

The librarian has always been told at school and library conventions that people are hungry for knowledge. Now people in general are not hungry for knowledge, and the proof of this lies in our tax-supported schools and libraries. A man who loves learning will get his heart's desire at any sacrifice. He does not wait until somebody comes along with a free school or a free library. When a subscription library is changed to a free library the best use of the new institution generally comes from those who cared enough for reading to subscribe to its predecessor. The great mass of the people regard the schools with indifference, take no interest in their management, and send their children to them chiefly because they are compelled. It would save an immense expenditure of that useless talk which is the greatest hindrance to practical work if it were once conceded that a new free library faces a public which, apart from what the library offers in the way of recreation, is equally, if not more, indifferent to it.

What have free libraries done for this indifferent public in the course of ten or twenty years? "Everything," answer the people with the missionary spirit, bent on establishing more and more free libraries. "Nothing," murmurs the pessimist with ever increasing

emphasis. "Both good and evil," answers the librarian who believes that the work he loves can bear the truth.

The great fortunes bestowed on library buildings are awakening inevitable jealousy and the world is beginning to ask somewhat insistently why after twenty years of library work in a given community fiction still swings between 60 and 70 per cent. in spite of the increase of women's clubs and similar organizations. And it wants to know why lists of popular books, furnished to various magazines by librarians themselves, show that the most popular novel is one and the same from Maine to California. That while the publishers are booming "Richard Carvel" the public in solid phalanx demand "Richard Carvel" at the libraries, and when "David Harum" is advertised as the greatest novel of the age the public cry out with one voice for "David Harum." There is no individual choice, no trying of the new comers by any literary standards. The public simply run along the grooves marked out for them by clever advertising like so many mechanical toys. And the pessimist says that all this is the librarian's fault, and he would be glad to learn why the librarian has not taught his patrons to love the great literature of the world.

The reason why women's clubs have added so little to the total circulation of solid books is easily given. In most women's clubs, only a small number of members really work, and much of their work is done with encyclopædias, dictionaries, and other reference books, of the use of which most of us are unable to keep statistics. Furthermore, most of these workers are women who used to read for self-improvement long before the days of federations, and so naturally became leaders in clubdom. Women's clubs have not greatly increased the amount of solid reading. They have simply changed its direction.

The charge of failure to popularize the great literature of the world is not quite so easily answered. At library conventions and through library journals the librarian is frequently commanded to feed his flock upon the heights of literature, though he is usually advised at the same time to obtain his own personal diet somewhere else. When a new library opens it is customary to announce that the feeding

of the said flock upon the said acclivities will be the librarian's lifework. Unfortunately, some eloquent speaker at the next library convention will probably direct him to do nothing of the sort, to let his patrons do as they please, and to give them anything they can find in the bookstores.

But what an amount of misconception it would save if we would all admit that the order of things is pretty fairly established, and a part of it seems to be that people with tastes for the highest literature are few and far between. Mr. Andrew Lang, Mr. Birrell and other writers whose culture is beyond reproach have done yeoman service to the cause of education by emphasizing the fact that a genuine appreciation of great literature must always be very rare—much rarer than the love of great music or of great plastic art. Professor Woodrow Wilson tells us that since the "general public" has taken to going to college the teaching of literature has been obliged to consist chiefly of setting people to count the words great writers use, and to note the changes they make in successive revisions; and so, he adds, "Degrees are made available for the large number of respectable men who can count and measure and search diligently."

The colleges have accepted modern conclusions and have frankly gone out of the miracle business. Why should not schools and libraries do the same?

But, although the educated librarian knows that he cannot supply his patrons with the sense of style, the keen ear for the music of verse, the passionate love of beauty and the vivid imagination with which their ancestors omitted to furnish them—his conscience is not wholly clear.

Outside of the great realms of imaginative literature lies a whole world of pure and wholesome books which even ten years ago almost everybody used to read gladly. Even now, perhaps, the majority of the people read them; but the taste for problem novels, morbid boneless books, and widely advertised trash grows apace. The librarian cannot honestly deny that some of this growth is due to the public library.

The trumpets have always given an uncertain sound, the race for popularity has been keen, and the librarian runs some obvious risks in letting the circulation of his library

fall below the average. Timid librarians who a few years ago were trying to prevent us from circulating many pleasant harmless books are now by a natural reaction throwing wide their doors and admitting almost everything. It takes some degree of personal courage to urge the exclusion of a book when you know that the library ten miles away has just put in twenty or thirty copies. But even on the lowest ground we shall do well to remember the central fact that public libraries are established for the education and uplifting of the people. It is our duty to maintain a certain standard in literature and morals in spite of the mistakes we shall inevitably commit. We are all too much afraid of what we are pleased to call "public opinion." An old librarian once said to a young one—"Why did you do such and such a thing?" The young librarian answered—"I did it in deference to public opinion." How large was the public opinion?" asked the elder. The other hesitated a moment, "Well, to tell the truth," he said, "it consisted of one noisy old gentleman who kept on writing to the newspapers." Real public opinion, if we could only get at it, is a thing we should all bow to reverently. It is the will of that vast majority of kindly sensible normal people who constitute the bulk of the patrons of a public library. It would be well for us to trust that larger public a little more in everything. It is surely on the side of the dignity and purity of the public library, and we may even rely upon its common sense for support if we persist in surrounding library business with ordinary business safeguards.

The great increase of reference work during the last few years in most public libraries is one of the few things over which the librarian can honestly and heartily rejoice. Most of the puzzles and problems of the neighborhood are brought to him for solution, and he can at least feel sure that he has made some solid conquests in the world of fact. The people who always delighted in good substantial books read still better books as his stores expand. Nevertheless he feels that more people ought to be interested in history, travel, biography, science,—in all the wonder and beauty of the world. The common school which offers its pupils a taste of nearly every kind of knowledge, rarely seems to give them enough of anything to make them wish for more.

A young girl came into a public library and asked for a book about worms because she had to teach the subject next morning. It was duly handed to her, "I don't want these," she said, "I want the worms that turn into butterflies." Then she added quite solemnly, "I don't know anything about the subject, but I know the proper methods of teaching it. *That* is the important thing." And a few days afterwards a little boy came into the same library with a penny picture of a cold flabby modern German madonna, and said to the librarian, "Will you please tell me if this is beautiful?" The librarian told him that she thought it hideous. "Oh, I'm so glad," said the child. "Teacher gave us each a picture and told us to live with it until we could see all its beauty, and I've lived with this for three weeks, and the more I look at it the homelier it seems to get." The librarian is often tempted to think that the secret of the indifference of the younger generation to everything but novels may lie somewhere in this direction. It seems fatally easy to spoil the whole range of interesting things, even with the best intentions. There seems to be no way of convincing libraries and schools that no amount of enthusiasm can take the place of knowledge, that elaborate methods never atone for ignorance, and that if the blind lead the blind the scriptural consequences usually follow. In many libraries the personal element is almost eliminated. The seeker after knowledge is confronted with lists of various kinds; if the lists fail, everything comes to an end. Now lists are very valuable in the hands of people who recognize their limitations; but they have all one radical defect. They "evaluate" the book, but they cannot evaluate the person who is to use it. Librarianship properly so called, as distinguished from the mere mechanical handing out of books, consists very largely in this fitting of the right book to the right person. We have been trying to evade this question of genuine librarianship for a good many years, and the results are not encouraging.

In fact, they are so little encouraging that there seems to be a growing tendency to leave adult readers to their fate, and to lay the whole stress of library effort upon the children. With this idea most of us are busily engaged in abolishing age limits, opening

children's rooms, and training children's librarians — largely along kindergarten lines. It is time to say firmly that the main business of a public library lies with grown people, for whom very little educational provision is made, and not with children who are expensively, if non-efficiently, cared for by the public schools. A visitor from a neighboring state once described the library of his native town as "the kind of library that made a man think tenderly of King Herod." It seems more than probable that a good many other libraries have recently induced their members to think tenderly of King Herod. An age limit is a stupid thing; but in towns of a certain kind, and where there is no prospect of a children's room it may be just as well to think carefully before abolishing it.

Separate rooms for children under 15 are in many respects desirable things; but they need to be conducted cautiously. If kindergarten features are made too prominent they will drive away the older children. Little children, who usually go to school far too early, are much better out in the air and sun than in the close atmosphere of a public room. There is always a temptation to encourage their presence because they look so pretty and charm the public; but it is really a cruel thing to do. Besides there does not seem to be any reason to think that we can essentially change the intellectual make-up of a child by getting hold of it very early. Work with children is not so easy as we fancy because we really know so little about them. A bright school-girl once said to a librarian, "The trouble with all you grown-up people is that although all of you have been there, so few of you can remember how it looked." The whole problem of library work with children lies in that bit of school-girl slang. We cannot put ourselves in the children's places and find out what they want. Of course, we all direct the reading of nice little people who read nice little books and possess cultivated fathers and mothers. Those delightful infants would probably continue to read and prosper if we and our libraries were non-existent. The children who present the problems are the normal boys and girls with no ancestors to help them, sprung from races that used hands instead of brains, often the first of their family to learn to read. The wisdom of going slowly in such

matters is shown by the excellent relations which have grown up naturally in many places between public libraries and public schools. A forced and formal alliance between teachers and librarians, such as has so often been proposed, would have resulted in grotesque consequences upon both sides. As it is now, those whom education and training have fitted for the task have learned to work together in the kindest unity. Those who are not ready for the work rarely undertake it, and the gain in honesty and efficiency is enormous.

Two things are necessary before we can do the educational work the public has a right to demand of us. The first is that we should persuade our friends of the schools really to teach children to read. As it is, too many children who leave school early are unable to pronounce ordinary English words or to grasp the meaning of very simple English sentences. They read English as many of us read French. They cannot follow a printed argument or understand a serious book, but they can tear out the plot from an exciting story, and read the columns of a sensational newspaper or fierce labor paper which is often in its way a model of style. Until these people learn to read, the library can do very little with them.

The second thing is that without prejudice to what may be called without irreverence the "ticket-office" ideal of librarianship, or the rights of the "business manager," we should find room, at least in the larger libraries, for men and women of broad education whose duty should be to meet the public and give them intelligent help. We have tried every possible mechanical device except librarianship by automatic figures; we have tested the principle of self-help by giving the public unrestricted access to the shelves; and yet we shall soon have to face the possibility of there being a singular contrast between our gorgeous American library buildings and the educational values for which they stand. Some of the best colleges in the country with their broad system of electives and their new ideal of the successful student as one who can best apply his learning to the practical uses of life, stand ready to give us the men and women we need. It would be a great service to the cause of public libraries if one of the older colleges, a college of schol-

arly traditions and unimpeachable standing, would establish a post-graduate course for intending librarians leading to a special degree. Except in regard to bibliography, such a course should not be technical. It should be merely designed to broaden and deepen the librarian's general culture. The training of men and women for the purely business side of library work should be left to the library schools, and the offices of business manager and librarian should be separated whenever possible. Place a man or woman of fine natural endowment and adequate training in a public library in actual contact with the people and the standard of the whole community would be raised. All that we have of best and noblest in American library work has been kept alive by a handful of book-loving men and women whose names we can all supply. The future of public libraries mainly depends upon our ability to attract more such scholarly enthusiasts to our ranks.

The old objections arise at once. People who spend money like water for every new appliance in the market, who advocate the utmost extravagance in buildings and furniture, loudly proclaim that highly educated assistants would demand such large salaries that they would bankrupt the libraries. It is not altogether a question of salaries. There are many occupations which people follow because they love them, knowing well that they can never bring them any but very moderate rewards. Is it not possible to imagine library work becoming so individual, so interesting and so varied that people may love it in much the same fashion? And, as a woman gently reminded the librarians who were discussing this question at Lake Placid, there are still left in the world people who love to serve.

The people who love to serve are forced to change the fashion of their service from age to age and to find new outlets for the helpful spirit within them. There is no better work than library work; none more worthy of the patience of a woman or the strength of a man. Finer and finer spirits must come to us as the years go on. The scholar will interpret books to men from the factory and the mine, and in the dreariest quarter of some crowded city little wolfish children may learn the meaning of life from a new St. Francis of Assisi.

SLAVIC transliteration: A FURTHER WORD.

It is encouraging to find in the December LIBRARY JOURNAL further discussion of "Slavic transliteration." Yet the article not only leaves room but makes room for still further discussion, although at the outset its author would cut from under our feet common ground, when he says, "It is absolutely impossible to devise a system of transliteration of Russian which will assign a constant equivalent to each letter, and at the same time give an English reader some notion of the correct pronunciation. . . . In such a case the only correct procedure is that of the committee, to adopt a consistent system [assign a constant equivalent to each letter], and let the pronunciation shift for itself." While recognizing the difficulties in the case, we insist that at every step our constant aim should be, even at the sacrifice of the "constant equivalent," to give the reader an approximate notion of the correct pronunciation.

If "the committee preserves consistency," it does not follow "Russian precedent in not distinguishing *e* from *ë*." In behalf of *ya* and *yu*, Mr. Noyes appeals to Mrs. Garnett's authority in her translation of Turgenev's works. For "Russian precedent" we cite Turgenev himself (with Mrs. G.'s transliteration in parenthesis). Turgenev writes: Алёна (Alyona), Алёша (Alyosha), Визъ-мёньковъ (Bizmyonkov), Серёга (Seryoga), Тютю-рёвъ (Tiutiurov [-rîdv]), Зёзя (Zyozya). And where Turgenev did not consider it necessary to mark the distinction, Mrs. G. has made it in these names: Березовка (Beryozovka), Губаревъ (Gubaryov), Королевъ (Korolyov), Михневъ (Mihnyov), Петръ (Piotr, "pron. P-yotr"), Фёдоръ (Fyodor [and] Fiodor), Роменъ (Romyon), Семень (Semyon), Семеновъ (Semyonov), Семеньчъ (Semyonitch), Семеновна (Semyonovna), Срепушка (Styopushka), Чернобай (Tchornobai), Чукчеулдзевъ (Tchuktcheulidzov [-dzîdv]).

The word "orel" (*orîol*) illustrates our need of the common ground of approximately correct pronunciation: Mr. Noyes rejects it; we think it essential. While we need not expect to indicate the various shades of closeness or openness of *e* or of *o*, to let an *o*-sound be represented by *e*, when it can be avoided, is too shiftless. Admitting for the moment that "*arytul*" is correct, we challenge the statement that *orel* "is hardly worse than 'orîol'." There seems to be much fear lest the latter shall be taken for that other bird, the *oriole*. There would be more reason for the fear if *orîol* had been written *oriole*. Doubtless it would be better to mark the accent (*orîol*), since the elementary fact that *ë* always bears the accent will not be known to the general reader; and knowledge of the place of the accent is (unconsciously) a guide to vowel quality: *e.g.*, if the first *o* in

orîol is supposed to be accented, it will be likely to be made close (and we shall have *oriole*); but if the second, then the first will be more indefinite in character, as becomes the unaccented *o* in Russian. But Mr. Noyes has adopted the erroneous method of representing this unaccented *o* by *a*. We need say no more of this than to quote the Russian scholar, Ia. Ia. Grot: "The generally accepted rule that *o* without the accent is pronounced *a* is incorrect; because, for example, the words *господа* [gospodà], *хорошо* [khoroshò], are not pronounced *гаспада* [gaspadà], *харамо* [kharashò]; in the first two syllables of the two words there is heard certainly not a pure *a*, but a middle sound between *a* and *o*." Besides, Mr. N. represents *ë* by "*yaw*." We should use *ø* for "*aw*" as being more open and (therefore) correct: compare English *pôle* (close *o* not found in Russian) with *pøl* (Russian accented *o*), which differs considerably from (English) *Paul*, *fall*. One more remark anent *ë*: in following the committee's plan, what shall we do with words spelled in two ways, as *лицѣ*, *лицо*; *Чернышѣвъ*, *Чернышовъ*? Here, perhaps, the transliteration must shift, instead of the pronunciation!

"Consistency" to the winds, if necessary! For we need *ie* (*ÿ*) to represent *e*, *u* at the beginning of words and syllables. After a consonant in the same syllable we would use *e* to represent both, whether accented or not. Mr. Noyes's Bohemian "*ë*" would puzzle the "unlearned reader." And in "scientific works" any system may be adopted with an appropriate key.

The committee, having used *y* to represent *u*, had very good reason for not making *ya*, *yu* stand for *я*, *ю*. Here is a chance for the "constant equivalent" which is so desirable whenever attainable: *y* is not needed anywhere else; *i* (*ÿ*) is quite sufficient, and seems equally unambiguous. Without preconceived notions the "unlearned reader" is quite as likely to say Rye-azan when the word has *y* as when spelled with *i*—and far the least likely when it is spelled Rîazan. Mr. Noyes's remark about Mrs. Garnett's use of *ya* and *yu* (*ye*, *yi*, *yo* might be added) is far too general. We find Sophia (Софья), Varia (Варя), both Maria and Marya (Марья), etc. And it is noticeable that toward the end of her long and successful task she somewhat changed her transliteration for the better, in this particular and in others; *e.g.*, Васильевичъ (Vassilievitch, for -yevitch), Онѣгинъ (Oniegin, for Onye-), Афанасьичъ (Afanasiitch, for -syitch), Праксовья (Praskovia), Тютюрёвъ (Tiutiurov, for Tyutyurov [-rîdv]), Григорьевичъ (Grigorievitch, for -yevitch), Телѣгинъ (Teliegin, for Telye-); and examples of *y* (instead of *i*) for *u*: Пузырицынъ (Puzyritsin—one *y* and one *i*), Миловъ (Mylov), Бублицынъ (Bublitsyn). Sometimes Mrs. G. makes *e* at the beginning of a syllable a diphthong (which it always is): *e.g.*, Евгенийъ (Yevgeny), Егоръ (Yegor), Ермолай (Yermolai)

Евсеевъ (Yevseyev — a double example, which, if rendered Evseev, according to the committee's plan, would probably be called Evsif by the "unlearned reader"), Евстигный (Yevstigney); and sometimes a simple vowel, as Ефремъ (Efrem), Евграфъ (Evgraf). (y is sometimes called a consonant, but never properly: the weak element of the diphthong *ai* is no more a vowel than that of *ai* ["ya"].)

When Mr. N. takes a deeper look into Mrs. G.'s work, he will find her authority mostly opposing his claims.

Mr. Noyes says: "The committee is certainly right in transliterating *v* by *y*." One good reason why *y* is *not* right is given above: *u* has preempted it. And when he refers to "Greek upsilon," he is more Greek than the Greeks: in Dal and other Russian dictionaries all words spelled formerly with *v* are now entered and defined under the spelling *u*, with only a reference from the *v* form. Besides, this appeal to Greek derivation introduces a new and distracting element into the discussion. Shall we, forsooth, make *ph* stand for *φ*, and *th* for *θ*? Certainly, with just as good reason!

NEW HAVEN, CONN.,
Dec. 30, 1901.

INFORMATION-DESK WORK AT PRATT INSTITUTE FREE LIBRARY.

From Annual Report of the Library, in Pratt Institute Monthly, December.

THE "information desk" was established as a regular feature of the library Nov. 1 [1900]. It had previously been tried in our old quarters, and last year in the spring, with students in charge—just enough to show that in proper hands it could be made a most important factor in our work. Miss Winifred L. Taylor, who was called from Freeport, Illinois, to help us make the experiment, had had twelve years' experience as volunteer librarian of the town library, helping to select books for purchase and to guide people in their choice of reading. She had afterwards for years been a member of the library board. Miss Taylor was left entirely to her own devices as to clerical work, as we wished her to feel that she could have time to supply the wants that she herself might perceive in the way of lists, etc. The experiment has been tried for seven months and a half, and has confirmed us fully in our belief in the value of an information-desk for the giving not only of information but of help and counsel. Of course, the class chiefly benefited is young people. Those who have been transferred from the children's department have carried a line of introduction to the desk and made the acquaintance of the

main library under good auspices. Young men and women also have not been slow to avail themselves of its help, as well as persons new to the library and unacquainted with the necessary forms. The feelings and perplexities of the public with regard to certain customs and regulations have found voice and a sympathetic hearing, and many misunderstandings have been corrected, mistakes rectified, and the reasons of certain procedures made clear. For all this work, time is a most necessary element, and in the hands of a judicious assistant produces results well worth its expenditure.

To go into some detail as to results, we may perhaps use Miss Taylor's own account of some parts of the work accomplished. In January she says: "A number of boys and girls have been transferred from the children's room and many others have begun taking books for the first time. I have taken these young people one by one, and taught them how to consult the printed lists and the card-catalog, explaining all their cabalistic signs. I have assisted them in making out their first lists of a dozen numbers or more, representing a variety of authors; through this list of twelve books by different authors they have the groundwork for selections of fifty or sixty books or more. In making out these first lists with the boys, I omit the Henty, Ellis and Munroe books, as they all know these authors, and aim to enlarge their circle and to call their attention to writers of whom they know nothing. The boys and girls usually pay strict attention and so begin the use of the library intelligently. I have assisted a number of persons who, not being able to get the latest books, have seemed at sea in the matter of selection, helping them to make out fresh call-slips with the numbers of books not so greatly in demand. I think the public are appreciative of the fact that there is some one in the room whose time is entirely at their service. A number of persons, in conversation at this desk, have seemed for the first time to realize the relation of literature to character, and in some cases of which we know have extended our work beyond the library by themselves undertaking the guidance of the reading of younger persons, coming back occasionally for consultation. Students of music and art, deeply interested in their subject, but quite unaware that it had a literature, have been introduced to the theory, history, and biography of art and music."

In February Miss Taylor reports:

"I notice in looking through the shelves that many of the Ellis books are in, and that Tomlinson is gaining in popularity. I also hear much less regret expressed for the absent Oliver Optic and Alger, and more opinions to the effect that the Henty books are all very much alike. Some of the boys are beginning to take out a second book, the 'not

fiction,' and that gives a chance to get them interested in fresh lines. My list of books for this purpose is very popular." "I find my book-lists a very great convenience, but experience convinces me that to hand even a most carefully selected list to any individual and to expect him to get just what he wants from it is like sending a sick man into a drug-store and telling him to help himself, that every bottle on the shelves is good for something. One must study the symptoms before recommending either book or remedy. . . . I know of perhaps twenty novels—aside from the standard series of fiction—which have a certain quality of all-round, bright mediocrity, novels of a certain indefinable social standing, that I feel safe in recommending to the average reader; these, of course, are books with no marked peculiarity either in the subject or the manner of treatment, or in the characteristic of the writer—stories of steady movement and plenty of light and shade. A good, romantic love-story seems to appeal to all readers."

THE QUESTION OF FICTION READING.

THE *New York Times Saturday Review*, in a recent issue, called attention to the reduction of the circulation of fiction, 24 per cent., that has taken place at the City Library of Springfield, Mass., in the four years of J. C. Dana's administration of that library. This was commented upon as a matter of interest and significance; and the article was followed, in the issue for Dec. 28, by a symposium on "Readers of fiction," from the librarian's point of view, containing contributions from Herbert Putnam, H. J. Carr, Dr. Canfield, Miss M. E. Hazeltine, A. E. Bostwick, J. L. Whitney, F. M. Crunden, W. E. Foster, Miss C. M. Hewins and J. K. Hosmer.

Perhaps the most suggestive contribution is that of Mr. Putnam, who states, first, that he is "not clear as to the necessity of reducing the circulation"; and second, that fiction circulation statistics might be usefully differentiated by class or value, as proposed by Mr. Thomson, of the Free Library of Philadelphia. He adds: "There is, however, a demand for fiction which I do not believe can legitimately be met by the public library. That is the demand for the latest new novel merely because it is the latest new novel. No free library can meet it adequately, and the attempt to meet it is an expense and annoyance to the reader and expense and burden to itself. In the Boston Public Library, under my administration, we commonly bought each year 25 or 30 copies of about 200 current novels. We had 65,000 cardholders. The chance for any particular cardholder to secure one of the 30 copies was, therefore, in effect infinitesimal. As a rule, he did not in

fact secure it. But finding the book in the catalog he applied for it, his application had to be handled by the various attendants, and, if made through the branches, by the delivery wagon also. It went back to him marked 'out,' and his labor and that of the officials was to no purpose. This process was repeated with thousands of slips from thousands of readers, of whom not one in a thousand could be successful.

"The free library cannot supply the demand for current novels 'hot from the press.' In professing to supply it the library deludes the public and reduces its capacity for service really serviceable. I believe that free libraries would gain in resources and in the end in popular esteem if they would agree to buy no current work of fiction until at least one year after the date of publication.

"They should at the same time make obvious their intention to buy the latest work in the arts and sciences as nearly as possible on the day of its publication.

"As to the reading public: The expenditure of a few cents will secure some of the best of the current fiction in magazines and newspapers. The remainder of the demand should, in my opinion, properly be met by subscription libraries."

Suggestion from others as to ways and means of reducing fiction reading include references to the "duplicate collections" of new books for which a small fee is charged; calling attention to generous supplies of interesting works of travel, biography, history, science, etc.; issue of special reading lists; the two-book method; and the sifting out of novels of inferior quality. Mr. Crunden says: "Keep novels in the background. Advertise and push other books. All lists are made more valuable by annotation. Get them into the hand of readers in various ways. We reduced the demand for Mrs. Southworth about 75 per cent. in five or six months by placing in every volume of hers issued a call slip containing 20 titles of a little better novels. These lists should be in form available for use as call slips. All this is simply adopting the advertising methods of the publishers, which create the enormous call for new novels. People ask for what they hear about, whether books, or soap, or medicine. Let them hear about the books you desire them to read."

Dr. Hosmer deprecates the suggestion that librarians should serve as censors of the public reading "except in a very limited way," and adds: "Novels as a class I by no means condemn. Like food and drink, they may be abused and indulged in excessively. People are foolish about them; but people themselves, not libraries, must cure the folly. We can do a little; the two-card system is some check. We can advise, if we can gain the confidence of our public. Certainly we should discriminate in selecting."

REPORT OF THE LIBRARIAN OF
CONGRESS.

THE report of the Librarian of Congress for the fiscal year ending June 30, 1901, furnishes gratifying evidence of the advance made toward the ideals of efficiency and public service set forth by Mr. Putnam when he assumed charge of the national library three years ago. It is presented in two parts, in one handsome volume, the first dealing with the year's record of activity, and the second setting forth the historical development, present organization, resources and methods of the library. Accessions for the year are given as 76,481 books and pamphlets, 19,341 manuscripts, 4308 maps and charts, 16,950 pieces of music, 21,455 prints, and 2328 volumes in the law library. The total number of books and manuscripts contained in the collection is recorded as 1,071,647. There were 832,370 visitors to the library building; and to the 112,804 readers who made use of the main reading room there were issued 401,512 volumes. The highest number of volumes issued in one day was 2932.

Results of the efforts made for systematic development are now beginning to be more clearly apparent. Mr. Putnam says: "The past four years, in particular the past two, have seen the collections, formerly indiscriminate, divided into certain main groups and in large part arranged and digested; most of these groups conveniently located; and the physical equipment and personal service appropriate to each determined, and in part provided. They have been determined also, and initiated in each group, a system of classification which not merely recognizes present contents but provides elastically for future development; and catalogs which, also elastic, when brought to date will exhibit adequately the collections as they stand and be capable of expansion without revision. The larger appropriations of the past four years have enabled the imperfections in the collections themselves in a measure to be remedied. Particular progress has been made in the completion of standard sets and bibliographies, which are the tools of the classifier and cataloger, and guides in selection; and considerable progress in the acquisition of miscellaneous material important to serious research, but impossible of acquisition with the small funds formerly available."

The administrative force, although increased by 26 appointments, was not brought up to the strength recommended in the previous report. It is pointed out that, owing to this, "too much of the time of \$1500 employes is now diverted to the revision of work of the \$600 and \$700 employes," and it is urged that the force be increased by additional catalogers and "certain assistants in the Copyright Office, whose salaries will be reimbursed by the receipts of the office."

Strong recommendation is made that the salary of \$3000 a year, which is paid to the chiefs of four divisions in the library, should be paid to at least three others. One of these is the post of head of the Division of Manuscripts, a position left vacant for more than a year, and which Mr. Putnam frankly states that he cannot fill "until the salary is put upon a reasonable basis." At present the salary is but \$1500, "the salary of an ordinary clerk in the government employ"; while it is pointed out that the sum recommended "is but the salary paid to a professor in a minor college for work involving no greater learning, no administrative duties, less consecutive attention, longer vacations, and many incidental privileges." The importance of properly developing this department is emphasized:

"There is no division in the library more important in its possible service to historical research than the Division of Manuscripts. There is none in whose conduct thorough, authoritative scholarship is more necessary. It is to this division particularly (as to the Division of Prints) that gifts must be attracted; the expert judgment must be there to attract them. The material bought has not, like most printed matter, a normal or standard market value. Each lot, being unique, is sold for the most that it will bring. Only expert judgment can determine for the library the fair limit to be paid; for to determine this means not merely to know the market in general, but to estimate justly the value of the particular manuscript to history and the loss to the library if its purchase be foregone. The chief of this division, among other qualifications, must have academic training, facility in at least a half dozen languages, a knowledge of political and literary history, a thorough and precise knowledge of American history, a discriminate knowledge of 'original sources,' a considerable knowledge of paleography, and familiarity with the character and conduct of the manuscript collections in other libraries and in the archive offices abroad as well as in this country."

There is a notable increase in the accessions to the library, owing to the more generous appropriation, which "has enabled progress to be made in the completion of sets and in the acquisition of standard material," although to a degree that is still much below what is requisite. Gifts have been more numerous than previously. It is noted that the library has never received a gift of money, and Mr. Putnam adds:

"The library can indeed hope to attract gifts only by three means: First, by a building which will house them safely and commodiously—this it has. Second, by administration which will safeguard them and render them useful—this it is developing. Third, by considerable expenditures of its own in the acquisition of material which will bring the material given into honorable company and

will attract notice to it by increasing the reputation of the general collection. These expenditures it must be prepared to make. All three of these factors have operated in the case of the British Museum. Priceless collections have come to it by gift. They have come largely for the distinction of association and service with a collection already the most distinguished in the world, made so by the direct effort of the government."

Special attention is given to the collection of Oriental literature, based upon the collection of the Hon. Caleb Cushing, and developed by gifts of oriental books from Hon. W. W. Rockhill, which "now numbers over 9500 volumes and pamphlets, and is understood to be, in certain directions, the most important in the United States. It justifies a separate division for its custody and administration, and expenditure for its suitable development."

Important purchases in the various departments are noted, and there is appended to the report a "Select list of recent purchases," covering 71 pages and over 700 titles, classified and annotated. The work of developing the document collection has made marked progress, when it is considered that the Division of Documents was only organized in July, 1900. There are many gaps in the collection, even among publications of the United States government, the law providing for distribution to the library having been formerly defective. Effort is also being made to establish a uniform system for the receipt of state documents, and reference is made to the recent joint resolution of the Virginia General Assembly, providing for the regular supply of state documents to the national library. The additions of important manuscript material are also fully noted.

In the Catalogue Division, in addition to the development of the system of printed cards for libraries—already familiar to readers of the *JOURNAL*—and the handling of current work, the entire section of American history and description (some 25,000 volumes) has been reclassified according to the new scheme of arrangement and notation. The sections next to be dealt with are British history and topography, and the political and social sciences. The printed catalog card plans are fully described, and in conclusion Mr. Putnam says:

"There are many difficulties of detail, and the whole project will fail unless there can be built up within the library a comprehensive collection of books, and a corps of catalogers and bibliographers adequate in number and representing in the highest degree (not merely in a usual degree, but in the highest degree) expert training and authoritative judgment. But the possible utilities are so great; they suggest so obvious, so concrete a return to the people of the United States for the money expended in the maintenance of

this library; and the service which they involve is so obviously appropriate a service for the National Library of the United States, that I communicate the project in this report as the most significant of our undertakings of this first year of the new century."

During the year covered the publications of the library have included four noteworthy volumes: The "Union list of periodicals, etc.," "Check list of American newspapers," "List of maps of America," and "Calendar of Washington manuscripts," in addition to many varied topical lists and special reference lists.

The reading-room for the blind was largely attended, there being an increase in the number of blind visitors of 560 over the preceding year. For this constituency 188 readings were given by 190 volunteer readers, and there were 45 musicales.

The matter of Sunday opening is again brought up, and its desirability emphasized. The extra administrative cost involved is set at \$13,000 a year, and the public benefit of this privilege is regarded as very important. It is pointed out that "the Sunday opening of libraries and museums is now so general that the application to a particular institution has ceased to be discussed as a question of utility, much less as a religious question, but purely as a question of local need and of pecuniary ability. Compulsory Sunday labor is not involved. In the Library of Congress, as generally elsewhere, the provision would be for a 'special service.' This might consist, in part at least, of week-day employees, but only at their own solicitation, for extra pay; and in no case would any employee serving during the week be permitted to work *every* Sunday, nor more than four hours of *any* Sunday.

"The Sunday use would not be trivial. Experience of other libraries proves it to be superior in orderliness and in seriousness to the week-day use. It would be in part by visitors from out of town, to whom now every Federal institution in Washington, save the Zoological Park, is closed from Saturday evening till Monday morning; it would be in part by the men whose profession is in books, but whose week-day hours are occupied with routine research within their respective bureaus; it would be in part by employees in the Executive Departments who are interested in serious reading, and it would be in a large degree by men and women whose week-day hours must be devoted to the mere business which is their livelihood and the work-day evenings to mere physical recuperation, and whose only opportunity for cultivation comes on Sunday."

The report of the Register of Copyrights forms appendix 2. The total number of entries during the year was 92,351, of which 83,813 were titles of works by residents of the United States; the total fees for these entries were \$50,444.50. The various articles deposited in compliance with the copyright

law amounted to 162,283, a gain of 20,839 over the preceding year; of these 7746 are classified as "books proper," 5770 as "miscellaneous articles," entered under the term "book," 9010 as newspaper and magazine articles, 17,702 as periodicals, and 16,709 as musical compositions. The "Catalogue of title entries" has been improved by the addition of a complete volume index. A careful statement is given of the exact status of the current work of the office, and of the progress made in handling material received prior to July 1, 1897. Mr. Solberg calls attention to the need of new copyright legislation, and as a first step in that direction recommends the codification of copyright laws by a special commission appointed by Congress.

Part 2 of the report covers some 200 pages and is practically an historical, descriptive and explanatory manual of the library; illustrated with plans and numerous views. It opens with a statement of the staff organization, recording the librarians who have held office since the inception of the library. Then follows a compact and interesting historical sketch of the library since its beginning, prepared by Mr. Hutcheson, superintendent of the reading-room; its constitution, and functions as thereby defined; a general review of the organization, scope and methods of every department, including Smithsonian Division, Law library, and Copyright Office; a full presentation of the character and status of the present collections; a statement of the equipment and administration of the building and grounds; and appendixes giving the last appropriations act, record of library publications, list of foreign depositories, and form of application for appointment.

It is stated that this section of the report may form the basis of a manual to be issued separately later, but its inclusion in the librarian's report is most welcome, as it makes practicable a clearer understanding of the conditions upon which present work and future plans are based. Especially informing is the review of the extent and character of the collection—books, pamphlets, documents and manuscripts. The general collection of books and pamphlets, "aggregating (without duplicates) three-quarters of a million volumes," is reported as almost completely representative of American literature of the past 30 years, and fairly representative for earlier years. The most notable items in rare Americana and other special classes are noted, and the total number of works in the various classes are stated.

It will be seen that the report as a whole is admirably representative of the past, present and possible future of the national library, and is a contribution of permanent interest and value to its annals. It will command the attention not only of librarians, but of all those who are interested in the development of American scholarship and literary research.

REPORT OF THE SUPERINTENDENT OF DOCUMENTS.

THE report of the Superintendent of Documents for the fiscal year ending June 30, 1901, just issued, gives statistics of the distribution of government publications as follows: Received from all sources 750,495 documents, of which 579,510 came from the Government Printing Office and 34,453 from libraries; 689,812 documents were distributed and sold, of which 257,945 were sent to designated depository libraries, being an average of 527 documents to each library. Since the establishment of the Document Office in 1895 the distribution to depositories has increased over 500 per cent. Mr. Ferrell observes: "To many libraries the receipt of 527 documents, more than half of which are large bound volumes, is embarrassing. A few depositories have already been dropped at their own request, having no available room for documents, while others have asked permission to select such as they find most useful. I have not yet found it practicable to comply with such requests because of the great increase in labor and bookkeeping involved. It is only a question of time, however, until something must be done that will enable librarians to select documents most useful to their patrons."

During the year the chief publications of the office included current issues of the *Monthly Catalogue*, the "Document catalogue" of the 54th Congress, second session, and an index to the Senate document 270, 56th Congress (report on food furnished to troops in Cuba and Porto Rico).

There is much unfinished work on hand. The "Document catalogue" for the first, second, and third sessions of the 55th Congress; the "Document index" for the first session of the 56th Congress; and Part 2 of the new check list relating to the documents of the 15th to the 52d Congress, are among the most important publications in process of printing, and copy for the "Document index" for the second session of the 56th Congress is substantially finished.

The report touches upon several points in which amendment of existing practice is needed. It is suggested that "the public would be much better served if the Public Printer were authorized to print, upon the requisition of this office, extra editions of documents whenever required for sale. There has been some opposition to this proposition, however, on the theory that it would place the government in the position of competing with the regular private book trade. In my judgment there is no reason whatever for apprehension upon that ground. I have never heard of a private firm undertaking to reprint a government publication for gain with but one exception." As the law now stands, 250 copies or less of any document may be

ordered, if the price be deposited with the Public Printer before publication; but it is practically impossible for anyone not possessed of advance information to take advantage of this provision. "A transaction occurred recently which caused much adverse criticism, yet it was strictly in accord with the provisions. The editor of the report of a government commission knowing, by virtue of his position, when the document would go to press, and also knowing that no copies would be printed for free distribution, except to a limited number of libraries, ordered an extra number of copies, which he offered to sell at a price greatly in excess of their cost to him. While there was legally nothing wrong about it, it should be impossible for such a transaction to take place." Mr. Ferrell recommended that this section of the printing act be abolished, and that instead the Superintendent of Documents be authorized to order extra copies of documents when needed for sale. The limitation of the sale of documents to not more than one copy to the same person should also be abolished. Duplication in the distribution of documents is referred to at some length, and the most effective remedy is thought to be in securing greater uniformity in printing and binding. Mr. Ferrell says, "The chief desire of every librarian and of every person who has occasion to use the public documents is, that each and every copy of a document shall have the same title-page and back title," and he gives examples of the confusion wrought by the present practice of issuing the same publication in various differing forms. He adds:

"Remedial legislation which will abolish such a system as I have described would result in three very important reforms in the printing and binding and distribution of documents:

"First. The annual reports and other Executive publications will be excluded from the Congressional numbered series of documents; and every copy of a document will bear the same inscription on the back and the same title page.

"Second. The issue of but one edition of a document, uniform as to back title, title-page and binding, will enable the Public Printer to deliver any document as soon as printed for distribution to those entitled to it.

"Third. Duplication will be greatly reduced, both to individuals and to libraries.

"Having given the subject a great deal of consideration during the past four years, I am satisfied that the only practical reform is to abolish the practice of printing the annual reports and miscellaneous publications of the Executive Departments and offices as numbered Congressional documents."

The Public Documents Library now contains 38,982 v. and 5934 maps, being an increase of 6965 v. and 907 maps during the year.

LIBRARY LEGISLATION IN 1902.

W. F. Yust, *New York State Library, in Albany Argus, Dec. 29.*

THE summary of legislation for 1901, which is now being published by the New York State Library, will contain a specially large amount of material on libraries. In the report of the Public Libraries Division it covers 106 laws in 31 states and Oklahoma territory. Thirteen local acts of New York state are included and one of Illinois. Thirty-nine laws were enacted by the central states, the North Atlantic division coming next with 30. Much of this legislation aims at the extension of the use of existing libraries, co-operation between municipalities and the formation of new libraries in small towns, school and rural districts. Cities and library boards are given greater freedom of action in the establishment and management of libraries; special appropriations are large and in six states the maximum tax limit has been raised.

Eight states passed acts general or comprehensive in scope. Washington has followed the New York law very closely, Pennsylvania, those of Massachusetts and New Jersey. At the time the laws were passed by their respective legislatures, Idaho had no free circulating library, and Delaware but three. The California law has a special feature, making it obligatory on town and city authorities to establish a public library on petition of 25 per cent. of the voters. This corresponds to that section of the New York law which provides that whenever 25 taxpayers shall so petition the question shall be voted on at the next election. In California the ordinance may be repealed, however, on petition of 25 per cent. of the voters and the library disestablished. In New York, on the other hand, a library once established by public vote or action or school authorities can be abolished only by a majority vote at two successive annual elections. The Indiana law is also mandatory, if a certain amount is raised for library purposes by popular subscription. The Oregon act fixes the maximum tax limit at one-fifth mill, which will give an income so small as to make the law almost prohibitive for all but a few large cities.

In several states co-operation was encouraged for the smaller and poorer municipalities. In Maine, towns may unite to form public libraries or may appropriate money to secure the free use of libraries in adjoining towns and receive annually from the state a duplicate amount equal to 10 per cent. of such appropriation. In Pennsylvania, cities under 100,000 and school districts and incorporated library associations therein may co-operate to erect and maintain free public libraries. In Wisconsin, townships, villages and cities may give financial aid to libraries

free for their use located in neighboring places. Aiding such libraries is also to entitle them to a voice in their government.

Separate laws providing for school libraries were passed in Missouri, Oregon, South Dakota and North Carolina. In the latter state, if \$10 is raised by subscription for a rural school library, \$10 shall be added by the county superintendent of schools and \$10 by the state board of education. The amount thus brought together is to form a nucleus for the purchase of books. Pennsylvania has supplemented her law relating to central free public libraries established by school districts, so that they may be divided and distributed among the schools of the respective districts. In Indiana, school trustees in cities of 15,000 are given power to issue bonds for library buildings.

County libraries also came in for consideration. It is interesting to note that these were provided for in the constitution of Indiana as early as 1816. No less than six acts were passed between 1818 and 1852 for their organization and management in that state. But only a few of these libraries still remain. The Wyoming law, passed in 1886, authorized the levy of an annual tax of one-eighth to one-half mill for county libraries. An amendment aiming to make it more effective was passed in February last. Nevertheless, Cincinnati and Van Wert, Ohio, are each claiming the distinction of priority in the matter of inaugurating the county library movement as a result of laws passed in 1898. This year Wisconsin passed a bill, one section of which is practically a copy of the Ohio law. It allows permanent county libraries to be established and maintained by a board of library directors. . . .

State library commissions were created in Idaho, Washington, Delaware and Nebraska. Acts for enlarging their powers, duties and funds were passed in seven other states. This is also a somewhat recent phase of library work, Massachusetts making the beginning in 1890. At present there are commissions in 20 states. Unsuccessful efforts to establish them were made this year in Illinois, Missouri and South Dakota. This is the third defeat in Illinois, where the State Library Association has been working since 1895 for the passage of such an act. In South Dakota, even though no appropriation was asked, one member of the Assembly moved to amend the title to read "A bill to provide employment for idle people." The commission was to consist of the state superintendent of education, the secretary of the State Historical Society and the librarian of the State University. In each of these states new efforts will be made at the next session of the legislature.

The Pennsylvania commission secured an annual appropriation of \$1750. It has been in operation since 1899, but has had to de-

pend on private sources for its funds. The Georgia commission, although established in 1897, is now the only one receiving no state aid, the enabling act specifying that the commission shall be of no expense whatever to the state.

Tennessee also passed a law establishing a state library commission, but its only function will be to have charge of the state library and select the librarian. The latter task has hitherto fallen to the Legislature and has been for years one of the important events of the session. At the last election of a librarian there was a deadlock among the gallant solons for several days, owing to the irresistible charms of rival lady candidates.

The large number of acts relating to state libraries indicates to some extent the growing change in ideas concerning their function. Originally consisting almost entirely of law books and intended only for the use of the Legislature and state officers, they are gradually coming to be regarded as the proper center of the library interests of the state. The view is also gaining ground that the library commission of a state should be identical with the governing body of the state library as in the case in New York state and in Ohio. New Hampshire has accordingly passed a law whereby its library commission and the trustees of the state library are to be gradually consolidated, leaving only three commissioners, not more than two of whom shall be from one political party.

New York state added to her statutes a very important one relating to gifts and bequests. After 25 years from the date of a gift for educational purposes the Supreme Court may administer the property without a literal compliance with the terms of the donor, but in such a manner as will most effectually accomplish the general purpose of the gift.

Among the minor acts also there are several of considerable interest. California has made the mutilation of books in libraries a misdemeanor, formerly a felony. Missouri declares it unlawful for a person related to any director on the library board to be employed in the library. The North Carolina Legislature has required a separate place to be fitted up in the state library for negroes. In Idaho, where teachers have heretofore been devoting 30 minutes per week to teaching pupils kindness toward one another and all living creatures, they are now instead to give one hour a week to systematically reviewing the works of the school library. Washington, in creating a library commission, weakens an otherwise excellent law with the senseless provision that the secretary must be a woman.

Although there are competent authorities in almost every state who might be consulted with profit and in spite of excellent laws that might serve as models, such blunders are repeated annually. One of this year's local acts of New York permits the

council of Cohoes to expend for the maintenance of a public library not over \$2500 annually. When this amount becomes insufficient further legislation will be necessary to allow for ordinary growth and development. The enabling acts for libraries at Johnstown, Mt. Vernon and Yonkers have similar defects. The consideration of these and other errors led the New York State Library Association committee on legislation in their last report to suggest that it would be to the interests of both trustees and founders of libraries to submit all proposed special legislation to the state library department for suggestions with regard to careful wording. Some special legislation could thus be made more satisfactory and others avoided altogether.

ANDREW CARNEGIE'S GIFTS TO AMERICAN LIBRARIES IN 1901.

DURING the year just closed the amount of Andrew Carnegie's benefactions for the establishment or development of American libraries reached the immense total of \$13,813,000. This sum was distributed among 153 places in 33 states, Porto Rico, Canada and British Columbia, the largest individual items being \$5,000,000 for branch libraries in New York City, \$1,000,000 to St. Louis for the same purpose, and a like sum for the endowment of the Carnegie libraries of Braddock, Duquesne and Homestead, in Pennsylvania. A record of these gifts, so far as they have been reported, are here given; but it is probable that this is not entirely comprehensive of minor gifts, that have not received public notice. In some cases Mr. Carnegie's offers have not been accepted by the communities receiving them; thus, Easton, Pa., voted to decline the \$50,000 offered for a library building, owing to the maintenance fund required; at Grand Rapids, Mich., an offer of \$100,000 from Mr. Carnegie was later withdrawn in view of the almost simultaneous offer of \$150,000 from a former citizen of the town; and in several cases the acceptance of Carnegie gifts is still pending, owing to reluctance or inability to meet the conditions imposed. These conditions are the familiar ones that the city shall provide a site, and guarantee a yearly maintenance fund amounting to 10 per cent. of the Carnegie gift. These conditions have been seldom waived, the gifts of \$500 to a school library in Staten Island, \$1000 to the Seaboard Air Line travelling libraries, \$5000 to the New York Press Club for books, and \$5000 for the Skene Memorial Library at Griffin's Corners, N. Y., being about the only exceptions in the past year's record. The record is as follows:

Aberdeen, S. D.	\$15,000	Madison, Ind.	\$20,000
Akron, O.	70,000	Madison, Wis.	75,000
Alameda, Cal.	35,000	Mankato, Minn.	40,000
Atlanta, Ga. (additional)	20,000	Marion, Ind.	50,000
Aurora, Ill.	50,000	Mattoon, Ill.	20,000
Austin, Minn.	12,000	Miles City, Mont.	10,000
Beloit, Wis.	25,000	Moline, Ill.	37,000
Bloomington, Ill.	15,000	Montclair, N. J.	30,000
Braddock, Duquesne and Homestead Carnegie libs., Pa.	1,000,000	Montgomery, Ala.	50,000
Burlington, Vt.	50,000	Montreal, Can.	150,000
Canandaigua, N. Y.	10,000	Mount Vernon, N. Y.	35,000
Cañon City, Colo.	10,000	Muncie, Ind.	50,000
Canton, N. Y.	30,000	Nashville, Tenn.	100,000
Canton, O.	50,000	Neenah, Wis.	10,000
Carbondale, Pa.	25,000	New Rochelle, N. Y.	25,000
Carrollton, Ill.	10,000	New York City	5,000,000
Catskill, N. Y.	20,000	New York Press Club	5,000
Charleston, Ill.	18,000	Niagara Falls, N. Y.	50,000
Cedar Rapids, Ia.	75,000	Norristown, Pa.	50,000
Centralia, Ill.	15,000	Norfolk, Va.	50,000
Charlotte, N. C.	25,000	Norwalk, Ct.	20,000
Charlottesville, W. Va.	20,000	Nyack, N. Y.	15,000
Chatham, N. Y.	15,000	Oncida, N. Y.	11,000
Clinton, Ia.	30,000	Ottawa, Can.	100,000
Clinton, Mass.	25,000	Oyster Bay, N. Y.	1,000
Cohoes, N. Y.	25,000	Paducah, Ky.	35,000
Collingwood, Ontario, Can.	10,000	Pekin, Ill. (additional)	5,000
Conneaut, O.	100,000	Pembroke, Ontario, Can.	10,000
Cornell College, Ia.	40,000	Pensacola, Fla.	15,000
Covington, Ky. (additional)	35,000	Perth Amboy, N. J.	20,000
Crawfordsville, Md.	25,000	Peru, Ind.	25,000
Cumberland, Md.	25,000	Phoenixville, Pa.	20,000
Danville, Ill.	40,000	Port Jervis, N. Y.	30,000
Davenport, Ia.	25,000	Portland, Ind.	15,000
Decatur, Ill.	60,000	Portsmouth, O.	50,000
Detroit, Mich.	750,000	Revere, Mass.	20,000
Elkhart, Ind.	35,000	Radine, Wis.	50,000
Elwood, Ind.	25,000	Redwing, Minn.	15,000
Fargo, N. D.	20,000	Richmond, Va.	100,000
Fort Scott, Kan.	15,000	Riverside, Cal.	20,000
Fort Wayne, Ind.	75,000	Rockford, Ill.	60,000
Freeport, Ill.	30,000	St. Cloud, Minn.	25,000
Fresno, Cal.	30,000	St. Johns, N. F.	50,000
Galesburg, Ill.	50,000	St. Joseph, Mo.	25,000
Gloversville, N. Y.	25,000	St. Louis, Mo.	1,000,000
Goshen, Ind.	25,000	San Francisco, Cal.	750,000
Grand Junction, Colo.	3,000	San Jose, Cal.	50,000
Great Falls, Mont.	30,000	San Juan, Porto Rico	100,000
Green Bay, Wis.	25,000	Sault Ste Marie, Mich.	30,000
Greenville, O.	25,000	Schenectady, N. Y.	50,000
Griffin's Corners, N. Y.	5,000	Seaboard Air Line travelling libs.	1,000
Grossdale, Ill.	35,000	Seattle, Wash.	200,000
Guthrie, O. T.	20,000	Sharon, Pa.	25,000
Hawarden, Ia.	5,000	Sheboygan, Wis.	25,000
Hempstead, N. Y.	25,000	Sioux Falls, S. D.	25,000
Henderson, Ky.	25,000	South Omaha, Neb.	60,000
Iron Mountain, Mich.	17,500	Springfield, Ill.	75,000
Ishpeming, Mich.	20,000	Staten Island (N. Y.) Academy	500
Islip, N. Y.	10,000	Stillwater, Minn.	25,000
Jackson, Mich.	70,000	Stratford, Manitoba, Can.	12,000
Jackson, Tenn.	30,000	Superior, Wis.	50,000
Jacksonville, Ill.	40,000	Syracuse, N. Y.	260,000
Janesville, Wis.	30,000	Tacoma, Wash.	50,000
Johnstown, N. Y.	20,000	Upper Iowa University, Ia.	25,000
Joplin, Mo.	40,000	Valley City, N. D.	15,000
Kalispell, Mont.	10,000	Vancouver, B. C.	50,000
Kansas City, Kan.	75,000	Wabash, Ind.	20,000
Kent, O.	10,000	Walpole, Mass.	15,000
Kewanee, Ill.	50,000	Washington, Ind.	20,000

Los Gatos, Cal.	10,000		
McKee's Rocks, Pa.	20,000		
Macon, Ga.	20,000		

\$13,813,000

In addition, Mr. Carnegie's gifts for library purposes in Great Britain are recorded as reaching a total of £179,500, or over \$800,000. These were distributed to eight places, of which all but one were in Scotland, the record being as follows:

Annan, Dumfriesshire, Scotland.....	£3,000	Larbert, Sterling, Scotland.....	£3,000
Coatbridge, Lanark, Scotland.....	15,000	Rutherglen, Lanark, Scotland.....	7,500
Dalkeith, Scotland..	4,000	Waterford, Ireland..	5,000
Dundee, Scotland... 37,000			
Glasgow, Scotland... 105,000			£179,500

FOUNDING OF THE CARNEGIE INSTITUTION.

ON Jan. 9, official announcement was made of the establishment in Washington of a Carnegie Institution, for the advancement of learning, to be endowed by Andrew Carnegie. The announcement, issued by Dr. C. D. Walcott, secretary of the corporators of the institution, is as follows:

"Mr. Carnegie's purpose, as stated by himself in requesting the various trustees to become members of the board, is as follows:

"It is proposed to found in the city of Washington, in the spirit of Washington, an institution which, with the co-operation of institutions now or hereafter established there or elsewhere, shall, in the broadest and most liberal manner, encourage investigation, research and discovery; encourage the application of knowledge to the improvement of mankind; provide such buildings, laboratories, books and apparatus as may be needed; and afford instruction of an advanced character to students whenever and wherever found, inside or outside of schools, properly qualified to profit thereby. Among its aims are these:

"First—To increase the efficiency of the universities and other institutions of learning throughout the country by utilizing and adding to their existing facilities, and by aiding teachers in the various institutions for experimental and other work in these institutions as far as may be advisable.

"Second—To discover the exceptional man in every department of study, whenever and wherever found, and enable him by financial aid to make the work for which he seems specially designed his life work.

"Third—To promote original research, paying great attention thereto, as being one of the chief purposes of this institution.

"Fourth—To increase the facilities for higher education.

"Fifth—To enable such students as may find Washington the best point for their special studies to avail themselves of such advantages as may be open to them in the museums, libraries, laboratories, observatory, meteorological, piscicultural and forestry schools and kindred institutions of the several departments of the government.

"Sixth—To insure the prompt publication and distribution of the results of scientific investigation, a field considered to be highly important.

"These and kindred objects may be attained by providing the necessary apparatus for experimental work, by employing able teachers from the various institutions in Washington and elsewhere, and by enabling men fitted for special work to devote themselves to it, through salaried fellowships or scholarships, or through salaries with or without pensions in old age, or through aid in other forms to such men as continue their special work at seats of learning throughout the world."

The board of trustees elected by the corporators to carry out the purposes of the institution as indicated is as follows:

EX-OFFICIO.

The President of the United States.
The President of the United States Senate.
The Speaker of the House of Representatives.
The Secretary of the Smithsonian Institution.
The President of the National Academy of Sciences.

Grover Cleveland, New Jersey.
John S. Billings, New York.
William N. Brewster, Pennsylvania.
Lyman J. Gage, Illinois.
Daniel C. Gilman, Maryland.
John Hay, District of Columbia.
Abram S. Hewitt, New Jersey.
Henry L. Higginson, Massachusetts.
Henry Hitchcock, Missouri.
Charles L. Hutchinson, Illinois.
William Lindsay, Kentucky.
Seth Low, New York.
Wayne MacVeagh, Pennsylvania.
D. O. Mills, California.
S. Weir Mitchell, Pennsylvania.
W. W. Morrow, California.
Elihu Root, New York.
John C. Spooner, Wisconsin.
Andrew D. White, New York.
Edward D. White, Louisiana.
Charles D. Walcott, District of Columbia.
Carroll D. Wright, District of Columbia.

It is understood to be the purpose of Mr. Carnegie to transfer \$10,000,000 in 5 per cent. bonds to the board of trustees for the purposes above mentioned.

The meeting for organization of the board of trustees and the election of officers has been called for January 29, at the office of the Secretary of State, Washington.

NET PRICES FOR BOOKS: MASSACHUSETTS LIBRARY CLUB COMMITTEE.

A MEETING of the committee of the Massachusetts Library Club appointed to consider the cost of books under the net price system, was held at the Boston Public Library Tuesday, Jan. 7, at 10 a.m. There were present Mr. Gifford of the Cambridge Public Library, Mr. Jones of the Salem Public Library, Mr. Wellman of the Brookline Public Library, Mr. Fleischner and Miss Macurdy of the Boston Public Library. Representatives from the following Boston publishing houses were also present by invitation to participate in an informal discussion: Houghton, Mifflin & Co., Lee & Shepard, Little, Brown & Co., Lothrop Publishing Co., Small, Maynard & Co.

The chairman, Mr. Gifford, opened the meet-

ing by stating the object of the conference, viz.: to ask information of the publishers as to the generally increased cost of books under the net price system, a cost increased to a greater degree than librarians had been led to expect when the new scheme of discounts was adopted by the American Publishers' Association. As understood, the plan originally outlined was primarily to protect the bookseller whose business had suffered from undercutting and a very small margin of profit. To correct these unsatisfactory conditions the publishers agreed to issue their books at a net rate, which would be lower than the list price under the old system, and to supply them to libraries at a discount of 10 per cent. This was estimated to result in an average increase of possibly 8 per cent. in the cost of books for libraries, an increase which was accepted with reasonable grace by librarians as a proper advance in the interest of the bookseller. But as the season advanced the prices of certain books increased far beyond this average of 8 per cent. and reached in some cases as high as 36 per cent. This advance seemed to the librarians to be designed not so much for the benefit of the bookseller as for the benefit of the book publisher. A list of books prepared by Mr. Wellman was submitted on which the average increase over former prices was shown to be 24 per cent. These books were continued series and had heretofore been issued at a uniform lower rate. To the small library, the chairman stated, to the average library even, the question of paying higher prices for books is a serious one. Their resources are none too large and 24 per cent. increase in the price of several books means fewer books than formerly for the same expenditure.

The publishers present were not all members of the Association. They were not sure but that mistakes had been made in some cases by the publishers, but thought if prices were analyzed all through the increase in some cases would be offset by a reduction in others. They urged "special conditions" in the cases cited of what appeared to be an unwarranted advance in price—and thought it perhaps natural at a period of change, for publishers to seek some readjustment in prices, which would better reimburse them. In reply to the inquiry if there were any general increase in the cost of making books, it was stated that there were three items which had largely increased the cost of bookmaking: (1) Binding, which had to be decorative and attractive to meet the higher standards of taste. (2) Illustration, which now cost five times as much as formerly. (3) Advertising, which was now expected by every author. The cost of type-setting has advanced and the cost of paper stock.

The question of allowing the bookseller more latitude in the matter of discounts was informally discussed, also the competitive method in the book trade. It seemed to be the sense of the publishers that bookselling

as a trade would cease if the competitive method obtained. "Booksellers"—one gentleman stated—"cannot supply books at 35 per cent. discount and live."

The committee was advised by the publishers to send a letter to the meeting of the American Publishers' Association to be held in New York, Jan. 8, stating the position of the librarians of Massachusetts in regard to the system of discounts. The suggestion was accepted and the meeting adjourned at 12 o'clock.

THEODOSIA E. MACURDY, *Secretary.*

The following letter was drawn up and approved by the committee for presentation to the American Publishers' Association:

CAMBRIDGE, MASS., Jan. 7, 1902.

Mr. George S. Emory, *Manager, Publishers' Association, 156 5th Ave., New York.*

"DEAR SIR: The Massachusetts Library Club, representing about 400 librarians, appointed at its last meeting a committee to investigate the subject of book prices under the present net system. The committee has had an informal conference with some of the Boston publishers and, at their suggestion, has decided to submit a statement for the consideration of the Publishers' Association.

"It was understood that the adoption of the net system as a means of helping the booksellers would cause the libraries to pay a few cents more than before for each new book published at a net price. It is for the interest of the libraries that the booksellers be not driven out of business; and, accordingly, the committee has thus far found that the new system has received little adverse criticism from librarians in so far as it seemed likely to afford the booksellers a chance to obtain a fair profit.

"But coincident with the adoption of the net system an unexpected advance has been made in the cost of various books and series. The following list, prepared by a member of the Massachusetts Library Club, shows in 18 different instances, an increased cost to libraries varying from 12 to 36 %, and averaging 24 %. The books which are not in series are compared with publications by the same authors, which are similar in style and binding.

"Instances of an advance in price, where comparison may readily be made with books in the same series, make it at least supposable that a price higher than would have been the case under the old conditions has been placed on other books where no such close comparison can be had. The books cited in the following list are widely bought by public libraries and are perhaps even more necessary to the libraries with small incomes than to the larger institutions. The publishers of some of these books say that the advance would have been made under any circumstances; but since the higher prices followed so closely the adoption of the net system, it is not unfair to assume that they bear some relation to it. The list is as follows:

SERIES.	Former list price.	Former cost to libs.	Present net price.	Present cost to libs.	Percent. Increased cost to libs.
American historic towns (Putnam).....	\$3 50	\$2.34	\$3.00 net	\$2.70	15
American men of energy (Putnam).....	1.50	1.00	1.35 "	1.22	22

Story of the nations (Putnam).....	1.50	1.00	1.35 "	1.22	22

Average increase of cost to libraries.....24

"The increased cost of books during the fall publishing season was sufficient to cause many libraries to view with much solicitude the possible extension of a system of publishing which has already resulted in a decided curtailment of their purchasing power. For this reason the committee of the Massachusetts Library Club respectfully requests that the Publishers' Association will consider the possibility of adopting a system of publishing, either by changing the discount allowed to libraries or by readjusting the scale of prices, so that the net cost of books to libraries may show an increase no greater than is demanded by the fair treatment of the other interests concerned.

For the committee,

"WM. L. R. GIFFORD, *Chairman.*"

THE CLEVELAND PUBLIC LIBRARY.

SEVERAL months ago the Cleveland Public Library occupied a new temporary building, a view of which is shown elsewhere. The circumstances which led the library board to erect such a building for mere temporary occupancy are as follows:

For about 21 years the library had occupied free of rental two floors of the public school headquarters building. Several years ago a movement was started to erect a library building, and in 1896 authority was secured from the legislature. Bonds were issued which sold in 1898 for \$295,250 to constitute a building fund, and plans were considered for the erection of a new building. Meantime a strong public interest was aroused in a project for grouping the various public buildings; the court house, city hall, the federal building, and the library, which are to be erected within the next few years. The group plan is a magnificent one, and although there are practical difficulties in the way, it is by no means impossible, and has enlisted

the efforts of many public-spirited citizens. The library board believed it to be its duty to promote this plan, and to postpone the selection of a site until the question of grouping the buildings was decided.

Meantime the board of education found it necessary to sell the headquarters building, and the library board was under the necessity of providing temporary quarters for the library. The board decided to build rather than to rent, as being both more convenient and more economical.

The building occupies free of rental a part of the city hall lot. It has about 28,000 square feet of floor space. It cost about \$33,000 without stack or furniture. The library has the practical certainty of being able to remain in the building for nine years if it is desirable to do so. Any advantageous quarters obtainable by renting would have cost at least \$6000 per year for not over 22,000 square feet of floor space, with the probability of having the rent increased after a short term of years. At this rate, in about five and one-half years the library board would have paid as rental all that this building has cost, so that taking into consideration the possibility of the library wishing to remain in temporary quarters for a longer time, and the probability that this building will be salable when it is vacated, it seems on the financial side to be a good business arrangement.

The further advantage is that the building furnishes much more convenient quarters than could be had in any rented rooms available.

I have been thus explicit as to the business conditions, as it is possible that the questions involved may be of interest to library managers elsewhere.

The building is centrally located, within a short distance of the Public Square, the cen-

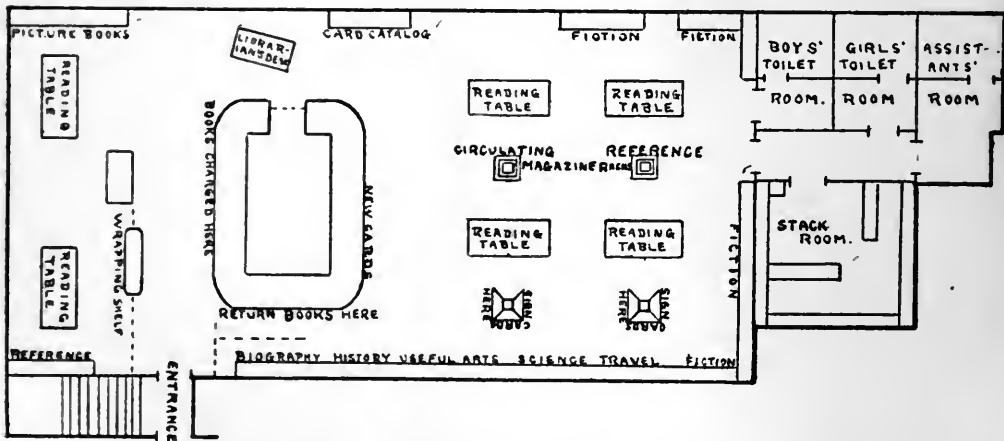

* Announced.

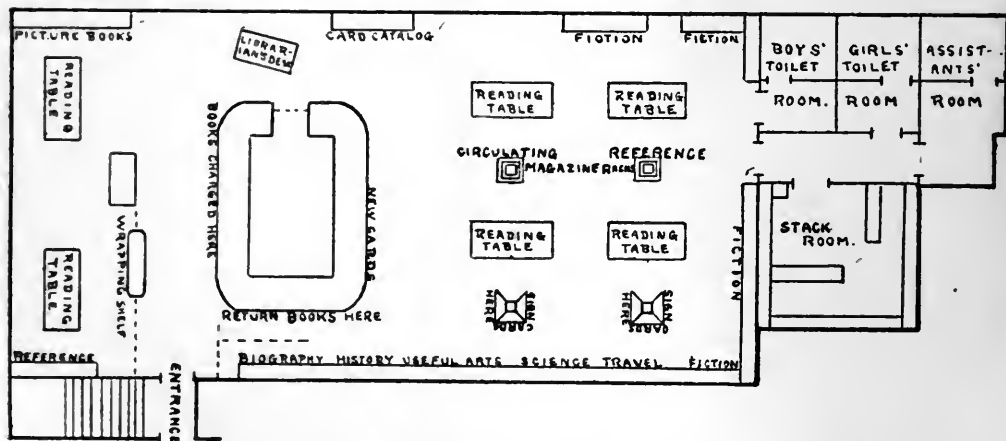

ter of the street railroad systems of the city. It is well lighted, having streets on two sides, an alley and court on the other two, and also a large skylight from which the light is carried to the main floor through a translucent glass floor in the reference room.

The floor diagrams shown elsewhere will give an idea of the arrangement of the building.

The newspaper room is on the ground floor, a few steps down from the main entrance, and therefore much more convenient for the busy people who wish to drop in a few moments to look over the papers.

The children's department is also on this floor, and is fitted up completely as a children's library. The low cases, tables, and chairs were planned and the books selected for their special needs, and in this room our little readers are being trained for intelligent use of the larger library. There is no age limit, and children can begin to use the library as soon as they are able to read, or even to enjoy picture books. The general arrangement of the room is shown in the following plan:

 *Plan of Children's Room, Cleveland Public Library.*

The stations department, the supply room and janitors' rooms, the check room, and the public and staff bicycle rooms are also provided for on this floor.

The main floor contains the circulating department and offices. The offices at the right of the entrance have a telephone exchange connecting the various departments, by 11 desk 'phones and two trunk lines, with each other and the outside. The registration and receiving desks are at the left of the entrance. A stile leading past the desk of the loan librarian admits to the book room, where perfectly free access is given to the books upon the shelves. The cases are low, so that the books upon the top shelves can be reached with ease. All parts of the floor have abun-

dant daylight, and the electricity on both floors is so arranged as to light sufficiently all cases and tables, while the general illumination is diffused by globes and the eye is protected from the direct glow of the electric light.

Books which are out of date, surplus, which are not recommended, or for any reason are undesirable for general circulation, are placed in the stack room on this floor. The passageway at the right, next the rooms of the assistants, is lighted from above and used for picture exhibits. The assistants at the desks in the various parts of the room give assistance to readers in making their selection, and the books are charged at desks placed at the turnstiles for exit.

The reference and general reading room is on the second floor, and also the board room and catalog department. The stack room for this floor is occupied mainly by the sets of periodicals and the government documents. The corner of the room next the board room is assigned particularly to the work of women's clubs, and the board room is occasionally used for their meetings.

The library bindery, which has for several

years been operated at the West side branch, is about to remove to rooms in the city hall building, adjacent to the main library. While this temporary building is larger, and more convenient than the building previously occupied for so many years, it is very far from being adequate to the library work of the city. While it seems clear that it is the best arrangement which was possible in the conditions, it is only a makeshift, and it is to be hoped that within a few years the library may be housed in a building which shall, in the nobility and beauty of its architecture, be a civic ornament, and in the amplitude and convenience of its arrangement provide adequately for the central library work of our growing city.

W. H. BRETT.

INVOICE METHOD AT SPRINGFIELD (MASS.) CITY LIBRARY.

From the 40th Report of the Library.

THE library will adopt a new method of invoicing new books and other acquisitions. No accession book or register is to be kept. The bills of any given firm during any one month are to receive as a determining mark one of the days of that month, and the year, and the bills from the same firm receive consecutive numbers. This date and number, standing for the bill of a certain firm, with such other marks as seem advisable, are to be placed on the inside margin of the fourth page after the title page. This group, of date and number, called the "accession mark," is to be written on the shelf list and on the face of the official author cards as was the old accession number. By means of it reference can be made from catalog or shelf list to the group of bills of any month in which any book may be found. This is sufficient for the few occasions on which reference to a bill is necessary. The price of the book and the source are added to the accession mark and to the shelf list card.

The original bills for books are kept in the library; statements only are sent to the treasurer. In the case of gifts a "gift slip" identical in nature with the bills are made out and treated as if it were a bill. In the case of periodicals that are added to the catalog after being bound a similar "periodical slip" is made.

LIBRARY SECTION OF WISCONSIN TEACHERS' ASSOCIATION.

THE Library Section of the Wisconsin Teachers' Association met at the library of the Milwaukee Normal School on Friday afternoon, Dec. 27. There were many librarians and teachers in attendance. Miss Julia Elliott, librarian of the Marinette Public Library, read a paper on the question, "In what way can librarians of public libraries co-operate with the teachers in order to make the library most useful to the city schools?" Miss Elliott told of the various lines of co-operation which were being conducted by her library and the local schools. Superintendent H. C. Buell, of the Janesville school, followed by giving the result of inquiries which he had sent to the leading libraries of the state, in reference to the co-operation between local libraries and schools. The conclusions were most gratifying, as showing the methods adopted by various librarians to bring about a closer relationship. In many cases cited the teachers were allowed to have all the books they pleased for reference work, while special attention was given to the needs of debating societies, etc. The use of a book mark, containing a literary ladder, was explained, the children ad-

vancing step by step up the rounds from simple books to those more difficult.

Professor A. H. Fletcher, River Falls, Wis., spoke on the subject of "The increased value of a high school library when properly organized—how can this work be done when there is no librarian?" Professor Fletcher gave a humorous account of his attempts at cataloging his library with the aid of some cards and a cigar box receptacle, having finally thrown the ill-advised attempt into the stove. He then secured a trained organizer to do the work, which had made the library immeasurably more valuable to the students, and concluded by saying that "if you want a thing well done, get someone who knows how to do it." Miss Ella Parmele, librarian of the Oshkosh Normal School, then told of the actual library work performed by students in her school in fitting them to classify and catalog school libraries. Principal H. L. Van Dusen stated that he and his assistants, after making a careful study of the Dewey classification and rules for cataloging, had made their own catalog, which had been of great value to them.

Mrs. Grace Darling Madden, of the Milwaukee Normal School, gave a long talk on "Library reading in the graded schools." The talk treated of methods used in arousing the interest of children in various lines of reading. Mrs. Madden deplored the lack of interest in reading on the part of many students, and stated that she believed that there was not half as much over-reading done by children as the reverse. At her request, a teacher in Indiana kept track of the voluntary reading done by her students. Six of the 53 students were found to have read no books whatsoever, outside of their text books, during the school year; twelve confined their reading to that of the dime novel sort, while a wide range of reading was shown by two girls who read the lightest and the heaviest of literature. The account given showed the need of good books and proper supervision in reading them.

Miss Cornelia Marvin, library instructor of the Wisconsin Free Library Commission, told of the ways in which teachers may co-operate with the library commission. Miss Marvin outlined the work of the commission, in giving help to villages, towns and cities in starting new public libraries, in reorganizing old public libraries, in training librarians, in maintaining a system of travelling libraries, in carrying on a clearing house for periodicals, aiding in book selection; and solicited the interest of the teachers in working for a public library in their respective towns, in securing travelling libraries, in urging upon public libraries the collection of sets of periodicals for reference, in seeing that books purchased by libraries are selected from approved lists and that the children's books are the best books; in teaching the care of

books; and urging upon librarians and trustees the necessity of care in the reading of children, in guarding against over-reading and in helping children to find the best books. She also urged that the teachers advocate library training for librarians.

Miss Marvin's talk was followed by a stereopticon lecture on "The child and his kingdom—the library," given by Miss Mary E. Dousman, superintendent of the children's room of the Milwaukee Public Library. A large number of slides were shown of various children's departments in all parts of the country. Illustrations of home settlement libraries and other phases of work with the children supplemented the talk, which was most helpful to teachers and librarians alike.

L. E. STEARNS, *Secretary*.

RECORD OF LIBRARY ASSOCIATIONS AND STATE COMMISSIONS, 1901.

THE following list comprises state library commissions and library associations, general, state and local, reported as in active existence at the close of the year 1901. Names of the chief officers and information regarding meetings have been included, so far as practicable; and it is hoped that the list may prove a useful reference guide to present organized library activities:

GENERAL.

AMERICAN LIBRARY ASSOCIATION.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th general meeting: Boston and Magnolia, Mass., June 14-20, 1901.

ONTARIO (CANADA) LIBRARY ASSOCIATION.

President: James Bain, Jr., Public Library, Toronto, Ont.

Secretary: E. A. Hardy, Public Library, Lindsay, Ont.

Treasurer: A. B. MacCallum, Canadian Institute, Toronto.

NATIONAL ASSOCIATION OF STATE LIBRARIANS.

President: W. E. Henry, Indiana State Library.

Secretary: Miss Maude Thayer, Illinois State Library.

NATIONAL EDUCATIONAL ASSOCIATION: LIBRARY DEPARTMENT.

President: Dr. J. H. Canfield, Columbia University Library, New York City.

Secretary: Miss M. E. Ahern, *Public Libraries*, Chicago.

STATE LIBRARY COMMISSIONS.

COLORADO STATE BOARD OF LIBRARY COMMISSIONERS: C. R. Dudley, chairman, Public Library, Denver.

No reports received.

CONNECTICUT FREE PUBLIC LIBRARY COMMISSION: Miss C. M. Hewins, secretary, Public Library, Hartford.

Members: C. D. Hine, chairman, Hartford; Miss C. M. Hewins, secretary; Rev. S. O. Seymour, Litchfield; N. L. Bishop, Norwich; Hon. E. B. Gager, Derby.

DELAWARE FREE LIBRARY COMMISSION: Cornelius Freear, secretary; Miss F. B. Kane, librarian, State Library, Dover.

Members: John Barkley, Clayton; G. F. Bowerman, Wilmington; D. C. Corbit, Odessa; Manlove Hayes, Dover; J. K. Holland, Milford; Mrs. E. C. Marshall, Dover; Mrs. C. H. Miller, Wilmington; Mrs. H. A. Richardson, Dover; Miss Margaret Truxton, Georgetown; C. A. Freear, state librarian, *ex-officio* secretary.

GEORGIA LIBRARY COMMISSION: Miss Anne Wallace, secretary, Carnegie Library, Atlanta.

Members: H. C. Peeples, chairman, Atlanta; Miss Anne Wallace, secretary; A. C. King, Atlanta; Mrs. E. Heard, Elberton; Mrs. N. L. Barbrey, Macon.

IDAHO FREE LIBRARY COMMISSION: Mrs. E. J. Dockery, secretary, Boise.

Members: Permeal French, chairman, superintendent of public instruction, Boise; Mrs. E. J. Dockery, secretary, Boise; J. A. McLean, president State University, Moscow; Mrs. S. H. Hays, Boise; Miss Eliza Kercheval, Rathdrum.

INDIANA STATE LIBRARY COMMISSION: W. E. Henry, secretary; Miss Merica Hoagland, organizer, State Library, Indianapolis.

Members: J. P. Dunn, president, Indianapolis; W. E. Henry, state librarian, *ex-officio* secretary; Mrs. E. C. Earl, Connersville; J. R. Voris, Bedford.

IOWA STATE LIBRARY COMMISSION: Miss A. S. Tyler, secretary, State Library, Des Moines.

Members: Johnson Brigham, state librarian; R. C. Barrett, state superintendent of public instruction, Des Moines; G. E. McLean, president, State University; Mrs. H. C. Towner, Corning; Miss J. B. Waite, Burlington; Mrs. L. S. Norris, Grinnell; Hon. W. H. Johnston, Fort Dodge.

KANSAS STATE LIBRARY COMMISSION: J. L. King, secretary, State Library, Topeka.

MAINE STATE LIBRARY COMMISSION: G. T. Little, chairman, Bowdoin College Library, Brunswick.

Members: G. T. Little, chairman; L. D. Carver, state librarian, *ex-officio* secretary; Mrs. K. C. Estabrook, Orono; A. J. Roberts, Waterville; L. G. Jordan, Lewiston.

MASSACHUSETTS FREE PUBLIC LIBRARY COMMISSION: C. B. Tillinghast, chairman, State Library, Boston.

Members: C. B. Tillinghast, chairman; Miss E. P. Sohler, secretary, Beverly; S. S. Green, Worcester; H. S. Nourse, Lancaster; Miss Mabel Simpkins, Yarmouth.

MICHIGAN FREE PUBLIC LIBRARY COMMISSION: Mrs. M. C. Spencer, secretary, State Library, Lansing.

Members: C. G. Luce, president, Coldwater; Mrs. M. C. Spencer, state librarian, secretary; Peter White, Marquette; H. N. Loud, Au Sable; J. M. C. Smith, Charlotte.

MINNESOTA PUBLIC LIBRARY COMMISSION: Miss Gratia Countryman, secretary, Public Library, Minneapolis; Miss Clara Baldwin, librarian, 514 Masonic Temple, Minneapolis.

Members: Cyrus Northrop, president State University, Minneapolis; J. H. Lewis, state superintendent of public instruction, St. Paul; Warren Upham, State Historical Society, St. Paul; Miss Gratia Countryman; Miss M. J. Evans, Northfield.

NEBRASKA PUBLIC LIBRARY COMMISSION: Miss E. D. Bullock, secretary, Lincoln.

Members: E. Benjamin Andrews, chancellor State University; W. K. Fowler, state superintendent of public instruction; F. L. Haller, board of trustees, Omaha Public Library; R. E. L. Herdman, clerk and librarian of the Supreme Court; J. I. Wyer, librarian State University.

NEW HAMPSHIRE STATE LIBRARY COMMISSION: A. H. Chase, secretary, State Library, Concord.

Members: G. T. Craft, Bethlehem; H. W. Parker, Claremont; J. F. Brennan, Peterborough; A. H. Chase, state librarian.

NEW JERSEY PUBLIC LIBRARY COMMISSION: H. C. Buchanan, secretary, State Library, Trenton.

Members: W. C. Kimball, chairman, Passaic; M. Taylor Pyne, Princeton; E. C. Richardson, Princeton; E. T. Tomlinson, Elizabeth; L. J. Gordon, Jersey City; H. C. Buchanan, state librarian.

NEW YORK STATE UNIVERSITY: PUBLIC LIBRARIES Division: Melvil Dewey, director; W. R. Eastman, inspector, State Library, Albany.

OHIO STATE LIBRARY COMMISSION: C. B. Galbreath, secretary, State Library, Columbus.

PENNSYLVANIA FREE LIBRARY COMMISSION: Dr. G. E. Reed, secretary, State Library, Harrisburg, Pa.
Members: J. G. Rosengarten, board of trustees, Free Library of Philadelphia; John Thomson, Free Library of Philadelphia; W. N. Frew, Pittsburgh; H. N. Belin, Scranton; W. M. Stevenson, Allegheny; Dr. G. E. Reed, state librarian.

VERMONT FREE LIBRARY COMMISSION: Miss Charlotte Gibson, secretary, Fletcher Memorial Library, Ludlow.

Members: S. W. Langdon, chairman, Burlington; Miss C. E. Gibson, secretary; H. E. Rustedt, Richmond; F. A. Howland, Montpelier; Mrs. W. P. Smith, St. Johnsbury.

WASHINGTON STATE LIBRARY COMMISSION: Mrs. K. T. Holmes, secretary.

Members: F. P. Graves, president State University; E. A. Bryan, president State Agricultural College; Miss S. L. Currier, Mrs. K. T. Holmes, Dr. F. H. Coe; and state superintendent of education, Bryan.

WISCONSIN FREE LIBRARY COMMISSION: F. A. Hutchins, secretary, Madison.

Members: J. H. Stout, chairman, Menominee; C. K. Adams, president State University; L. D. Harvey, state superintendent of education; R. G. Thwaites, secretary, State Historical Society; Mrs. C. S. Morris, Berlin; F. A. Hutchins, secretary, Miss L. E. Stearns, organizer; Miss Cornelia Marvin, instructor.

STATE LIBRARY ASSOCIATIONS.

CALIFORNIA LIBRARY ASSOCIATION.

President: C. S. Greene, Public Library, Oakland.
Secretary: F. B. Graves, Public Library, Alameda.
Treasurer: Miss M. F. Williams, Mechanics' Institute Library, San Francisco.
Meetings: Second Friday of the month, January, April, August, November.

CONNECTICUT LIBRARY ASSOCIATION.

President: H. M. Whitney, Blackstone Library, Branford.
Secretary: Miss Anna Hadley, Ansonia Library.
Treasurer: Miss J. P. Peck, Bronson Library, Waterbury.

Annual meeting: New Britain, February, 1902.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas Clark, Law librarian, Library of Congress.
Secretary: Hugh Williams, Library of Congress.
Treasurer: F. E. Woodward, 11th and F sts., N. W.
Meetings: Second Wednesday of each month, October-May.

GEORGIA LIBRARY ASSOCIATION.

President: W. B. Hill, University of Georgia, Athens.
Secretary-Treasurer: Miss Anne Wallace, Carnegie Library, Atlanta.
Next meeting: At time of dedication of Carnegie Library, Atlanta, probably in spring of 1902.

ILLINOIS STATE LIBRARY ASSOCIATION.

President: A. H. Hopkins, John Crerar Library, Chicago.
Secretary: Miss Eleanor Roper, John Crerar Library, Chicago.
Treasurer: Miss Anna Hoover, Public Library, Galesburg.
7th annual meeting: Quincy, April, 1902.

INDIANA LIBRARY ASSOCIATION.

President: Miss Jennie Elrod, Public Library, Columbus.
Secretary: Miss A. G. Hubbard, State Library, Indianapolis.
Treasurer: Arthur Cunningham, State Normal School, Terre Haute.

IOWA STATE LIBRARY ASSOCIATION.

President: F. C. Dawley, Cedar Rapids.
Secretary: Miss Margaret Brown, Chariton.
Treasurer: W. H. Douglas, Grinnell.

KANSAS STATE LIBRARY ASSOCIATION.

President: J. L. King, State Library, Topeka.
Secretary: Miss L. T. Dougherty, Washburn College, Topeka.
Treasurer: Miss Marion Steck, Salina.

KEYSTONE STATE LIBRARY ASSOCIATION.

President: E. H. Anderson, Carnegie Library, Pittsburgh.
Secretary-Treasurer: Miss H. P. James, Osterhout Free Library, Wilkes-Barre.

MAINE LIBRARY ASSOCIATION.

President: Mrs. M. H. Curran, Public Library, Bangor.
Secretary: G. T. Little, Bowdoin College Library, Brunswick.
Treasurer: Miss Alice C. Furbish, Public Library, Portland.
Meetings: Magnolia, Mass., in June, in connection with A. L. A.; Brunswick, autumn of 1902.

MASSACHUSETTS LIBRARY CLUB.

President: H. C. Wellman, Public Library, Brookline.
Secretary: G. E. Nutting, Public Library, Fitchburg.
Treasurer: Miss Theodosia Macurdy, Public Library, Boston.
Annual meeting: Second Thursday in June; other meetings decided by exec. com.

MICHIGAN LIBRARY ASSOCIATION.

President: H. M. Utley, Public Library, Detroit.
Secretary: Mrs. M. C. Upleger, Mt. Clemens.
Treasurer: Mrs. M. F. Jewell, Public Library, Adrian.
12th annual meeting: Detroit, October, 1902.

MINNESOTA LIBRARY ASSOCIATION.

President: Miss Alice N. Farr, Public Library, Mankato.
Secretary: Miss Clara Baldwin, State Library Commission, Minneapolis.
Treasurer: Mrs. L. G. Tandy, Public Library, Red Wing.
10th annual meeting: Probably Red Wing, October, 1902.

MISSOURI LIBRARY ASSOCIATION.

President: Mrs. C. W. Whitney, Public Library, Kansas City.
Secretary-Treasurer: J. T. Gerould, University of Missouri, Columbia.
3d annual meeting: Sedalia, autumn of 1902.

NEBRASKA LIBRARY ASSOCIATION.

President: J. I. Wyer, State University Library, Lincoln.
Secretary: Miss Bertha Baumer, Public Library, Omaha.
Treasurer: Miss M. A. O'Brien, Public Library, Omaha.

NEW HAMPSHIRE LIBRARY ASSOCIATION.

President: Miss Grace Blanchard, Public Library, Concord.
Secretary: H. W. Denio, State Library, Concord.
Treasurer: Miss B. I. Parker, Public Library, Dover.
Annual meeting: Pittsfield, Jan. 29, 1902.

NEW JERSEY LIBRARY ASSOCIATION.

President: S. G. Ayres, Drew Theological Seminary Library, Madison.
Secretary: Miss B. S. Wildman, Public Library, Madison.
Treasurer: Miss S. S. Oddie, Public Library, East Orange.

NEW YORK LIBRARY ASSOCIATION.

President: Miss M. E. Hazeltine, James Prendergast Free Library, Jamestown.
Secretary: Mrs. H. L. Elmendorf, 319 Norwood ave., Buffalo.
Treasurer: E. W. Gaillard, Webster Free Library, New York City.
Annual meeting: Lake Placid, last full week in September.

OHIO LIBRARY ASSOCIATION.

President: S. L. Wicoff, Sidney.
Secretary: E. C. Williams, Adelbert College, Cleveland.
Treasurer: Miss Grace Prince, Wittenberg College, Springfield.
8th annual meeting: Probably Columbus, October, 1902.

WISCONSIN STATE LIBRARY ASSOCIATION.

President: Dr. H. H. Hurd, Chippewa Falls.
Secretary: Miss B. M. Brown, Public Library, Madison.
Treasurer: Miss Tryphena Mitchell, Vaughn Library, Ashland.

LIBRARY CLUBS.

BAY PATH LIBRARY CLUB.

President: Miss M. Anna Tarbell, Brimfield, Mass.
Secretary: Miss Mary D. Thurston, Public Library, Leicester, Mass.
Treasurer: Miss Eliza Hobbs, Brookfield, Mass.
Annual meeting: June; other meetings decided by exec. com.

LIBRARY CLUB OF BUFFALO.

President: H. L. Elmendorf, Public Library.
Secretary-Treasurer: R. F. Morgan, Grosvenor Public Library.
Meetings: Monthly, third Tuesday and third Wednesday alternately, May-October.

CAPE COD LIBRARY CLUB.

President: C. F. Swift, Yarmouthport, Mass.
Secretary: Miss M. N. Soule, Hyannis, Mass.
Treasurer: Miss E. C. Nye, Sturgis Library, Barnstable, Mass.
Annual meeting: September; other meetings decided by exec. com.

CHICAGO LIBRARY CLUB.

President: A. G. S. Josephson, John Crerar Library.
Secretary: C. R. Perry, Public Library.
Treasurer: C. A. Torrey, University of Chicago.
Meetings: Second Thursday of the month, October-May; annual election in May.

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

President: Camillo von Klenze, University of Chicago.
Secretary: A. G. S. Josephson, John Crerar Library.
Treasurer: C. B. Roden, Public Library.
Annual meeting: April; other meetings at call of council.

LIBRARY CLUB OF EASTERN MAINE.

President: R. K. Jones, University of Maine, Orono.
Secretary-Treasurer: J. H. Winchester, Stewart Memorial Library, Corinna.
Meetings: Quarterly, beginning January.

LONG ISLAND LIBRARY CLUB.

President: Miss M. W. Plummer, Pratt Institute Free Library.
Secretary: Miss M. S. Draper, Children's Museum Library.
Treasurer: Miss Mabel Farr, Adelphi College Library.
Meetings: First Thursday of the month, October, December, February, April, May.

NEW YORK LIBRARY CLUB.

President: Dr. H. M. Leipziger, Aguilar Library.
Secretary: Miss E. L. Foote, New York Public Library.
Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.
Meetings: Second Thursday of the month, October, November, January, March and May.

PENNSYLVANIA LIBRARY CLUB.

President: A. C. Thomas, Haverford College, Haverford.
Secretary: L. E. Hewitt, Law Library, 600 City Hall, Philadelphia.
Treasurer: Miss M. Z. Cruice, American Philosophical Society, Philadelphia.
Meetings: Second Monday of the month, Nov., Jan., Feb., March and May.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: George Stockwell, Westfield Athenaeum.
Secretary: Miss Ida Farrar, City Library, Springfield.
Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburgh.

American Library Association.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway St., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th General meeting: Boston and Magnolia, Mass., June 14-20, 1902.

BOSTON AND MAGNOLIA MEETING.

It has been decided that the general meeting of the American Library Association for 1902 be known as the Boston and Magnolia Conference. The opening date has been set as Saturday, June 14, in Boston. June 14 to 16 will be devoted to visits to libraries in Boston, Cambridge and elsewhere in the vicinity, under direction of the local committee of arrangements. On Monday, June 16, council meeting, preliminary board and committee meetings, etc., will be held at Magnolia, followed by an informal social session in the evening. The business sessions will be held at Magnolia from June 17 to 20, inclusive.

Magnolia is well known as one of the most beautiful of New England seashore resorts. It is 27 miles from Boston, and its natural attractions should make it a delightful setting for a conference that combines the features of a summer resort meeting with the advantages of a visit to a large city. The date chosen has made it possible to secure specially reasonable rates at the three largest Magnolia hotels (the New Magnolia, the Oceanside, and the Hesperus) which have been selected as headquarters.

Preliminary announcements regarding the conference will be issued about March 1.

COMMITTEE APPOINTMENTS.

Public Documents: R. P. Falkner, Library of Congress, succeeding R. R. Bowker, resigned.

A. L. A. PUBLISHING BOARD.

Library tract no. 4, on "Library rooms and buildings," by C. C. Soule, is now in preparation. It will be issued at the same price as the preceding numbers, viz., single copies five cents; or \$2 per 100 in lots of 50 or more.

State Library Commissions.

DELAWARE STATE LIBRARY COMMISSION:
 Miss F. B. Kane, librarian, State Library, Dover.

The commission has issued a circular regarding the travelling libraries which it is prepared to lend to local library associations, schools, clubs, granges, etc. Each travelling library contains 50 volumes and may be kept for three months, the usual provisions being made for guarantee, provision of suitable

quarters, etc. The commission defrays cost of transportation, but not local carriage.

WISCONSIN FREE LIBRARY COMMISSION: F. A. Hutchins, secretary; L. E. Stearns, librarian, Madison.

The commission has issued a serviceable little *Bibliography bulletin*, no. 1 (December, 1901, 4 p. O.), prepared with the co-operation of the School of History of the State University. It suggests historical reading useful in the work of the schools, and includes some 35 or 40 titles classed under broad headings.

State Library Associations.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas Clark, Law librarian, Library of Congress.

Secretary: Hugh Williams, Library of Congress.

Treasurer: F. E. Woodward, 11th and F streets, N. W.

The 59th regular meeting of the association was held at the Columbian University, Thursday evening, Dec. 12, at eight o'clock. The program consisted of an address by Mr. Herbert Putnam on the "Distribution of printed catalog cards by the Library of Congress."

Mr. Putnam prefaced his address with a brief résumé of the history of co-operative cataloging in this country, beginning with the suggestion in about 1850 made by C. C. Jewett, of the Smithsonian Institution. He then told of the difficulties in commencing the work. The differences of opinion of catalog experts in regard to the catalog rules to be adopted resulted in a compromise which, of course, was not altogether satisfactory to any one. The various sizes of cards used was also a troublesome question, but after a thorough canvass it was found that the 3 x 5 in. card was most universally used. In this connection he spoke of his many visits to library associations throughout the country to get their opinion, and to outline the plan and scope of the work. The library has not as yet adequate facilities for combining accuracy of work, promptness of delivery and the largest area of literature, but it is ultimately hoped that they will be provided, so that the success of the work will be assured.

In conclusion he showed how the libraries of Washington could co-operate in this work, and thereby the benefit to them and to the Library of Congress would be mutual.

The annual election of officers which followed resulted as follows: Thomas Clark, president; Henderson Presnell and W. D. Johnston, vice-presidents; Hugh Williams, secretary; F. E. Woodward, treasurer; Miss Josephine Clark, Miss M. A. Gilkey and C. K. Jones, executive committee.

HUGH WILLIAMS, *Secretary*.

Library Clubs.

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

President: Camillo von Klenze, University of Chicago.

Secretary: A. G. S. Josephson, John Crerar Library.

Treasurer: C. B. Roden, Public Library.

The first regular meeting for the season was held in the John Crerar Library, on Nov. 22d. The president of the society, Dr. Camillo von Klenze, read a paper on "Travels in Italy in the 18th century, before 1786." He said, in part:

"The 18th century like the 16th, is characterized by a great desire to broaden the horizon of intellectual life. Hence the travelling literature of that time is extremely rich. No country, however, attracted more attention than Italy. A glance at the bibliography in the book by D'Ancona, entitled 'L'Italia alla fine del secolo XVI.' Citta di Castello 1895, will show that the public of the 18th century took interest in the customs, the governments, the morals, the art, etc. etc. of Italy. A large number of books were put upon the market by Italian publishers adorned in some cases with expensive copper plates, which were meant to interest foreigners in the beauties of the various cities of the peninsula. Besides, many books appeared which described in detail the cities in Italy and the works of art which they contained. Lastly distinguished men, like for instance Addison, were fond of noting their impressions of Italy. Up to about 1750 all these records are characterized by incorrectness and narrowness of point of view. A book by Richard in six volumes, Paris, 1776, and another by La Lande in eight volumes, Paris, 1769, may be regarded as the first successful efforts to describe Italy to the cultured public of Europe. These authors too, however, lack the ability to furnish more than a dry, though fairly accurate statement. Soon after them, the emotional wave which swept over Europe enabled travellers to give more color to their recitals. But even then, virtually only the remnants of antiquity were adequately appreciated. This is true of many men, among whom we will only mention Goethe's friends Tischbin and Moritz, furthermore the German author Heinse. Goethe does not go beyond his predecessors. So great is the influence of Winckelmann upon him that he speaks intelligently only of antiquity, and then mentions with great enthusiasm Raphael and Michel Angelo, as do his contemporaries. He takes no interest in the middle ages, very little in the works of the Early Renaissance, and greatly exaggerates the merit of the Bolognese School. In all this he merely follows the taste of his age, as is shown in the works on Italian art by such writers as Rich-

ardson, London, 1722; Cochin, Paris, 1758; etc., etc."

The council reported that, in accordance with the decision at the meeting in Waukesha, it had appointed a committee consisting of Messrs. W. S. Merrill, C. W. Perley, and J. W. Thompson, to consider the question of founding a national bibliographical society, and to correspond concerning this matter with the non-resident members of this society, and others.

The council submitted the following memorial to be sent to the Committee of Education of the Louisiana Purchase Exposition Company:

"To the Honorable Committee on Education of the Louisiana Purchase Exposition Company, St. Louis.

"GENTLEMEN: The Bibliographical Society of Chicago, an organization founded to encourage and promote bibliographical study and research, having due regard for the great advances made in bibliographical research and studies in the United States, and being of the opinion that the widespread interest now manifested in bibliographical labors merits the attention of your Honorable Exposition Company, begs leave herewith respectfully to submit to your Honorable Committee the following proposal, namely:

"That your Honorable Committee recommend the appointment of a Commissioner of Bibliography for the Louisiana Purchase Exposition whose duties shall be:

"1, To have supervision and final control of all bibliographical publications that may be issued in connection with the Exposition, and to undertake, for his own part, the editing of a series of bibliographies of subjects relating to the Louisiana purchase, and the political, industrial and intellectual development of the territory concerned, and other subjects that may prove pertinent.

"2, To collect a complete set of all printed matter relating to the Exposition and to compile an accurate catalogue thereof.

"3, To arrange for an international bibliographical exhibit, with the idea of keeping the same intact after the close of the Exposition as a permanent bibliographical library.

"The development of public libraries during the last quarter century has been very remarkable, and it is with great satisfaction that this society learns of the plans of Mr. Frederick M. Crunden, the able librarian of the St. Louis Public Library, for a comprehensive exhibit showing the development and working of free libraries. Closely allied to the work of the more scholarly class of libraries is the preparation of bibliographical material and the pursuit of bibliographical investigation, the results of which are so manifestly of the first importance to the student engaged in research.

"It would be particularly striking to set forth the wonderful growth of that part of our country known as the 'Louisiana Purchase,' through a bibliographical presentation of the literature dealing with the history of that section. Such bibliographies, besides rendering distinct and valuable assistance to the historical student, would serve at the same time to indicate the present standpoint, methods and achievements of that important branch of scholarly research called scientific bibliography.

"The Bibliographical Society of Chicago, in submitting this proposal, begs to hope for full and careful deliberation of the same by your Honorable Committee, and ventures to add that it is prepared to render, through its properly constituted officers, any assistance which your Honorable Committee may desire in the furtherance of this or similar plans looking to the recognition by the Louisiana Purchase Exposition of a widespread and important department of scientific activity.

"Respectfully submitted, on behalf of the Society,

"CAMILLO VON KLENZE, *President.*

"AKSEL G. S. JOSEPHSON, *Secretary.*"

The recommendation of the council was adopted and the secretary was directed to send the memorial to the said committee and also to send copies of the same to other societies and institutions, asking them to endorse the plan.

The following new members were elected: Miss Mary M. Nelson, Knoxville, Tenn.; Messrs. G. F. Bowerman, Wilmington, Del.; L. H. Dielman, Annapolis, Del.; E. W. Dow, Ann Arbor, Mich.; E. G. Swen and A. J. Norton, Chicago.

AKSEL G. S. JOSEPHSON, *Secretary.*

CHICAGO LIBRARY CLUB.

President: A. G. S. Josephson, John Crear Library.

Secretary: C. R. Perry, Public Library.

Treasurer: C. A. Torrey, University of Chicago.

The December meeting of the Chicago Library Club was held on Dec. 12 at the public library. Mr. Josephson presided and about 35 members were present. Mr. F. M. Morris and Miss Bessie Goldberg were elected and Mr. J. J. McCarthy and Miss O. Goldberger restored to membership. It was reported that the finances of the club are in a satisfactory state, the manual is nearing completion, 15 copies of the union list have been sold so far, Miss Simpson has resigned owing to absence from the city, and special committees have been appointed as follows:

To consider and report upon the advisability of the club undertaking the compilation and publication of list, index or other similar work, etc., Mr. Merrill, Miss Lindsay, Mr. Gates, Miss Montross, and Mr. Swen.

On "vitalizing the relationship between the public schools and the public libraries of Chicago," Miss Ahern, Miss Elliott, and Dr. Holmes.

On library work at the county jail, Mr. Roden, Mr. Larson and Mr. Abernethy.

On home libraries work, Miss Dickey, Miss Hawley, and Miss Walker.

On program for January meeting, Miss Clarke, Miss Roper, and Mr. Parsons.

On program for February meeting, Miss Mabel McIlvaine, Miss Robertson, and Mr. Perley.

The program of the evening was a symposium of papers on some of the special libraries of Chicago.

Mr. Hugo S. Grosser, librarian of the Municipal Library, described the difficulties incident to the establishment of his library, and then outlined the scope of its work. The Municipal Library was created by an act of the city council in March, 1900. Its primary purpose was the collection of reports, documents, etc., pertaining to the municipal government of the city of Chicago, but this was extended so as to embrace other cities in the United States and foreign countries as well. The library is for reference only,

and of course open to the public. Active work was begun in June, 1900, and with no means on hand, success was necessarily very much retarded.

The library contains in all about 4000 volumes, representing: the city of Chicago, about 600 volumes; 117 cities in the United States, 2200 volumes; 67 foreign cities, 600 volumes; miscellaneous and periodicals, 600 volumes. A regular exchange has been established with all larger cities throughout the world, and it is expected that, in time, the Municipal Library will contain the printed documents of every city of note everywhere. Since February, 1901, a bureau of statistics has been connected with the library, and a bi-monthly publication (it will be made monthly next year) has been issued under the name of *City of Chicago Statistics*, which is being supplied free of charge to city officials, libraries, universities, colleges, and individuals interested in municipal government. This library is crowded into a little room in the city hall. The staff consists of three people. The volumes collected are already much used by every department of the city government, by the council committees by the special civic commissions, and by the university students.

Miss Jessie L. Forrester read an interesting paper on the library of the Art Institute which had its beginning in 1879, when an entrance fee of two dollars was imposed upon every student to be expended for the purchase of books on art. Upon these matriculation fees the library has existed with occasional gifts added. Recently Mr. M. A. Ryerson has provided a new and beautiful building completely equipped as a home for the library. The Ryerson Memorial Library, as it is now called, is exclusively an art library, and primarily for the students and members of the Art Institute, but practically free to any serious student of art. About 2500 volumes are on the shelves and about 700 are for circulation. All accessions whether by gift or purchase have been very carefully selected. A valuable acquisition was Muybridge's great work on "Animal locomotion," eleven large volumes costing \$600. The Pearson's Collection of carbon photographs, valued at \$30,000, overshadows all other single acquisitions to the library. These photographs, commonly known as autotypes, were published by Braun & Co., of Paris. They number more than 16,000 subjects and include reproductions of the paintings, drawings and sculptures of the great masters. Heretofore a simple classification designed by the librarian has met the needs of the library, but now that the library has a new building and the accessions promise to be more rapid it has been about decided to adopt the Dewey classification with modifications.

Miss Evelyn H. Walker entertainingly sketched the work of All Souls library which

is a department of the educational section of All Souls Church. It is a free circulating neighborhood library with only 1800 volumes on its accession book, which are replenished annually by a book sociable. The study classes of the church contribute to the support of the library. Some few books are purchased each year and an attempt is made to provide books correlated to the work of the study classes and Sunday-school. An endeavor is also made in the direction of securing and circulating books of travel, science, history, etc., which supplement the work of the public schools of the neighborhood. Besides doing the local work referred to, the library receives cast-off books and magazines from any sources and sends them out to Indian and colored schools of the west and south, to isolated prairie homes, to small churches of every degree of orthodoxy and heterodoxy. The establishing of the public library delivery station within a block of All Souls has diminished the latter's circulation but slightly. This would seem to justify the belief that there is a place for the small library where the librarian may come into personal friendly advisory contact with the children.

Mr. Earl G. Swem, who but recently assumed charge of the Armour Institute of Technology library, was heartily greeted by the club. His remarks were brief, as has been his experience at Armour, but they were interesting and instructive. The library is primarily for the students of the Institute but is also open to the general public as a reference library. It has about 15,000 volumes and is strongest in engineering works. The books are circulated among the students and instructors to some extent. The department system is used but little. The librarian conducts a course of lectures on bibliography for the benefit of the students. The library contains many complete sets of literary and scientific periodicals and is fully equipped with indexes for use in the reference work.

Miss Mary E. Downey then enlightened us as to the Field Columbian Museum library which, like all other departments of the museum, had its origin in the World's Columbian Exposition, with the special collections of the department of mines and mining and the department of ethnology as a nucleus. It is designed for reference purposes only and is confined to the literature of the various arts and sciences illustrated in the museum. It contains many valuable scientific and technical works which may be consulted by the general public. Students are given access to the book shelves. There are 28,272 books and pamphlets in the library and they are classified according to a decimal system. The departmental system is used. The departments especially emphasized are anthropology, botany, geology and zoology. In the reading room 123 scientific and technical peri-

odicals are currently received and made available for public use. In order that the curators may avail themselves in the most convenient manner of the scientific literature on the shelves of other Chicago libraries, co-operative arrangements have been made, as far as possible, by which their books can be used at the museum. The University of Chicago library extends many courtesies and is extensively used by the curators. The John Crerar Library presents a duplicate printed copy of its card catalog, and buys scientific literature especially desired by the museum. The Chicago Public Library allows its reference or other works to be drawn out upon requisition of the museum librarian, and delivers them at the Hyde Park station. The three largest libraries of the city are thus in effective co-operation with the museum, avoiding unnecessary duplication of their books and giving the museum library opportunity to develop along its special lines.

After a short discussion the club adjourned. The January meeting will be a mild celebration of the tenth anniversary of the first regular meeting of the club which was held Jan. 8, 1892. CHESLEY R. PERRY, *Secretary*.

NEW YORK LIBRARY CLUB.

President: Dr. H. M. Leipziger, Aguilar Library.

Secretary: Miss E. L. Foote, New York Public Library.

Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.

A meeting of the New York Library Club was held in assembly hall of the Board of Education building, 59th street and Park avenue, on Jan. 9, 1902, at which about 200 were present. The meeting was called to order at 3.15 with President Leipziger in the chair. Minutes and report of executive committee were read and approved, and a motion was carried that the usual annual dinner be held. Treasurer's report showed a balance of \$360.21. A letter was read from the Long Island Library Club inviting to its meetings members of the New York Library Club who should care to attend, and stating that "those members who particularly desire to have notices sent them previous to each meeting may have this done by applying to the secretary of Long Island Library Club, Miss Miriam Draper, Children's Museum Library, Bedford Park, Brooklyn." A letter was also read from the secretary of the American Library Association announcing the dates of the Boston and Magnolia conference, June 14-20.

The secretary announced the receipt from the Chicago Library Club of its "List of serials in libraries of Chicago and Evanston," and also requested note of any changes in address of members and names of non-members interested to receive notices of meetings. The president then announced that in response

to the invitation of the Grolier Club a special meeting will be held Feb. 13, at that club's rooms, 29 East 23d street.

Opening the program of the afternoon, Dr. Leipziger spoke briefly on "Possibilities of library expansion in connection with the Department of Education." He described the provision made by the Board of Education for libraries in the public schools and the great opportunity for their usefulness there, and specially in connection with the evening schools. He explained that the four public evening reading rooms which had been opened last summer in school buildings were closed Dec. 31 on account of lack of appropriation for their support. It is hoped they may be reopened later.

Then followed a general discussion on the question of classification of fiction by subject and by value, which was opened by Miss Rathbone, of Pratt Institute Library. She spoke of the necessity of such fiction classification for librarian and for borrowers, and described some of the work of "evaluation" done in connection with the Pratt Institute Library School.

Miss Rathbone was followed by Mrs. Fairchild, of the New York State Library School, who said that we were under obligations to wrestle with the fiction question until we mastered it. It is not impossible to do that. She advocated the division of fiction on the shelves into three classes—stories, standard fiction, historical fiction—each arranged alphabetically. This arrangement should be supplemented by book notes in each book, and short lists on such subjects as ghost stories, Irish stories, dog stories, etc. She also laid great stress on the importance of having a reference attendant on duty at the fiction shelves.

Mr. John Thomson, of the Philadelphia Free Library, was then introduced. Mr. Thomson's idea on the subject was that some interpretation should go forth with our library reports and statistics, showing the value of the large per cent. of fiction circulated. We should endeavor to convince the city fathers that we are carrying on the educational idea by showing the solid character of reading that is done under the name of fiction. For convenience of comparison, and for the sake of economy, the classification should be uniform. He advocated possibly 10 divisions as historical, instructive, etc., and recommended for the consideration of the American Library Association two questions, viz., Can fiction be classified and in what classes, and, Should librarians exclude fiction less than a year old, as suggested by Mr. Putnam?

Continuing the discussion, Mr. Gaillard described a classification which did not interfere with shelf arrangement, being indicated by colors of book covers, bright red, for instance, lending attractiveness to standard fiction.

Miss Kelso thought that in regard to library reports, some interesting anecdotes and other matter might interpret the statistical tables to the considerable enlightenment of boards of apportionment and other interested readers. Mr. Bostwick said: "Let us have a subject list of prose fiction, and let us mark our cards so that they will tell something of the character of the circulation, but leave the shelves alone. We need a classification on cards, not on the shelves."

Mr. Hill thought it unnecessary to apologize at all for a large per cent. of fiction in the circulation.

After some further discussion a motion was carried that a committee be appointed to co-operate with the Keystone State Library Association in further consideration of this important question.

The president reserved announcement of the committee.

ELIZABETH L. FOOTE, *Secretary.*

Library Schools and Training Classes.

DREXEL INSTITUTE LIBRARY SCHOOL.

PERSONAL NOTES.

Miss Mary Krichbaum, class of '01, has been engaged to organize the public library of Huntington, W. Va.

Miss Emma C. Wells, class of '97, is organizing the library of the Tuskegee Institute, Tuskegee, Ala.

Miss Edith F. Pancoast, class of '01, has been engaged as temporary cataloger in the State Library, Augusta, Maine.

Misses Beulah S. White, Charlotte K. Hannum, Amy Keith, Julia E. Stubbs, Hetty S. Johnston, Ruth Palen, graduates of the school, have been engaged as temporary catalogers in the Library of the University of Pennsylvania.

NEW YORK STATE LIBRARY SCHOOL.

The course on library bindings by W. R. Eastman is being somewhat modified this year by an increased emphasis on small libraries and by the addition of numerous practical problems.

In the selection of books course a change has been made in assigning to each student two books which he reads and for which he leads the discussion before the class. This plan adds thoroughness and definiteness to the class work and also stimulates discussion by other students. The set of printed readers' book notes for 1900-01, on the same lines as the set for 1899-1900, is now ready for distribution and can be secured at the rate of 36 cents per set of 100 cards. Postage is four cents. The set covers in the main books published within the last year or two but includes also Parkman's works, Bos-

well's Johnson and Carlyle's Sterling. The notes are printed in such form as to be available for the card catalogs, as well as for their primary purpose—tipping into the book itself opposite the front cover. They are intended to be of practical service to the reader in helping him to decide whether he wants to take the book.

Miss Ono M. Imhoff (N. Y. 1898) paid a short visit to the school on her way from Newark, N. Y., where she has been engaged for the past year in organizing the public library, to Bloomfield, N. J., where she will be librarian of the Jarvie Memorial Library.

Miss Anna R. Phelps (N. Y. 1901) spoke to the school Friday, Dec. 20, on the Glen Haven Public Library which was started through her efforts. The talk illustrated in an interesting way the peculiar needs of a little library.

The 15th anniversary of the school, which opened Jan. 5, 1887, was kept on Saturday evening Jan. 4 by a skating party at the home of Mrs. Fairchild.

SALOME CUTLER FAIRCHILD.

PRATT INSTITUTE LIBRARY SCHOOL.

A report of the work of the library school for the year ending June 30, 1901, is included in the annual report of Pratt Institute Free Library for that period (*In Pratt Institute Monthly*, December, p. 43-47). There were 73 applicants for the first-year course, of whom 43 passed the entrance examinations and 20 were selected for the class. Eleven states were represented. The special lectures, library visits, reading lists prepared, and other features of the class work are noted. In the historical course three students were entered; and there were four in the special course for children's librarians. In the latter course one of the "best means of developing the sense of responsibility, the faculty for management and discipline, and the ingenuity and resourcefulness of the students" was found in the evening work in the children's library.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL.

The university library, because of its close connection with the library school, has been made a depository for the printed cards issued by the Library of Congress.

The course in public documents, which for the past three years has been a special feature of this school, will hereafter be opened to students in the College of Literature and Arts, and a part of the instruction will be given by the Department of Economics. Dr. Hammond will treat of the documents from the specialist's point of view, while Miss Mann will, as before, treat of the reference and cataloging features. In this connection, the Department of Economics will so arrange its course in statistics that library students

may take the general without the technical and mathematical parts.

Further requests from the College of Literature and Arts have been granted to open to their students the course in Reference, Selection of books, History of libraries, and Bookmaking.

The course in Bibliography, given by specialists in the university and the towns, is proving more satisfactory than ever this year. Lecturers use the Decimal classification for an outline, and base their selection of books upon the needs of a 10,000 volume public library. They emphasize the principles of selection, which change little, give a critical estimate of leading authorities, and illustrate by specific books. Where closely related subjects are represented by several departments, the college including them is asked to assign some one man to speak of the group. For example, the professor of history is presenting the Political Science group, of history, economics, and public law and administration. The group system secures a more practical proportion of books than was gained from separate departments.

The course has thus far included Bibliographies of bibliography, General bibliography, Library economy, General periodicals; Philosophy, by Head Professor Arthur H. Daniels; Religion, by Rev. J. E. Wilkin-son, of Emanuel church, Champaign; Roman-ic languages, by Head Professor Geo. D. Fairfield; and Political science, by Acting Head Professor of History, D. E. Spencer.

The library school each month prepares for the College of Engineering a list of articles of interest to engineers, which have appeared in the current general magazines. A list of interest to the classical departments is also posted in the College of Literature and Arts once a month. The class in Reference includes a study of current events, and each week a summary is prepared for discussion in the Department of Economics.

Much indexing is done by the various departments of the university, and the library school assists whenever the practice is such as to be of value to the students, in becoming familiar with the subjects assigned by the specialists.

The seniors continue to have entire charge of the branch of the Champaign Public Library, opening it every afternoon.

KATHARINE L. SHARP, *Director*.

WISCONSIN SUMMER SCHOOL.

The summer school for library training, conducted by the Wisconsin Free Library Commission, under the auspices of the University of Wisconsin, will hold its eighth annual session during July and August, 1902. The regular course will begin on Wednesday, July 2, and close on Friday, Aug. 26. The supplementary course, for more experienced or advanced students, will extend from Mon-

day, July 7, through to Friday, Aug. 1. The document course will begin on Wednesday, Aug. 6, and close Wednesday, Aug. 27.

A fund for lectures has been provided by J. D. Witter, of Grand Rapids, making it possible to secure specialists to speak on special lines of work. The school will be under the direction of Miss Cornelia Marvin. Miss Adelaide Hasse, chief of the documents division of the New York Public Library, will conduct the course in public documents. Miss Julia Elliott, librarian of the Marinette (Wis.) Public Library, will act as assistant instructor in library economy. Lectures and instruction will also be given by professors in the University of Wisconsin and by officers of the state commission. A general library meeting will be held Aug. 28-29. Full information regarding admission requirements, details of courses, etc., may be had on application to Miss Cornelia Marvin, Wisconsin Free Library Commission, Madison, Wis.

Reviews.

LIBRARY OF CONGRESS. Calendar of Washington manuscripts in the Library of Congress; comp. under the direction of Herbert Friedenwald, Ph.D. Washington, 1901. 315 p. 1. O.

It is gratifying to note that the Library of Congress has recently published some valuable catalogs of its treasures. Among those which have already appeared we have a "Check list of American newspapers," "A list of maps of America," and the present "Calendar of Washington manuscripts." This volume is divided into two parts, the first containing such manuscripts as were written by Washington himself or under his authority (pp. 9-102), while the second is devoted to such documents as were received by him (pp. 105-184). Wherever the writings of Washington have been published, references are made to the publications in which they appear and such papers have been indexed with less fulness than those not so reproduced. Among the more notable documents contained in this work are the Virginia Articles of Association of 1770 (of which the Library of Congress possesses six copies), the series of papers relating to General Sullivan's expedition against the Susquehanna Indians in 1779, and the letters relating to the founding of the city of Washington. Of those received by Washington not the least interesting are those dated from 1778-1782, which give insight into the means which he employed in obtaining information respecting the movements of the enemy. The work contains a very full index of names (filling more than a third of the volume) (pp. 187-315),

which enables one to readily refer to any of the calendared papers.

The introduction states that "In addition to the documents comprised in this calendar the library has recently acquired the letter books of Robert Morris which contains copies of 73 letters from that statesman to Washington, 68 of which were written during the years 1781-1784. The library possesses also the large Toner collection of transcripts of Washington's writings, as well as the transcripts of letters and documents written by Washington during the Revolutionary war, collected by Peter Force, and obtained by the Library of Congress in 1867." No reasons are given why this additional material was not incorporated in the present work.

This work is printed on good paper and in a handsome and convenient form. We are glad of the assurance that the future publications of the library, not administrative, will appear in uniform character with this one. G. W. C.

Library Economy and History.

GENERAL.

LIBRARY ASSOCIATION OF AUSTRALASIA. Transactions and proceedings . . . at its second general meeting, held at Adelaide, Oct. 9, 10, 11, and 12, 1900. Adelaide, C. E. Bristow, Gov. printer, 1901. 86+114 p. O.

The delay in the publication of these proceedings is apologized for by the editor, as being due to "a variety of untoward circumstances." The conference was reported in the *LIBRARY JOURNAL*, December, 1900, p. 737-739. In addition to the papers, attendance list, and summary of proceedings the "Transactions" include programs and catalog of the loan exhibition held in connection with the meeting.

LOCAL.

Alliance (O.) P. L. (Rpt.—year ending Sept. 1, 1901.) This is the first report of the library since its reorganization from a public school library to a free public library. The reorganization was decided upon in the summer of 1900, and the plan followed was adopted after visits by the librarian to the Case Library of Cleveland, Oberlin College Library, and other libraries. It included classification by the D. C., preparation of a dictionary catalog, card shelf list, new charging system, etc. The library was opened to the public Sept. 15, 1900. It now contains 2527 v., and circulated 16,911 v., or a daily average of 58. There are about 900 borrowers. Percentage of adult fiction is 39.28, of juvenile fiction, 47.63. "The fiction percentage is high, owing mainly to our poverty of recent books in other classes." Free access is given to the shelves.

Atlantic City, N. J. The board of trustees of the public library, now in process of organization, has been appointed by Mayor Stoy as follows: T. J. Dickerson, A. M. Heston, Dr. J. B. Thompson, Rev. J. H. Townsend, and Mrs. A. B. Endicott.

Brooklyn, N. Y. Pratt Institute F. L. (Rpt.—year ending June 30, 1901.) This interesting report constitutes the greater part of the *Pratt Institute Monthly* for December, 1901 ("Library number"), and will not appear in small pamphlet form as heretofore. The principal statistics for the year are as follows: Added 5920; total 74,979. Issued, home use 238,208 (fict. 63.2 per cent.). New registration 7747; total registration 60,639; total active membership (estimated) 39,913.

In its presentation of varied activities and suggestions for increased usefulness this report is of marked interest and should be read in full. Any summary is necessarily unsatisfactory. Of the total home circulation 33,847 v. were issued to borrowers under 14 years of age; and 15,255 were drawn from the open-shelf collection of about 2000 v. It is recommended that the entire delivery room be equipped as an open-shelf room, thus giving about 2500 volumes additional (or about 7500 in all) accessible to the public.

The large demand for advertised or popular books was evidenced by the sale of 4865 reserve postal-cards, a larger number than ever before. Miss Plummer points out that this reserve system means "the retirement from circulation for 24 hours (sometimes more) of the books reserved, and the failure, therefore, of each book to do the duty possible to it if kept in constant circulation," and suggests that the reserving of books be somewhat discouraged by an increase in the price of reserve cards, which have been sold at a lower price than that set by most libraries.

There is an interesting report of the work of the information-desk, as carried on by Miss Winifred Taylor, noted elsewhere in this issue.

Reference attendance at the main library and the Astral branch is given as 37,803, with a total of 16,265 v. issued for consultation from the stacks; but this, of course, is an inadequate record of the reference use. "Account has been kept recently of the number of pamphlets called for from the stack, and we find the number increasing each month. An unusual demand for the Smithsonian publications is attributed by the department to the printed analytical catalog-cards furnished by the Publishing Section of the American Library Association." Accessions of special importance to the reference, art reference and general collections are briefly noted. "Among the most interesting accessions of the year were 38 chap-books, published in

Bath, Bristol, and London, in the early part of the century. They were bought to illustrate the lectures on the history of literature for children; also about 50 old-fashioned books for children and young people, published between 1748 and 1842. Some books printed in the Confederate States during and immediately after the Civil War were purchased at auction, as having historical interest, while an extra set of the *International Studio* was bought for circulation, and duplicates of the last 10 volumes of the *LIBRARY JOURNAL* for class-use in the Library School."

Especially interesting is the report of the work of the children's department, where numerous exhibitions have been held, and reading aloud and story-telling have enlivened many evenings. The classifying and cataloging of children's books is now handled in this department, as the books thus become more quickly familiar to the assistants, and the children's catalog is simpler in its subject-headings. Regular visits are made to the schools by the children's librarian, "to make sure that teachers and children know of the library and what it can do for them." Many suggestive points are brought out, and the record should be read in full by all interested in library work with children. The work of the library school is also fully reported upon.

Brooklyn (N. Y.) P. L. (3d rpt.—year ending Feb. 20, 1901.) As this report appears about ten months after the close of the year covered, most of the information given has already been noted in these columns. The statistics presented are as follows: Added 13,329; total 118,011 (of which 50,521 belong to the Schermerhorn st. branch, formerly the Library of the Union for Christian Work, and 16,874 are in the Bedford branch). Issued, home use 541,013; lib. use 94,411. The classified circulation is given only for total issue, and the percentages of home use are not stated. Of the total issue 234,530 v. were fiction, and 161,804 were juvenile books. New registration, 12,262; total registration, 65,745.

At the time of this report there were 11 branch libraries in operation and four branches in preparation. Summarized reports are given for each branch, and for the travelling library department. The report was drawn by Mr. Bostwick just before his resignation to become chief of the New York Public Library Circulating Department, and it closes with a cordial valedictory and a reference to the remarkable growth of the library system, which in two years had expanded "from two to 15 branches and from an annual rate of circulation of a few thousand to more than a million."

Chicago P. L. The T. B. Blackstone Memorial Branch Library, to be given by Mrs. T. B. Blackstone, will be erected at Washington avenue and 49th street.

Cincinnati (O.) P. L. The library trustees on Dec. 19 adopted a resolution providing "that the president appoint a committee of three to prepare such legislation looking to the providing of a new building for the main library and such buildings for branch libraries as may be deemed advisable." The committee was named as W. T. Porter, Drausin Wulsin, and Robert West.

Connecticut State L. Hartford. The library has adopted a new bookplate, designed at the request of Mr. Godard, the librarian, by W. F. Hopson, of New Haven, designer of the Yale and other bookplates. The bookplate is oblong, 4 by 2½ inches in size, with the design in the upper half. In the center of the design is the seal of the state, surrounded by a band bearing the word "Connecticut." At the left of the seal the charter oak is presented, firmly rooted in front of the state house erected in Hartford in 1720. At the right of the seal the east front of the capitol is presented and beneath the buildings at the right and the left are rolls of manuscript indicating the constitution or "fundamental orders" of 1639 and the charter of 1662.

Dayton (O.) P. L. and Museum. (41st rpt.—year ending Aug. 31, 1901.) Added 4038; total 49,873. Issued, home use 138,632 (fict. and juv. fict. 72.6 per cent.); ref. use 52,946. New registration 2313; total registration 13,665. Receipts \$17,466.89, expenses \$14,588.78.

The circulation during the period covered was greater than that for any year previous to September, 1897. Use of books in the library, however, has apparently declined in the past two years. "This apparent falling off is coincident with the attendance, in the reading room, of a reference assistant, whose special duty it is to wait upon the students. The assistant devotes himself to finding the exact books required, to answer the searcher's questions, and, with his more special knowledge of the resources at hand, fewer books are taken down at a hazard of answering the purpose than was the case when the student was obliged to wait on himself alone." It is also pointed out that for a large amount of reference use no record is practicable. The fiction percentage was reduced 2.3 per cent, during the year—largely owing to the percentage of classed books read from the school department and vacation branches.

An interesting experiment was tried at the close of the school year, when the school library was broken up into four collections, and placed at each of four districts, situated at a distance of a mile or two from the main library. Several hundred volumes of fiction and classed books for adults were added to the collections and the whole, under the charge of a teacher belonging to the district, was thrown open to the public for two after-

noons a week during the summer. The average issue per afternoon was 114 books; 297 new borrowers were added. Sixty-one per cent. of the books taken were for adults, and less than 65 per cent. of the books read were fiction and juvenile fiction. "Two of these district branches (each two miles from the main library) will be continued as neighborhood libraries for their respective localities. They will be open one afternoon a week to the public, with a collection of several hundred volumes added to by weekly deliveries of new books from the main library."

In closing her report Miss Doren thus states the controlling aim and method of the conduct of the library:

"The library is not only seeking to extend its general usefulness as a distributor of pleasant books for home reading, but it is increasing the actual intensive use of books for study among all classes of people. A very great proportion, perhaps the most important proportion, of this work is done within the walls of the library itself, where all the tools of the student are conveniently at hand and the studious atmosphere prevails. That the character of its work is deepening, and that the grasp of the needs, conditions and ideals of the community is becoming more real, we believe to be a fact. Though not wanting in the visible proofs of usefulness and progress, the work of the library is necessarily a quiet one. Without the appearance of haste, but without rest, it must ever be sympathetic to the desires of the people; persuasive, not didactic in method, and, above all, through the selection of its books and the manner of bringing them to the notice of readers, it must mold ideals while it satisfies needs."

The library has issued two attractive Christmas book lists, one for adults and one for children, recording titles in varied classes of literature recommended by the members of the library staff, and including many older books as well as current ones.

East St. Louis (Ill.) P. L. A systematic effort was made by the librarian at the beginning of the reading season to arouse an interest in the library among the workingmen of the city. The city is a large manufacturing center, and in consequence a considerable per cent. of the population is employed in skilled labor. To reach this class a small printed slip, setting forth a few facts concerning the library, was prepared and several thousands circulated through the pay envelopes of a number of the large employers of labor.

Although too early as yet to judge of the net results of this campaign, from the results as known so far there is no reason to doubt but that they will be gratifying.

Madison (Wis.) P. L. It is planned to open a children's room at the library, and the

members of the Madison Women's Club have been asked to contribute \$100 toward the fund of \$500 necessary for its equipment.

Mount Vernon (N. Y.) P. L. The long disagreement in the Mount Vernon board of education regarding a site for the \$35,000 Carnegie library building was settled on Dec. 17, when it was voted to purchase for \$16,000 a site on South First and South Second streets, between First and Second streets. The site is a central one, and seems generally satisfactory.

New Haven (Ct.) F. P. L. (Rpt., 1900.) Added 5824; total 52,033. Issued, home use 395,284, of which school use is estimated as 6000 (fict. 50 per cent.; juv. fict. 20.2 per cent.). New borrowers 8484; total borrowers 16,678. Receipts \$16,191.60; expenses \$16,177.89.

A re-arrangement of the fiction shelves was made in May, to allow more room; but the library quarters are still overcrowded. Small collections of books have been placed in two of the local schools.

Nashville, Tenn. Carnegie L. On Dec. 5 the incorporators of the Howard Library, at a largely attended meeting, voted to transfer all the property of that association to the Carnegie Library, to be established through the gift of \$100,000 from Andrew Carnegie. The Carnegie Library has been duly chartered and all plans for its development promise to be smoothly and speedily carried through. A site has been secured that will be deeded to the city when the time is ripe, and the appropriation of the city council is purely a matter of form, as that body has voted unanimously in favor of the library. The transfer of the Howard Library is made on condition that the property "be kept available for free public library purposes"; that the library building now contemplated "be constructed within a reasonable time," that the Carnegie Library carry out the contracts now existing between the Howard Library and its cardholders; and that the new building shall "fittingly perpetuate the memory of M. H. Howard." With the passing out of existence of the Howard Library its quarters will be occupied and its work carried on by the Carnegie Library until the new building is completed. The Carnegie Library board is composed of directors of the Howard Library and three members appointed by the city council.

At the final meeting of the Howard Library incorporators a short report was presented, showing that since the opening of the free circulating department 3219 cards have been issued, and an average of 300 books have been drawn daily. The library contains about 1200 v. Of these only about 7000 are available for circulation, the others being reference

books. 47 periodicals are subscribed for and 10 presented.

New York City. Carnegie libraries. On Dec. 26 the city Board of Estimate adopted formal resolutions of thanks to Andrew Carnegie for his munificent gift of \$5,200,000 for 65 branch library buildings for New York City. After reciting the terms of the gift and its acceptance, the board "in the name of the citizens of New York," extends to Mr. Carnegie "the sincere thanks of the municipality, and commends his action as an important event in the progress of civilization and education in our city, which will mark an epoch in the enlightenment of our citizens and offer much needed opportunities for the higher education of the youth of the city."

New York P. L. A bill was introduced into the state legislature on Jan. 1, authorizing an increase in the number of library trustees from 21 to 25, so that the following officials of the city may be ex-officio members of the board: the mayor, comptroller, and president of the board of aldermen. Under this arrangement the municipality will have an adequate representation on the board of governors.

At the December meeting of the trustees George L. Rives presented his resignation from the office of secretary, in view of his appointment as corporation counsel for the city. Mr. Rives continues as trustee. A resolution was passed naming seven residents of Staten Island to act as an advisory committee in the selection of sites for the Carnegie libraries for Staten Island. They are George Cromwell, John M. Carrere, G. A. Irving, A. K. Johnston, Walter C. Kerr, Ira K. Morris and De Witt Stafford.

At the January meeting of the board Andrew Carnegie was elected a trustee, succeeding Daniel Huntington.

The Riverside branch has removed from 261 West 69th st. to 230 Amsterdam ave., near 70th st., where it will occupy the entire second floor of a building about 25 x 90 feet. This library, which reaches a crowded tenement district, was originally established by the Riverside Association, a settlement society, and was transferred to the New York Free Circulating Library in 1897.

Newark (N. J.) F. P. L. A new library sub-station was opened the first week in December in the Morton street school, and over 90 new cards were issued to pupils in the first two days.

Norwich, Ct. Otis L. (Rpt. — year ending Aug. 31, 1901.) Added 1626; total 26,317. Issued, home use 88,418 (fict. 55.90%). New registration 787; total registration 10,500. Receipts and expenses \$6629.69.

A decrease of 2699 in books issued is noted, mainly in the line of work with the schools, which appears to have reached its limit of growth. The reduction of the book purchase

appropriation is a serious difficulty, and affects all classes of readers by limiting the library's effectiveness. The more important accessions of the year are noted, and reference is made to the prompt treatment accorded public documents of special interest. More than half of those received during the year have been cataloged on receipt, and placed on the shelves in the classes to which they belong. "For example: a report on civil affairs in Porto Rico and Cuba issued by the War Department in 1900 forms vol. 7 of House documents of the first session of the 56th Congress. Instead of burying it in this Congressional series, we place it among the books in the library descriptive of Cuba and Porto Rico, and place in the card catalog a subject card for each island. This method of treating government publications requires careful discrimination in view of the overcrowded condition of the shelves, but results in making the more important publications readily available." It is suggested that free access, now granted to the fiction shelves, might be extended to other departments; "the custom is a growing one, and in many respects convenient and satisfactory."

Passaic (N. J.) P. L. Plans submitted by Jackson, Rosecrans & Canfield, of New York, have been chosen for the Jane Watson Reid Memorial Library, to be given as a branch library for the district of Dundee, by Peter Reid, of Passaic. Construction will begin in the early spring. The building will be three-storied, including a basement above the ground level, with a rear stack room, circular in plan. There will be a children's room, assembly hall, and all the features of an up-to-date and thoroughly equipped branch library.

Peoria (Ill.) P. L. (21st rpt. — year ending May 31, 1901.) Added 5000; total 72,133. Issued, home use 174,945 (fict. 45.74%; juv. fict. 25.16%). New registration 3838; cards in force 7519. Receipts and expenses \$17,388.80.

Through the small selected libraries placed in nine public schools, there were circulated 23,163 v., being 13¼ per cent. of the total issue and an increase of nearly 50 per cent. over the school issue of the preceding year. The total home circulation shows an average of 3½ vol. to every inhabitant of the city.

Raleigh, N. C. Olivia Raney L. The annual meeting of the trustees was held on Dec. 9. Since the opening of the library on Jan. 24, 1901, about 550 v. have been added, making a total of 5411. There has been an average daily attendance of 50 persons in the reading room; and 34,829 v. were issued for home use (fict. 64%), being a daily average of 135. There are 2195 borrowers, of whom 506 are under 18 years of age.

The library derives its income from rental of parts of its building, amounting to \$857 for a period of ten months. "The necessary ex-

penses during that time amounted to \$1739.55, including the purchase of new books, and the deficiency has been supplied by the generous founder." A strong plea is made for a city appropriation of \$125 per month.

At a meeting of the city council on Jan. 3, the sum of \$100 per month was appropriated for library maintenance.

Richmond, Va. Carnegie L. On Dec. 10 the ordinance for the management of the Carnegie Library, passed by the city council on Dec. 2, was accepted by the board of aldermen, and on Dec. 14 was signed by the mayor. The ordinance was opposed by a numerous body of citizens, in favor of a plan whereby the board of trustees should consist of one alderman, two councilmen, and six citizens. The plan adopted provides for a board of two aldermen, three councilmen, three citizens and the city superintendent of schools. It is looked upon as meaning that the library will be controlled by politics, and there has been much dissatisfaction at its adoption. The *Richmond Dispatch* said editorially prior to the final vote upon the matter, that it "would open the way for the directing authority to pass at any time into the hands of a political ring, and for playing the position of librarian as a football of favoritism. It would clear the field for all sorts of political jobbery and the exercise of all sorts of pressure, and at the very least, leave us in constant danger of the subordination of the question of competency in electing a librarian to that of personal popularity." The ordinance, however, is now law, and the outlook for the library is regarded as at least questionable. Several candidates for the post of librarian are named, the most prominent being W. M. Turpin, president of the board of aldermen, and Carlton McCarthy, city accountant.

San Francisco (Cal.) F. P. L. The attractive branch library building at Fourth and Clara streets, given to the city by Mayor J. D. Phelan, was dedicated on the evening of Dec. 16. The building has a frontage on Fourth st. of 56 feet, and is nearly square. It is built of pressed brick and terra cotta, while the fixtures, including cases, desks, tables and chairs, are of solid oak. In the basement there is a large room which is to be utilized as an auditorium and reading room. The building is lighted by electricity.

Sandusky, O. Carnegie L. Despite the presentation of a legal opinion from the city solicitor that their proposed action was illegal, the city council on Dec. 16 voted to make an appropriation of \$1500 to the library association, or one half the sum of \$3000 that it is pledged by ordinance to appropriate annually for library maintenance. The ordinance in question was passed to secure the \$50,000 library building offered to the city by Andrew Carnegie; and its validity is now questioned on the ground that the library is managed by a "close corporation" and that

the city has no voice in the application of the funds it grants. The city solicitor bases his opinion mainly upon the fact that the charter of the library association provides for the "establishment of a free library, the books of which shall be accessible to its members," phrasing which does not accord with the provision of the state law regarding city support of "free public" libraries. He says: "This association according to the provision above quoted does not make the library a public one, it omits the word 'public' and provides that, 'the books of which shall be accessible to its members.' Of course the managers may perhaps at their own volition permit all persons a free access to the books of the library, but it is within their power at any time to withhold and deny such rights to the public. We must judge the character of a corporation by the terms and conditions of its charter, and I therefore hold that this library association, as a corporation, is not a free public library. The city as a corporation in its corporate capacity has no property rights in this institution; neither has it anything to say as to the conduct and control of the institution. It is powerless to curtail expenses, or to make by-laws, rules or regulations in conducting and managing the same. It has absolutely no voice neither directly or indirectly as to conducting the institution except as to the levying of taxes, which the people are called upon to pay."

The matter seems to be largely the result of dissatisfaction of the public with the attitude of the library directors, and it is hoped that it may be smoothed over. The *Sandusky Journal* says: "The opposition to the management has crystallized during the past two or three weeks in a demand that the city shall not be taxed to support the library unless the city, as a corporation, has something to say about the expenditure of the funds. In some instances this opinion is held by persons who are friendly to the institution, who are anxious to have its usefulness extended to the widest possible limits and who have nothing but words of praise for those now in control. They urge that it is bad public policy for the people to be taxed and have absolutely no voice in the expenditure of the money collected from them.

"It is contended too, that if the people generally feel that they have an ownership interest in the institution, they will be more apt to take kindly to it, to use it more freely and derive greater benefits. There is something in this contention. The great mass of the people like to feel that they are part owners of public institutions and that they are in some sense responsible for the welfare of the same. It seems to us that if the library association and the people who are not members of the same would get a little closer together the whole difficulty might be solved. It will not do for the people—those who are making the complaints—to carry their prejudices

into the matter and it will not do for the library association to take a high-and-mighty ground."

Seattle (Wash.) P. L. The city council on Dec. 19 decided to submit to popular vote an amendment to the charter for reorganization of the library commission. That body, under the proposed amendment, will be known as the library board, and will be composed of seven members, who will have control of the actions of the librarian and actual direction of the public library. One of the members of the board, in explanation of the decision, is quoted as saying that "at present the library commission is but a figure-head. It has no power of action. Nominally it is the head of the department, but actually it is without power. Some additional relief was given some time ago by ordinance, but this might be taken away any time. The librarian is now appointed by the mayor and the board has no control over him. That is the fundamental reason for wishing a new amendment. Another reason for wanting a change is that it is the desire of those who have the best interests of the library at heart to make it a part of the educational system of city and state, and as the state has now a new library act it is desirable that the library be put under this and as much in unison with it as possible to make the library here as nearly a part of the state system as possible. That explains why the superintendent of schools has been added to the library board."

The amendment, which will be submitted to vote at the March election, makes the usual provisions for maintenance, expenditures, etc., and includes the following sections regarding administration: "There shall be appointed seven library commissioners, who shall constitute and be known as the library board, and be the governing body of the library, who shall hold office for seven years. They will serve without compensation and be subject to removal by the mayor. The mayor, with the consent of the city council, shall appoint the trustees, each of whom shall hold office for the term of seven years. The present library commission, together with two new trustees, to be appointed by the mayor for the term of seven years from April 1, 1902, shall be the first library board, and the present commissioners shall continue to hold office as such commissioners until the expiration of their respective terms as commissioners, and the mayor shall thereafter annually appoint one trustee."

"The librarian shall be elected by the board and subject to removal by it. Under civil service rules, he shall have the appointment and removal of all subordinate employees of the board."

Springfield, Ill. Lincoln L. The library board has not yet been able to make public the plans for the \$75,000 building, given by Andrew Carnegie. Of the plans first sub-

mitted in competition the three that seemed most satisfactory were sent for criticism and suggestion to E. H. Anderson, librarian of the Carnegie Library of Pittsburgh, who returned them with a letter saying: "After examination I cannot tell you how much I regret the fact that I cannot make a favorable report upon any of these plans," and "I think I ought to say to you that if the responsibility were mine, I would have the whole subject reconsidered."

The plans were therefore set aside, and a special sub-committee was appointed to secure an architect. Mauran, Russell & Garden, of St. Louis, were finally engaged, and it is understood that their plans for the building are now practically completed.

Springfield (Mass.) City L. On Dec. 18 the directors accepted the resignation as librarian of John Cotton Dana, now librarian of the Newark Free Public Library, and passed following resolutions recording their appreciation of Mr. Dana's services and regret at his retirement, and adding: "They realize that he has largely extended the usefulness of the library in enlightening the minds and brightening the lives of the people of this community, and that his leadership has been potent outside of Springfield, in this section of the state, in making other libraries more effective and valuable, and they are correspondingly grateful to him."

A resolution was also passed authorizing Miss Alice Shepard, as first assistant, to be "acting librarian, and have general supervision; the board understanding that Miss Medlicott will, as on former occasions, co-operate with Miss Shepard in carrying on the work of the library, sharing with her the general responsibility."

A committee was appointed to nominate a new librarian, and the board voted to continue the policy of having a curator for the art department and a librarian, each to manage his own department subject to the direction of the board.

Stanley, Wis. Moon Memorial L. The library building erected by Mrs. Sarah F. Moon, of Eau Claire, as a memorial to her late husband, Delos R. Moon, was dedicated on Dec. 17. The library is a one storied structure, 50 by 55 feet, of Roman brick, with a tiled roof. It contains three large rooms, opening from a spacious hallway, with lavatories, etc., in the basement. It is lighted by electricity. Stanley is a city of 2500 people, and it is estimated that nearly the entire population attended the public reception in the library building, which was held in the evening, after the formal dedication.

Washington County F. L., Hagerstown, Md. The trustees have issued a statement regarding the work and needs of the library. Since the library was opened on the 1st of

September, 1901, 3024 persons have registered and 18,227 books have been issued. "This is at the rate of 72,000 books per year, or an average of 275 a day." The number of volumes on the shelves at the opening of the library was 6325 and there are now 8267, an increase of 1942. There have been branches established at Leitersburg, Boonsboro, Tilghmanton, Beaver Creek and Sandy Hook, and applications for branches at 10 or 12 other points are now being prepared. It is pointed out that although the library is maintained from the endowment of the late B. F. Newcomer, the site and building were secured through public subscription, and its equipment has left the trustees with a debt of about \$15,000. In view of the great success of the library, and the large field of work before it, an earnest appeal is made for public subscriptions sufficient to clear off the indebtedness existing, and to extend the library's benefits more widely to the country districts.

Winona (Minn.) F. P. L. The library has issued an attractive illustrated pamphlet picturing and describing the beautiful Laird Library building, the gift of William Harris Laird, of Winona, which was presented to the city on Jan. 21, 1899. Its cost, exclusive of site, equipment, shelving, heating, etc., was \$50,000. The little booklet gives a view of the exterior of the building as frontispiece, floor plans, and four excellent interior views.

Wisconsin State Historical Soc. L., Madison. The 49th annual meeting of the society was held on Dec. 12, when the report of the secretary, R. G. Thwaites, was presented. Accessions to the library during the year were reported as 5712 v. and 5628 pm., giving a total of 226,946 titles. Reference was made to the great collection of books, pamphlets, and newspaper files bearing on the Mormon question—2300 titles in all—which has been loaned to the library by Theodore Schroeder, a Wisconsin University graduate, now of New York City, but for many years one of the most prominent attorneys in Utah. This collection far surpasses any other of the kind, and it is expected that ultimately it will be presented to the society.

It was pointed out that it will be only a few years before the new library building will need to be enlarged by the erection of the north bookstack wing; and the legislature of 1903 will be asked to provide for its construction. This would give relief for perhaps 25 years, at the end of which time it will be necessary to build a transverse bookstack wing upon the Park street end of the lot.

It is intended to establish a small reference library at the capitol during legislative sessions, with telephonic connection with the central library, for the use of officers and members of the two houses.

"The society's relations with the library of the state university continue to be of the most cordial character, amply justifying the expectations of those who had foreseen that placing the two libraries under the same roof would result in broadening and strengthening the work of each, to the betterment of the interests of higher education within our state."

COLONIAL.

San Juan, Porto Rico. The Carnegie library building will be two stories high, 75 feet wide, fronting on Plaza Colon, and 50 feet deep. The second floor will contain an assembly hall and the book capacity will probably be for 100,000 volumes. In the basement it is designed to arrange two reading rooms, one of which shall be for children.

FOREIGN.

Bradford (Eng.) P. Ls. (31st rpt.—year ending Aug. 12, 1901.) Added 7319; total 108,632. Total issue 674,572 (29,000 from the 11 branches), being a net increase of 75,809 over the preceding year. New registration 12,654.

106 books in Braille type have been circulated among the blind persons of the city, and 1602 volumes of music scores were issued.

Paisley (Scot.) F. L. and Museum. The library and museum has received a gift of \$27,500 from James P. Coates, of the J. V. P. Coates Thread Mills, Pawtucket, R. I.

Rome, Vittorio Emanuele L. The *Athenaeum* states that a considerable part of the Chinese Imperial Library of Peking is now incorporated in the Vittorio Emanuele Library at Rome, where it is being arranged by Prof. Nocentini and Signor Vigna del Ferro, who served as interpreter during the Chinese campaign. It consists of historical, geographical and philosophical works. There is a history of the Han dynasty and another of the Tsing dynasty. One geographical work runs to "several hundred volumes."

Warwick (Eng.) P. L. The death of the librarian Thomas Carter, in November, 1901, called forth the following communication to the *Athenaeum* of Dec. 7:

"Warwick has lost, by the death from pneumonia of Mr. Tom Carter, a public librarian of decidedly original character. Mr. Carter was the son of a Forest of Dean miner, and was sent into the pit long before he reached his teens. He had practically no school education, but taught himself to read, and developed a consuming passion for books. He went to Warwick as an insurance agent, and soon, by his force of character and gifts as a speaker, acquired such local influence that he was returned to the school board and the town council. A year ago he resigned his seat on the council in order to become public

librarian. He found the library in a heart-breaking state. It was one of the many local libraries started in a fit of enthusiasm and stocked with books; but the enthusiasm cooled, and no effort was made to weed out the worthless volumes and maintain a supply of the best modern books. Mr. Carter completely overhauled the collection of some 9000 volumes, induced the committee to fill up gaps—there was, for instance, not a single volume of Matthew Arnold—and carefully studied the literary papers to discover the new books worth ordering. He constituted himself the literary adviser of the town, not only by personal counsel to the borrowers, but by highly intelligent notices in the *Warwick Advertiser* of batches of new books ordered on his recommendation, and of the reviews and magazines supplied to the reading-room. He was contemplating inviting literary men to give lectures on courses of reading to the studious young men of the town. Mr. Carter taught himself French and Latin, and was seeking new worlds to conquer when his useful life was cut short at the age of 40."

Gifts and Bequests.

Newton (Mass.) P. L. By the will of the late Mrs. Elizabeth L. Rand, of Newton, the library is to receive a bequest of \$1000, the income to be devoted to the purchase of books.

Norwalk, Ct. On Dec. 5 the city received from H. E. Bishop, of Norwalk, a deed of gift for a central site, corner of Mott and Belden avenues, for the \$20,000 library building to be given to the city by Andrew Carnegie.

Titusville, Pa. W. S. and R. D. Benson, of Passaic, N. J., and their sister, Mrs. C. F. Emerson, of Titusville, have offered to present to Titusville a \$25,000 library building as a memorial of their parents. It is to be known as The Benson Memorial Library, and it is required that the city provide \$2000 annually for maintenance.

Wesleyan Univ. L., Middletown, Ct. By the will of the late Mrs. Harriet Hoxie Wilcox, of Brooklyn, N. Y., the university library is bequeathed an endowment fund of \$20,000, and the university receives probably an equal amount. By the terms of the will the executors have 10 years in which to settle the estate, and interest at the rate of 4 per cent. per annum is to be paid on all legacies remaining unpaid after two years.

Carnegie library gifts.

The following record covers recent gifts of library buildings made by Andrew Carnegie:

Akron, O. Dec. 23. \$70,000.

Bloomington, Ind. Dec. 24. \$15,000.

Cañon City, Colo. Dec. 17. \$10,000.

The city already appropriates \$1100, and \$600 is added from private subscription. A site has been secured.

Danville, Ill. Dec. 26. \$40,000.

Accepted Dec. 28.

Elkhart (Ind.) Carnegie L. Dec. 16.

\$5000 additional, to render building more nearly fireproof.

Iron Mountain, Mich. Dec. 19. \$2500 additional.

Kalispell, Mont. Dec. 28. \$10,000.

Madison, Wis. Dec. 30. \$75,000.

Accepted Jan. 10.

Nyack, N. Y. Dec. 23. \$15,000.

The three corporations of Nyack, South Nyack and Upper Nyack together contribute \$1200 annually to the support of the public library, and the acceptance of the Carnegie gift is practically assured.

Oneida, N. Y. Dec. 31. \$11,000.

Pekin, Ill. Dec. 18. \$5000 additional.

Red Wing, Minn. Dec. 17. \$15,000.

Accepted Jan. 4, when site was also accepted from James Lawther.

Stratford, Manitoba, Can. Dec. 25. \$12,000.

New York Press Club. Dec. 18. \$5000 for purchase of books.

Librarians.

BARTLETT, Miss Henrietta C., Pratt Institute Library School, class of 1901, has been engaged to assist in the reorganization of the Englewood (N. J.) Public Library.

BOWKER-MITCHELL. Richard Rogers Bowker, editor of the LIBRARY JOURNAL and the *Publishers' Weekly*, was married on Jan. 1, 1902, to Miss Alice Mitchell, of Cambridge, Mass. The ceremony took place at the home of Mr. and Mrs. George P. Bingham, in Brookline, and was performed by Dr. Edward Everett Hale, of Boston. Mr. and Mrs. Bowker will leave on Jan. 22 for a three months' absence in Europe.

HASSLER, Miss Harriet E., Pratt Institute Library School, classes '98 and '99, has resigned from the Buffalo Public Library to accept a position on the staff of the John Crerar Library, Chicago, beginning Jan. 1.

MERRITT, Miss Leslie, graduate of the Pratt Institute Library School, classes 1900 and 1901, has been released from her engagement at the St. Johnsbury (Vt.) Athenæum, to accept the position of cataloger at Bryn Mawr College Library.

MORT, Henry, assistant librarian of McGill University Library, Montreal, retired from

the library service on Jan. 1 on a comfortable pension. Mr. Mott had been connected with the university library for 14 years, and his cordiality and courtesy will be remembered by the librarians in attendance at the Montreal meeting of the American Library Association, in 1900. His retirement was marked by the art students of the university by the presentation of an illuminated address and a handsome set of furs. Mr. Mott was born in London in 1825. He came to Montreal in 1859, and was in commercial life until 1879, when he joined the staff of the *Canadian Spectator*, and later became connected with the *Herald*. He was appointed librarian of the Mechanics' Institute in 1884, and in January, 1888, joined the staff of McGill University Library.

PERRY, Miss Lucy Ware, Pratt Institute Library School, classes 1900 and 1901, has been engaged to make the typewritten catalog of the Millicent Library, at Fairhaven, Mass.

PRENTISS, Miss Mabel E., first assistant at the Pasadena (Cal.) Public Library since 1898, was recently granted a leave of absence to assist in reorganizing the Pomona (Cal.) Public Library, with the result that she became librarian of that library on Jan. 1, 1902.

Vogt, Von Ogden, has been appointed librarian of Beloit College Library, Beloit, Wis., succeeding the late Charles A. Bacon. Mr. Vogt was a member of the Beloit graduating class of 1901, and had been financial secretary of the college since June last.

WILSON, Miss Ellen Summers, New York State Library School, 1896-98, has resigned her position as librarian of the Wylie avenue branch of the Carnegie Library, Pittsburgh, Pa., to become librarian of the Steubenville (O.) Public Library.

Cataloging and Classification.

THE BEST BOOKS FOR CHILDREN. (*In Outlook*, Dec. 7, 1901. 69:869-884.)

A series of 10 brief articles, by Mary Mapes Dodge, Kate Douglas Wiggin, Edward Everett Hale, Horace E. Scudder, Frank R. Stockton, T. W. Higginson, Tudor Jenks, Agnes Repplier, Caroline M. Hewins and Nora A. Smith. Most of the writers give lists of 10 books best suited for reading by children from six to 12 years of age. There is an editorial on the same subject.

BIBLIOTHEQUE NATIONALE. Catalogue général des livres imprimés. Auteurs. Tome 6: Baade-Bancroft; tome 7: Band-Barrozzi. Paris, Imprim. Nationale, 1901. 8°.

BOSTON (Mass.) P. L. Annual list of new and important books added, selected from

the monthly bulletins, 1900-1901. Boston, 1902. 206 p. O.

This fifth annual list is, as usual, an interesting and useful volume. It contains 18 per cent, more titles than its predecessor, but the relative proportions of the different classes are but little changed.

The BOSTON BOOK Co.'s *Bulletin of Bibliography* for January contains a further instalment of G. W. Cole's record of "Bermuda in periodical literature," and part first of a "Reading list in library science," compiled by Pratt Institute Free Library.

BROOKLYN LIBRARIES' CO-OPERATIVE BULLETIN. The Brooklyn Public Library and the Pratt Institute Free Library have joined in the issue of a co-operative monthly bulletin of accessions. The lists for each library are printed separately, and wired together, the edition for the Public Library having that library's list put first, and *vice versa*.

The CARDIFF (Wales) P. L. *Bulletin* for December includes a list of additions to its reference library, which will also serve as a list of books in Welsh and relating to Wales, published during the last three months.

CATALOGUS codicum manuscriptorum Bibliothecae Universitatis Lipsiensis. Katalog der Handschriften der Universitätsbibliothek zu Leipzig. 1: Die Sanskrit-Handschriften von Theodor Aufrecht. Leipzig, Otto Harrassowitz, 1901. 6+493 p. 8°.

Reviewed in *Centralblatt für Bibliothekswesen*, December, p. 605.

CUTTER AUTHOR TABLES.—Hitherto libraries that had adopted the Cutter two-figure tables, if they wished to use three figures in biography, fiction, English literature, etc., have been obliged to assign the third figure themselves, because the Cutter-Sanborn three-figure tables were made independently of the two-figure tables, and could not be used in continuation of them. Different numbers would fall to almost every name. But a set of three-figure tables has at last been prepared on the same lines as the shorter tables, and in fact including them. They can be procured from C. A. Cutter, or from the Library Bureau. As they are a little smaller (and handier) than the Cutter-Sanborn tables, they can be furnished at a less price, \$2.25. To librarians that already have the two-figure tables the two new tables will be sold for their own use for \$1.50.

The NEW YORK P. L. *Bulletin* for December is largely devoted to a "Check list of foreign government documents on finance" in the library, compiled by Miss Hasse. The list is alphabetical by locality, with chronological subdivisions when the material recorded is considerable.

READING LIST IN LIBRARY SCIENCE; compiled by Pratt Institute Free Library, Brooklyn, N. Y. Part I. Boston, Boston Book Co., 1902. 12 p. nar. D. (*Bulletin of Bibliography* pamphlets, no. 9.)

A good classed list of the standard available literature on Librarianship; Library economy, including order department, cataloging, classification, charging systems, reference work, etc.; and Children's libraries and special work for children. Reprinted from the *Bulletin of Bibliography*, January.

The SALEM (Mass.) P. L. *Bulletin* for December concludes the reading list of short stories begun in the November number, and prints short lists on Ralph Waldo Emerson and the Inter-oceanic canal.

SYRACUSE (N. Y.) P. L. A finding list of genealogies and local history. Syracuse, [1901.] 131 p. O.

Arranged alphabetically under the following main headings: Serial publications, continuations, etc.; Genealogical guides; Family histories; Registers, etc.; Names and epitaphs; Heraldry; Visitations; Local histories. Printed in lefthand column only, one column being left blank for additions or corrections. Entries are as brief as possible, the date being the only information given except author and catch-title.

WISCONSIN STATE HISTORICAL SOCIETY. *Bulletin* of information no. 15: November, 1901. Suggestive outlines for the study of the history of the middle west, Kentucky and Tennessee; prepared in conjunction with the School of History, University of Wisconsin. Madison, 1901. 32 p. O.

An excellent example of careful and systematic syllabus work, intended primarily for study clubs, but equally useful to students and to the reference librarian. The outlines for study are prefaced by "Suggestions for students," compactly setting forth the general subject, the arrangement of the course and the best methods for handling or adapting it. A selected list of authorities covers books, pamphlets and magazine articles; and supplemental references include a list of suggested fiction dealing with the middle west, grouped to refer to nearly all the divisions of the study outlines proper. These are followed by the 15 study outlines, which form practically a chronological record of the historical development of the sections covered. Each study has from one to seven subdivisions, each forming a separate topic with its separate references; thus, study II, The Louisiana purchase, covers (1) Diplomatic antecedents, Napoleon's policy, the treaty; (2) Effects of the Louisiana purchase; (3) Lewis and Clark expedition; (4) Burr's con-

spiracy. The references are as far as possible to more recent literature, especially in the case of magazine articles. The bulletin is the work of F. J. Turner, of the University of Wisconsin, and R. G. Thwaites, of the State Historical Society.

WRIGHT, W. Catalogue of Syriac mss. preserved in the Library of the University of Cambridge. London, C. J. Clay & Sons, 1901. 2 v., 8°.

FULL NAMES.

The following are supplied by Harvard University Library.

Allen, Walter Spooner (Development of street railways in the commonwealth of Massachusetts);
 Auchincloss, William Stuart (St. Peter the apostle of Asia);
 Bryan, Henry Lewis (Compilation of treaties in force prepared under act of July 7, 1898);
 Buck, John Henry (Old plate);
 Butler, Carlos Antonio (The temple in the time of Christ as restored by Herod);
 Calkins, William Wirt (Catalog of lichens collected in Florida in 1885);
 Campbell, Milo De Witte (The purpose and working of the Michigan state tax commission);
 Delhi, Arne, assisted by George Howard Chamberlin (Norman monuments of Palermo and environs);
 Evans, Lawrence Boyd (Handbooks of American government);
 Gragg, Isaac Paul (Homes of the Massachusetts ancestors of Major General Joseph Hooker);
 Greenwood, James Mickleborough (Principles of education practically applied);
 Hall, Charles Bryan (Military records of general officers of the Confederate States of America);
 Hall, Micajah Otis (Rambles about Greenland in rhyme);
 Henshall, James Alexander (Ye gods and little fishes);
 Hollister, Harvey James (The importance of good tax laws);
 Holmes, Edwin Sanford, jr. (Wheat growing and general agricultural conditions in the Pacific coast region of the U. S.);
 Howe, Albert Hovey (The insular cases);
 Humfreville, James Lee (Twenty years among our hostile Indians);
 Johnson, John Edgar (The boa constrictor of the White Mountains);
 Koyl, Charles Herschel (The cause of foaming in locomotive boilers, and other papers);
 Langworthy, Charles Ford (Eggs and their uses as food);
 Letson, Elizabeth Jane (Post-pliocene fossils of Niagara);

- Loew, William Noah, *tr.* (Magyar poetry);
 Lumley, Eleanor Patience (The influence of
 Plautus on the comedies of Ben Jonson);
 Morrison, Hugh Alexander, *jr.* (List of books
 and of articles in periodicals relating to
 interoceanic canal and railway routes);
 Mortimer, William Golden (Peru history of
 cocoa);
 Norton, Albert James (Complete hand-book
 of Havana and Cuba);
 Palmer, Theodore Sherman and Olds, H.
 Worthington (Laws regulating the trans-
 portation and sale of game);
 Park, Orville Augustus (An index to the
 publications of the various bar associa-
 tions of America);
 Parker, Benjamin Strattan, and Heiney, Enos
 Boyd (Poets and poetry of Indiana);
 Pepper, Charles Melville (To-morrow in
 Cuba);
 Perry, Marsden Jasiel (A preliminary list of
 the Shakespearean collection of);
 Rogers, James Swift (Hope Rogers and his
 descendants);
 Saville, Marshall Howard (Cruciform struc-
 tures near Mitla);
 Simons, Algie Martin (Packington);
 Thian, Raphael Prosper (Legislative history
 of the general staff of the army of the
 United States);
 Van Deusen, Clarence Van Cortlandt (The
 primary and general election laws as
 amended by the legislature of 1899);
 Willard, George Owen (History of the Prov-
 idence stage, 1762-1891);
 Woodlock, Thomas Francis (The anatomy of
 a railroad report and ton-mile cost).

Bibliography.

- ANCONA, Alexandre d'. Ferrari, L., Manacorda, G., and Pintor, F. *Bibliografia degli scritti di Alessandro D'Ancona*. Firenze, G. Barbèra, 1901. 48 p. 8°.
- BORMANN, Edwin. *Die Kunst des Pseudonyms: 12 literarhistorisch-bibliographische Essays*. Leipzig, Edwin Bormann's Selbstverlag, 1901. 11+135 p. 8°.
- BOYS, Forbush, William Byron. *The boy problem: a study in social pedagogy; with an introduction by G. Stanley Hall*. 2d ed. Boston, The Pilgrim Press, [1901.] 194 p. 12°, net, 75 c.
- Contains a 7-page classified list of books and pamphlets relating to boys and social work with them. The list includes only such works as the author has found helpful.
- CARDUCCI, Giosuè. Salveraglio, Filippo. *Saggio di bibliografia carducciana*. Roma, soc. edit. Dante Alighieri, 1901. 15 p. 8°.

Reprinted from the *Rivista d'Italia*; contains record of Carducci's poetry only, although the compiler has in preparation a complete bibliography of all Carducci's work.

CATLIN, George. Miner, William Harvey. George Catlin: a short memoir of the man with an annotated bibliography of his writings. Part 2: Bibliography. (*In Literary Collector*, December, 3:79-83.)

Lists 28 items, with careful annotations. There is an interesting appendix of notes by Miss Elizabeth Catlin, daughter of George Catlin.

CREMATION. Cobb, John Storer. A quarter century of cremation in North America: being a report of progress in the United States and Canada, etc. Boston, Knight & Millet, 1901. 8+189 p. 12°.

Contains an extensive bibliography (pages 123-161) of works published in the 19th century, American and European. Titles are classified by countries and arranged chronologically under each country. The list is followed by an index of authors and one of periodicals.

CUBAN LITERATURE. Hills, Elijah Clarence, ed. *Bardos Cubanos: antología de las mejores poesías líricas de Heredia, "Plácido," Avellaneda, Milanés, Mendive, Luaces, Zenea*. Boston, D. C. Heath & Co., 1901. 4+162 p. 12°, 60 c.

Contains a five-page bibliography, nearly all the works being in the Spanish language.

CHARLES EVANS, secretary and librarian of the Chicago Historical Society, and one of the veteran members of the American Library Association, issues a circular announcing the publication of his comprehensive and elaborate record of "American bibliography, 1639-1820, A.D." This is to be "a chronological dictionary of all books, pamphlets and periodical publications printed in the United States of America from the genesis of printing in 1639 down to and including the year 1820, with bibliographical and biographical notes." The first volume will cover the period 1639-1749, and it is thought that in all the work will comprise six volumes, one volume appearing each year. Mr. Evans' purpose is to furnish a record of American literary production from its beginning to the period where the work is taken up more or less fully by available publications, as Roorbach (1820-1861), Norton (1852-1855), Kelly (1861-1871) and then through the "American catalogue" volumes. The publication of the work is undertaken as a private enterprise by Mr. Evans, and it will be sold only by subscription, each copy being signed and numbered. The work will be chronological in ar-

rangement, with full indexes of authors and subjects and printers and publishers, and it is estimated that when it is completed it will embrace about 70,000 titles. The price is set at \$15 per volume. The circular, which will be of general interest to librarians, may be obtained of Mr. Evans, 1045 Pratt avenue, Rogers Park, Chicago.

GREEN, Samuel Abbott. Ten facsimile reproductions relating to Old Boston and neighborhood. Boston, [For sale by G. E. Littlefield,] 1901. 8+44 p.+facsim. Q. \$10.

The facsimiles included in this handsome volume are: *Publick Occurrences*, the earliest American newspaper, 1690, and the decree for its suppression; Hubbard's map of New England, 1677; Rev. Samuel Willard's "Useful Instructions," 1673, the earliest Boston imprint; Increase Mather's sermon, "The wicked man's portion," 1675; Thomas Thacher's "Brief rule to guide the common people of New England how to order themselves and theirs in the small pocks or measles," 1678; The catalog of "the library of the late Reverend and Learned Mr. Samuel Lee," 1693, the earliest book catalog printed in this country; Bonner's map of Boston, 1722; the earliest print of Harvard College, 1726; Joshua Green's "Plot of Cambridge common," 1784; and Butler's map of Groton, Mass., 1832. The facsimiles are admirably reproduced and each is prefaced by a careful and interesting bibliographical and historical description.

HAEBLER, C. Typographie iberique du quinzième siècle: reproduction en facsimile de tous les caractères typographiques employés en Espagne et en Portugal jusqu'à l'année 1500; avec notices critiques et bibliographiques. Lieferung 1. Leipzig, Karl W. Hiersemann, 1901. subs., 16m.

The INSTITUTE INTERNATIONAL DE BIBLIOGRAPHIE *Bulletin*, fasc. 3-6, is devoted largely to the addresses and report of proceedings of the International Congress of Bibliography at Paris, Aug. 16-18, 1900. The need of an international scheme for statistics of literary production is presented by Paul Otlet; bibliographies of chemistry and chemical industries are reviewed by Jules Garçon, who describes briefly the scope of his own enterprise, the "Encyclopédie universelle des industries tinctoriales et des industries annexes"; there is a "Memorandum concerning the principles on which a catalog of official documents must be constructed," by Frank Campbell, based upon his "Catalogue of Indian official documents"; an interesting exposition of the necessity for a general international scheme for the alphabetical arrangement of authors' names; and other papers in kindred fields.

MISSIONS. Hodgkins, Louise Manning. Via

Christi: an introduction to the study of missions. New York, The Macmillan Co., 1901. 19+251 p. 16°, net, 50 c.; pap., 30 c. Contains a six-page bibliography.

TUNIS. Bégouën, C. Notes et documents pour servir à une bibliographie de l'histoire de la Tunisie: sièges de Tunis (1535) et de Mahédia (1550). Toulouse, [Paris, Picard et fils,] 1901. 106 p. facsim. 8°.

BIBLIOGRAPHIC WORK IN PREPARATION.

BIBLIOGRAPHY OF ENGLISH AND AMERICAN LITERATURE.—John Louis Haney and Abraham S. Wolf Rosenbach, of the University of Pennsylvania, announce that they have been engaged for several years upon "an extensive bibliography of English and American literature," with the intention of supplying "a definitive finding-list for all books, theses, monographs, magazine articles and reviews dealing with significant English and American authors and their works." It is purposed to include German, French and other foreign material. The compilers state that they realize "that it will be necessary to ask for the co-operation of scholars and bibliographers who have paid special attention to detailed portions of the subject; but deem it advisable to defer a request for such aid until we have made definite arrangements for the publication of the work."

Anonyms and Pseudonyms.

THE Smithsonian Institution has received a letter from James Walter Smith, of London, stating that he is the author of an article entitled "The Zeppelin air ship," published in the *Strand Magazine*, September, 1900, and reprinted in the annual report of the Smithsonian Institution for 1900. The article appeared under the *nom-de-plume* of Thomas E. Curtis. CYRUS ADLER.

"FEMALE life in prison; by a prison matron." The fact that the late F. W. Robinson was the author of this book is definitely stated by Theodore Watts-Dunton, in the *Athenaeum*, Dec. 14, 1901. Mr. Dunton says: "After a while he [F. W. Robinson] started a third series which he called 'The prison stories,' beginning with 'Female life in prison; by a prison matron.' This book was also a great success. It consisted of sketches and stories of various prison characters, based in part upon the personal record of a real prison matron. For perfect realism it was worthy of Defoe. No one dreamed for a moment but that it was the work of a prison matron, who had recorded her real experiences. 'Jane Cameron,' by the author of 'Female life in prison,' and 'Prison characters' were each of them a great success, and, like the first of the series, these books were believed to be genuine records of prison life."

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

American History

WRITINGS OF THE FOUNDERS OF THE REPUBLIC

Absolutely essential to the thorough student of American History.

Every library in the land should own the complete series.

Librarians are urged to order now any of the sets not already in their libraries.

Later it may not be possible to secure them.

Printed uniformly in octavo volumes of about 500 pages each, pica type, and bound in half leather, gilt tops. Price per volume, \$5.00 net.

These works are printed from type, and not electrotyped.

When the limited edition is exhausted no more copies can be obtained.

1. ALEXANDER HAMILTON. THE WORKS OF ALEXANDER HAMILTON.

Edited with an Introduction and Notes by HENRY CABOT LODGE. 9 vols.

Limited to 500 sets. Now out of print and very scarce. Sets have recently been sold for three or four times the original price.

2. BENJAMIN FRANKLIN. THE WORKS OF BENJAMIN FRANKLIN.

Edited by JOHN BIGELOW. 10 vols.

Limited to 600 sets. Now out of print and very scarce. Sets have recently sold for two or three times the original price.

3. GEORGE WASHINGTON. THE WRITINGS OF GEORGE WASHINGTON.

Comprising his Diaries and his Public and Private Correspondence, including numerous letters and documents now for the first time printed. Edited by WORTHINGTON CHAUNCEY FORD. 14 vols.

Limited to 750 sets. A few sets still remain for sale.

4. JOHN JAY. THE CORRESPONDENCE AND PUBLIC PAPERS OF JOHN JAY.

Including all his important writings, addresses, and decisions, from 1776 to 1824, together with numerous letters to him from Washington, Hamilton, Adams, Jefferson, and others, many of which are now printed for the first time. Edited by HENRY P. JOHNSTON. 4 vols.

Limited to 750 sets. A few sets still remain for sale.

5. THOMAS JEFFERSON. THE WRITINGS OF THOMAS JEFFERSON.

Comprising his Public Papers and his Private Correspondence, including numerous letters and documents now for the first time printed. Edited by PAUL LEICESTER FORD. 10 vols.

Limited to 750 sets. A few sets still remain for sale.

6. RUFUS KING. THE LIFE AND CORRESPONDENCE OF RUFUS KING.

Comprising his Letters, Private and Official, his Public Documents, and his Speeches. Edited by his grandson, CHARLES R. KING, M.D. 6 vols.

Limited to 750 sets. Now complete.

7. JAMES MONROE. THE WORKS OF JAMES MONROE.

Edited by S. M. HAMILTON, of the Department of State. To be completed in six or seven volumes.

Limited to 750 sets. In course of publication. Volume 6 in press.

8. JAMES MADISON. THE WRITINGS OF JAMES MADISON.

Edited by GAILLARD HUNT. To be completed in eight or nine volumes.

Limited to 750 sets. In course of publication. Volume 3 in press.

9. SAMUEL ADAMS. THE WORKS OF SAMUEL ADAMS.

Edited by HARRY ALONZO CUSHING. 4 vols. (In preparation.)

10. JOHN MARSHALL. THE CONSTITUTIONAL DECISIONS OF JOHN MARSHALL.

Edited, with an Introductory Essay, by JOHN G. PALFREY, of the Massachusetts Bar. (In preparation.)

G. P. PUTNAM'S SONS NEW YORK
and LONDON

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philological Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanass Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 *net*.

Unmounted, on 24 sheets in portfolio. \$25 *net*.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

NEARLY READY

The Cumulated Annual American Catalogue

including in one alphabet the short title lists of the books of 1900 and 1901, giving the information by author, title, subject and series. This work is a successor to the "Annual American Catalogue," and the cumulation here begun is to continue annually until a five-yearly volume of "The American Catalogue" in this new shape is reached. It is hoped that this form of catalogue will prove a desirable, practical working tool, supplementing as it will do, from year to year, the last issue of the five-yearly "American Catalogue," without the need of consulting several alphabets in several volumes.

8vo, cloth, - - - \$2.00

if ordered and paid for in advance. Orders should be addressed at an early date to

IN PREPARATION

The Annual Literary Index, 1901

Including Periodicals, American and English; Essays, Book-Chapters, etc.; with Author-Index, Bibliographies, Necrology, and Index to Dates of Principal Events. Edited by W. I. FLETCHER and R. R. BOWKER, with the co-operation of members of the American Library Association and of the *Library Journal* staff.

THE ANNUAL LITERARY INDEX contains: (1) The index to periodical literature for the year 1901, making the fifth annual supplement to "Poole's Index to Periodical Literature," 1892-1896; (2) An index to essays and book-chapters in composite books of 1901, making the first annual supplement to the new edition of Fletcher's "A. L. A. Index to General Literature," published in 1901; (3) An author-index, both to periodical articles and to book-chapters; (4) A list of bibliographies issued in 1901; (5) A necrology of authors for 1901, extremely useful to catalogers; (6) An index of dates of events in 1901, furnishing a useful guide to the daily press. One vol., cloth, similar to "Poole's Index" and the "A. L. A. Index," \$3.50, net

For 1902

Publishers' Trade List Annual

(Thirtieth Year)

The forthcoming issue of THE PUBLISHERS' TRADE LIST ANNUAL, to be ready in August, 1902, will contain

A COMPLETE INDEX

to the publishers' catalogues contained therein. The books will be indexed by author, title and, practically, by subject or class. The name of series, the price, and name of publisher will also be given, so that any book contained in the ANNUAL may be located at once by whatsoever clue the user may have. The Index will be printed in two columns to the page, in readable type, full face letters being used to make reference to authors' names more convenient.

THE TRADE LIST ANNUAL has been for upwards of a quarter of a century indispensable to every one who has any interest in the purchase or sale of books. With the reference index to the books listed in the publishers' catalogues its practical usefulness will be enhanced an hundred fold.

The work will be offered in two styles :

With the Index, \$5 00

Without the Index, 1 50

if ordered and paid for in advance of publication. Orders, stating whether the volume is desired with or without the index, should be registered at

The Office of THE PUBLISHERS' WEEKLY

(P. O. Box 943)

298 Broadway, New York

 We shall also supply the new volume of the ENGLISH REFERENCE LIST for which we control the American market.

Magazines. I will undertake to supply any

magazine or review published, at a price per copy depending upon its market value, or the cost of finding same, if not on hand.

I have considerably over 500,000 magazines in stock, and the assortment is as varied as the production of the periodical press for the last one hundred years. A Business-like query with list of wants will be met by a prompt and business-like reply. . . .

Life of Pasteur

By R. VALLERY-RADOT

Translated from the French by Mrs. R. L. Devonshire

"The real story of Pasteur's life is the story of his successive scientific achievements, and it would be difficult to assign too much praise for the fashion in which Monsieur Vallery-Radot has written of these. . . . The reader of these pages, even if he begin with no scientific knowledge, will gain a clear understanding of many of the most complicated of modern scientific problems, and he will have the dramatic interest in learning of them in the order of their development."—*London Saturday Review*.

1856—1901.

LIBRARY BUILDINGS OF MODERATE SIZE.

W. R. Eastman in Report of New York Home Education Department for 1901.

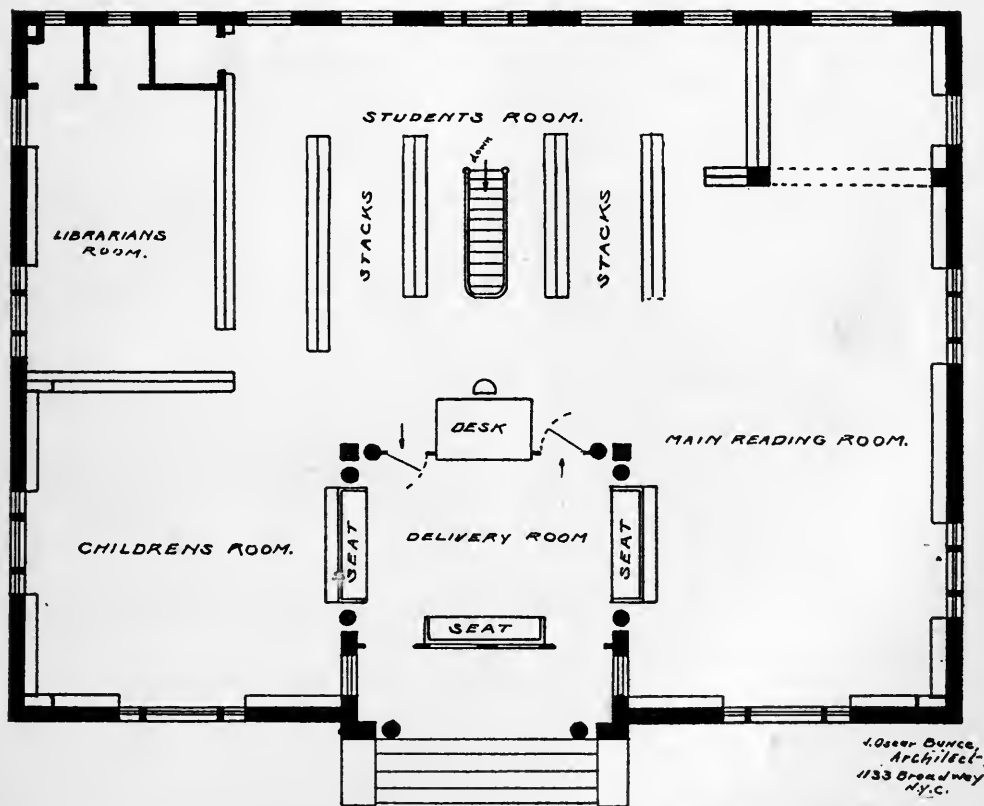

THE rapid growth of a public library requires liberal provision for the future. The number of volumes and the annual increase for not less than 20 years should be carefully estimated and room provided.

In general, the library building should have in front, two ample reading rooms with a wide passage between. If stairs are needed, they can be arranged in a porch projecting somewhat to the front.

The central passage should end in a book room wide enough to overlap both reading rooms and having direct access to each. A

continue to the rear line without break and thus secure the utmost economy of construction. The ceiling of the book room should be high enough (at least 14 feet) to give room for two stories of bookcases when needed. It is desirable also to have the use of a dry basement under the book room with direct stairway between to hold the overflow of books not in much demand. This will be a great relief from overcrowding and with the available space above the main floor will give the practical advantages of a stack of three stories.

Suggested plan for small library building.

MAIN FLOOR PLAN.

Scale $\frac{1}{8}$ " = 1 Foot.

delivery desk may be at the end of the central passage with a narrow gate on each side of it, one for entrance, the other for exit, if public access to shelves is to be allowed as in most cases.

The size of the book room will depend on the estimated number of books. If the walls are insufficient for the needed shelves, a few double-faced bookcases may be placed on the floor five feet apart, ranging from front to rear. An open space behind these cases, with small tables set between the rear windows will give a convenient place for study or work. A librarian's room, closets or an ex-

Shelves should be placed on all available walls in the reading rooms.

Instead of placing partitions between the rooms the entire floor may be in one room divided into departments by double-faced bookcases, varying from four to eight feet in height according as it is desired to retain or to cut off the view, for the sake of appearance or supervision. This will give a great advantage of light with possibly some slight liability to disturbance.

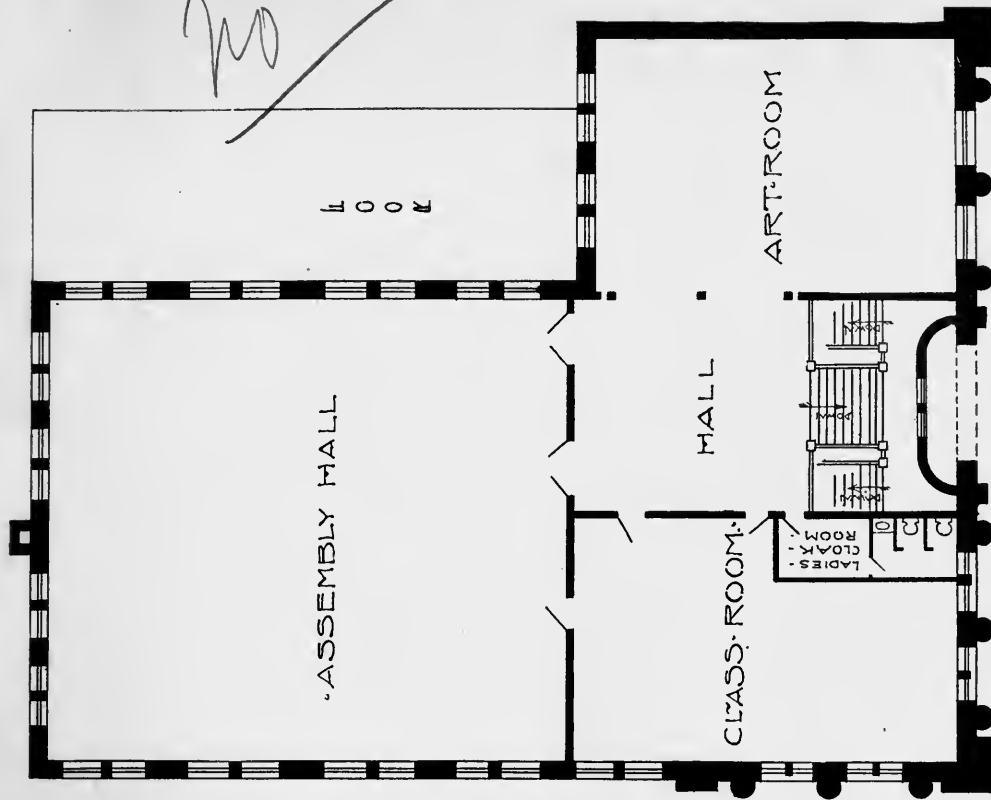

Bookcases so placed can be moved as experience may indicate to meet varying conditions. The library so arranged will give the

No. 2

PLANS for the next annual meeting of the American Library Association are now taking definite shape, and all indications point to a large and profitable conference at Magnolia in June. In point of attendance it is likely that all previous records will be broken, for the meeting-place is practically in the library center of the east, and the opportunities it affords of visiting the libraries of Boston, Cambridge and the nearby cities are especially attractive. Three entire days will be given to such visiting, followed by four days of business sessions at Magnolia, one of the most delightful of the New England coast resorts. The constantly increasing size of these yearly gatherings and the great variety of interests represented have of recent years made the question of program a difficult one. Its only practical solution, though in some respects unsatisfactory, seems to lie in the splitting up of sessions into section and group meetings, and this year again matters of cataloging and bibliography, activities of state commissions and state associations, the work of children's librarians, of reference, college, and state librarians, and of trustees, will have individual presentation. As we have often said, it should be a matter of ordinary business policy on the part of trustees to ensure the attendance of their librarians at these meetings—and it may almost be said that the smaller the library and the more limited its apparent field, the more essential is this policy. It is to be hoped that the present conference may be especially representative of public libraries in the smaller towns and cities, not only from the east, but from north and west and south as well.

BROOKLYN has followed in the footsteps of New York in providing a great reference library as the hub of its free library system. The transfer to the city by the trustees of the Brooklyn Library of their immense collection and the building which contains it is an event of the first importance in the present day of the co-ordination of library facilities. It is a consummation that has long been devoutly wished by those interested in the provision

of proper library facilities for Brooklyn, and it is especially gratifying that it has been effected so easily and on such perfectly proper and reasonable conditions. There seems no doubt that the consolidation will be carried through promptly, and in a month or two Brooklyn should have ample material for the complete library system that it so much needs. The Brooklyn Library collection gives the basis for a fine reference foundation, its building is centrally placed and it has been for years one of the familiar institutions of the city. There remains the need of a fine central building, adequate for the demands of a great city, but where so much is already assured this does not seem unattainable. With such a central building, and with the system of branch libraries already outlined and for which Mr. Carnegie's generosity has ensured suitable buildings, Brooklyn will at last take its proper place among the cities of its rank in its facilities for public education.

LIBRARY buildings are the order of the day just at present, and are likely to remain so for some time to come. With all that has been written upon the subject, and with object lessons of what to do and what to avoid in many towns and cities, there remains a surprising fund of ignorance of the first essentials of buildings suited to the needs of a small city, easy of administration, and capable of later extension. Boards of trustees and local architects too often feel that a library building should be composed of an imposing entrance, a rotunda and a dome, with Corinthian pillars and a few "literary" inscriptions, and the librarian finds it no easy task to urge the claims of books and readers. The issue by the A. L. A. Publishing Board of a short practical "tract" upon library buildings comes, therefore, at a timely moment. The little pamphlet has been prepared by Mr. Soule, and is especially intended for trustees and librarians of the smaller cities. It should prove of real usefulness, and it is to be hoped that it may be followed by a later supplement covering a broader phase of this important subject.

Communications.

AN INDEX TO RECITATIONS.

IN answer to the communication of H. F. Woods, which appeared in the *LIBRARY JOURNAL* for November, 1901, I wish to say that a bibliography of poetry suitable for recitations is being compiled by a committee of the Washington Branch of the Association of Collegiate Alumnae. This committee, consisting of 12 members, has been at work since February, 1901, and hopes to complete the list not later than October, 1902.

The list, which is compiled from the works of the best poets, dating from the Elizabethans, is supposed to contain poems and selections from poems suitable to be committed to memory by children between the ages of five and 14. The committee has chosen poems suitable not only for declamation, or recitation, but also for use in small classes or in the home. The choice has been broad, the committee thinking that in such a selection the sin of commission is preferable to that of omission. In making selections we have kept in mind always melody and rhythm.

The object of the bibliography is to give to parents and teachers a guide to assist them in choosing for a child who is to be called upon to commit a "piece" to memory, something of literary value, something worthy to be learned *by heart*, not by rote—a notable distinction of phrase made by Miss Katherine Lee Bates.

The list under authors will be supplemented by a subject index of the poems.

LUCY MADEIRA, *Secretary of Committee.*

1511 THIRTEENTH STREET, }
Washington, D. C.

THE CLASSIFICATION OF MUSIC.

THE publication of Mr. Clarence W. Ayer's thoughtful comments and careful classification, in your January number, prompts me to make a suggestion which I took the liberty of making to the Harvard authorities at the time when their classification was undertaken. Mature reflection has made me only the more convinced that, in what would appear to be a minor detail, the Harvard classification otherwise admirable, is distinctly unpractical. I refer to the "arrangements" of musical works.

In my opinion, no arrangement of any work should be shelved by the side of the original. Only rarely does an individual who is looking for the arrangement of a work have any desire to see the original. Arrangements are of very diverse nature, from the authorized reduction of a score, to the distortion of the original for flute and piano (or reed organ). A string quartet arrangement of a slow movement of a Beethoven symphony or sonata is probably a pot-boiler by some hack-writer, and belongs in some locality remote from the original.

But it is not wholly, nor, indeed, chiefly, the sentimental reason which is here potent. Shelf classification is, I take it, not solely for

the expert, but also for those who, for any reason, are admitted to the stack. It should also seek to minimize errors on the part of the (generally musically uneducated) messengers. The expert certainly does not want to be bothered by the presence of arrangements. The less advanced student generally seeks the arrangement only, and the messenger often gets the wrong volume or reports "out" because there is a bit of illegibility in the slip, or because the messenger who last returned the volume misplaced it on the same shelf.

But, without endeavoring to exhaust the subject, let me merely state my opinion, based on rather extended use of musical collections, that the shelf-classification which combines arrangements with originals is essentially vicious. Whether this is merely the least of several evils I leave the library experts to decide. I cannot help believing that a classification of arrangements under the headings "Voice and piano," "Piano, four hands," "Piano, two hands," "Two pianos, eight hands," "String quartet," "Two mandolins and guitar," etc., is the desirable thing.

LEO R. LEWIS.

TUFTS COLLEGE, }
Mass.

THE INDICATION OF VARIOUS EDITIONS ON THE SHELVES.

It is just possible that libraries employing the same system of book numbering as that used by the Pratt Institute Free Library may have suffered the same inconvenience in one respect, and may be glad to know how we have overcome the difficulty. Different editions of the same novel—more especially novels published sometimes separately and sometimes bound with others by the same author—have, of course, had to have a different book number, which has resulted in their being separated on the shelves. The book being called for by one of its numbers, and found not in, there has been no indication as to the book number or whereabouts of other editions, except by a second or third resort to the catalog. The borrower does not always know enough of the system used to do this, and the assistant in busy hours has not time to look up the other numbers.

It is now proposed that a special dummy be made, somewhat thicker than the others and painted a light shade of green or blue, to stand next to the copy of one edition, indicating where copies of other editions may be found. The lettering on the back of these dummies would be as follows:

Call-number of copy first received and first numbered.

Author and brief title.

In succession below, call-numbers of other editions.

This device, proposed by one of the staff, will, it seems to us, do away with our difficulty.

MARY W. PLUMMER.

PRATT INSTITUTE FREE LIBRARY,
Brooklyn, N. Y.

THE CLASSIFICATION OF CHILDREN'S STORY BOOKS.

BY CLARA WHITEHILL HUNT, *Children's Librarian, Newark (N. J.) Free Public Library.*

ALL librarians who have had experience in supplying the wants of boys and girls, are familiar with the requests "Please give me a good Indian story," "Have you any stories of the Crusades or Chivalry?" "We are studying about the Norman Conquest, and the teacher wants us to read some stories of that period." Teachers come to the librarian asking for animal stories or fiction relating to children of other countries; fairy tales are perennially in demand. Having felt the need of some means of getting at the fiction illustrating certain often-called-for subjects more quickly than by searching from A to Z on the fiction shelves, it was decided by the Newark Free Public Library that before opening the new children's room, the juvenile story books worthy of such treatment should be so classified that any person desiring material on the Civil War, or the Navy, or the French Revolution, might find by the side of the serious books of information on these subjects such good stories as would add to the child's interest in those lines.

This step was decided upon for a number of reasons. In the first place, with a few exceptions, children were more apt to ask for stories by subject than by author. To give what was asked for quickly one must either know the books more thoroughly and have a memory trained to respond more quickly than the average library attendant, or else one must have classified lists ready at hand. To consult such lists and hunt up the numbers takes time, and it is impossible to keep a printed list up to date. Again, the dividing line in books for children between fact in story form and real information books is so narrow that it is often a puzzle to the classifier to know where to place them. Much of the best information is given in what must be classed as fiction, thus what would be valuable help in study is lost sight of. Further, in an open shelf room it is desirable in every way to help the people to help themselves, and this is particularly true in the children's department where practically all the work with the boys and girls is done between the hours of four and six on school days, and no library

is so rich as to be able to provide attendants enough for answering every timid request of every child.

Upon thinking over this matter with deliberation we decided to classify our juvenile fiction, and having worked out a scheme which, after nine months of use we can pronounce entirely successful, it was thought that other children's librarians might be interested in hearing of the method.

For months before the children's room was opened, while doing her regular work at the bureau of information, the future children's librarian took for her "knitting work" the examination of all juvenile books in the library. First a shelf list on slips the size of the ordinary catalog card was made. Little by little each book was gone over more or less thoroughly. On each slip was entered the catalog form of author's name, full title, place, publisher and date of publication, with a note describing the book—its literary merit, subject, scope, to what age adapted, etc. If the book seemed likely to be a useful addition to the child's information on any subject, the class number of that subject was written in red ink below the call number of the book, for future use.

Having decided to place stories of the Civil War next to the histories of that struggle, the problem was how to mark the books so that they would be returned to such shelves, without really changing the class numbers, since it would be manifestly unfair to mark "Two little Confederates" with 973.7 and get the credit for circulating a larger "hundreds" per cent. than was actually the case! Also if the books were really to be classified anew, it would mean changing the numbers on hundreds of shelf and catalog cards, a piece of work too stupendous to be contemplated.

The first point was then, to mark the back label so that the book would stay on the 973.7 shelf. But back labels slip off and become dirty, therefore the class number should appear in some safe place within the book. The book plate was naturally best for this permanent record. Next it was reasoned that, as the persons marking back labels usually

When we were ready to begin work — when the movers had deposited our children's books on the shelves in the beautiful new room, and the shining tables soon to be surrounded by eager youngsters were temporarily filled with books to be repaired, books to be marked, books to be covered, books to be discarded, new books to be accessioned, shelf-listed, etc., the room became a hive of busy workers. One of the messengers, taking a bunch of call slips referred to above, collected the stories to be classified. Placing the call slip with its subject reference in the title-page of the book, they were soon separated from other books of fiction and ready for marking. Opening day saw Kirkland's "History of England," Bennett's "Master Skylark," Henty's "Wulf the Saxon," Church's "Stories from English history," Pyle's "Men of iron," etc., hobnobbing together on the 942 shelf as if they knew they belonged in the same neighborhood.

To be perfectly candid, and to help others who may desire to adopt this scheme I must tell of a few difficulties we experienced in the beginning and how we disposed of them.

When the children came to the library in person and made their own selections, there were no difficulties. But when call slips came in through the delivery stations with a long list of H39's (which few librarians need to be told are the Henty numbers), our messengers were obliged to refer to the slips bearing reference numbers to know where H3957, H3966, etc., were shelved. This took a good deal of time at first, but we soon saw a way out of the difficulty. Having no printed juvenile catalog we were about to issue a double number of our *Library News* containing a fairly complete author list of books in the children's department. In this list we gave the new numbers thus:

Goss, W. L.	Jed.	G692(973.7)
Thackeray, W. M.	The rose and the ring.	T3221(398)

After the boys and girls had been provided with this number of the *News*, call slips came in through the stations so made out that books wherever shelved were quickly found.

Another objectionable feature was that on books coming back from the bindery gilded with their library numbers only, we were obliged to paste a back label bearing the red ink reference number under the gilded num-

ber. But this was such a waste of time that we soon had the binder gild the reference number also, in smaller type, underneath the fiction call number, thus: **W 51**

590

Since these matters have been satisfactorily settled, the system has given no trouble whatever. I can truthfully say, and all who have helped in the children's room agree, that classifying the juvenile fiction has proved not only desirable but so indispensable that we should feel lost without it. The children "take to it" as naturally as ducks to water, and teachers apparently think there could be no other scheme of arranging our books. It is the quickest way of collecting all material in any line for immediate reference. You place the applicant before the shelves where her subject is represented and leave her to look them over at her leisure. There is no consulting of catalogs, sending messengers to hunt up a long list of numbers to bring the books together and later distribute them back to their shelf. This work is all done in advance and the saving in time after the change has been made is great.

It may be of interest to tell of some of our adaptations of the Decimal classification which would be diverting to Mr. Dewey, I have no doubt. For example it requires a stretch of the imagination to guess why "Robinson Crusoe" and "Treasure Island" are classed in 359, the number for histories of the navy. But the connection is obvious if you reason with the boy who classes together in his mind all books about adventure at sea, shipwrecks, desert islands, etc. So in our 359's we have Lossing's "History of the U. S. navy," Seawell's "Little Jarvis," Alden's "Cruise of the Canoe Club," Munroe's "Dorymates," the two books above mentioned and others of their kind, and as the boys see no incongruity we are not concerned if classifiers do.

In 398 we place all fairy tales, whether a book deserves the folk lore number or is merely a fanciful invention of a modern author. Most animal stories except those on birds we put in 590, for in this fiction classification we use only broad classes, not thinking it worth while to carry it down to a very fine point. In the English history stories above mentioned "Wulf the Saxon," "Men of iron," and "Master Skylark" although relating to the Saxon, Lancastrian and Tudor peri-

ods respectively are placed in the general English history number 942 without any of its period subdivisions.

When the new room opened we had taken about 450 story books off the fiction shelves and placed them with history, fairy tales, etc. As new books are added we treat them in the same way.

Below is given a list of all the class numbers we have used, with an example of stories so treated, excepting modern history, travel and biography, of which many examples will immediately occur to every librarian:

353 Austin. Uncle Sam's secrets.
398

500 Booth. Sleepy-time stories.
537 Trowbridge. Electrical boy.
595.7 Noel. Buz.
598.2
600 Walsh. Young folks' ideas.
770 Black. Captain Kodak.
820 Richardson. Stories from old English poetry.
900 Andrews. Ten boys, etc.
930 Stoddard. Swordmaker's son.
932 Henty. Cat of Bubastes.
933 Henty. For the temple.
937 Church. Two thousand years ago.
938 Church. Three Greek children.

SHELF CLASSIFICATION OF MUSIC.

BY CHARLES A. CUTTER, *Librarian Forbes Library, Northampton, Mass.*

AT the last meeting of the Massachusetts Library Club, when Mr. Ayer described the Harvard music classification, I gave some reasons for thinking that the Forbes is better. In the January LIBRARY JOURNAL, p. 5-11, he published the Harvard scheme. The editor permits me to print here the class Music of the Expansive classification, and to briefly point out the differences between the two schemes.

The Forbes plan is to an unusual extent the result of experiment. Owing to the fact that the music section has never been permanently classified we have been able in our first seven years to try different arrangements and make as extensive changes in them as we pleased without feeling that we were throwing away too much work. The Forbes collection is about two-fifths as large as that in Harvard College Library; and the circulation is large enough to give some weight to our experience.

There are three chief peculiarities in the Harvard plan. First, under most subdivisions the books are arranged by accession numbers, with no attempt at alphabetical order. Second, nevertheless, "important and growing divisions are given alphabetical numbering by the use of 26 running figures." That is to say, there is practically a return in the smaller sections to the discarded early practice of the D. C. and for larger classes to the principle of Mr. Schwartz's order table composed of figures alone. About 1880, after converting this table to decimals, in order to

allow of indefinite expansion, I tried it for a year at the Boston Athenæum, and gave it up, constructing in its stead the table now generally used in American libraries, in which the mark, beginning with the author's initial, has a meaning in the eyes of the public and is more helpful towards finding a desired book, and at the same time the capacity of the notation is more than doubled.

The third characteristic is that all the scores of individual composers are arranged in one alphabet of composers and are not put in classes according to their musical form. This plan, too, we tried at the Forbes Library for three years, and the longer we tried it the less we liked it. Then we made an arrangement by forms and instruments, at first in very large divisions, then with gradually increasing frequency of subdivision; and the more we developed our scheme the better its practical working satisfied us. This, like the other, was under trial for three years and with unanimous approval of all concerned has now been definitely adopted.

Still, it should be noted that there is not an irreconcilable difference between the two methods, since the Harvard subdivides the works under each composer by form and the Forbes subarranges the form sections by composers. Under either scheme by taking a little trouble you can get together all the works of any composer or all the pieces of any kind. If one piece only is wanted, we think it is

found a little more easily by the composer or by the form in the Forbes than in the Harvard plan.

The main question is, however, Which do those who use the library and go to the shelves want first and want most? In the Forbes Library six years' experience, half with each arrangement, shows that our public ask for the forms much the more frequently. And it is not unfair to assume that this would be the case with many town libraries and some college libraries, for the Forbes enjoys the distinction of belonging to both classes.

In one point the two plans radically differ. The Harvard puts individual biography and criticism with each composer's musical works. This is an attractive idea, but it has its practical inconveniences. The lives and criticisms and analyses are usually small books, octavos and duodecimos; the music is mostly in large quarto or small folio. They do not go together well on the shelf, and if the lives are separated from the music and put on an upper shelf they are, after all, not much more with each composer's works than if they were put *alphabetically arranged by composers* in a neighboring section. Besides which, keeping the biography with the works, though a taking idea at first sight, is not really very desirable. The majority do not want a piece of music at the same time with the life of its composer, and it is only rarely that there would be any gain in having the two on the same shelf. It is enough that either of them can be instantaneously found when it is wanted.

The last difference to note between the two schemes is in the notation; the one uses figures, the other letters. There is not space here to discuss the question, nor would it be of much use. Those who like figures dislike letters, and those who like letters cannot imagine why the others prefer figures. At any rate it is certain that the letters give shorter marks, which those who use them find easier to remember. They also have a feeling that figures when not used decimally are sure in the end to have said of them what Mr. Ayer tells us of the "elaborate and ingenious system of fixed-shelf numbering" devised for the Harvard College Library by Justin Winsor, that it is "found to be inadequate to the needs of large and rapidly increasing subdivisions of important groups,"

and has therefore been abandoned by the library.

The following scheme is necessarily given in abridged form, and cannot be quite fairly judged without explanations and advice, which will be given when it is printed in full in the Expansive classification.

OUTLINE OF CLASSIFICATION.

WORKS ABOUT MUSIC.

Vv'2 Bibliography.
Vv'5 Dictionaries.
Vv'7 Periodicals.
Vv'9 Societies.

The history of publishing societies comes here; but the works issued by them are distributed according to their contents; the history of performing societies may be put here or locally in Vv14-99.

Vv General and miscellaneous works.
General specials, as Moral influence of music, Music and the state, Women in music, etc., may be put in Vv or separated as Vv0, with alphabetical subarrangement.

HISTORY AND BIOGRAPHY.

Vv1 History and state of music (general) and Biography (general).
Vv1'7 Yearbooks.

History of music (kinds).

Vv1A History of music of particular kinds
to and of music written for particular
Vv1z instruments and collective biography of performers on particular instruments.

For example Vv1b History of dance music, Vv1c History of operatic music and Lives of opera singers (Collections; single lives are in Vva-Vvz.) Vv1r History of piano music and Lives of piano players (Collections.)

The history or analysis of any one opera or any one pianoforte piece is best put (1) in Vva-Vvz, under the name of the composer; also the analysis of all the operas or sonatas, etc., of any one composer.

History of music (periods).

Vv12 Ancient history in general.
Vv121 Primitive and savage nations.
Vv1232 Single ancient nations: Greek 1232,
to Roman 1235, Hebrew 1261, Assyrian 1263, Egyptian 1271.
Vv1271 Modern history (the whole modern period).
Vv13 Mediæval history.
Vv134 Modern modern, i.e., late history.
Vv135 To be subdivided by musical periods.

History of music (countries).

Vv14 History and contemporary state of
to music in particular countries.
Vv99 In these divisions may be put collective biography confined to one coun-

try; but it will be more convenient with general collective biography in Vv1. Here will come, locally arranged, accounts of musical celebrations and festivals; also programs.

Biography (single).

Vva Biography (Individual); also Criticism and Analysis.

to
Vvz Includes the musician's letters and journals. Thematic catalogs may be put here with the composers' lives or in Vy with the composers' musical works.

Arrange alphabetically by persons (composers, performers, teachers, etc., in one alphabet.)

In the order marks of the greater composers use only one figure, e.g., Bach B1, Beethoven B3, Chopin C4, Handel H1, Haydn H3, Liszt L7, Mendelssohn M5, Mozart M8, Rossini R7, Schubert Sch7, Schumann Sch8, Verdi V5, Wagner W1, Weber W3. This will produce an occasional slight derangement of the alphabetical order, which can be avoided by giving to the less important composer a high number from the preceding digit. For instance Mozart having occupied the mark M8 Moszkowski who comes also into the section M8 could be marked M98. In other words one establishes for composers a special order list with altered limits.

MUSICAL ACOUSTICS, ESTHETICS, AND THEORY.

Vva Musical acoustics.

Vvb Psychology of music.

Vvc Musical esthetics.

Vvd How to hear, understand, enjoy music.

Vve Theory.

Vvf Nomenclature, Terms.

Vvg Notation and its history.

Vvi Tonic sol fa notation.

Vvl Temperament.

Vvm Melody.

Vvo Harmony and Thorobass.

Vvp Composition.

Vvq Details, as Rhythm.

Vvr Form and special forms.

Vvs Counterpoint, Canon, Fugue.

Vvt Instrumentation, Orchestration.

Vvu Instruments and Voice together. Oratorio, Opera, etc. Here will come Wagner's theories of operatic composition.

Vvv Voice.

Vvw Musical analysis.

General. The analysis of any one work goes under the composer in Vva-Vvz.

INSTRUCTION.

Vwx Instruction in general, Education, Training, Study.

Vwy Tonic sol fa method (or Vxvb).

Vwz Music schools.

With the local list. Might go in class I Education as Iyvv.

INSTRUMENTS AND THE VOICE.

Vx Instruments in general, the Orchestra. .4 is not needed.

Vxa Single instruments, including the Voice.

to
Vxz This will include the history, description, and representations of an instrument and its manufacture, tuning, etc.; also instruction on it (for which a or 1 is to be added to the mark of the instrument, e.g., Vxu Violin, Vxua Instruction in violin playing), also instruction books without music; but instruction books containing scores go in Vy.

I have drawn up an alphabetical list of 44 instruments now in use and 10 classes of instruments. 18 are marked with one letter, 32 with two, three with three, one with four. These letters are to be added to Vx for the class Instruments and to Vy for the class Instrumental and vocal music, e.g., Vxo Organ building, tuning, etc., Vyp, Pianoforte music. The classes are Ancient, Autoharp and the like, Brass, Mechanical, Organoid, Percussion, Plectral, String and bow, Wind, and Woodwind. Single instruments of any class except Mechanical appear in their own place. Very few of the instruments at present unused will have either history or music in an ordinary collection. Those which do can easily be inserted in their proper order. The divisions under Voice are:

Vxv Voice; physiology of the vocal organs and culture of the voice.

With such exercise books as are confined to the development of the voice, vocalises.

Vxva Instruction in singing.

Both single voice and classes.

Vxvb Tonic sol fa method (or Vwy).

Vxvc Choir or chorus training.

WORKS OF MUSIC.

COLLECTIONS.

Vy9 Collections of works by several composers.

But if any collection is confined to one instrument or one class of instruments (percussion, strings, wind, woodwind) it goes in Vza-Vzz; if it falls entirely within any of the groups in Vy it goes there. Often it will be found better to put a collection of several kinds of music under one of them, with dummy references from the others.

SINGLE COMPOSERS.

Vy Complete works of composers and partial collections of their works.

But if either the partial or complete collection falls entirely into one class (as Opera or Organ) it will go with that class.

The author-mark for the composers is the same as in Biography Vva-Vvz, the order-mark of the greater composers having only one figure, as Bach B1, Beethoven B3.

The classifier can if he prefers arrange all the works of composers here rather than in the classes Vza-Vzz, retaining in those classes only collections

of composers, but this is not recommended. He then should add to the author-mark the instrument mark (o Organ, p Piano, v Voice, etc.), and the group mark (vd Dance music, vo Opera, vov Overture, etc.), e.g., Vy.B3p Sonatas, Vy.B3vo Opera; Vy.B3vs Symphonies. (Or v may be omitted making a single alphabet.) The subarrangement may be made by opus number or by figures, 1, 2, 3 as the sections will generally be so small that the suborder is unimportant.

To vo the initial of the best known name of the opera should be added, e.g. Vy.B3vof or Vy.M8of Fidelio.
Vy.M8vod or Vy.M8od Don Giovanni.

CONCERTED MUSIC.

- Vy Concerted music, excepting that for classes of instruments (Brass band, Percussion, Stringed, Wind, Wood-wind), that designed for one instrument chiefly (as Piano-concertos), and the following

MUSICAL GROUPS.

- Vy13 National music, Folk songs.
to As Vy36 Italian, Vy39 French, Vy47 German.

- Vy99 This mark is for arrangements for the piano or for piano and voice; mark those for any other instrument by adding its mark to the number, as for violin Vy39v.

- Vyc Chamber music (not solo).
May have subclasses, as Vycq Quartettes, Vycv (or Vycr) Quintettes.
Each library must choose whether or not to put purely string quartettes, quintettes, etc., here or in Vzs (strings), piano concertos here or in Vzq, Vzs for the wood-wind instruments here or in Vzwo. I prefer to use Vzq, Vzs, and Vzwo, confining Vyc to collections of music for several combinations of instruments and to single pieces which do not come under either of those classes. Solos at any rate are not to be put here.

- Vyd Dance music.
This need not include the concert pieces but may be confined to the practical dance music.
With subclasses, as Vydm1 Minuets, etc.
Dance music for a single instrument will be most useful with the instrument in Vz; to distinguish it v may be added to the mark, as Vzvd Dance music for the piano.

- Vym Military music (concerted).
Vye Operas.

Whether full-score, piano and voice, or voice with any other instrument; also collected selections for instruments and voice. Single solos, duets, trios, and choruses, however, go in Vzv without regard to their origin.

But both complete and partial arrangements for instruments without the vocal parts will be most useful under the instrument. Add o to its mark, as Vzro.M8p a piano arrangement of Don Giovanni.

- Vyoc Cantatas, etc.
Vyok Song cycles.
Vyol Librettos for operas, cantatas, and song cycles.
Strictly a libretto solo belongs in Literature Y[language mark] but they

are more useful here. They will usually be separated from the operas by their size.

Vyov

Vyr

Overtures.

Religious music (concerted).

With divisions, as Vyra Anthems, chorals, choruses, etc. Vyrc Cathedral services not otherwise marked. Vyrr Hymns and psalms; Vyrm Masses; Vyro Oratorios; Vyrrp Sacred cantatas; Vyrrr Requiem masses; Vyrs Special days and occasions; Vyrsu Sunday-school; Vyrt Te Deums.

Vys

Vysc

Symphonies.

Children's symphonies.

SINGLE INSTRUMENTS AND CLASSES.

Vza

to

Vzz

Music for single instruments or for classes of instruments.

Arranged alphabetically with the same marks for the instruments as in Vx.

Only a few needing special remark are given here.

Orchestral music. See Concerted music Vy.

I.e., collections of pieces for the orchestra and single pieces for the orchestra (such as Fantasias, Nocturnes, Suites, etc.) not coming into the classes National, Dance, Military, Overtures, Religious, Symphonies.

Vzor

Organ.

A large collection might be divided by forms.

Transcriptions for the organ can be kept separately, marked Vzoz, and a large collection might be divided, as Vzsoz Overtures, Vzssz Symphonies.

Vzot

Organ with other instruments, organ concertos.

May have divisions, as Vzotp Organ and piano.

Vzp1

Piano: instruction books containing music.

Vzp2

Easy music for the piano; music for beginners.

The same notation may be used with any instrument.

Vzpf

Piano solo, 2 hands.

Vzpe

" " 4 "

Vzpaa

" " 6 "

Vzpb

" " 4 " on 2 pianos.

Vzpc

" " 8 " on 2 pianos.

Vzpd

Piano arrangements of dance music

Other kinds may follow in alphabetical order.

Vzq

Piano with other instruments, piano concertos.

May have special divisions, as Vzqr Piano and harp, and so on.

Vzu

Violin.

Vzua

Violin and other instruments.

Except Violin and organ (Vzosu) and Violin and piano (Vzqu).

Violoncello.

Vzuu

Violoncello and other instruments.

Vzup

Voice (collections of songs).

Vzv

I.e., songs with or without accompaniment.

Vzv is for books containing collections of four part songs, trios, duets, and solos, or any two of these classes. Single solos and collections of solos go in Vzvs.

Special song collections.

- Vzvck Kindergarten.
 Vzvcf Patriotic, Political, War songs.
 Vzvcn Negro, coon, negro-minstrel songs,
 and so on.

Number of voices.

- Vzvd Duets.
 Both single duets and collections.
 In a large library the voices should be marked either s for soprano, ms for mezzo soprano, c for contralto, t for tenor, ba for baritone, b for bass, or by a shorter notation a, b, c, etc.

Vzvda or Vzvd sc Soprano and contralto.

Vzvd b or Vzvd st Soprano and tenor.

Vzvd c or Vzvd tb Tenor and bass.

This marking applies both to single duets and to collections of duets for a single combination. Collections of duets for several combinations are Vzvp.

To separate religious from secular duets add v to Vzvd and add to this a, b, etc., for the voices, e.g., Vzvpvc a religious duet for tenor and bass.

Vzvf Four part songs (mixed voices).

Both single songs and collections.

Vzvff Female voices.

Vzvfm Male voices.

Religious four-part songs, if separated from secular go with Anthems in VYRA.

Vzvs Solos.

Both single songs and collections.
 Mark the voices.

Vzvt Trios (mixed voices).

Both single trios and collections.
 Mark the voices.

Vzvtf Female voices (s., ms., and c.)

Vzvtm Male voices (t., ba., and b.)

Separate religious trios, if desired, as religious duets are separated.

In the music for two or three instruments as Organ and violin, Piano and cello it will sometimes not be easy to determine which instrument takes the lead; but the title will usually give an indication of the composer's thought. In doubtful cases a dummy will prevent serious inconvenience.

It will be seen that I have put in a few well marked main divisions a large number of alphabetical subdivisions, an arrangement which without excessive elaboration of marks provides the very minute classing which a large collection needs if every distinct kind of music is to be found readily.

In a few places only there is sub-subdivision: under Voice for the special voices, which is absolutely necessary, and for different classes of collected songs, which is desirable where there are many; under Dance music for the different dances, and under Religious music for the different services. Those who object to such grouping can easily distribute these subdivisions in the general alphabet.

It would be possible also to combine the alphabet of music for single instruments and the alphabet of forms and groups of music into a single order under Vy; in this case the marks would occasionally have to be a little longer.

ARE LITERARY PAPERS OUT OF PLACE IN A LIBRARY CLUB?*

BY JUUL DIESERUD, *Library of Congress, Washington, D. C.*

THE question has been raised whether a library club should confine its activity to the consideration of the various phases of library work in its narrowest sense, or whether it is justified in setting aside part of the available time for literary and esthetic papers, and I beg to offer a few remarks in this connection. In the first place it seems to me that a local library club or association cannot be compared with the A. L. A. or with scientific, technical or trade associations. We all agree that a literary paper would be entirely out of place in the regular meeting of a society of civil engineers, of American entomologists, or, say, a bricklayer's union. But not so in a local library club. The time has not long gone by

when the librarian was himself an active worker in some field of literature and science and it is even at this day eminently his business to be in especial touch with the esthetic movements of his age, since the great majority of readers still seek most of their mental nourishment in the dramas, novels, poetry, popular philosophical essays and other lighter branches of literature. I do not in fact see why it should not be entirely proper for a society of librarians to slate a paper on say Tolstoy, or the modern German drama, or the Victorian poets, or on the so-called decadent movement in France. And I would even say that a subject like Heinrich Heine, a couple of years ago ably treated by a member of the Chicago Library Club, was not entirely out of place, although in such a case

* Remarks made before the District of Columbia Library Association, Jan. 8, 1902.

the probability would be that any one could read the same thing just as easily in one of the score or so of well-written biographies on the subject. As a rule literary papers should be limited to more modern times and to persons and subjects around which interest is still centered and where the librarian, always busy with the daily routine of his profession, cannot possibly get time to form a well-defined opinion from his own reading except in a very limited number of cases. And it goes without saying that the person offering a paper should select a subject upon which for some special reason he is able to give more than a rehash of what is available in magazines and books already issued, and that the program committee should not be bound to accept anything offered by any member not so qualified. As a matter of course a few of the most reliable books and articles on the subject should be mentioned by way of bibliography.

It is, I believe, a tenet in philosophy and one of the facts of common experience, that the useful defeats its own end when it becomes so tedious that nobody cares to use it. This law to some extent applies to the library clubs of the present day; for they are too often of late acknowledged to be almost proverbially dull and tedious. We are, most of us, week out and week in, working and talking and dreaming on catalog cards and authors' first names, and catchword titles and reference books, and economy here and economy there, and yet very few of us have reached that goal of librarianship of becoming a human index to the books that other people have written and to the thoughts that other brains have evolved. We are still beings with a few human interests and ideas which we would like to exchange with our fellow-workers. And we do not see any harm in devoting even a good sized fraction of the time available in our trade meetings to such interests and to the pleasant feeling that we also might be capable of producing thoughts and expressing ideas to be indexed and cataloged, and—who knows—even bibliographico-scientifically described by others. And if this can serve to add to the interest taken in the meetings of the club, to swell the audience and to stimulate the activity of the members, there seems no reason why such a plan should not be carried out.

As oral discussions notoriously as a rule

lead nowhere and convince nobody, I think that an ideal program for the ordinary meetings of a local library club would be one literary paper and one paper on library economy, cataloging, reference work, or bibliography, each occupying from half an hour to three-quarters of an hour with an occasional evening devoted to the reading and discussion of a single paper.

While, therefore, a library club is essentially a professional affair, where subjects treating of library economy, bibliography, reference work and cataloging should be liberally represented, I would lay stress on the fact that the papers read and the oral discussions arising in a single society are rather unimportant in relation to the library movement as a whole, in comparison with the proceedings of the A. L. A. and the discussions in the organs of the craft. And to those who offer us only papers on the best means of luring children away from their sports and studies, or on plans for park libraries, or on impossible labor-saving devices in the line of the Rudolph indexer, I would not hesitate in certain emergencies to apply a modification of the famous saying of Omar: "If your paper is worth something it will find its way into the LIBRARY JOURNAL; if not, burn it, for it is then probably not worth hearing."

I am confident that the world will not fail to turn on its hinges, even if the library clubs scattered over the country once in a while put aside that painstaking and eminently tedious sense of being in duty bound for the benefit of mankind to rehash each season a certain number of shopworn subjects pertaining to library work in its narrowest sense. And the danger is probably not great that the program committees would be so overrun by interesting literary papers, that the majority of the hours available during the years could not be devoted to our more special professional interests.

We of course keep up these societies and meet several times a year with the ambitious hope that we are contributing some little to the general advance of the library cause, but we most assuredly also meet in the legitimate egotistic hope that we may personally derive some pleasure and inspiration from such intercourse with our fellow-workers; and I believe the time has come for the latter feature to assume a more prominent part than has heretofore been the case.

NOTES ON THE CATALOGING OF MAPS.

IN consequence of the entirely different features set forth in describing a map, and to save time in writing certain words which always recur, and also to ensure that every fact recorded by these words shall occupy the *same position* and thus facilitate reference, it was decided that cards for the card catalog of maps in the Lenox Library should be printed, only leaving the varying blanks to be filled in by the writer.

The cards are regular standard size, the following data being printed in the lower half, in the order shown:

<i>Place and publisher:</i>	<i>Date:</i>
<i>Size within border:</i>	<i>Scale:</i>
<i>Engraved</i>	<i>plain or col.</i>
<i>Sheet</i>	

Space must be left at the top for the subject or name of place to be entered in pencil, and the actual title must then be written as in regular book cataloging, or made up if necessary within the usual [———]. In many cases, the data to be transcribed are extremely verbose, and particularly in old maps include lengthy dedications. These latter are scarcely ever recorded, unless a very rare and valuable map is noticed, when every fact or indication of peculiarity can be noted. In those exceptional cases where the printed card does not allow sufficient space for all the description considered necessary, one or more unprinted cards can be used at discretion; in such cases I have always named the subject in pencil on each, but left the first line blank, and added both the total number of cards, *e.g.*, (4), on the extreme bottom right hand corner, and the consecutive numbers 1-4 on the right hand of the perforated hole. As a general rule, the bare title of the map suffices, though if the name of a compiler, editor, or draughtsman is given, or the name of the surveyor or director of a surveying party, or the head of a government department, as many of these as can be contained on one card, should be given, but I do not think it necessary to put all.

Now let us examine each word in succession on our card and see what it really signifies:

Place. Here should be put if possible the city or town in which the map is published; and it does not necessarily follow that because an atlas or collection of maps is published at a certain place, that an individual map in it should have been originally published there, so that unless such name appears on the map, the name of the place where the atlas which originally contained such map was published, should be given in brackets, with mark of interrogation. When government maps are concerned, the *general* head office of the government may be given.

Publisher. The same remarks apply here also; and considerable confusion exists among the earlier maps, to decide as to whether a given name might be that of author, seller, draughtsman or publisher. In many cases, even down to the middle of the 19th century, the author has been both draughtsman, seller and publisher, as Aaron Arrowsmith and John Arrowsmith of London. On the other hand the many maps included in the various editions of the so-called "Ptolemy" atlases and geographies, are admittedly drawn by one person and published by another, but none of them by Ptolemy himself. We believe that Lafreri was the first collector of maps originally engraved and published by others, but he was the publisher of the atlas bearing his name; whilst Ortelius not only did the same thing, but he compiled maps himself and published them individually and collectively.

Date. If a map bears a date, there is of course no difficulty in transcribing it; but if it does not, there are various methods by which a reasonably approximate one may be added in pencil within brackets and with the interrogatory mark. And it is in connection with this question of date, that it is often found that some one or other of the various names already set forth of compiler, editor, author, translator, engraver, seller, printer or publisher, may assist to place this important item. And perhaps it may be well to note here, that I have endeavored to make short "author" cards, referring to the specific maps, and by degrees have accumulated quite a long list of these, some having only one, others as many as 20, maps handled by them, and these *having dates*, have helped to some extent to correctly localize the time. And if that cannot be done, a little experience will show the style of the period either of engraving or printing. But this above all things must be noted: when the map bears on its face no date, be sure that the approximate date you assign to it appears on *both* the card and the map, as when you come to finally arrange and classify your maps, you will find that the *chronological* arrangement of each place is far more valuable than any other.

Size. This question of size is quite important, and as I have had no precedent, the method adopted is the result of my long previous experience in handling maps. This principle has been to give first the measurement from *left to right*, as the map reads, (not necessarily from east to west) being the length, and then that from top to bottom. Now I have been told that engravings are always measured first from top to bottom, but I have found no one who could give a reason for that course; but the reason why we have chosen the opposite plan is because it is natural to read from left to right, and all references to the points of the compass on maps and charts ordinarily read N. W., N. E., S. W., S. E., and the British Government, which issues by far the largest quantity of maps of any government has also adopted that

plan in its classification of sheet maps, where a whole number is divided into four quarters. Then I have always considered that the measurement of a map should represent as nearly as possible the engraved map itself, and not its adjuncts of statistical tables, ornamental border, or other extraneous matter, for the idea presented to the mind's eye should be the actual surface occupied by the representation of the country required, which would be obviously erroneous by any other plan of measurement. Some departments of some governments have absolutely no rule in this matter, and although their catalogs state that the measurement includes the border, yet such measurement gives you the idea of reading one way, while the facts represented are both ways: viz., a size is given, say 24 x 40, and the map or chart is found to be at one time that measurement from E. to W. wide and N. to S. deep, and at another from 40 inches wide and 24 inches deep. Such hopeless and useless direction is obviated by the adoption of our plan, based upon common sense and actual practice. In some catalogs *no size* is given, in others that of the full sheet of paper — the latter more generally by the private publisher, who wants his publication to look as large as possible.

Scale. If I have given much time to the question of size, I desire to urge infinitely more attention to that of *scale*, as all things considered, this is of the first importance, and usually it can be inserted from the data shown on the map even if not actually expressed. The most casual observer can realize that a map which would give all the information a traveller by the rapidly moving railroad train might require, who only needs to note the relative position of points at considerable distances from each other, would be of no use to the cyclist, who can only travel in a day what a locomotive may run in an hour, and far less to the pedestrian or soldier who requires to see the nature of the ground over which he has to pass, and travels slower than any of them. The English-speaking community in this country and the British empire naturally use the English mile or inch as their standard of measurements, and speak of a map as showing so many inches to the mile or so many miles to the inch, and it was decided by the Lenox Library to adopt that form of expression wherever possible, rather than the general European plan of fractional or decimal denomination: as 1 : 63-360 to represent the scale of one inch to the mile; as there are that number of inches to the mile and consequently one inch on the paper represents one mile on the ground. The advantage of the continental system is that it is intelligible to every nationality; a Frenchman seeing 1-100,000 on the foot of a map can as readily understand the proportion to nature as a Russian, Norwegian or German; whilst the general indication on old maps of so many German, Flemish, Italian or Greek miles or leagues to an inch, a foot or any

other local measurement can as a rule only be understood by the consultant of that country. But as the catalog of this library was primarily made for the use of Americans it seemed best to adopt the standard described, and consequently wherever possible I have reduced all mileage to it. This has been quite easy where the parallels of *latitude* have been given as they almost invariably are on the right or left hand sides of the map; for every one has learned at school that a degree of latitude is 69½ statute miles (for convenience, let us say 70 miles), so that if his map shows that five degrees of latitude measure one inch then he writes down the scale as (5 times 70 =) 350 miles to the inch. In dealing with *charts*, or maps of the sea, he must remember that a *nautical* or geographical mile is not the same as a *statute* mile, but that all marine measurements are based on the fact there are 60 geographical miles to the *degree*. This rule applies generally to latitude, but only to the equator as regards *longitude*; the number of miles in a degree of longitude diminishing as you approach to either North or South Pole.

Engraved. The next point to claim attention is the process by which the map is produced. Up to the beginning of the last century, nearly every map was printed from an engraved copper plate or wood block, and even in these days the best maps are still produced by the former process, consequently the word *engraved* stands, to be modified by the addition of "on copper," or "on wood," or "by wax process" as the case may be, with the addition of the name of the engraver, when it is stated. But in these days of rapid printing of large quantities, maps are almost always produced by the lithographic process, or printing from stone or zinc in one shape or another. A little experience will enable the librarian to recognize these differences. In all cases where the map does not appear to be printed direct from the engraved surface, I mark out the word *engraved* and substitute "lithographed," or "photo-lithographed," or whatever it may be. Some few maps were engraved on steel in the '40s and '50s, but this process is discontinued now.

Plain or colored. Nearly all maps are issued uncolored or plain, in which case, mark out the words *or colored*; but if colored, treat the words *plain* or in similar fashion, and add *by hand*, if they appear to be so produced, or "printed in colors," as may be.

Sheet. As just stated the most common form in which maps reach your hands will be the uncolored sheet, and consequently, that word will stand alone. If it is a book map from a bound atlas, add "*No. — from Blaeu, Vol. 6,*" or "*Royal atlas*" or "*Stieler's atlas*"; on the other hand, if it is *bound* in the atlas, use the word *in* instead of *from*. Should it be folded in a paper or cloth cover, add "folded in — cover, 6 x 8 inches (as may be) lettered gold"; or "paper label, on back or side." This enables you more readily to iden-

tify, when searching for it. If the map be dissected and mounted on muslin, mark out the word "*Sheet*," and write "*Muslin, dissected*" to fold, etc., as before, or to roll, or if only to lie flat, the word *muslin* alone will suffice. If not dissected, state that fact. On the other hand, if it be a roller map, varnished or unvarnished, with or without being backed or mounted on muslin, write the facts as, "*Muslin, varnished, rollers*," or "*Sheet, varnished rollers*." At any rate state exactly its condition.

This attention to detail may seem somewhat troublesome at first, but it saves time in the long run; as according to a map's *size*, and mounting, so is its final abode, and that is what you must get at exactly.

When your consultant writes out his application ticket for his maps the particulars required are: 1, Title of country or town. 2, Date. 3, The mounting. As a rule these particulars will suffice to find your game, for your map is arranged by *place*, and not by author, by *chronological date* and not by publisher, and *mounting*, because according to that, must eventually be its final resting place.

The foregoing remarks apply specifically to maps, or loose sheets and not to collections of these or "*atlases*," which as a rule must be treated somewhat as books, though in all cases, the number of maps should be given, and preferentially the *name* of each. Old atlases like the "*Ptolemies*" come somewhat under the character of incunabula, on account of their very diverse make up. The Lenox Library has used "*salmon*" colored cards for atlases as showing them up distinctively. Each section of country commences with Atlases; and "*General atlases*" are cataloged as "*World*" maps.

Conclusion. After spending more than three years in arranging and cataloging all sorts and conditions of maps, and thinking how the ordinary librarian can handle them with the greatest ease and least trouble, I feel that the "*dissected and mounted to fold*" form is the handiest and most easily preserved, as approaching nearest to the condition of the modern book, although open to the objection that in making fine calculations as to distances, trouble may be caused by the width between the sections: on the other hand the expense may be an important factor against such a system being generally introduced. If maps are ordered from Europe, and they can be had colored and mounted, let both of those processes be performed there, as they are infinitely cheaper and better than anything that can be done here.

As to cataloging: If you do not have the time, or the experience to set forth all the details I have enumerated, do not let that deter you from having a good "*subject*" map catalog. If the *name of the country*, date and style of mounting are given, they will do better than nothing, and other details can be added or included as opportunity may offer; but you will be surprised to find how

much valuable cartographic matter is available in every library, if only the necessary trouble can be taken to extract the subjects from the encyclopedias, atlases, guide books, directories and books of travel in which they are absolutely forgotten, hidden away and in the pressure of other ideas, driven out of mind. The "*Encyclopedia Britannica*," "*Johnston's cyclopædia*," and the interesting collection of "*Baedeker's guide-books*" would supply over 1000 different titles which even a small library might possess.

As regards the housing of sheet stock, very much may be said. Primarily, I object to portfolios of any description, as they are unwieldy and constantly out of order. Cabinets of drawers seem to be the handiest, and subject to certain restrictions they are; but for loose sheet maps, always open to the objection, that every "*jar*" or jolt given to the drawer when closing it, imperceptibly but assuredly slides the contents constantly to the back and eventually the sheets ride up and slide down over the back and in course of time accumulate to an alarming extent, whilst you are in absolute ignorance as to the cause of their disappearance. But if you keep your sets of sheets in manila paper folios, and keep those folios (say not more than three or four) in the drawers this evil may in all probability be counteracted.

Personally, I prefer loose sliding boards, *with no backs* and no stop of any kind at the back: this at once removes the jarring tendency, which is the sole cause of the evil. Falling front flaps of wood, or stout board covered with buckram or fustian, can be used to keep the dust out: not quite so effectively perhaps as a drawer would, but possibly sufficient for ordinary purposes. As to roller maps, I am opposed to the practice of keeping these in a horizontal position, as they must occupy more room, and accumulate more dust, than in the perpendicular rack form I have recommended. THOMAS LETTS.

NOBEL INSTITUTE LIBRARIES.

THE foundation established by the late Dr. Alfred Nobel for the awarding of money prizes to "*those who have contributed the greatest good to humanity*" in the five fields of physics, chemistry, physiology or medicine, literature, and international peace, has resulted in organization of Nobel institutes with libraries in the special subjects named. The Norwegian Storthung has begun to collect a library relating to the peace movement and allied subjects, such as international law, law of nations, etc., and the Swedish Academy has already organized its Nobel Institute with its librarian, professors and other officers. Its library aims at collecting a complete file of literary journals, encyclopædias, bibliographical, literary and biographical reference works, history, philosophy, etc.

THE NOVEL AND THE LIBRARY.

From the Dial, Feb. 1, 1902.

THE great preponderance of works of fiction among the books drawn from public libraries has always been a subject of much concern to librarians and other men engaged in the business of public education. It comes up for discussion perennially, and various are the suggestions made for the correction of what is generally recognized as an evil. While there is nothing to say against the practice of reading fiction, abstractly considered, there is much to say against the novel-reading habit which seems to be fastened upon the majority of those who use our public libraries. When the statistics of circulation show that works of fiction constitute from 50 to 80 per cent. of the books that are taken for home reading, there is certainly some reason to think that the library is regarded as a source of entertainment rather than of public education, and some reason to question the wisdom of taxing the people at large for such a purpose. Even if careful consideration of the whole subject convinces us that a library, put chiefly to such uses, is better than no library at all, and still on the whole a worthy object of public support, it is certainly obligatory upon those who control the supply of free books to use all possible vigilance in minimizing the evil of thoughtless reading, and in encouraging the literary and studious tastes of readers.

Mr. Herbert Putnam, who by virtue of his official position is the leader of the profession of librarianship in America, makes a suggestion that may be pronounced radical, but that commends itself to the sober intelligence after the first shock of surprise is over. It is, simply, that no works of fiction be purchased by public libraries for at least a year after publication.

The exclusion of the newest fiction from the library shelves would doubtless occasion a great outcry, but the loss to the public would be more imaginary than real. Every librarian knows how hollow is the pretence of meeting the popular demand for the novels of the day. To supply that demand would entail an expenditure that no librarian could sanction. Take such a novel, for example, as "The crisis," and such a library, for example, as that of Chicago. Probably 500 people were daily clamoring for that particular novel during the weeks that immediately followed its publication. To satisfy them, it would have been necessary to purchase several thousands of copies, with the absolute certainty that next year they would be collecting dust upon the shelves, if not actually consigned to the lumber-room. The satisfaction of an ephemeral fancy of this sort is an absolutely illegitimate demand to make upon any public library. The only library that has a right to spend money in this reckless fashion is the private enterprise of the Mudie type, which exists for the special purpose of catering to the taste of the moment. What such a library

as the Chicago institution actually does in the case of a novel like "The crisis" is to purchase 40 or 50 copies of the work, and supply one applicant out of every 200 or 300. "In proposing to supply such a novel," says Mr. Putnam, "the library deludes the public and reduces its capacity for service really serviceable." It does not really supply the demand, and succeeds only in gratifying an occasional applicant at the cost of creating exasperation in the breasts of the thousands who, knowing that the book is in the library, ask for it from day to day until they desist from sheer weariness.

We are inclined to think, on the whole, that every public library would be well-advised in adopting Mr. Putnam's suggestion, thus forcing its patrons to take, as far as the library is concerned, Emerson's well-known advice against reading books that have not kept alive for at least a year. Using "The crisis" once more for our illustration, it is safe to say that by next summer the demand for that excellent story will have fallen to normal proportions. It will still be asked for by a few people, and it will be as proper to provide copies to be read as it is proper to provide copies of "The spy." This, of course, presents an extreme case, for, besides the two or three novels that a capricious public marks for its favor every season, there are 200 or 300 others of merit sufficient to entitle their claims to be recognized. But the reasoning to be employed is similar in all cases; the demand for current fiction is essentially temporary and artificial, and it is doubtful if it be the policy of wisdom to put into a public library any books for which there may not be some reasonable demand year after year.

NET PRICES FOR BOOKS: STATEMENT FROM THE A. L. A. COMMITTEE.

REFERRING to the question of the "net price system," I learn from the published account of the proceedings of the meeting of the Massachusetts Library Club, held on Jan. 7 last, that it was decided to send a letter to the American Publishers' Association stating the position of librarians, etc.

This ground has already been quite thoroughly gone over by the committee on relations of libraries to the booktrade of the American Library Association.

As showing the sentiments which the committee has found to prevail quite generally among the booktrade, I enclose herewith a copy of a letter received from Mr. Charles Scribner, the president of the American Publishers' Association.

W. T. PEOPLES, *Chairman.*

Mr. Scribner's letter is as follows:

"DEAR MR. PEOPLES:

"Herewith I return the copy of the LIBRARY JOURNAL and the letters left with me. As I said at our recent interview, I shall be

pleased to give any information desired concerning the Publishers' Association. It should be understood:

"1. The publishers are not seeking to increase the prices received by them for their books. On the contrary, a careful review of our new net prices shows that the average price obtained by us is less than under the old system. The object of the association is to protect the retail dealer (upon certain books and for a year) from a ruinous cutting of the retail price—to make it profitable to deal in our publications.

"2. We have not attempted to fix the prices of books. Publishers fix their own prices without any interference by the association. What we are trying to do is to *maintain the retail price* for a year.

"I do not think the association would be willing to attempt any regulation of the retail price. If the prices of net books are in any cases too high it would be natural and right that such books should suffer, and I hope librarians will discriminate against them.

"Undoubtedly librarians are expected to pay more for their books, and this is necessary if the publishers wish to make it possible for the booksellers to supply net books to libraries at a profit. There may also be some cases in which prices are too high under the new system (as they would be under any system), but I think they are comparatively few in number. I have looked up the various books referred to, and in almost every instance the reason for the price is clear. In the case of Birrell's new book, published by us, though the price is \$1, the same as the "Obiter dicta" volumes, published some years ago, it is forgotten that those books were published before the International Copyright Bill was passed, and therefore in competition with reprints not paying royalty. \$1 is not an excessive price for the new book. Concerning the comparison of American with English prices, I would write that, so far as my experience goes, it is not customary to give much consideration to the English price when a book is protected by copyright. Upon the whole I think it will be found that the American prices compare very favorably with the English prices, particularly upon books of high class, but this is due to the business conditions in the two countries. We do not inquire what the English price is to be before we fix our own. It should be remembered also that when an English book is published *net*, there is *no discount to libraries*.

"As I have written before, it will give me pleasure to give any information desired by you or the other members of your committee. I might add that at the last meeting of the Publishers' Association a committee was appointed (of which Mr. Dodd is chairman) to look into the question of prices and discounts.

Yours very truly,

CHARLES SCRIBNER."

THE "VARIORUM" SHAKESPEARE AND NET PRICES.

J. I. WYER, JR., librarian of the University of Nebraska, sends to the JOURNAL correspondence with the J. B. Lippincott Company regarding the recently increased price of the "Variorum" Shakespeare, published by them. Previous to the adoption of the "net price" plan of the American Publishers' Association, the volumes of the Variorum edition, listed at \$4, cost the library purchasing \$2.60. The last volume, issued under the new arrangement, was listed at \$4 net, and cost the library \$3.60. In a letter written in December last to the Lippincott Co., Mr. Wyer stated these facts, and added: "We are interested in learning why the price has been raised. If it is because of the recent action by the Publishers' Association, it is my impression that such action in this case is contrary to the reasons which the publishers themselves have given for their action. The argument urged by them was that list prices of books would be uniformly lower so that with a uniform discount of 10 per cent. on net books prices would not be materially higher than in the old arrangement. As librarians have figured the thing out, we must pay and expect to pay cheerfully 10 per cent. over old prices. In this case, however, your volume in question costs us \$3.60 as against \$2.60 for the earlier volumes. This is but one particularly conspicuous instance among a good many, which tend to make us think that the publishers are taking advantage of the new discount in a way which was not certainly announced before the discount went into effect, and which is directly contrary to the objects professed."

In reply the publishers say: "The book is a most expensive one to manufacture, and our margin of profit has been entirely too small, and resolved itself into one of two questions, whether to raise the price of the book to \$5, subject to long discount, or make it \$4, subject to short discount, making the net price of the same to us as publishers. The Publishers' Association had nothing to do with this particular case, and we should have made this alteration in the price if the association had not existed. It was entirely a matter of adding the necessary profit to make the book remunerative. It is not our intention in any case to raise the price direct to the consumer, and if possible to lower the price." Commenting on this Mr. Wyer says: "The explanation of the Lippincott Company seems not to give satisfaction. The best instances for comparing new and old prices are found in some of the standard series. For example, the last two volumes issued in the 'International education series': Search, 'An ideal school'; Sheldon, 'Student life and customs,' issued at \$1.50 net, are identical in size with the preceding volume, Hughes,

'Dickens as an educator,' issued at \$1.50. The latter costs us 98 cents, the former \$1.35, which seems to show clearly that the publishers are surely of bad faith in not reducing list prices of the books, as tacitly understood when the new net price arrangement was made. It was on the contrary taking advantage of the new order of things to increase prices on every book under cover of the new net price."

THE DALLAS (TEXAS) PUBLIC LIBRARY.

THE first formal opening of a free public library in Texas took place on the evening of Oct. 29, 1901, when the Dallas Public Library was thrown open to the public with appropriate ceremonies.

The building, a view of which appears elsewhere, is the gift of Mr. Carnegie, and contains, in addition to the library quarters on the first floor and rooms for service in the basement, an assembly room seating 500 persons and called Carnegie Hall, a class room for the use of clubs, and an art gallery, all on the second floor. This has been called the most beautiful building of its size in Texas. It is monumental in character and yet simple and adapted to its purpose, expressing at a glance the object for which it was erected. The material used in the construction is of the best, the columns and other stone work being of gray Bedford stone and the two front façades of gray Roman pressed brick, with terra-cotta enrichments.

The building is planned on symmetrical lines, the entrance portico and hall forming the central axis. The portico forms the main central feature of the design, embodying the richly ornamented doorway flanked on each side by a cluster of Ionic columns reaching from the water table to the main entablature. On each side of the portico the façade is treated with similar detail, the main lines being continuous, thus giving a tone of imposing simplicity. Above the entablature over the center of the portico is a large tablet bearing the name of the giver and the date of erection. The entrance, with its broad steps, wide marble portico, massive buttresses and stately columns extends a dignified and gracious welcome. Through the main entrance doors, which are of oak, heavily carved, the delivery hall is entered. This is the principal decorative feature of the interior. It is finished with marble floor and wainscoting and richly decorated pilasters and arches. The main stairway is of marble and iron, and starts upon each side of the entrance to a platform the width of the hall, thence to the second floor with a wide single run.

Facing the main entrance and near the center of the building is the delivery desk of marble and oak, from which the attendant may see and control the entire interior. To

the right of the delivery desk, facing the entrance, are the reading and reference rooms; to the left the children's room and librarian's office; back of the desk is the stack room.

The coloring of the main hall is white and old ivory; all other parts of the first floor are old rose, with wood work and furnishings of oak.

The library now contains 10,550 volumes. The work of organization was begun in December, 1900, and the first order for books was placed with a local firm in January. When the library was opened in October some 8000 volumes were ready for use. This work was done by the librarian and two untrained assistants, one of whom was with the library eight months and the other five.

On account of a lack of funds it was considered best to start with untrained assistants. One disadvantage of this plan is that it sometimes takes months to prove that an assistant cannot get beyond the simplest routine work, and another is that just when a promising assistant is beginning to be of real use she sometimes marries. Both of these unforeseen disadvantages have stricken this library, and it is now being run by a force new since the opening. The present staff consists of five persons—the librarian, two regular assistants, one extra assistant, a young man, for evening and Sunday work, and a janitor. The following statistics show the work of the first 10 weeks: registration, 2908; issue, 15,208. Neither reference nor reading room work has been counted.

The library is classified by the Decimal system and book numbers are not used—following the plan of the St. Louis Public Library. The catalog so far has not progressed beyond the author and title stage, though some subjects of local interest, such as cotton, Mexico, the race question, Texas history, and all biography have been brought out. The shelf list supplements this, and is made to take the place of a classed catalog until a dictionary catalog can be completed.

The Newark charging system is used, and free access is permitted in the reference, reading and children's rooms. Access to the stack room may be had on application to the librarian. All new fiction and a constantly varied assortment labelled "Good fiction" is kept on the issue desk, where it may be examined and selections made.

Quite a feature is made of the children's room, which is furnished with two sizes in tables and chairs, has low wall cases, well supplied with books, several good pictures and plaster casts, and dainty muslin sash curtains. The pictures, casts and curtains are a gift from the teachers and pupils of the public schools. Beginning with February a series of short talks on art and literature have been given in the children's room by some of the teachers.

ROSA M. LEEPER, *Librarian*.

LIBRARY BUILDINGS OF MODERATE SIZE.

W. R. Eastman in Report of New York Home Education Department for 1901.

THE rapid growth of a public library requires liberal provision for the future. The number of volumes and the annual increase for not less than 20 years should be carefully estimated and room provided.

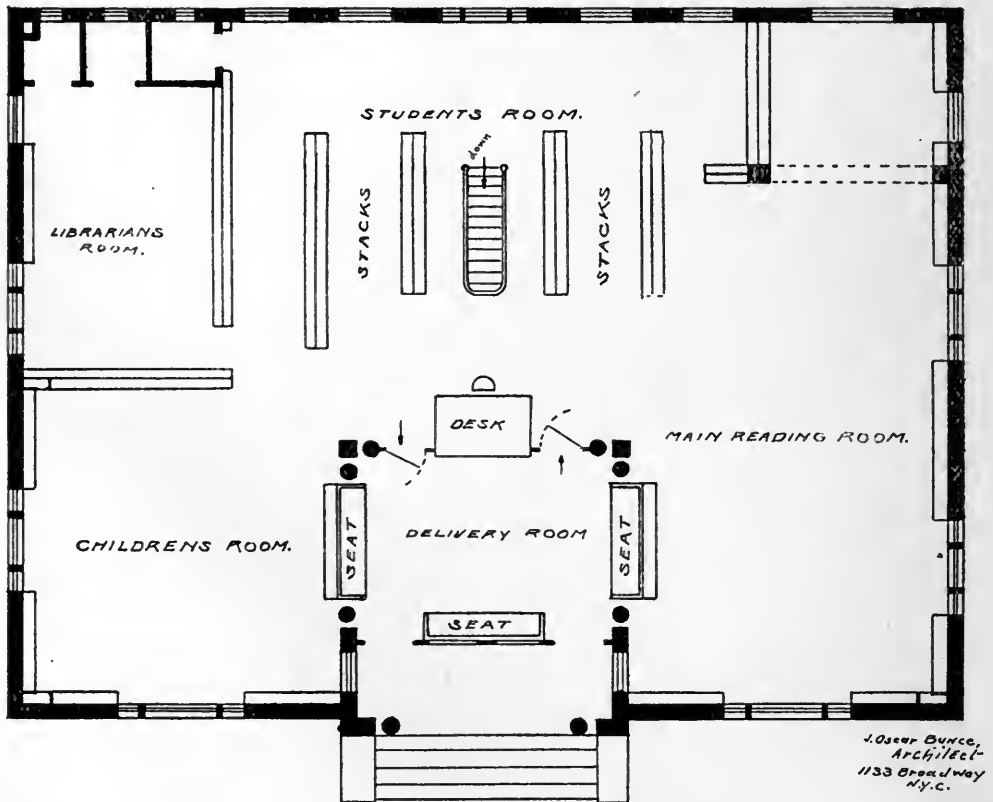

In general, the library building should have in front, two ample reading rooms with a wide passage between. If stairs are needed, they can be arranged in a porch projecting somewhat to the front.

The central passage should end in a book room wide enough to overlap both reading rooms and having direct access to each. A delivery desk may be at the end of the central passage with a narrow gate on each side of it, one for entrance, the other for exit, if public access to shelves is to be allowed as in most cases.

The size of the book room will depend on

the estimated number of books. If the walls are insufficient for the needed shelves, a few double-faced bookcases may be placed on the floor five feet apart, ranging from front to rear. An open space behind these cases, with small tables set between the rear windows will give a convenient place for study or work. A librarian's room, closets or an extension of the reading room may fill out the spaces on each side of the book room so that the exterior side lines of the building shall continue to the rear line without break and thus secure the utmost economy of construction. The ceiling of the book room should be high enough (at least 14 feet) to give room for two stories of bookcases when needed. It is desirable also to have the use of a dry basement under the book room with direct stairway between to hold the overflow of books not in much demand. This will be a great relief from overcrowding and with the available space above the main floor will give the practical advantages of a stack of three stories.

Suggested plan for small library building.

*J. Oscar Bunce,
Architect
1133 Broadway
N.Y.C.*

MAIN FLOOR PLAN.

Scale $\frac{1}{8}$ " = 1 Foot.

Shelves should be placed on all available walls in the reading rooms.

Instead of placing partitions between the rooms the entire floor may be in one room divided into departments by double-faced bookcases, varying from four to eight feet in height according as it is desired to retain or to cut off the view, for the sake of appearance or supervision. This will give a great advantage of light with possibly some slight liability to disturbance.

Bookcases so placed can be moved as experience may indicate to meet varying conditions. The library so arranged will give the impression of one compact and harmonious whole and can be readily administered by the least number of persons.

CONSOLIDATION OF BROOKLYN LIBRARIES.

A most important step toward the provision of an adequate central free library foundation for Brooklyn, N. Y., was taken on Feb. 5, when James L. Morgan, vice-president of the Brooklyn Library, notified Mayor Low that the trustees of that library had decided to offer to the city the entire property, including the building on Montague street and its collection of over 160,000 volumes, valued at \$750,000, to be maintained as a central reference library. The letter conveying the offer is as follows:

"The trustees of the Brooklyn Library have been deeply interested in the rapid progress of library development in the Borough of Brooklyn during the past two years, including, as it has, the extension of the free public library system and the generous provision made therefor by the gift of Mr. Andrew Carnegie.

"It would seem, however, that the Brooklyn Free Library, wisely as it has been planned, must still be incomplete, until it possesses, in addition to its circulating system, an adequate central reference collection. The accumulation of such a collection must ordinarily require both a large expenditure of money and a long period of time.

"Appreciating the importance to Brooklyn of a complete free library system, the trustees of the Brooklyn Library believe that they are able to provide for Brooklyn this important part of a public library by offering their library, with its valuable collection, for incorporation in the general free library system.

"The Brooklyn Library is now possessed of a large library building on Montague street, which, with its investments in real and personal property and its collection of over 160,000 volumes, represents a money value of not less than \$750,000. Its collection of books, journals, and periodicals has been accumulated during a period of over 40 years, and it now constitutes a library difficult alike to duplicate and to overvalue.

"For the purpose of making this property

available as part of a general library system. I am now authorized, by the unanimous action of the trustees of the Brooklyn Library, to offer its entire property and estate for free public library service in Brooklyn, upon the following general conditions:

"There shall be created by special act of the legislature a new corporation, to be known as the Brooklyn Public Library, which shall conform in its organization to the excellent precedent established by the constitution of the New York Public Library. The membership of this corporation shall consist of the mayor, comptroller, and president of the Borough of Brooklyn, of the city of New York, and of 22 additional members to be appointed by the mayor; 11 from the board of trustees of the Brooklyn Library and 11 from the board of directors of the present Brooklyn Public Library.

"The new corporation shall succeed to all the powers and duties now exercised by the board of directors of the Brooklyn Public Library, and the city of New York shall contract with it for the maintenance and administration of the free public library service in the Borough of Brooklyn.

"Upon the formation of such corporation and the assumption by it of the functions now exercised by the board of directors of the Brooklyn Public Library and the execution of a contract between such corporation and the city of New York for the suitable maintenance of the free public library system of the Borough of Brooklyn, the Brooklyn Library will convey to such new corporation all of its property and estate, subject only to those conditions in respect of the tenure and maintenance of trust funds now binding upon the Brooklyn Library, and to the provision that the property and funds of this library shall be devoted, in the main, to the increase and enrichment of the central library collection.

"It is our hope, if this offer shall meet with your approval, that this consolidation of the chief libraries now serving the public in Brooklyn may found here a great free public library worthy of the importance of the city, and which shall make library service in Brooklyn of increasing value and usefulness."

This action is the result of efforts toward the consolidation of Brooklyn library facilities that have been going forward for several years past. It was at one time thought that the Long Island Historical Society would join in the consolidation, but at their January meeting the directors of that institution decided definitely in the negative. The acceptance by the city of the Brooklyn Library offer and the formal legal steps necessary for the creation of the new library organization are likely to follow promptly. A bill providing for the transfer of the Brooklyn Library, upon the terms stated, was introduced into the legislature by Assemblyman Morgan, of Brooklyn, on Feb. 6.

THE CARNEGIE INSTITUTION.

A MEETING of the trustees of the Carnegie Institution was held in the office of the Secretary of State, in Washington, on Jan. 29, when officers were elected and plans laid for permanent organization and the initiation of work. The deed of gift was presented to the trustees by Mr. Carnegie, who made a brief speech, in which he said:

"My first thought was to fulfil the expressed wish of Washington by establishing a university here, but a study of the question forced me to the conclusion that under present conditions were Washington still with us his finely balanced judgment would decide that, in our generation at least, such use of wealth would not be the best.

"One of the most serious objections, and one which I could not overcome, was that another university might tend to weaken existing universities. My desire was to co-operate with all educational institutions, and to establish what would be a source of strength and not of weakness to them, and the idea of a Washington university or of anything of a memorial character was therefore abandoned. . . .

"This gift in nowise interferes with the proposed university or with any memorial. It has its own modest field, and is intrusted to co-operate with all kindred institutions, including the Washington University, if ever built. In this hope, I think the name should be sacredly held in reserve. It is not a matter of \$1,000,000, or \$10,000,000, or even of \$20,000,000, but of more, to fulfil worthily the wish of Washington, and I think no one would presume to use this almost sacred name except for a university of the very first rank, established by national authority, as he desired. Be it our part in our day and generation to do what we can to extend the boundaries of human knowledge by utilizing existing institutions.

"Gentlemen, your work begins. Your aims are high; you seek to extend known forces, and to discover and utilize new forces for the benefit of man. Than this there can scarcely be greater work. I wish you abundant success, and venture to prophesy that through your efforts, in co-operation with those of kindred societies in our country, contributions to the advancement of the race through research will compare in the near future not unfavorably with those of any other land."

The deed of gift states, in substance, that Andrew Carnegie deems it his duty and highest privilege to administer the wealth which has come to him as a trustee in behalf of others, and, entertaining the belief that the best means of discharging that trust is by extending the opportunities for study and research in our country, he transfers to the trustees named \$10,000,000 of registered 5 per cent. bonds of the United States Steel Corporation.

This gift is to be held in trust, the income from the bonds or from other securities that may be substituted for them to be applied to paying the expenses of the trustees, who are to receive the bonds and collect the interest, and may sell the same and invest the proceeds according to the laws of New York, Pennsylvania and Massachusetts, and who are not made responsible for the safety of the bonds or for their depreciation. They may appoint officers, fixing their salaries, and provide for the financial business of the trust.

The income is to be expended to founding in Washington an institution to co-operate with those now or hereafter established, and in the broadest and most liberal manner encourage investigation, research and discovery, show the application of knowledge to the improvement of mankind, provide such buildings, laboratories, books and apparatus as may be needed, and afford instruction of an advanced character to students properly qualified to profit thereby. Unexpended income may be kept in a reserve fund to defray the cost of buildings. By a two-thirds vote the trustees may modify these conditions in accordance with the original purpose, which is "to secure, if possible, for the United States of America leadership in the domain of discovery and the utilization of new forces for the benefit of man."

After acceptance of the deed of gift, by-laws were adopted, and officers were then elected as follows: Chairman of the board of trustees, Abram S. Hewitt; vice-president, Dr. J. S. Billings; secretary, Charles D. Walcott.

ABOUT READING-ROOM TABLES.

IN planning the furniture and fittings for the new building erected for the New York Young Men's Christian Association Library, special attention was paid to the size and form of the reading-room tables, looking to the comfort and convenience of readers, and tables were built which have some peculiarities of their own, which the writer considers points of improvement over the usual form; their use having passed beyond the experimental stage, and several librarians having requested specifications, a description may be of interest and use to others.

Observations had led to the conclusion that small tables were preferable, for when four or more readers were seated at a table, there was always likely to be one of them moving about, disturbing the others more or less.

These tables are 30 x 48 inches, accommodating a reader at each end, thus assuring him free elbow room, and making it clear that he may use all of his end of the table without encroaching. They are 29½ inches high, while library tables are usually 30 to 31½ inches; the higher are found to be very good if one

takes a single sheet of paper, but the lower are better when we lay an open book on the table. All edges of these table tops have a long round edge carrying back from near the lower corner to $1\frac{1}{4}$ inches from edge, so gradually blending into the level top that there is no perceptible break or angle, making a perfectly comfortable place to rest the arm, while reading or writing.

To do away with a difficulty often found, the lack of comfortable space under library tables, we made them with a narrow stile (if that is the correct term); there is no need that this should be more than $3\frac{1}{2}$ inches wide, and it may be $1\frac{1}{2}$ thick to furnish the needed support; having this slightly rounded and finished on the lower edge adds considerably to the comfort of readers.

The legs are large, and have a large foot $4\frac{1}{2}$ inches across the bottom, and are set out as near the corners as possible, thus giving a firm footing.

We arrange these tables in rows, so that the long sides are so near together that chairs cannot be used between them, and the rows are set alternating, thus bringing the ends of each table opposite a space in the next row, enabling a reader to lift his chair without disturbing other readers.

Many readers speak of the comfort they find in study at these tables, and none have ever complained of their height, although there have been above 150,000 reference books used over them, and many more periodicals.

The tables in the Fine Art Department are 48x60. Instead of the usual half round moulding or furring strip near lower edge to prevent books from slipping off (and incidentally to stop the circulation of blood), we have a two-inch "nosing" along the edge, which is thicker than the sloping top; this is rounded to its upper edge, thus forming a $\frac{3}{8}$ -inch ledge, and not carrying with it any discomfort. These sloping tops rise 7 inches in 23 inches, thus leaving a 4-inch flat surface at center; the middle two inches of this should be sunk $\frac{1}{4}$ inch to furnish a place for pencils, etc. These tables being large, need braces; we therefore put braces in, in such a way that they form a convenient foot rest, which is a real need for those working long at a time.

A word as to the care of such furniture. These tables seem to look as well as they did three years ago, because they have never been "dusted," but cleaned every morning with a cloth that is very slightly oiled, and once a week thoroughly rubbed with oiled woollen cloths. A good mixture for oil is:

Paraffine oil.....	1-3
Boiled linseed oil.....	2-3

or oils for the purpose may be bought ready prepared; their use will keep the furniture from looking old until it is old and needs re-finishing.

STLAS H. BERRY,

Librarian Y. M. C. A. Library.

THE LIBRARY POST BILL.

THE bill providing for the reduction of postal rates on library books, introduced into Congress in January, 1900, was reintroduced in the Senate by Senator Lodge on Dec. 5 last. It is the same as when first introduced, save that the clause relating to society libraries is changed to read "maintained by endowments or fees" instead of "by endowment or taxation." The bill which was printed in these columns when first introduced (*see* L. J., Feb., 1900, p. 68) provides that the postal rate of one cent per pound or fraction thereof be granted on "books and other printed matter belonging to and passing from and to" any of the following libraries: "Public libraries maintained wholly or in part by towns, cities, states, or other political units, or by the United States; school libraries supported by taxation or having tax exemption, belonging to educational institutions of all grades; society or social libraries having entire or partial tax exemption, or other public privilege, maintained by endowments or fees, or from both sources, by religious, literary, professional, trade, industrial, or library associations."

MUTILATION OF BOOKS.

From the 83d Report of New York State Library.

IN common with all great libraries we occasionally suffer from some vandalism. It is highly creditable to human nature that so few people trusted with unusual privileges abuse them, but the exceptions prove the rule. The difficulty often comes from thoughtlessness rather than malice. Some one whose brain is not quite normal ethically, wishes an extract of a half page or so and reflects that probably nobody else will ever want that particular page and that he can save himself time and trouble by cutting it out with a penknife. We think it unwise to give publicity to these rare cases lest it should suggest to other unbalanced minds the possibility of similar offences, but we use every endeavor to detect such offenders and to bring them to justice under the stringent laws against mutilation of the property of the public libraries and museums, which we post freely about the library. When a mutilation is discovered it is at once marked by the head of the department as noted, so there shall be no suspicion cast on any later user of the book as the possible mutilator. For costly books we secure a typewritten copy from some other library and replace the part removed. Cheaper books we can sometimes replace from our duplicates or at small cost. It is a matter of educating public sentiment more fully to regard public property as something sacred to be guarded by every user against abuse. One vandal throws a cloud over all his associates till it is known who is guilty. It is gratify-

ing to note that general sentiment is so sound on these matters and that there are so few who feel that because a thing is owned by the public, individual members of that public have a vested right to abuse it.

THE INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE.

THE secretary of the Smithsonian Institution, in his report for the year ending June 30, 1901, recently published, recites the history of the plans for the "International catalogue of scientific literature" undertaken under the auspices of the Royal Society, and notes the present status of the enterprise. After referring to the requests for subscriptions at \$85 per year, sent out by the Royal Society in June, 1900, he says: "It being necessary to secure these before the end of September, 1900, the secretary, as an evidence of the Institution's good will, sent out a circular letter commending the project to American institutions of learning. By the end of September the above number had been secured, thus assuring the publication of the work in England, and this number has since been increased to the equivalent of over 66 sets, at \$85 apiece, for five years, representing a sum of about \$30,000, the largest subscription made to the catalog by any single country, a fact which abundantly demonstrates the interest felt in the catalog on the part of scientific men in the United States.

"It is greatly to be regretted that no adequate provision has been made for the cataloging of the scientific literature of the United States, which is to form a part of it. The secretary has provisionally undertaken to do this work out of the private funds of the Institution, in what is feared will be an inadequate way, since only two assistants can be allotted for the purpose, and the secretary has felt able to retain these only to June 30, 1902. It has indeed been quite clear from the outset that this work could not be made a perpetual charge upon the small Smithsonian fund; but with a full recognition of the importance of this project, the secretary is still not willing to have the Institution itself solicit aid from Congress for it, while other interests already committed to the Institution are so inadequately provided for and demand its first care.

"There is yet hope that some way may be found by which this country may take its proper share in the community of nations. In this great undertaking, which is now being carried on by England, France, Germany, Russia, Italy, and Austria, the Institution, which is not soliciting for itself any Congressional aid, will be glad to see Congress place the work in any effective hands, or, if the Institution itself be designated, it will do its part if Congress shall so direct and provide the means."

SOCIETA BIBLIOGRAFICA ITALIANA.

THE current number of the *Rivista delle Biblioteche* (v. 12, no. 11-12), gives the results of the election of officers of the society, held on Dec. 15, 1901. These are: President, Pompeo Molmenti; vice-presidents, Guido Biagi and Giuseppe Fumigalli. In addition to these, 10 members of the council were elected.

The same number of the *Rivista* contains a circular sent out by the society urging the keepers of archives in Italy to join the organization, and setting forth the advantages of mutual intercourse between librarians and archivists. Here is a hint of possible activity in a very practical matter for American librarians, and particularly for officers of local library clubs. While our archives of towns, cities and states are meager when compared with those of Italy, there is no question that librarians could aid those who have charge of them, and could, perhaps, gain as much as they would give. W. W. B.

DR. HOTTINGER'S LIBRARY SCHOOL FOR WOMEN IN BERLIN.

IN February, 1900, a library school for women was opened in the Berlin suburb of Südende by Dr. Chr. G. Hottinger, formerly librarian of the Bibliothek der Königliche Universitäts. The school, which has been already noted in these columns, (L. J., 25:250, 687,) was visited a few months since by two graduates of the Pratt Institute Library School, Miss Caroline Burnite and Miss Bertha Trube, from whose notes a later account is now available.

Dr. Hottinger's school was established and is maintained, not with a view to the development of the library field on more popular lines—for the idea of the free public library as it exists in England and the United States is unfamiliar in Germany—but with the purpose of opening a new field of work for women. Its founder's special interest is the "woman question" rather than the library profession, and the school is intended as a first step toward a women's college, to be some day established. He is, nevertheless, much interested in the popular library movement, and has schemes for making up cheap libraries for poor people, to buy, however, not to be circulated free. The school is housed in a small building fitted up as a library and museum, in which is Dr. Hottinger's personal library of about 30,000 volumes, which includes an extensive collection of books by and about women. A one-year course is given, mainly devoted to the practical cataloging of the library, and to work upon Dr. Hottinger's cherished enterprise, a compilation in the field of universal biographic-bibliography, which is to contain 6,000,000 titles, 200,000 biographies and 20,000 portraits. It is to be printed by linotype, and its projector hopes to have it ready for distribution by 1904.

He has also planned a Bibliography of Woman, on a similar scale, but systematic progress was not evident in either of these great tasks of compilation. Language requirements are not yet demanded of the students, though it is hoped before long to require English, French, Latin and Greek. All instruction is given by Dr. Hottinger personally. There are few students, not more than four or five, and the one or two who have completed the course are now engaged in libraries at salaries of about 1200 marks per year.

It will be seen that this is hardly to be included among the effective and well-organized schools for library training. It is rather a course of apprentice work, limited in its scope, its chief interest being the effort it represents to introduce into Germany a new occupation for women.

American Library Association.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th General meeting: Boston and Magnolia, Mass., June 14-20, 1902.

BOSTON AND MAGNOLIA CONFERENCE.

Preliminary announcements of the 1902 meeting give the following facts:

The 24th general conference of the American Library Association will be held in Boston and Magnolia, Mass., beginning June 14, 1902. The general plan may be thus outlined:

Saturday, June 14, 9 a.m. Delegates will assemble in lecture hall of the Boston Public Library, where brief exercises will be held. Morning and afternoon will be devoted to visits to the principal libraries of Boston and Cambridge.

Sunday-Monday, June 15-16. Delegates may continue their stay in Boston for visits to libraries or points of historic interest, or may go to Magnolia, where the general convention will open Monday evening.

Monday, June 16. Sessions of council, special boards, committees, etc., at Magnolia; general arrival of delegates in late afternoon; informal social session in evening.

Tuesday-Friday, June 17-20. General business sessions at Magnolia. Not more than two general sessions will be held each day, and provision will be made for the usual simultaneous section, round table, and special meetings. The National Association of State Librarians will hold its annual meeting, of two sessions, and there will be meetings of the state library associations of Maine, Massachusetts, New Hampshire, and other states, and of library school alumni associations, etc.

Saturday, June 21. Departure for post-conference excursions, of which particulars will be announced later, but which will proba-

bly include *a*, trip of inspection of public libraries, *b* tour of historic towns, *c* pleasure excursions to (1) White Mountains and (2) Maine coast. Final adjournment June 27.

COMMITTEE APPOINTMENT.

J. C. Dana has been appointed a member of the committee on A. L. A. Exhibit at Louisiana Purchase Exposition, *vice* R. R. Bowker, resigned. The duties of the committee, which now consists of Messrs. Dewey, Crunden, Dana, and Miss Plummer, are to co-operate with the exposition directors and the directors of the St. Louis Public Library in arranging for a complete and satisfactory library exhibit at the Louisiana Purchase Exposition, and, if requested, to furnish advice and suggestions in regard to the design of the building and the arrangements of exhibit.

State Library Commissions.

DELAWARE STATE LIBRARY COMMISSION: Miss F. B. Kane, librarian, State Library, Dover.

The commission issued on Jan. 11 an earnest appeal for public subscriptions to enable it to continue the work so well begun through Miss Kane, its librarian and organizer. It stated that a point had been reached "where active, energetic and effective work on its part for the present season must cease" unless more adequate financial support was received from the people of the state. Several months since a gift of \$100 was offered to the commission, on condition that \$400 be contributed by others, and earnest efforts to raise this amount are now being made.

INDIANA PUBLIC LIBRARY COMMISSION: W. E. Henry, secretary, State Library, Indianapolis.

The commission will conduct a training school for librarians, at the state house, Indianapolis, during the four weeks, April 17-May 15, 1902. The course will be conducted by Miss Merica Hoagland, library organizer, assisted by Miss Harriet L. Eaton, and lectures will be given by outside speakers. "Only those will be admitted who are creditably filling library positions, or are under definite appointments to them. Trustees are cordially invited to attend all lectures." No tuition fee is required of residents within the state; to others a fee of \$10 will be charged.

NEW HAMPSHIRE LIBRARY COMMISSION: A. H. Chase, secretary, State Library, Concord.

The *Bulletin* of the commission for December contains two excellent articles for the librarians of the smaller towns and villages — on "Pictures, in a modest way," by Caroline H. Garland, and "Library economy," in the sense of money-saving devices, by George Stockwell. There is also a sketch of the Nashua Public Library, with an illustration of its proposed building, and a careful reference list on "New Hampshire local history."

State Library Associations.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas H. Clark, Custodian of the Law Library, Library of Congress.

Secretary: Hugh Williams, Library of Congress.

Treasurer: F. E. Woodward, 11th and F. streets, N. W.

The 60th regular meeting of the District of Columbia Library Association was held at the Columbian University, Wednesday evening, Jan. 8, 1902, with the president, Thomas H. Clark, in the chair.

The president stated that the absence of the secretary was due to his illness, and the minutes of the last meeting not being in hand, their reading was dispensed with. Mr. W. L. Boyden was requested to act as secretary *pro tem*.

The executive committee reported the election to membership of Miss C. Rosenbusch, of the Library of Congress, proposed by Miss Gilkey.

A communication from the American Library Association giving notice of the Boston and Magnolia Conference, commencing June 14, was read and filed.

The discussion for the evening, namely: "The work of a library association; the opportunities of this association," was opened by Mr. W. D. Johnston, of the Library of Congress, and participated in by Dr. Adler and Messrs. Cole, Cutter, Dieserud, Solberg and Stefansson.

After referring to some of his experiences as a student in the government libraries, Mr. Johnston described briefly the history of the investigation into the condition of the Library of Congress conducted by the Joint Library Committee of Congress in the latter part of 1896, and the consequent attempt made in 1897 to reincorporate the American Library Association under the laws of the United States, with headquarters at Washington, with a provision that the association, through its council or otherwise, should from time to time act as a visiting board of the national library. The incompleteness of the former and the failure of the latter, he observed, left certain duties to be performed by the District Library Association. These duties had been well defined by the Librarian of Congress in a paper upon local library associations read before the second International Library Conference in London, in 1897.

The speaker then enumerated some of the problems which confront the libraries of the District, particularly the national library, described what had been done by the association in the past to solve these problems, and concluded by recommending that the association devote more attention, if possible, to these matters.

Mr. Dieserud, following a paper of his own, made the following motion:

"The Library Association of the District of Columbia favors a program in which the literary and esthetic feature plays a more prominent part than has heretofore been the case, occupying, if possible, not less than one-fifth of the time available for the reading of papers."

The motion was laid upon the table, not in the formal sense, but as embodying the opinion of many of the members of the association, and to serve as advisory matter for the executive committee in making up programs.

Mr. Woodward made a statement regarding the membership of the association, as follows: There are 181 members on the roll, at least 77 of whom are in the Library of Congress, with a possible 10 or 12 more; 4 reside out of town; 16 are not employed under the government, and 67 are employed in other libraries than the Library of Congress. Thirty-nine of these members joined during the year 1901.

Mr. Johnston then presented the following motion:

"That a committee be appointed to gather material for a bibliography of the libraries of the District, with power to make such expenditures out of the treasury of the association as may be necessary."

The same on motion was referred to the executive committee, with instructions to report at the next meeting.

The association then adjourned. About 60 members were present.

WM. L. BOYDEN,
Secretary pro tem.

LIBRARY ASSOCIATION OF CALIFORNIA.

President: C. S. Greene, Public Library, Oakland.

Secretary: R. E. Cowan, 829 Mission st., San Francisco.

Treasurer: F. B. Graves, Public Library, Alameda.

The Library Association of California held its annual meeting on Jan. 17, 1902, and following the usual custom it was preceded by a dinner at the California Hotel. The following officers were elected for 1902: President, Chas. S. Greene; vice-president, Miss Mary A. Walker; secretary, R. E. Cowan; treasurer, F. B. Graves. Remarks were made by the president, Mr. Greene, and by Prof. Stringham, of the University of California, and Mr. John McNaught, of the San Francisco Call.

F. B. GRAVES.

MASSACHUSETTS LIBRARY CLUB.

President: H. C. Wellman, Public Library, Brookline.

Secretary: G. E. Nutting, Public Library, Fitchburg.

Treasurer: Miss Theodosia Macurdy, Public Library, Boston.

A meeting of the Massachusetts Library Club was held on Jan. 14 in Worcester, which was practically a joint meeting of the various library associations of the state. Members were present from the Massachusetts, the Western Massachusetts, the Bay Path, and the Cape Cod clubs. The session was held in the hall of the English high school, and was opened at 10.30 a.m. with H. C. Wellman, president of the Massachusetts club, in the chair. The first half-hour was devoted to business. There was a warm discussion as to the means of inducing publishers to reduce the prices of books, which have recently been advanced, and it was voted to have the committee appointed to treat with the publishers continue their work.

At 11 o'clock the regular program opened with a paper by Miss Ida Farrar of Springfield, secretary of the Western Massachusetts library club, on "Library institutes in Massachusetts." She showed that these institutes are in line with other educational movements of the day. The American Library Association, covering the whole country, was the first concerted movement of librarians; then came the state clubs; then the local, and last the library institute, covering a section of from five to 10 towns and centering in the one most accessible. Its purpose is to awaken an interest in the library among the townspeople, to arouse discussion between librarians as to ways and means of developing the library and making it of greatest use to the people, and to bring to teachers and pupils a deeper realization of what the books in their midst may mean to them. The idea of an institute was first broached at the last union meeting of Massachusetts clubs, in October, 1900. Through letters sent out to librarians in the four western counties of the state, the secretary established a line of communication with nearly all the towns, and ascertained which ones would welcome the idea of an institute. Five have been held during the past year, representing in attendance between 30 and 40 towns. Those who have been present as listeners have not been the only ones helped. The speakers have learned much from the devotion of the librarians in the smaller towns to their work. Many receive only a nominal sum for their salary and sometimes devote even that to the purchase of books for their library; time is given very freely in order to keep the books in repair and to accommodate the people.

As yet the work is in an experimental stage and each meeting teaches new lessons. Most of the preparation has been made through correspondence, but the most successful institute was one worked up by personal visits of two members of the club on librarians, trustees, ministers and members of school committees.

Miss M. A. Tarbell, president of the Bay Path Club, spoke on "The relations of the state clubs to local clubs." After outlining the development of the several library

clubs of the state, and their affiliation, and describing the very different conditions and characteristics of the sections they represent, she said: "We are now confronted by this question, Shall each association work out its own problems, cultivate its own province independently, except by exchange of courtesies and of ideas, and assistance in the problems common to all? Or can the state club sustain a fostering relation to the others, and to all the libraries in the state—those in sitting-rooms and meeting-houses and corners of town halls, and the branches in mill offices, corner stores and electric car barns? Can a state association do many things for the general welfare that local clubs cannot do? and, on the other hand, can it carry brightness, encouragement and the sense of fellowship in a noble calling to the self-sacrificing, often lonely, librarian in the little village or remote hill town? Can a state club help the library that has only \$15 to spend for books to invest this most advantageously, as well as the one that has \$5000?"

"I asked an eminent librarian, noted for pioneer work, if a state club has peculiar possibilities, for advancing library interests all over the state, and his answer was, 'Yes.' It is certain that a state club has more money more experience, more trained librarianship, more intercourse with other large associations—therefore more executive force and administrative power. Let us consider to-day what large things for the general good it can do. Let us also consider the more difficult question, Can the state club adapt itself in active helpfulness to all the varieties of library conditions, and lack of library conditions, in Massachusetts? Can its influence be exerted upon every community, the environment of every library, in the state? Can it unite in the sense of companionship, and inspire with new enthusiasm all those who are giving out books to the people of Massachusetts, whether they can be called librarians, in the professional sense, or not? Is all this more feasible because of the local clubs that have been lately organized?"

This paper provoked a warm discussion, the gist of which went to prove that the local clubs understand the conditions of their community and consequently can provide for them better than the larger state club can, but the state club should show its interest and add what it can in inspiration by sending a delegate to each meeting of the local clubs.

The last address was by E. A. Gilman on "How periodicals are illustrated." The speaker had brought a variety of pictures representing wood engraving, steel engraving, zinc etching, photogravure, gelatine prints, lithographs, half-tones, etc., which were spread before the audience and copies of which were passed around. Not only the finished pictures, but also the processes and the blocks of wood and the plates on which the work is done were exhibited, and the development of illustration was traced from

the earliest times to the artistic advertisements of modern days sent out even by junk-dealers.

After dinner the party divided, visiting the libraries of the city, the Worcester Public, the Law Library, the American Antiquarian Society and the library at Clark University. At a joint executive committee meeting held in the afternoon plans of affiliated work and the desirability of another union meeting were discussed.

NEBRASKA LIBRARY ASSOCIATION.

President: Miss Edith Tobitt, Public Library, Omaha.

Secretary: Miss Clara Mullikin, State University Library, Lincoln.

Treasurer: Miss Margaret O'Brien, Public Library, Omaha.

The seventh annual meeting of the Nebraska Library Association was held in Lincoln on Jan. 1, when a dinner was given at the Lincoln Hotel, and a session followed in Palladium Hall, at the State University. The address of J. I. Wyer, the president, was a summary of library work in the state during the year. He said that the six largest libraries in the state are now, in the order of size, Omaha Public Library, the University of Nebraska Library, Nebraska State Library, Peru Normal Library, Creighton College Library and Lincoln City Library. These six libraries number to-day about 195,000 volumes, as against 143,000 in 1896. The Omaha Public Library is the largest in the state, with nearly 60,000 volumes. During the past year it has established the first branch library in Nebraska. The library of the University of Nebraska is growing steadily, having added something over 6000 volumes during the past year, making a total of about 53,000 volumes. It is the largest reference library in the whole tier of states from North Dakota to Texas.

The characteristics of the other libraries mentioned were briefly noted; and the library legislation of the year and the work of the state commission were reviewed, while the new libraries established or under way were also described.

Miss Bullock, secretary of the state library commission, reported upon the activities of that body during the year, contrasting the conditions that prevailed in the east and in the west. A useful "question box" was conducted by Miss Tobitt, of the Omaha Public Library.

The election of officers resulted as follows: President, Miss Edith Tobitt; 1st vice-president, Miss Jane Abbott, Lincoln City Library; 2d vice-president, Miss Rulon, Peru Normal School; secretary, Miss Mullikin, University of Nebraska Library; treasurer, Miss O'Brien, Public Library, Omaha. The next meeting of the association will be held in Omaha.

Library Clubs.

LIBRARY CLUB OF BUFFALO.

President: H. L. Elmendorf, Buffalo Public Library.

Secretary: R. F. Morgan, Grosvenor Library.

The Library Club of Buffalo met in the rooms of the Buffalo Historical Society, Jan. 29, 1902, Mr. Elmendorf in the chair. In the absence of Miss Hawkins of the Buffalo Public Library, the chairman of the home libraries committee, the report was made by Mr. Walter Brown.

The work is fast outgrowing the experimental period. Several of the home libraries have been started, and are looked after by some who volunteer to see that the books are properly used and cared for.

The report of the committee on library institutes was made by the chairman, E. D. Strickland, of the Buffalo Historical Society. The committee suggested that the institute for the Buffalo district be held in the city of Buffalo some time in May, probably Memorial Day. Mrs. Elmendorf, secretary of the New York State Association, asked that the committee make definite arrangements as to date, hours of meeting, program, etc., so that she might send the report to Albany at an early date.

The club is trying in other ways to entertain and educate the citizens of Buffalo. The topic for the evening was the "Evening use of school houses" and the club was addressed by Hon. Henry P. Emerson, superintendent of the Department of Education of Buffalo. Mr. Emerson tried to lead the zeal expressed by the club into the right channel, by telling them of the obstacles that would have to be surmounted in order to get good results.

Miss E. M. Chandler, of the Buffalo Public Library, read a bright paper on the "Library club possibilities in aiding this work." Miss Chandler suggested how the rooms of the school buildings could be opened not only for lecture courses, but for reading rooms, and perhaps for games, etc. The attendants could be secured by volunteers from the library club.

The topic was discussed by J. N. Larned, Henry P. Richmond and others. It was thought that the use of school houses in this way would give centers for helpful neighborhood gatherings, that would be at once educational and interesting. They would reach many who are outside of the influence of the public library. Mr. Elmendorf was asked to appoint a committee of three to act in conjunction with the committee of the School Association and the board of school examiners to devise a plan of work, and to petition the common council of Buffalo to aid the club in this, its new venture.

R. F. MORGAN, *Secretary.*

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

President: Camillo von Klenze, University of Chicago.

Secretary: A. G. S. Josephson, John Crerar Library.

Treasurer: C. B. Roden, Public Library.

The second regular meeting of the season was held at the residence of Mr. F. I. Carpenter, 5533 Woodlawn avenue.

After the minutes of the previous meeting had been read and approved, the secretary reported that Mrs. M. H. Wilmarth, vice-president of the society, had resigned from the council, and that the vacancy had been filled by the election of Mr. J. W. Thompson, already member of the council, to be vice-president, and of Mr. W. S. Merrill to be member of the council. The secretary also reported that the suggestion that a commissioner of bibliography be appointed at the Louisiana Purchase Exposition had so far received endorsement by the American Historical Association, the Wisconsin State Historical Society, the New York Historical Society, President C. W. Eliot, of Harvard University, and the directors of the John Crerar Library. Mr. Thompson read, in the absence of Mr. Merrill, the report of the committee on founding a national bibliographical society, in part as follows:

"Although you are all familiar with the recommendation of the committee, as stated in their circular to members, I will repeat it here: 'The committee endorse the opinion of Mr. Andrews, given at the Waukesha meeting, viz., that the Chicago society go on a year or so longer, and issue a couple of creditable publications, thereby proving its reason for existence, and drawing more non-resident members to its ranks. At the moment when these outnumber the resident members it would be in order to change the name and organization of the society, and enlarge plans and field of work.'

"This proposition was submitted to all members and to a number of outsiders for approbation or criticism. 112 copies were sent out, and up to Jan. 27 43 replies have been received. The returns when tabulated stand, in so far as they agree, as follows: 32 approve the plan of the committee, 5 want local societies, 2 want a national society at once, 2 want Chicago to be the nucleus of the new society, 3 make special suggestions, and 3 are non-committal. . . .

"Miss Mabel McIlvaine has a special suggestion: 'A class of persons who, if properly directed, might be useful in co-operative bibliographical work are the graduates from library schools. Might we not suggest themes for the bibliographies compiled by these students and then enlarge and edit them? If every library in the country recognized bibliography as a part of its proper duties, and gave its employees a portion of time for compilation, it would be profitable to all concerned.'

"As the plan of the committee has been

strongly endorsed by our correspondents, and as the suggestions offered, while of value in themselves, seem to call for no essential modification in the plan proposed, the committee beg to report that they favor enlarging the non-resident membership of the society, and maintaining a high standard of scholarship in its publications until it shall deserve the name of the Bibliographical Society of America, with all that such a title should imply.

"The form suitable for such a national society, whether a central one with local branches, or a federation of local societies — this is a matter for consideration when the time and circumstances arrive favorable for forming a national organization.

"WILLIAM STETSON MERRILL, *Chairman.*"

The committee was continued, and asked to communicate with bibliographers and librarians not yet connected with the society, and to make its final report at a meeting of resident and non-resident members of the society to be held in connection with the meeting of the A. L. A. in June.

Mr. J. W. Thompson then moved that the society recommend to librarians of certain libraries that some time be granted to members of their staff for independent bibliographical work, as had been suggested by Miss McIlvaine. This motion was amended by Mr. F. I. Carpenter to the effect that the council be requested to formulate some plan to carry out this suggestion, and was then accepted. A short paper on "Some bibliographical desiderata and the ways and means to carry them out" was then read by Mr. Josephson, who said, in part:

"The function of bibliography, I take it, is the recording, classification and evaluation of printed literature. Bibliographical research is the research into the literary sources of scientific investigation. The century just past has been one of unusual activity in the field of productive scholarship. The literary production of this period is simply immense. But it is only in a limited degree available to students on account of the scantiness and insufficiency of bibliographical records. The first thing that an investigator into any subject usually has to do is to work out the bibliography of it, thus spending on preliminary labor valuable time that could have been employed to better purpose. There are certain minds to whom this kind of research has a peculiar attraction; but it may be doubted whether the most vigorous and original of investigators are to be found among them, or whether these are not just the ones who feel this preliminary digging to be a distasteful drudgery. If a division of the field could be made by which the productive scholars could be relieved from the preliminary search after sources, and this work done for them by persons particularly fitted for that kind of work, it would be a great boon. It is my belief that before many years have gone we will have well on the way a central institute where bib-

liographical research will be carried out in the interest of productive scholarship. Such an institute must be international in character and affiliations. As there is a great mass of literature that is not to be found on this side of the ocean, and that very likely never will be found here, it would be necessary to establish relations with scientific institutions in Europe or to found special affiliated institutes there." Three special undertakings were outlined: a bibliography of bibliographies, a bibliography of serials, and a bibliography of incunabula. The first "should not be made in one single volume, but as a series of monographs, each dealing with the bibliography of a subject or group of subjects. It should be made in co-operation by bibliographers and specialists." The second should include ordinary periodicals, serials, transactions, etc., giving changes of titles, publishers and editors, frequency of issue, etc. As to the third, Mr. Josephson described Dziatzko's "Plan eines aller bekannten und noch zu ermittelnden Wiegendrucke umfassenden katalogs," printed in no. 14 of his "Sammlung bibliothekswissenschaftlicher Arbeiten," Leipzig, 1901. To carry out these plans a bibliographical institute, on lines previously described, was necessary. "Its location should be in New York or Washington, so as to be near the largest library centers and not too distant from Europe. It should have staff officers in such centers as Chicago and San Francisco, and also in London, Paris, Berlin, and Rome, at least. Its staff should consist not only of bibliographers, but of scientists in various fields. The institute should undertake bibliographical work on its own initiative and also compile special lists to order. The entries should all be made uniform, and each entry electrotyped so as to be always available for future use. The cost of running an institution of this kind I have calculated at about \$50,000 a year. Sale of its publications might be expected to bring in some money, but hardly more than to cover the cost of printing. What is needed, therefore, is an endowment." Mr. Josephson ended with a plea that the society "make suggestions to persons or institutions that might be likely to take interest in the founding of such an institute."

In the discussion that followed Mr. Thompson mentioned among the desiderata a bibliography of glossaries. A bibliography of articles in scientific periodicals was also mentioned, and Mr. Carpenter expressed the hope that the influence of the society might tend to improve the character of general bibliographies, which were at the present time made up chiefly of titles of popular articles.

Mr. Thompson suggested the possibility that the Carnegie Institution might interest itself in the establishment of a bibliographical institute. On motion the question as to what the society could do to promote the plan was referred to the council.

AKSEL G. S. JOSEPHSON, *Secretary*.

CHICAGO LIBRARY CLUB.

President: A. G. S. Josephson, John Crerar Library.

Secretary: C. R. Perry, Public Library.

Treasurer: C. A. Torrey, University of Chicago.

A regular meeting was held Jan. 9 at Handel Hall, President Josephson in the chair.

Miss Harriot E. Hasder, John Crerar Library, and Miss Estelle Luttrell, University of Chicago Library, were elected to membership. Mr. C. B. Roden was appointed a member of the committee on future work, *vice* H. W. Gates, resigned; and announcement of the Boston-Magnolia conference of the A. L. A. was made.

The following formal program had been arranged in commemoration of the 10th anniversary of the first regular meeting of the club, which was held Jan. 8, 1892:

Address: The Chicago Library Club; its founding and early history, by Mrs. Zella Allen Dixon, University of Chicago.

Address: The Chicago Library Club; its present and future, by Carl B. Roden, Chicago Public Library.

Reminiscences by members.

An informal social, with music, readings and refreshments followed, and although the club quarters were somewhat crowded the 75 people present seemed to have an enjoyable time.

Mrs. Dixon said in part:

"We have come here to-night to celebrate the 10th birthday anniversary of the Chicago Library Club. I am to give you a very brief outline of the circumstances that formed the environment of the birth and early infancy of this vigorous young child. A printed circular setting forth the desirability of a city club composed of those who were interested in library matters was given a wide distribution. On Dec. 17, 1891, 18 librarians met at the Newberry Library to effect an organization. After an informal discussion the meeting adopted a constitution and elected its officers, making Dr. Wm. F. Poole its first president. The advent of the club was at a time of precious opportunity when the library history of Chicago was turning its brightest pages. The Newberry was bringing into the city rich collections of rare and out-of-print books, the Chicago Public had just accepted the plans of its new building; the University of Chicago had just moved its library from its temporary quarters at Morgan Park to the Chicago campus; Armour Institute, the John Crerar and the Evanston Public were beginning to be something more than a rumor. At just this point in the library history of Chicago came the Library Club. This environment was reflected in the meetings themselves. During its early history the club had no home, no regular place of meeting. It was customary to accept an invitation from one of the libraries represented in the club to meet with it. This plan had both advantages and disadvan-

tages. It was a good thing to have the members visit in turn each of the libraries, and indirectly it afforded exercise and the broadening effect of travel to have the club meet one month at Pullman, the next at Oak Park, then Morgan Park, Evanston, South Park and the North Side. But there were also the trials and sufferings of the executive committee—anticipation as to where the next meeting was to be held, despair as the days passed and no invitation was received. When one did come the weather man had to be considered. An accepted invitation to the University of Chicago was more than once accompanied by the worst blizzard of the season. And yet the club grew and prospered. During its first year the club undertook to start an Illinois State Library Association, but the enthusiasm seemed to be confined to Chicago, for the effort failed. It was not until 1896 that the Chicago Library Club succeeded in bringing into existence the state association. During the World's Fair the club became the local committee for the entertainment of the visiting A. L. A. members. In 1894 the club suffered an irreparable loss in the death of Dr. Poole. In 1895 the club published its first manual, giving names and addresses of the libraries of Chicago and vicinity, and also a short historical and descriptive account of each."

Mr. Roden said in part:

"We have lived 10 years; we have elected 10 executive committees, no two of which have ever interpreted their duties alike, but all of which, with varying views, have succeeded in the ultimate object of keeping the club alive, and interest in it at least above the freezing point. Our membership is large, and though we are, broadly speaking, all engaged in the same occupation, that occupation is still too much a matter of individual opinion rather than of scientific principles, and its various departments are too sharply set off and specialized to permit their being treated in a manner uniformly interesting to all in such an association. Still we may say safely that, by their very diversity, these meetings must, at some time, have provided something of use for each one. Meanwhile, through the wisdom of one of our presidents in selecting the chairman of a committee, and the unaltered devotion of that chairman to an endless task, the name of the Chicago Library Club appears upon the title-page of a most creditable publication, which in itself is ample reason for the club's existence, and its justification for a full measure of pride in itself, and, more than that, a plain sign post toward a useful future.

"We have a pleasant organization, affording a much-needed point of contact for a number of busy people, from many places, with many interests, and many ways of doing the same thing; we have a club which stands before the world as the representative of Chicago's interest in the library field, and the extension of that field within the city, during the period

of our corporate existence, has been truly wonderful; we have a membership embracing a very large percentage of those engaged in library work within the limits of our jurisdiction. But, I think, that besides the present of which we need not be ashamed we have a future, and a wide field before us.

"Here in Chicago we have made a good beginning. Our 'Union list of periodicals' is a much-needed and much-appreciated library tool, but there are many besides which might be produced of equal value. I believe that a system of committees, each one charged with some task, the accomplishment of which shall be of common benefit, would tend to bind the club together a little more closely and stimulate not only the interest but also the pride of members in it. I would not advocate the restriction of such tasks to mere library aids, lists, and handbooks, and I would be very strongly opposed to the undertaking of any purely bibliographical labors, but I would follow the spirit of co-operation into fresh fields and pastures new; even the fields of municipal improvement, of library extension, and of active participation in the various plans for civic betterment which are springing up so plentifully.

"Something of this kind is now, nominally at least, being done. We have a committee charged with the duty of compiling accurate statistics of the libraries of the city and county; we have another committee on the library at the Cook county jail; we have a representative on the school extension committee created by a number of local societies. This is the day of strenuous life; let this club join the procession; let it cease to be a mere gathering place, rather let it become the outward and visible sign of the inward and spiritual grace which moves in the library world."

CHESLEY R. PERRY, *Secretary*.

LONG ISLAND LIBRARY CLUB.

President: Miss W. M. Plummer, Pratt Institute Library.

Secretary: Miss M. S. Draper, Children's Museum Library.

Treasurer: Miss Mabel Farr, Adelphi College Library.

The February meeting of the Long Island Library Club was held at the Pratt Institute Free Library on Thursday, Feb. 6, at 3 o'clock. The program was interesting, and brought together a large attendance of members of the club, students of the library school, and others. The walls of the lecture-room were closely covered with beautiful water-color paintings of flowers by Mrs. Rowan, which gave an added interest to the occasion.

The meeting was called to order by the president. The treasurer's report was read and accepted, and was followed by a report of the committee on districting the Island for library interests, signed by Miss Plummer, chairman. Three meetings have been held by the committee. A sub-committee of three members was appointed to draw up a circular,

to be sent to every library on the Island. The committee recommended that 200 copies of the circular should be printed and distributed. The circular as prepared by the committee was then read by the secretary and approved by the club. A formal vote was passed as follows: That the report of the committee should be accepted, that the circular should be printed as recommended and the committee should be continued.

The first address was made by Miss Hazeltine, president of the state association, on the subject of library institutes. The speaker outlined the development of the idea from its suggestion at Lake Placid, and said that like the Teacher's Institute, the aim is to give not only information, but inspiration. In accordance with the spirit of the proposed plan, five persons volunteered to give such assistance as they are able to any librarians desiring it.

The president announced that a special meeting of the club would be held by invitation at the rooms of the Grolier Club, on Friday, Feb. 21, at three o'clock.

Action was taken on an amendment to the constitution, in relation to the election of officers. It was voted that article iv., section 1, should read, "Nomination shall be made in the following manner: the president shall appoint a nominating committee, which may present at the same meeting two tickets to be voted for by ballot. Those candidates receiving the highest number of votes shall be considered elected." The names of three persons were presented and accepted for membership.

The subject "Photographs and other illustrative material in reference work" was then discussed by Miss Romiett Stevens of the Pratt Institute High School, Miss Julia Osgood of Boston, Miss Bertha Bass of Barnard College, Miss Alice Stevens of the Girls' High School, and Mr. E. W. Gaillard, librarian of the Webster Free Library, New York. The first speaker showed how her pupils are aided in the study of Greek and Roman history by the use of photographs of the famous buildings, or of the statues of the gods and heroes. It is impossible to give properly the impression of life without pictures. Miss Osgood advocated the use always of the best pictures that can be procured, as the cheaper reproductions do not give what artists call "values." Miss Bass related in how many pleasant ways the students of the Polytechnic Institute were aided in their study of history by the use of photographs placed in the classroom. Miss Alice Stevens called attention to the fact that the portraits of rulers and leaders could be used to great advantage in connection with the study of modern history, throwing light on their characters. Mr. Gaillard suggested that as all librarians cannot have fine pictures, but must use some of a very cheaper kind, other illustrative material may be used and lent as well as books, such as minerals, casts of statues, anatomical

models, boxes of specimens illustrating the life history of insects, etc.

A subject of very practical interest to many of the librarians was presented by Miss Hunt, children's librarian at the Newark Free Public Library, in her paper on the "Classification of children's story books," printed elsewhere (see p. 65.)

MIRIAM S. DRAPER, *Secretary*.

PENNSYLVANIA LIBRARY CLUB.

President: Dr. Morris Jastrow, Jr., University of Pennsylvania, Philadelphia.

Secretary: L. E. Hewitt, Law Association Library, 600 City Hall, Philadelphia.

Treasurer: Miss M. Z. Cruice, American Philosophical Society, Philadelphia.

A postponed stated meeting of the club was held on Nov. 18 last in the lecture hall of the Pennsylvania Historical Society, Dr. Morris Jastrow presiding. There, with the portraits of distinguished civil and military Pennsylvanians looking down on them, the club listened to a most interesting address by Judge Samuel W. Pennypacker. 85 persons attended the meeting. The subject of the address was "The early German press of Pennsylvania." The speaker prefaced his remarks by a number of stories illustrative of the elements which went to compose the Pennsylvania population. The religious orders were preceded by Peter Cornelius Plockhoy, who declared in 1662 that no slavery should exist in his community on the Delaware; the story of James Annesley, grandson of the duke of Buckingham, was used as a reminder of the individuals driven by oppression or craft of one kind or another to a more noble and generous Pennsylvania. These stories aptly introduced the prints which Judge Pennypacker displayed. There were religious volumes from Sauer's Germantown press and from the bindery of the mystics at Ephrata. There was the patriotic almanac of Francis Bailey, with a device of Washington on horseback, and describing him in German as the Father of his Country—the first known description of Washington in those terms. There were some of the almanacs so congenial to the thrifty farmers from the Rhine provinces and to the equally thrifty Scotch-Irish. These and other prints attracted much attention, and were examined with interest after the discourse. A discussion followed, participated in by Prof. M. D. Larned, J. G. Rosengarten, Julius F. Sachse, Dr. Jastrow, Mr. John Thomson.

Mr. Thomson stated that the new Keystone State Library Club had appointed a committee to consider the differentiation of fictional literature.

On Jan. 13, 1902, the club again met, this time at the beautiful building of the H. Josephine Widener Branch of the Free Library, at Broad st. and Girard avenue. The executive committee had decided to try the effect

of inclosing two invitation cards with the notices of the meeting, in order that the members might send invitations to friends. Perhaps partly on this account, and partly also on account of the expectation of an interesting address, 150 persons attended the meeting. The speaker was Miss Mary Upton, a graduate of the Drexel Institute Library School and recently with Sanderson, the London artistic bookbinder. Her subject was "The craft of bookbinding." After a historical review of the subject, she described present efforts at artistic development, and explained some of the practical work. Col. Nicholson then gave a brief survey of the artistic work in bookbinding done in Philadelphia, a work which he said received an impetus at the time of the Centennial Exhibition. Mr. Kates expressed the pleasure which the club felt at hearing Miss Upton's address.

Dr. Jastrow expressed the feeling of amused surprise with which he discovered, on one occasion, a poem of 100 pages which some lover of binding had written on that subject.

Mr. Bowerman, of the Wilmington Library, moved the appointment of a committee to consider the subject of the negotiations with publishers for the purpose of securing further reductions in the net prices of books, this committee to report at the Atlantic City conference with the New Jersey Club. The president appointed as the committee Mr. Bowerman, Mr. Montgomery, of the Wagner Institute, in Philadelphia, and Miss Randall, of the University of Pennsylvania.

Announcements were made by Mr. Thomson, as A. L. A. delegate, of the meeting of the Library Association, to be held next summer at Magnolia near Boston. Announcement was also made of the bi-state meeting at Atlantic City, beginning March 14 next, to be participated in by the New Jersey and Pennsylvania clubs.

Library Schools and Training Classes.

CARNEGIE LIBRARY OF PITTSBURGH: TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS.

The training school reopened for the autumn term on Sept. 30, 1901, and closed for the Christmas vacation Dec. 21. After a week of preliminary lectures upon library work in general, with visits to all the branch libraries, the regular school schedule was put in operation, lectures being given each morning by members of the library staff. The lectures bearing directly on library work included order department routine, classification, government of children's rooms, annotation of children's books, studies in literature preparatory to the story hour, with the theory and practice of story-telling. Other subjects designed to give the student a broader knowledge of how to work with children, and a knowledge of the social conditions of the time, were civic education, children's

games, and Froebel's philosophy as expressed in his "Education of man" and "Mother play." In addition to these, the students have listened to a number of outside lectures, including those given by Prof. R. G. Moulton in the University Extension course on "Stories as a mode of thinking," also two lectures by Miss Susan E. Blow, author of "Symbolic education," on "The root of deception and how to uproot it" and "The awakening of the ideal." Special lectures were also given the students by members of the faculty of the Pittsburgh and Allegheny Kindergarten College, one by Miss Georgia Allison, supervisor of kindergartens, on "How to tell stories to children," another by Miss Ruth Tappan on "Psychology as an aid in the selection of children's books." For practical work each member of the first year class and each special student was assigned to one of the six children's rooms, her work being under the direct supervision of the librarian, and of the children's librarian of that branch. At the end of eight weeks each student was transferred to another children's room, and transfers will continue to be made at intervals of eight weeks throughout the year. In this way the members of the class gain experience in working among children of all sorts and conditions. Members of the senior class, however, having had this varied experience, are scheduled to one branch children's room for the year, in this way gaining a connected view of the work. Each student is also assigned to a home library group which she visits weekly, and is given special work in connection with the city schools, to which she devotes one afternoon each week.

The following is a list of the students for 1901-1902:

Senior class.

Jessie M. Carson, Pittsburgh, Pa. Appointed, in July, 1901, assistant in charge of children's room, Hazelwood branch, Carnegie Library of Pittsburgh.
Helen Underwood Price, Kent, Ohio. Oberlin, 1897-1898.
Lilian Rodé, Pittsburgh, Pa.

Junior class.

Edna May Cullis, Oil City, Pa.
Cora K. Dunnells, Pittsburgh, Pa.
Alice Gordon Goddard, Zanesville, Ohio. Apprentice in Utica (N. Y.) Public Library, Sept.-May, 1898.
Josephine Louise Gutman, Pittsburgh, Pa.
Florence Janney Heaton, Hamilton, Va. A. B. Woman's College of Baltimore, 1901.
Maria Louise Kennard, Pittsburgh, Pa.
Annabelle Porter, Kent, Ohio.
Hannah Stuart, Springfield, Ill.

Special students.

Elva Sophronia Smith, South Pasadena, Cal. Los Angeles Public Library Training Class, 1898.
Marie Martin Smith, Philadelphia, Pa. New York State Library School, 1899-1900. General assistant (including work in children's room) in Buffalo Public Library, 1900-1901.

DREXEL INSTITUTE LIBRARY SCHOOL.

The annual display of picture bulletins made by students of the library school attracted much attention in the library exhibit alcove. Among the subjects chosen for bulletins were: Coronations, Isthmian canal, Our animal friends, The stellar universe, James Russell Lowell, Some interesting books on domestic science, etc.

The work of the second term began Feb. 3.

Miss Inez Mortland, class of '01, has been engaged as temporary cataloger in the Louisiana State University Library, Baton Rouge, Louisiana.

Miss Annie F. Petty, class of '99, assisted by Miss Louise F. Buhrman, class of '99, organized the Public Library of Greensboro', N. C., which was opened in January.

NEW YORK STATE LIBRARY SCHOOL.

Mr. Clement W. Andrews, librarian of the John Crerar Library, has accepted an invitation from the N. Y. State Library School Alumni Association to fill the Alumni lectureship this year. He will give three addresses on "The bibliography of science," June 2, 3 and 4. Former students are most cordially invited to attend the lectures.

Miss Edith D. Fuller began her course in advanced dictionary cataloging Feb. 1. It will be followed by the elementary course.

The school will this year have the unusual opportunity of attending the annual meeting of the American Library Association. Only once before, in 1892, has it been feasible to arrange for the attendance of the entire school, though individual students have been frequently present and the majority attended the Chicago meeting in 1893. The last examination this year will be held June 11 and the time from June 12 to 16 will be spent in visiting a few New England libraries.

SALOME CUTLER FAIRCHILD.

PRATT INSTITUTE LIBRARY SCHOOL.

The course in works of reference for high school teachers, begun in October, 1901, ended the third week in January, 1902. 13 teachers from the Girls' High School, teachers of English, literature, history, German, and French, applied for the course, which was arranged especially for them, and there were seldom fewer than 11 in attendance on the 10 weekly lectures. The following classes of books were taken up: General encyclopædias, Dictionaries, Biographical dictionaries, Reference books in literature, music, art, religion, geography, sociology, and Historical and miscellaneous reference books—also a few generally useful trade bibliographies. When there was time, problems were given out to be looked up in the books mentioned in the day's lectures, and careful notes were taken. Expressions of satisfaction with the course were heard on every hand and of conviction that the notes taken would be exceedingly serviceable. The books referred to

were brought into the class and examined, so that the acquaintance might be with the book as well as with the title.

The class of 1902 will make the usual spring vacation visits to libraries, this year to those in Washington and Baltimore, the dates chosen being March 27 to April 3. It is quite likely that the school will also attend the A. L. A. conference in Boston and Magnolia from June 14 to 19, returning in time for the Pratt Institute commencement, the evening of the 19th.

During January the school had the pleasure of a visit from Mr. H. L. Elmendorf, of the Buffalo Public Library, and from Miss Isabel Ely Lord, of Bryn Mawr. Mr. Elmendorf talked to the class on the subject of "Open shelves," and Miss Lord's address was on "The qualifications of the college librarian." Both addresses were greatly enjoyed.

In February the Library School had the pleasure of a visit from Mrs. Fairchild, of the New York State Library School, from Miss Hazeltine, of the James Prendergast Free Library, Jamestown, N. Y., and from Miss Hewins, of the Hartford Public Library. Mrs. Fairchild lectured before the school on the subject of Book annotation; Miss Hazeltine on Some economies in small libraries—followed by a short address on the work in children's libraries—and Miss Hewins took up the subject of Book reviews as a guide to the librarian. The lectures were very much enjoyed by the students.

Graduates' Association.

The annual luncheon and business meeting of the Graduates' Association of the Pratt Institute Library School was held in New York on Jan. 30, 55 members being present.

The association entertained Mrs. Fairchild of Albany as its guest of honor and received her brief address of greeting and good-fellowship with applause. She spoke of the solidarity existing among library-school graduates as the result not of clannishness but of a unity of aim, and more especially of a similarity of point of view and breadth of vision which special educational training in any line gives, in contradistinction to that gained by entering the same field of work by other paths. This breadth of vision the library school seeks to give by teaching principles not facts and by fostering mental plasticity in the student for their application.

Following Mrs. Fairchild's address, Miss Plummer read an interesting paper on the changes in the course of study in the Pratt Institute Library School since 1896, changes that have helped in placing the school on its present solid footing. The aim has been to give strength to the course by greater attention to certain subjects and at the same time to insure elasticity in meeting individual needs, reached by a conservative introduction of the elective system. Miss Plummer's paper

was written along the lines of a circular which had been sent out that the school might receive the suggestions and criticism of its active graduates. She pointed out that certain suggestions made by them were not practicable, that others had already been adopted, and finally quoted excerpts from the answers received—answers representative of the various fields of library work.

After the speeches, the necessary business of the association was discharged, reports were heard, officers for the year elected and the constitution amended. Miss Rathbone made an informal report on the Lake Placid meeting of last fall. New officers were elected as follows: President, Susan A. Hutchinson, librarian of the Brooklyn Institute; vice-president, Susan Clendenin, of the Y. W. C. A. Library, New York; secretary, Annie Katharine Emery, of the Brooklyn Public Library; treasurer, Annie Mackenzie, Pratt Institute Free Library.

After voting to use the surplus funds of the association for the purpose of a complete home library outfit for the Library Chapter of the Neighborhood Association of Pratt Institute, the meeting adjourned.

EDITH P. BUCKNAM, '98,
Acting secretary.

Reviews.

CHICAGO LIBRARY CLUB. A list of serials in public libraries of Chicago and Evanston: corrected to January, 1901. Chicago, 1901. O. 185 p. pap.

It requires but a glance at this list, a true labor of love, to realize both its importance to Chicago libraries and the great difficulties which must have been encountered by its editors. Here we have within less than 200 pages a means whereby a scholar can discover whether a desired file of a periodical is to be found in the city, whether the journal is currently received, and just where he can get it among the 15 libraries co-operating in the issue of the list. In any city such a list would be a great boon to investigators of all ranks, and in a city of magnificent distances the time saved by this means is hardly calculable. The Chicago Library Club is to be congratulated on the completion of probably the most notable task hitherto undertaken by any local organization of librarians.

The preface states that the time required to bring the list into its present form has been nearly five years. When we consider the great number of entries, over 8000 including references, and the fact that information from 15 sources had to be assembled, edited, and reduced to the shortest possible abbreviation before being sent to the printer, and further, when we remember that all the work has been contributed voluntarily by members of the club, the time in which the task has been done

hardly appears excessive. The labors of editor-in-chief have fallen on the shoulders of Mr. C. W. Andrews, of the John Crerar Library, who has been assisted by a committee of nine members of the club, and by some 30 collaborators. The money required to pay for the printing has been secured by a committee of two, consisting of Mr. F. H. Hild, of the Chicago Public Library, and Mr. G. B. Meleney, of the Library Bureau.

The following libraries, concerning each of which a brief description is given, co-operated in furnishing material for the list: Armour Institute of Technology, Art Institute, Chicago Academy of Sciences, Chicago Public Library, Evanston Free Public Library, Field Columbian Museum, Garrett Biblical Institute, Chicago Theological Seminary (Hammond Library), John Crerar Library, Lewis Institute, Newberry Library, Northwestern University Library, St. Ignatius College Library, the University of Chicago, and the Western Society of Engineers. The total number of volumes owned by these libraries on Jan. 1, 1901, was a trifle over a million, with over 300,000 pamphlets. To get the total for the city and its chief suburb we should add the number of volumes in the libraries of the Chicago Historical Society and the Law Institute. When we recall the disastrous fire of 1871 it will be seen that the libraries of the city have kept pace with its rapid development in other lines.

A certain discretion has been used in editing the list which has reduced the number of entries of odd volumes and very small sets. The explanations given of the rules of entry and the arbitrary symbols adopted in the list show a practical and common-sense view of matters on which no little difference of opinion is likely to be encountered.

The extremely abbreviated form of entry necessarily adopted for such a list results in some few peculiar titles. An extensive use of references has apparently reduced to a minimum the danger of misunderstanding and difficulty in finding titles. A number of tests on changed and confusing titles made by the reviewer has given uniformly satisfactory results. Of course only long continued use can prove the accuracy of the entries and of the proofreading, but misprints seem to be exceedingly rare.

The John Crerar Library announces that it intends to print an annual cumulative supplement to the present list, should the usefulness of the compilation prove great enough to warrant the undertaking. It is to be hoped that nothing will prevent the accomplishment of this design. Moreover it would be a fortunate thing if other cities should follow the example of Chicago in this matter. A list of periodicals currently received is better than nothing, but we know from sad experience that the presence of a periodical on the current list by no means implies that a complete file is on the shelves of the library. And also

a list of current periodicals gives no clue to possible files of "dead" periodicals and those no longer taken by the library.

Some observations on the problems of serials in libraries are naturally suggested by this compilation. That periodicals are a distinct feature of the literary production of the last century, and that they have come to stay, seems beyond doubt. That libraries must furnish them and also such aids to their ready consultation as this list presents is equally clear. But that libraries should recklessly acquire periodicals without reckoning the cost of continuing sets, binding, and cataloging them does not follow. It is a surprise to find by a count of a number of pages in the present list that, if the same percentage holds good for the entire work, over 2500 entries in the 6640 are of incomplete sets possessed by a single library, which at the same time neither end with the last volume published, nor are currently received. The difficulty of completing such sets increases with every year; the work required to complete them demands much time from a highly trained person, and altogether the difficulties of the whole matter are so great that one is tempted in the interest of sound librarianship to advance the canon that incomplete sets whose completion would be difficult should not be added to a library, and that a periodical list should not be suddenly inflated unless a careful view of the future income will permit the continuance of the expenditure not alone for subscriptions, but for the expenses resultant on keeping the files.

WM. WARNER BISHOP.

Library Economy and History.

GENERAL.

THE *Dial* for Feb. 1 is a "library number" of much interest. It opens with an editorial on "The novel and the library," dealing with the efforts made to reduce the percentage of fiction issued from public libraries, and the need of "minimizing thoughtless reading" if the library is to be an agent of public education. Mr. Putnam's suggestion that no works of fiction be purchased by public libraries for at least a year after publication is referred to with approval. W. H. Brett contributes a paper upon "The public library: its purposes and possibilities;" and the reviews include Clark's "Care of books" and Richardson's "Classification." A. G. S. Josephson outlines, in a communication, "What the Carnegie Institution could do for librarianship and bibliography."

FOOTE, Elizabeth L. A successful Sunday-school library. (*In Sunday-School Times*, Jan. 11, 1902. 44:19-20.)

This article is the third of Miss Foote's series. It discusses methods of charging, advertising, and the ideals of the librarian.

UNIVERSITY OF THE STATE OF NEW YORK.

Home Education Department, Bulletin 40. Travelling libraries: field and future of travelling libraries, by Melvil Dewey; summary of travelling library systems, prep. by Myrtilla Avery. Albany, 1901. 155 p. O. 25 c.

A comprehensive and informing exposition of the growth, condition and prospects of the travelling library system, as carried on in the United States, Canada, and other countries. There are full statistics and many interesting reports of work. The field covered is remarkable in its extent and variety, and the bulletin is excellent "missionary" literature.

LOCAL.

Baltimore, Md. Enoch Pratt F. L. The plan of the Booklover's Library has suggested to librarians and others that people might be willing to pay to have books from the public library delivered to their homes. Last August the Enoch Pratt Free Library consulted a messenger service company of Baltimore with reference to the company's handling the home delivery of books for those who might be willing to pay for it. After a thorough examination of the whole subject the conclusion was reached that the service could not be carried on at a rate sufficiently low to make it popular.

Recently a private individual, Mr. J. H. Franz, came to the library with a proposition to try the experiment of delivering books to the homes of the people for what he could make out of it. His plan is to take only a limited area of the city at first, so that the expense of delivery may be kept at the minimum. In this section he advertises the scheme thoroughly. He has eight drug stores as stations, so selected that no person in the section of the city included in his experiment has more than three or four blocks to go to a station. At these drug stores finding lists and library blanks are supplied. Orders for books with the borrowers' library cards are left at a drug store, where the charge for delivery, three cents per book, is collected. At least once a day these orders are collected by Mr. Franz who then delivers the books, called for to the homes of the borrowers. When the borrower has finished using the book he leaves it at the drug store, for Mr. Franz to return to the library.

The service between the library and the drug stores is performed by a man; from the drug stores to the homes of the borrowers by a boy. Mr. Franz is of the opinion that he can reduce the cost of service to two cents per book, if there are enough books to be delivered to keep a boy employed constantly for every afternoon. This experiment has not been in operation long enough to predict results, but, whether successful or not, it is not without interest.

S: H. R.

Bangor (Me.) P. L. (19th rpt. — year ending Dec. 31, 1901.) Added 2182; total 49,823. Issued, home use 95,320 (fict. and juv. 77,491); lib. use 26,052. Membership cards sold 2502. Receipts \$7514.64; expenses \$7372.40.

Braddock, Pa. Carnegie F. L. An abstract of the librarian's report for 1901 gives the following facts: Added 5615; total 30,839. Issued, 184,553 (fict. 66%). New registration 2272; total registration 10,497. The circulation showed a gain of 21,277 over that for 1900, and in the fiction issue there is a reduction of 3.7%.

Brooklyn (N. Y.) P. L. The library has issued in pamphlet form the "Agreement entered into between the city of New York and the representatives of Andrew Carnegie for the erection of branch libraries in the Borough of Brooklyn" and the "Report of A. D. F. Hamlin, consulting architect to the committee having charge of the erection of Carnegie library buildings." The main points in both documents have already been noted in these columns.

Mayor Low on Feb. 3 appointed seven library directors to fill expired terms, as follows: John W. Devoy, William D. Sargent, Arnold W. Catlin, Abner B. Haight, Andrew D. Baird, Isaac H. Cary and Jules A. Guedon. The directors are to serve for three years.

Brown University L., Providence, R. I. The report of the president of the university, for the year ending Sept. 4, 1901, contains the record of the year's work in the library by H. L. Koopman, and appendixes describing the great John Carter Brown library, by G. P. Winship. For the university library Mr. Koopman reports accessions of 4733 v. and 1306 pm., notable among the gifts being the 200 volumes purchased for the Harris collection at the McKee sale from the \$1000 provided for the purpose by Chancellor Goddard. The library endowment has been increased by the addition of the James Tucker Junior fund of \$2500, the income of which is to be devoted to the purchase of books for the classical departments — "but the crowning event of the year has been the gift of the John Carter Brown Library to the university, coupled with provision for a fireproof building and an ample endowment."

In all 6782 v. were issued, of which 1582 were drawn by the faculty. "Of the undergraduate students, 65% of the men and 37% of the women, or 59% of all the undergraduates, borrowed one or more books from the library." The librarian's course in bibliography was given to a class of 23 men.

President Faunce, in his report, touches at some length upon "the great gift of the John Carter Brown Library, probably the finest collection of Americana in existence. For many years this rare library has been growing up in the city of Providence, better known possibly in Europe than in America, but known to all students of American history as a collection

of priceless value." By the will of the late John Nicholas Brown, "the library, together with \$500,000 for a permanent endowment, and \$150,000 for the erection of a building, was placed in the hands of trustees with full power as to its permanent disposition. These trustees, after mature consideration, decided that the library should go to the university which bears the family name, and in whose halls the owner received his education. It will be our endeavor through all coming time to preserve the memorial features of this library, and yet render its treasures accessible to mature and qualified students from all parts of the world."

The character and contents of the Carter Brown library are somewhat fully described in two articles by its librarian, George Parker Winship, printed as an appendix to the report, which originally appeared respectively in the *Brown Alumni Monthly* and the *Providence Journal*. Mr. Winship notes the demands made upon the collection by such men as George Bancroft, Helps, Fiske, and others, and briefly reviews its wealth of early and rare Americana. "Whatever the field of study, so long as it touches ever so slightly upon the confines of the western world, the student may confidently hope to find something to assist his researches in the John Carter Brown Library."

Chattanooga, Tenn. At the annual meeting of the Chamber of Commerce, on Jan. 9, the library committee presented the following regarding the proposed Carnegie library: "The library committee is pleased to report substantial progress during the past year toward getting the city of Chattanooga to accept Mr. Carnegie's offer of \$50,000 for a free public library, which was made to your committee a year ago last December. An ordinance accepting said offer and complying with the conditions thereof, has passed the board of aldermen and has passed two readings in the board of councilmen. We have every reason to believe that the latter board will pass it on its third reading at their next meeting, Jan. 20; therefore, we hope to have a first-class public library, free to the citizens of Chattanooga, with all its great advantages, in operation before the close of this year. We regret that unfortunate conditions delayed the accomplishment of this great object so long, as we had hoped to have it in running order last fall."

At the city council on Jan. 20 the library ordinance passed its third and final reading, a large petition signed by many taxpayers urging its acceptance having previously been presented.

The board of nine directors has not yet been appointed by the mayor.

Chicago (Ill.) P. L. (29th rpt. — year ending May 31, 1901.) The statistics here given were noted in abstract in L. J. for Nov., 1901, p. 823-824. The library force at the date

of this report numbered 208 persons, the salary expenditure for the year being \$135,678.76. For books \$19,867.04 was spent; for binding \$10,331.31; and for newspapers and periodicals \$4388.11.

Dover, Del. The question whether the city of Dover should establish a free library was submitted to a vote at a special election on Jan. 15 and was carried in the affirmative by 140 against 10.

Galion (O.) P. L. The library was opened to the public on Jan. 29. It has attractive rooms in a business building on North Market st. A "book shower" was a feature of the opening, giving a nucleus of volumes for the library's work. Both books and magazine subscriptions have been given by interested citizens, for the library was established and is maintained by volunteer effort.

Holyoke (Mass.) P. L. The new library building was transferred to the library association by the building committee on Jan. 18. No formal dedicatory exercises were held. The total cost of the building was \$96,000, of which \$89,950 was raised by public subscription and contributed funds. The debt remaining, about \$8000, will, it is thought, soon be raised.

Homestead, Pa. Carnegie L. (Rpt., 1901.) Added 2820; total 13,637. Issued 72,618, a gain of 27% over 1900 (fict. 65%). New registration 766; total cards in use 1891. The school circulation is of two classes—the kind the teachers select, which amounts to 6300, and the supplementary reading, which is furnished in lots of 25 volumes each, amounting to 1675. In all, 7975 volumes were circulated through the agency of the school.

Jamestown, N. Y. Prendergast F. L. At the semi-annual meeting of the library trustees, held Jan. 6, L. B. Warner was elected president of the board, succeeding the late Solomon Jones, and Rev. Elliot C. Hall was elected trustee to fill the place left vacant by Mr. Warner's promotion.

The "Founder's day" celebration, on Dec. 21 last, was not only in memory of the founder of the library, but in honor of Mr. Jones, whose death occurred early in that month. During all the day and evening the entire building, including stack room as well as art gallery and reference room, was open to the public, and the rarer books in the collection were displayed. In the evening the memorial exercises were held in the reference room, which served as an assembly hall for the occasion. Judge Abner Hazeltine delivered an address reviewing the work of the library during the decade just closed. He said, in part: "There have been loaned for home reading more than 550,000 books—more than half a million—in the past 10 years. The art gallery has been visited by more than 50,000 guests in the same period. Considerably over 162,000 have visited the reading room,

of which annually 5000 were children and 2100 were students. When the library was opened to the public 10 years ago there were a little over 8000 volumes. To-day the total number of volumes in the library is over 17,000."

The development of the collection of technical books and of the genealogical collection were referred to. "Another department which has a special prominence in this library is that of children's work. We have set aside the room which has been called the directors' room as a special room for the children, and in every way possible, both in selection of books and in the attention given to the children in aiding their studies, they are made to feel at home in the library, and to know that their needs and wishes are a subject which receives full consideration from all the attendants. The number of children registered as readers, amounting to almost 5000 a year, shows that they appreciate the interest which the library management feels in them.

"It may perhaps not be deemed fitting to give too much praise to the librarian in behalf of the board of directors, but as a matter of fact the librarian—or any librarian of any library—is the whole thing (to use a current expression), and the success of the library depends very largely upon the manner in which the librarian and the assistants meet the public and respond to their requests. I am certain that the directors join with me in a feeling of hearty congratulation to Miss Hazeltine upon her elevation to the position of president of the state library association."

Library of Congress, Washington. William Thompson, a young Kentuckian, was recently arrested for the mutilation of a newspaper file in the library, and was arraigned in the police court on Jan. 23, upon the charge of destroying public property. He pleaded guilty, and was fined \$500, with an alternative of six months in prison.

Upon the suggestion of the library authorities and the assistant district attorney, the young man's personal bond was accepted and he was released. The article cut out was in a paper from his native city. He was detected in the act and prosecuted in order that it might serve as a warning to others. Thompson claimed that it was an act of thoughtlessness on his part.

Massillon (O.) P. L. (3d rpt.—year ending Dec. 31, 1901.) Added 1020; total 10,736. Issued, home use 45,074. New registration 554; total cards in use 3782. Receipts \$4106.92; expenses \$3181.70.

Muncie, Ind. Workingmen's L. The library, which was established two years ago, was closed early in February on account of lack of funds and support by the laboring men. The books will be stored. Andrew Carnegie aided in establishing the library by donating \$500.

Nashville, Tenn. Carnegie L. A site for the new library building was accepted on Jan. 20 by the committee having the matter in charge. It was offered as a gift by J. Edgar McLenahan.

The former librarian of the Howard Library, Miss Mary Hannah Johnson, and her assistant, Miss Kercheval, have been re-elected in charge of the newly organized library. The Howard Library regulations have been adopted, with slight modifications.

The report of the Howard Library for the year 1901 was submitted to the directors at their January meeting, prior to the merging with the new Carnegie Library. During the year — on April 22 — the membership fee previously charged was abolished, and the library was made free to the public. "Up to that date the library had 571 cardholders at \$2 per year, having been running on a pay basis for one year and seven months. Since its organization up to two years and some months ago the library was a reference library purely. One year ago it was free as reference, but was on a paid basis of circulation. Eight months ago it was made entirely free, and now loans from 300 to 500 books per day, besides having a free reference room."

Miss Johnson gives the following statistics: Added 1694; total 10,688. Issued, home use, about 50,000 (fict., 69 per cent.); reading room attendance 46,800. Registration 3414. There were 1036 v. issued from the children's department in one month.

New Jersey State L. (Rpt. — year ending Oct. 31, 1901.) Added 3528; total 58,370. The more important accessions are noted and the need of more room is presented. The installation of a two-story steel stack in the law library is strongly urged.

Mr. Buchanan reports at length upon the system of travelling libraries, operated from the state library, and established by act of April 20, 1898. There are now 62 libraries, of which 41 are in use. The results of the work are not very encouraging. "Since the system was put in operation, in November, 1899, the libraries have been in use in 61 different towns, of which 20 have discontinued them for various reasons — lack of interest, failure to get a suitable person to act as librarian and because of the establishing of local public libraries. There will probably be a further falling off in the demand with the expiration of the second year, in a few weeks. The new applications filed during the year just passed were 20 — the exact number that gave up the use of the libraries. The future increase, if any, is likely to be small." This is despite the fact that several hundred circulars were sent out calling attention to the libraries and giving directions for securing them. Tabulated record is given of the circulation of the libraries, the towns to which sent, circulation, number of readers, etc. Regarding their use Mr. Buchanan's conclusions are:

"The travelling libraries cannot become as popular in New Jersey as they are in some of the larger states, where the towns and villages are scattered, communication with cities difficult, and where agents employed by the states give their entire time to the work of placing libraries in the neighborhoods where the need of books is felt. In New Jersey there are but few localities so far distant from large cities as to make daily communication impossible, and books and newspapers are readily obtained. Besides, there is a liberal provision for school libraries, and these have, in several cases, resulted in travelling libraries being withdrawn."

New York City. Cathedral F. C. L. The library will remove about the middle of February to new quarters at 536 Amsterdam ave., corner of 86th st., where the free access system will be placed in operation.

New York P. L. The bill increasing the number of library trustees from 21 to 25, and adding the mayor, controller, and president of the board of alderman, was passed by the legislature in January and later approved by Mayor Low.

New York City. Webster F. C. L. (Rpt., 1901; in 10th rpt. of East Side House Settlement.) Added 1447; total 12,352. Issued, home use "over 125,600 v.," an increase over the previous year of about 34,000. Total registration 16,676. The report brings out interestingly the work done for school teachers and children. Of the former 365 use the library in various ways. The loan exhibitions of Russian curios and articles relating to the American Indians, previously noted in these pages, are described. An adaptation of the Providence Public Library plan for a standard collection has been made, the books therein included as "books of power" being "especially covered with a bright red book-cloth, and the masterpieces of literature are now being covered in green."

"Special shelves have been brought into prominence, and thereon have been placed books which relate to the history and literature of architecture, sculpture and painting and the fine arts in general, with suitable biographies, and books of appreciation. In the reference room the mantelpiece has been devoted to music; score, history, biography and criticism, with a few novels that seem to belong with books on musical subjects. Medallions, pictures and small plaster busts of musicians will, in the near future, add interest to the collection. Besides a little showcase of bird nests and eggs, a shelf is reserved for many lovely bird books. A collection of beautiful tropical butterflies calls attention to the books on butterflies, bees and other insects, and since the Indian exhibit a corner has been devoted to things and books which cannot help but lead the mind to the day of adventure and romance.

"In a section of the city where nearly everyone is a wage-earner, the library of that section should be in a position to supply books which instruct those wage-earners in better methods. This library always supplies technical books upon demand, but it has not gone out to the public and announced the fact. It is as yet too weak to make any such attempt. Books of practical help to steam fitters, plumbers, and the various building trades, engineers, machinists, etc., would be much used, were they in the library, but they are not. The active, ambitious, intelligent boys and girls who attend night schools should be told and kept informed of the value of a library, and its ability to help them advance in life. The evening lectures of the board of education in this neighborhood should be supplemented by annotated lists of books on the subject of the lecture. Great good might be accomplished, but with all knowledge, and the best will in the world, without books, the library is helpless. The library is less able than ever to meet the demands made upon it. With a circulation of over 125,000 upon a strength of 12,000 volumes, it will readily be seen that the wear and tear must be very great."

Arrangements have been made by which books asked for and not in the library will be supplied, when possible, from the Circulating Department of the New York Public Library or from the Aguilar Library.

New York City, Y. M. C. A. L. Advance abstract from the librarian's report gives the following facts: Added 3440; total 57,620. Issued, for ref. use 134,137; no. readers 122,109. Volumes cataloged 8834.

"In the year's work of recataloging was included the Shakespeare collection of 264 volumes, which was given a special classification.

"Notable among the additions was the Robert R. McBurney collection of Christian hymns and hymnology, and from the same source an extensive collection of books on angling and outdoor sports, 82 volumes of which were various editions of Walton's "Complete angler." These were so classified as to make them stand in one series in chronological order by date of publication."

New York State L., Albany. (83d rpt.—year ending Sept. 30, 1900.) The reports of the New York State Library are always extremely full and varied in interest, and this one is no exception to the rule, although, as usual, it appears more than 15 months after the close of the year covered. The accessions for 1900 amounted to 32,563, of which 12,929 were bought. Total 437,733, of which 57,754 are in travelling libraries in the Home Education department, and 134,876 are duplicates. There are 8657 serials received by gift or subscription. Details of the year's accessions, the special collections, duplicates, etc., are presented in tabulated form.

The estimated reference use of the library for 1900 was 136,386, a decrease of 64,627 over

the preceding year—"due to the enforced closing of the library for four hours daily most of the busy season." There were 2661 evening readers, who used 6966 v. "There has always been a limited demand for admission to the library on Sundays, but we have never had an appropriation available. For some time four men on the staff have volunteered without compensation to divide the hours of Sunday among them so that the other men of the staff might have access regularly. This fact has not been published, but not a few people learning of it have by special permission been accommodated, a regular member of the staff being always present in the room. As the building is locked, it has not been practicable to admit ladies. The experience the world over has been so favorable to Sunday opening that there is little opposition and a growing feeling that the state library should be available for a part at least of every Sunday."

Reference is made to the bill for a new library building, introduced Feb. 1, 1900, and referred to the committee on ways and means. Unless plans for this building are promptly carried through much-needed space must be secured by hiring outside quarters for the entire travelling library collection, now numbering over 60,000 v. with half as many pictures. "The space thus gained would be filled within three years." The work of the various divisions is reviewed and summarized, and the appendixes include full statistics of administration, accessions, gifts, and selected special bulletins.

Newburgh (N. Y.) F. L. (Rpt.—year ending June 30, 1901; in Board of Education rpt., 1901, p. 47-49.) Added 1135; total 26,387, distributed in the main library and six schools. Issued, home use 92,377. New registration 807.

Reference is made to the death of the former librarian, Charles Estabrook, and the memorial minutes adopted by the board of education are given. The circulation showed an increase of 7479 over the preceding year. The reference department contains 1454 general works and 2755 v. of government publications.

Ohio State L. The 56th report of the library was submitted to the governor on Nov. 15 last. The additions for the year were 6849; total 75,699. From the travelling library department 762 libraries, aggregating 20,698 v., were sent to different parts of the state. Mr. Galbreath says:

"All shelf space is now occupied, and unless additional room is promptly provided future additions to the library must be stored where they cannot be made accessible for use. Unless something is done by the coming legislature to afford at least the relief contemplated by the act of the last, the library will soon be forced to suspend the work of some of its important departments."

Orange (N. J.) F. L. The annual meeting of the library board was held on Jan. 8, when the report of the librarian, Miss Elizabeth Howland Wesson, was presented. The formal opening of the new Stickler memorial building, on June 21, was noted, and the re-opening of the library three days later, since when there has been a steady growth in its activity, and the demands upon the staff are greatly increased. Accessions for the year amounted to 3355, giving a total of over 16,000. There were issued for home use 43,133, of which 32.37 per cent. were issued to children (fict. 74 per cent.). Receipts \$5964.56; expenses \$5088.60.

The year was notable not only for the removal to the beautiful and adequate building, but for many important gifts. These included the sum of \$1000 from Henry Graves for the purchase of new books; 1135 volumes from the library of Daniel Addison Heald, including several valuable pictures, among them a Rembrandt etching and a Dürer woodcut; and a complete set of the "Rebellion records." In addition, the New England Society of Orange passed a resolution that all unbound pamphlets and periodicals and pamphlets belonging to the society, of a date previous to 1900, should be given to the Orange Free Library.

"A very important part of the library is now the Medical Alcove, where not only the books from Dr. Stickler's medical library, but those from the library of Dr. William Piereson are shelved."

A branch in Orange Valley was established in January, 1901, with the aid of the Orange Valley Social Settlement, in whose rooms it is located.

Providence (R. I.) Athenaeum L. (66th rpt. —year ending Sept. 1, 1901.) Added 1373; total 63,354. Issued, home use 44,634 (fict. 28,024). Membership not stated. Receipts \$7757.25; expenses \$7586.75.

There was a decrease of 6198 or about 12 per cent. from the circulation of the previous year, of which "more than two-thirds, or 68 per cent. was in the department of English prose fiction." Limited funds for fiction purchases and increased use of the public libraries are regarded as factors in this decrease. Despite this, the general outlook seems to be encouraging. A larger number of membership shares were sold than for many years, and in its management and the value of its collection the library is of increasing usefulness. The question of attempting to "popularize" it is brought up, and submitted to the shareholders for consideration. It is pointed out that the development of public libraries should not diminish the value of proprietary libraries, but rather elevate their standards—but that the question remains, whether an effort shall be made to meet popular demands for new fiction, multiplied copies of advertised books, etc., and thus avoid the possible loss of subscribers, or whether a more conservative

course shall be followed, and the library if less popular, be made of still more value to the studious reader.

Providence (R. I.) P. L. The Providence *Visitor*, a weekly Roman Catholic journal, publishes in its issue for Jan. 23, a list of the books by Catholic authors added during the past year to the Providence Public Library, prepared by the library authorities. The list includes 65 entries, and is classed to cover "Works issued by the authority of the church," "Historical accounts," "Biographical accounts," "Statements of doctrine, usages, etc.," "Publications on miscellaneous subjects," "Periodicals." The list is carefully printed, and there are some annotations. The *Visitor* prints an interesting editorial on the list, "which," it says, "we owe to the industrious courtesy of Mr. Foster, the librarian." "Now and then," it is added, "a broadly-read and tolerant official succeeds in satisfying the larger Catholic demands without trenching unfairly upon the unmapped domains of the intelligent Protestant body. Mr. Foster, we think, has done that; and those who give themselves the pains to examine his list will be grateful to him for the fine sense of discrimination he has displayed in compiling it."

The matter of furnishing Catholic books from public libraries is touched upon as follows: "One sometimes hears vague and ill-natured criticism of public institutions up and down New England from members of the Catholic body, who are too often misled by their own traditions to read a studied discourtesy into acts that may be prompted only by the misunderstandings of half-knowledge. Intolerance is on the wane everywhere in our great urban centers. No doubt one may detect lingering evidences of it now and then; but we have never heard it gravely alleged as an abiding grievance against the public library."

Richmond, Va. Carnegie L. The members of the library board have been chosen as follows: from board of aldermen, Robert Whittett, jr., J. B. Wood; from common council, James Caskie, S. F. Bloomberg, D. F. McCarthy; citizens elected by council, W. C. Armitage, Robert Whittett, jr., Dr. Geo. A. Taber; *ex-officio*, Superintendent of schools Fox.

Rochester (N. H.) P. L. Added 554; total 8299. Issued 31,036. Total cardholders 3522. Visitors to reading room 4567.

St. Louis (Mo.) P. L. At the board meeting held on Jan. 18 the librarian submitted a summary of the year's statistics, which showed that for books, periodicals and binding during the year over \$20,000 had been spent, and 21,225 volumes had been added. The gifts for the year numbered 2571 volumes and 5990 pamphlets.

Statistics relating to the reference work were encouraging, showing an increase in use

of 31,264 volumes over the year previous. The total issue of books in all departments for the year was 990,197, a gain over the year 1900 of more than 70,000 volumes.

Scranton (Pa.) P. L. (11th rpt., 1901.) Added 4724; total 41,336. Issued, home use 125,518 (fict. 64.98 %; juv. 11.24 %); lib. use 3201. New registration 4122; cards in use 8363. Receipts \$14,007.90; expenses \$13,176.44. These figures do not include various special funds and accounts, as the Mining Section fund, petit cash, etc.

A room for young people was opened in May, equipped with a collection of about 1600 v., to which 800 were added during the year. A combined reference and reading room was opened on the second floor, in what had formerly been the lecture room, and the new facilities thus given have proved entirely popular and satisfactory.

Seaboard Air Line Travelling libs. Mrs. E. B. Heard announces the proposed addition to the travelling libraries of the Seaboard Air Line of a "William McKinley Memorial Series" of travelling libraries. These will be 12 in number, each containing 50 books, and will be sent to the rural schools in Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama. It is hoped that the books will be given by persons interested in the movement. They are to deal mainly with American history, including however biography, travel and description, fiction, etc. These libraries will be offered as prize libraries to the 100 schools which shall make the most improvement in the surroundings of their school houses, the painting of their building, ornamenting the grounds, planting trees, shrubbery, etc.

Shelbyville (Ind.) P. L. The city council on Jan. 13 appropriated \$4000 for the purchase of a site for the proposed Carnegie Library. The city's present tax for library maintenance purposes is \$2000. As Mr. Carnegie asks only \$1500 annually for this purpose, no additional levy will be needed.

Sioux City (Ia.) P. L. The librarian's report for 1901, presented Jan. 2, gives the following facts: Added 1260. Issued 56,612 (fict. and juv. 84.6 per cent.). New registration 1069. Receipts \$4360.74; expenses \$3561.40.

Smithsonian Institution L., Washington, D. C. (Rpt.—year ending June 30, 1901; in Report of secretary, p. 126-128.) Added 28,134, of which 21,368 are parts of volumes, 4063 pamphlets, and 772 charts. "In ever-increasing volume the operations of the library, like those of the International Exchanges, look to the strengthening of the Library of Congress. All books, pamphlets, charts, and completed volumes of periodicals are accessioned and recorded on cards as a permanent record file, which both serves as a ledger account with learned societies and es-

tablishments and as a catalog of the Smithsonian deposit. The greater part of these publications are then sent to the Library of Congress.

"The additions to the libraries of the secretary, the office, and the Astrophysical Observatory number 374 volumes, pamphlets, and charts, and 2058 parts of volumes, making a total of 2432, and a grand total of 30,566. On the card catalog of serial publications about 30,000 entries were made, of which 300 required new title cards."

The circulating library for employees now contains about 1280 v., and reached during the year a circulation of 2515 v. among 105 borrowers.

Somerville (Mass.) P. L. The house-to-house delivery of books desired by readers, in operation for some time past, is noted in the library *Bulletin* for January, as follows:

"It is the purpose of the library to deliver its books directly to the doors of every family in Somerville which is desirous of such service. This work is done by a corps of boys selected by the librarian for the purpose. To recompense the boys for this work, a fee of two cents is charged for each book delivered. This fee goes entirely to the boys and not to the library. This service has already proved a great accommodation to many people, some of whom have hitherto been precluded from the use of the library on account of the difficulty of reaching it. Mothers of small children, elderly people, and men whose business keeps them away from the city during the day find this service an especial boon."

Syracuse (N. Y.) P. L. (Rpt.—year ending June 30, 1901.) Added 5227; total 52,472. Issued 173,468, an increase of seven per cent. over last year, of which 38,536 are juvenile. Mr. Mundy touches upon the cost of circulation, and reports that "the entire management of this library, beyond the cost of books, serials and binding," cost in 1900 8.4 cents.

The plans for the Carnegie library building are described, and the report contains as frontispiece an elevation of the façade, and a plan of the second floor, which is interesting in its combination of open and closed stacks, and other features.

Troy (O.) F. P. School L. (5th rpt.—year ending Nov. 30, 1901.) Added 202; total 3445. Issued, home use 16,630.

All borrowers' cards were cancelled Jan. 1, 1901, and during the year 914 new cards were issued. "The circulation would have been double what it was if we had the number of books called for."

Tyler (Tex.) P. L. A Saturday afternoon reading hour for children is conducted at the library by Mrs. Elizabeth Herndon Potter, president of the board. It is attended by 25 or more children, and has proved most suc-

cessful. Each child contributes, if convenient, five cents a week, the money being used for children's books, which are bought as promptly as possible, and plated "From little library helpers."

Mrs. Potter writes: "We are very poor and grow slowly. We have 1200 books; issue one free ticket to every responsible white family; have a reading table; are open all day; have a trained librarian. Began in April, 1899; have had free tickets only since Dec. 1, 1901."

University of Michigan L., Ann Arbor. (Rpt.—year ending June 30, 1901.) Added 10,064, of which 8488 were received in the general library; total 123,362 in general lib., 18,827 in law lib., 10,899 in the medical lib., 1014 in the dental lib., and 1422 in the lib. of Homeopathic Medical College. The beginning of a collection of Spanish books was made, \$550 being devoted to this purpose. The more important gifts are noted.

At the general library the recorded circulation of books is given as 144,602 v., 8591 having been drawn for home use by professors; "unrecorded use constituted more than one-half the actual use of the library."

The reclassification of the library is reported as nearly completed. It is hoped soon to arrange and classify the map collection and set apart a map room for its use.

WISCONSIN STATE HISTORICAL SOCIETY. Exercises at the dedication of its new building, Oct. 12, 1900; together with a description of the building, accounts of the several libraries contained therein, and a brief history of the society; edited by Reuben Gold Thwaites. Memorial volume. Madison, 1901. 12+139 p. 1. Q.

A handsome and fitting "memorial volume" devoted to the beautiful library building of the Wisconsin State Historical Society. The addresses at the dedication include Charles Francis Adams' fine address on "The sifted grain and the grain sifters," and "Greetings from sister libraries," by Dr. J. K. Hosmer. The building is described by Mr. Thwaites, who also outlines the history and work of the society. The institutions affiliated with it—the library of the University of Wisconsin and the library of the Wisconsin Academy of Sciences, Arts and Letters—are described by Walter M. Smith, librarian of the former, and W. H. Hobbs. There is also a "symposium" setting forth "What distinguished librarians think of the building." The volume is well printed on highly calendered paper and fully illustrated with plans, views and portraits.

Yazoo City (Miss.) L. Assoc. The B. S. Ricks memorial building was formally transferred on Jan. 1 to the local library association. The building, which cost \$25,000, is the gift of Mrs. F. J. Ricks, as a memorial to

her husband. It is of gray pressed brick and white terra cotta, with a frontage of 84 ft. and a depth of 70 ft. The entrance, through a semicircular, columned portico, leads into a vestibule, 10 x 15, beyond which is a lobby, 15 x 28, opening into the stack room. The stack room is semicircular, 31 x 64, with single bookcases and eight two-story stacks. The librarian's desk is circular, and so placed that all visitors must enter and pass out beside it. On either side of lobby and stack room are general reading rooms; there are also smoking and chess rooms. The Yazoo Library Association is more than 50 years old. It has had a checkered career, during and after the war becoming almost extinct. It now has a membership of over 200, and is sustained by monthly dues of 25 cents, and \$1 per year for book privileges. It contains about 3000 volumes.

FOREIGN.

Cardiff (Wales) F. Ls. (39th rpt.) Additions not given; total 95,725, exclusive of 9363 v. in the school collection. Total issue 457,448 (ref. dept. 89,595; central lending lib. 172,825; school libs. 153,528).

"The most noteworthy feature revealed by the statistics is that the opening of the branch libraries does not decrease the work of the central library, both the lending and reference departments showing substantial increases for the year. The same applies to the school libraries. Notwithstanding the very large circulation through the schools the use of the juvenile sections at the central and branch libraries continues to increase."

The Welsh department has been enriched by the gift of the Scott collection of 1235 printed and 51 ms. volumes, comprising over 2000 items. This collection is the subject of a separate report by the librarian, noting the items of special rarity and interest.

Much work has been done in connection with the local schools. A select library has been placed in each school (39 being now established) which is controlled by the teacher, under supervision of the librarian; school visits are made to the reference library, when the librarian gives short explanatory lectures upon books and their uses; and teachers are authorized to issue library membership cards to their pupils, without the regular formalities. These cards must be renewed in regular form at the end of one year, "and it is found that as these tickets run out they are practically in every case renewed."

Branch libraries are now established in five out of the six districts of the town.

French libraries' lending departments. The Minister of Public Instruction has issued an announcement of the establishment of special long-term lending departments for the Bibliothèque Sainte-Geneviève, and the libraries of the universities of Bézangon, Dijon, Lille, Montpellier, Nancy, Poitiers, Rennes, and Tou-

louse. These departments are to contain several copies of each of the publications issued under the auspices of the Minister of Public Instruction, which are to be freely lent to persons desiring their use for research purposes, for a longer time than ordinary loans permit. The library officials may determine the period of loan, which is not to exceed five years in duration. Such loans may be made on condition that the borrower shall be pecuniarily responsible for injury to or loss of books, the amount of damage to be fixed by the library authorities; that cost of wrapping and transportation be defrayed by the borrower; that a special receipt be given by borrowers on which the conditions are set forth; and that special records, catalogs, and lists of borrowers be kept for this special department. A list of the works included in this department is given, which includes documents and material relating to the history of France—memoirs, journals, collections of charts, correspondence, etc.

Lindsay (Ontario, Can.) P. L. (Rpt.—year ending Dec. 31, 1901.) Added by purchase 208 v., at a cost of \$226.99. Total 3619. Issued 19,299 (fict. 11,992). New membership 238; total membership 1227. Receipts and expenses \$1199.75 ("salaries \$313.83.")

The circulation of juvenile books was 3665 for the 339 v. in that department. "The highest ratios of circulation were in the girls' section, 13.9 issues for each volume; and in the little ones' section, 12.3 issues to a volume." The meetings of the Ontario Library Association at Toronto in April, 1901, and of the American Library Association at Waukesha in July, 1901, are noted.

McGill University L., Montreal. "The university library" is described by C. H. Gould, the librarian, in the first number of *The McGill University Magazine*, for December, 1901. The total contents of the library are noted as nearly 87,000 v., the accessions being at the rate of 5000 a year. "Within four years there have arisen, as a result of most generous gifts, excellent working collections on architecture, on chemistry, on mining and metallurgy; there have been received the valuable Ribbeck library of classics and classical philology, the geological and palæontological library of Sir William Dawson, and a choice collection of Canadian autographs and manuscripts, and of works on music."

The system of travelling libraries established a little over a year ago is described. "Within the past 12 months boxes of books have been sent to hamlets in the far west, by the sea in Nova Scotia, to lumber camps in Algoma, to divisional and sectional railway points remote from any center and to many towns and villages nearer home. The first library was despatched on the 28th of January, 1901, and was, so far as can be ascertained, the first travelling library in

Canada, with the exception of those which the government of British Columbia had in operation at the time." The books are lent to country schools, public libraries, reading or literary clubs, and communities possessing no public library; they may be kept three months on payment of a fee of \$3, covering expressage, and the time is extended on request. The libraries are of three classes, consisting 1, of general works, including fiction and a few books for young people; 2, of books intended entirely for children and young people; and 3, of books on special subjects. Each library contains from 25 to 30 volumes.

Gifts and Bequests.

Ashtabula (O.) P. L. By the will of the late Maria Conklin, of Ashtabula, the entire estate of the testator is bequeathed to "erect and construct in whole or in part a suitable building for the Free Public Library to be known as the "Conklin Library Building." The value of the estate is not given.

Belleville, Ontario, Can. Mr. Gilbert Parker, the novelist, has offered to give a public library building to the city of Belleville.

Boston P. L. It was announced on Jan. 18 that the library would receive the sum of \$100,000 from the estate of the late Robert C. Billings, who died three years ago. The money is to be used for the purchase of books.

Columbia University L. Through the generosity of W. C. Schermerhorn, the library has acquired the valuable collection of "Clinton papers," recently bought by Mr. Schermerhorn from Dodd, Mead & Co. The collection includes the complete correspondence of De Witt Clinton, embracing 1100 letters addressed to Governor Clinton, comprising in all nearly 6000 pages. Among the writers are Presidents Adams, Monroe, Jackson, Jefferson and Van Buren; Aaron Burr, Philip Freneau, Gouverneur Morris, John Jay, Henry Clay, Chancellor Kent, Gen. Horatio Gates, Gen. William Dearborn, Mary Clinton, James Clinton, Robert Fulton, John Jacob Astor and the Marquis de Lafayette.

The second part of the collection is made up of Gov. Clinton's letter-books, taking the greater part of six volumes—more than 3000 pages.

Queen's University, Kingston, Ontario. The library has received from Mr. Gilbert Parker a fine set of Canadian historical portraits, valued at \$5000.

Carnegie library gifts.

Bedford, Ind. Jan. 12. \$15,000. A site was secured on Jan. 29.

Canastota, N. Y. Jan. 10. \$10,000.

Columbus, Ind. Jan. 3. \$15,000. A site was secured on Jan. 29.

Librarians.

Columbus, O. Jan. 1. \$150,000. Annual maintenance fund of not less than \$20,000 required. Accepted.

Dubuque, Ia. Jan. 2. \$10,000 additional, making a total of \$60,000.

Eldora, Ia. Jan. 2. \$10,000. Accepted.

El Paso, Tex. Jan. 15. \$35,000.

Fremont, Neb. Jan. 4. \$15,000.

Gloversville, N. Y. Jan. 21. \$50,000. This is a repetition and increase of a previous offer of \$25,000.

Greencastle, Ind. Jan. 22. \$10,000.

Guelph, Ontario, Can. Jan. \$20,000.

Huntington, W. Va. Jan. 6. \$25,000.

Johnstown, N. Y. Jan. 16. \$5000 additional, making a total of \$25,000.

Kenton, O. Jan. 24. \$17,500.

The town is required to grant a yearly maintenance fund of not less than \$1750, provide a site, and secure \$10,000 endowment. The endowment fund of \$10,000 has already been offered as a gift by Lewis Merriman of Kenton, and \$5000 more has been added to the amount by an anonymous giver. The city council voted on Jan. 27 to grant the appropriation required, and a committee has been appointed to raise a subscription fund for the purchase of a site.

Kingston, N. Y. Jan. 7. \$20,000.

Lansing, Mich. Jan. 11. \$35,000.

Laurel, Md. Jan. 2. \$10,000.

Lexington, Ky. Jan. 20. \$50,000.

Lindsay, Ontario, Can. Jan. \$10,000.

Louisville, Ky. Jan. 17. \$250,000.

This is a repetition of the offer made two years ago, but never accepted, owing to local differences between the city council and the Polytechnic Library directors.

Melrose, Mass. Jan. 6. \$25,000.

Newnan, Ga. Jan. 1. \$10,000. Accepted Jan. 21.

Newport (O.) P. L. Jan. 10. \$6500 additional.

Newton, Ia. Jan. 28. \$10,000.

Ottawa, Kan. Jan. 28. \$15,000.

The matter will probably be voted upon at the spring election.

St. Catharine's, Ontario, Can. Jan. 2. \$20,000.

Saratoga, N. Y. Jan. 7. \$20,000.

Sarnia, Ontario, Can. Jan. 20. \$15,000.

Tampa, Fla. Jan. 16. \$25,000.

Temple, Tex. Jan. 27. \$10,000.

Tipton, Ia. Jan. 9. \$10,000.

Washington, O. Jan. 15. \$12,000. Accepted.

Waterloo, Ia. Jan. 28. \$40,000.

Xenia, O. Jan. 27. \$20,000.

The city already appropriates about \$2000 yearly for library maintenance.

BAKER, Miss Gertrude, librarian of the Mt. Vernon (O.) Public Library, has been appointed librarian of the Carnegie Library of East Liverpool, O. She is succeeded by Miss Harriet Goss, who has been connected with the Mt. Vernon Library for two years past. Both Miss Goss and Miss Baker have been associated with the editorial work on the *Cumulative Index to Periodicals*, published in Cleveland, and they were the compilers and editors of the "Index to *St. Nicholas*" published last year.

BAKER, William G., formerly of Columbia University Library, died on Jan. 30, in New Bedford, Mass. Mr. Baker was born in Nantucket in 1824, and about 10 years later moved with his family to New Bedford. He was prepared for Harvard College, but never entered. In 1844 he went abroad for a year, and then entered the firm of Little & Brown. In a few years he severed his connection with this firm and became part owner and associate editor of the New Bedford *Mercury*. In 1876 he came to New York, and for a time was one of the night editors of the New York *Herald*. He then entered Columbia College as librarian for the school of mines, and later was appointed one of the reference librarians for the general library. After being connected with Columbia for 20 years he retired two years ago on account of ill health. Mr. Baker was a linguist of considerable ability, a musician, and a writer of both prose and verse. He was always very quiet and reticent, and at the same time most kind and courteous in his manner.

CHILD, Miss Grace A., who has for four years and a half had charge of reference and school work in the Hartford (Ct.) Public Library, has been appointed librarian of the new Harcourt Wood Memorial Library in Derby, Ct., the gift of Col. and Mrs. H. Holton Wood in memory of their son. Miss Child, after two years in Smith College, took the library course in Pratt Institute, and is a graduate of the class of 1897. The library will probably be opened within six months.

CRUNDEN, Frederick M., completed his 25th year as librarian of the St. Louis (Mo.) Public Library on Jan. 16. In celebration of the event Mr. Crunden was given a dinner at the St. Louis Club, by present and former members of the library board, and on Jan. 17 received an anniversary clock from the members of the library staff.

DEAN, John Ward, for 27 years librarian of the New England Historic Genealogical Library and an authority in the field of American history, died on Jan. 22 at Medford, Mass. Mr. Dean was born March 13, 1815, at Wiscasset, Me. He was for many years connected with, and filled several offices in, the New England Historic Genealogical So-

ciety, to whose *Register* he made many valuable contributions and of which he was for many years the editor. He was the author of "A brief memoir of the Rev. Giles Firmin, one of the ejected ministers of 1662"; "Story of the embarkation of Cromwell and his friends for New England"; "A Memoir of the Rev. N. Ward"; "Memoir of the Rev. Michael Wigglesworth," and other historical and biographical monographs. He also edited the first and a portion of the second volume of the first series, and one number of the fourth volume of the second series of the *Historical Magazine*.

EATON, Miss Harriet L., Pratt Institute Library School, class of 1902, formerly in the Oshkosh (Wis.) Public Library, has been appointed instructor in the spring course to be given to librarians by the Indiana State Library Commission in May.

FORSYTH, Walter G., has resigned his position as librarian of Lafayette College, Easton, Pa., to accept a position in the Boston Public Library.

HARDIN, Miss Pauline Helm, was on June 12 re-elected state librarian of Kentucky, for the two-year term beginning June, 1902. Miss Hardin has served two terms in this office.

HATHAWAY, Miss Bertha F., Pratt Institute Library School, class of 1901, has been engaged to reorganize the library of the St. Johnsbury (Vt.) Athenæum.

HOPKINS, Miss Julia A., New York State Library School, 1895-96, assistant cataloger at the Carnegie Library of Pittsburgh, has been made librarian of the Wylie avenue branch of this library, this position having been left vacant by the resignation of Miss Ellen S. Wilson. Miss May L. Prentiss (New York State Library School, 1899-1900), for some time assistant cataloger at the Bryn Mawr College Library, will take Miss Hopkins' place as assistant cataloger at the Carnegie Library.

ISOM, Miss Mary F., Pratt Institute Library School, classes 1900 and 1901, has been appointed librarian of the Public Library of Portland, Ore., recently made free. Miss Harriet Gooch, class of '98, has been made head cataloger.

NELSON, Charles Alexander, of Columbia University Library, has received official notification that a "diploma of honorable mention" has been awarded to him for his exhibit of the "Catalogue of the Astor Library" at the Pan-American Exposition at Buffalo.

NOYES, Miss Ethel Regina, Pratt Institute Library School, class of 1901, has been appointed librarian of the West Side Branch of the University Settlement Library in New York City.

OWEN, Miss Esther B., Pratt Institute Library School, class of 1899, has been engaged as reference assistant in the Hartford Public Library, succeeding Miss Grace Child.

RICE, Prescott C., for 29 years librarian of the Fitchburg (Mass.) Public Library, died of pneumonia at his home in Fitchburg on Jan. 26. Mr. Rice was born in Natick, Mass., April 18, 1846, and had been in charge of the library from its beginning with 100 volumes in a room of the city hall. He had been a member of the American Library Association since 1887.

ROCKWELL, Miss Adaline Benson, New York State Library School, 1898-99, has been appointed assistant librarian at Hampton Institute, Hampton, Va.

RUSSELL, Miss Florence, Pratt Institute Library School, class of 1896, has resigned from the reference department of the Pratt Institute Library, to take charge of the reference department of the Trenton (N. J.) Free Public Library.

WRIGHT, Charles E., Pratt Institute Library School, class of 1897, has resigned his position as librarian of the Andrew Carnegie Library of Carnegie, Pa., to become assistant librarian of the Cincinnati (O.) Public Library.

WHEELER, Miss Florence E., of the Drexel Institute Library School, class of 1900, has been appointed librarian of the Leominster (Mass.) Public Library.

Cataloging and Classification.

CARNEGIE L. OF PITTSBURGH. List of one hundred entertaining biographies. Pittsburgh, 1902. 20 p. O.

An excellent annotated list.

CATALOGING PUBLIC DOCUMENTS. The subject of cataloging public documents was well presented by Miss Alice C. Fichtenkam, of the Office of Documents, in the *Index and Review* for last September and October. Miss Fichtenkam treated separately the cataloging of government publications in general, and the making of the "Document catalogue" issued under direction of the Superintendent of Documents. Her clear and practical statement of methods and difficulties are of general interest to catalogers.

The FITCHBURG (Mass.) P. L. *Bulletin* for January contains good short reference lists on "Development of song from ballad to opera" and "Development of the sonata from suite to symphony."

THE LAURENTIAN LIBRARY, of Florence, announces the reproduction in facsimile, under its direction, of the famous Pisan-Florentine codex of the Pandects of Justinian. The work is in charge of a commission appointed by the ministry of Public Instruction, and it is estimated that the reproduction of the whole manuscript, which consists of 1844 pages, or with the preface of about 2000 pages, will be furnished within the next three

years, a sheet of 200 plates being published quarterly. A specimen of the reproduction was issued at the time of the silver wedding of King Humbert and Queen Margharita and presented to them and to the Emperor of Germany. A facsimile of the illumination of the binding presented at the royal anniversary will accompany the last sheet of the present reproduction. The phototype reproductions are executed by the firm of Danesi, of Rome, and the historical and palæographical notes will be prepared by the commission in charge. The edition consists of 100 numbered copies, of which 70 are offered for sale. The subscription price is 800 lire (£32, \$160), payable in 10 instalments (of £3.20, \$16) on publication of each sheet. The price will be raised after publication.

THE NEW BEDFORD (Mass.) P. L. *Bulletin* for January contains reference list no. 59 on "The cotton industry, textiles and textile industries."

THE NEW YORK P. L. *Bulletin* for January contains a check list of the general serial municipal documents of Brooklyn contained in the library, and "A calendar of the Barbour papers, 1811-1841," including letters from Jefferson, Madison, Monroe, Van Buren, and John Quincy Adams. There are also printed, from the Duyckinck collection, several letters from Edgar Allan Poe, written in 1845-49.

THE PRATT INSTITUTE FREE LIBRARY *Co-operative Bulletin* for January contains the first instalment of an excellent full reading list on "Richard Wagner and his operas," covering 8 p.

THE SALEM (Mass.) P. L. *Bulletin* for January, in addition to lists of "best books of 1901" in several classes of literature, contains reading lists on "Russia and England in Central Asia" and "Boots, shoes and leather."

THE SPRINGFIELD (Mass.) P. L. *Bulletin* for January prints a first instalment (Abbott-Holland) of its revised list of fiction for adults. This is based upon the selected list published in 1899, and includes a selection from the fiction accessions of the past three years, as well as "a few of the older books, which public demand, or further consideration by the compilers, has made it seem advisable to admit." Mr. Dana says: "This list is probably the shortest list of fiction for adults presented to the public by any library in the country of the size of this one. We venture to think that if omissions and inclusions be both taken into account it is the best."

UNIVERSITY OF THE STATE OF NEW YORK.

New York State L. Bulletin 68, November, 1901. Bibliography 32: Biography for young people, submitted for graduation by Bertha Evelyn Hyatt, B.A., B.L.S., N. Y.

State Library School, class of 1899. Albany, 1901. p. 38-92. O. 15 c.

This will be useful in the selection of books for school collections or children's rooms. Books indicated are intended chiefly for children under 16 years old.

THE WASHINGTON COUNTY (Md.) F. L., of Hagerstown, issues the second, January, number of its *Bulletin* as a "Teachers' number," devoted to a graded reading list on Nature study, and to short lists of books on Kindergarten, Pedagogy, School ventilation, hygiene, and psychology.

WISCONSIN F. L. COMMISSION. Free travelling library, series G: Contains a group of books relating to the American Revolution. 16 p. O.

An excellent annotated list, well adapted for use in study club courses or in school work.

Bibliography.

CITY FINANCES. Clow, Frederick R. A comparative study of the administration of city finances in the United States, with special reference to the budget. (*In* Publications of American Economic Association, November, 1901.)

Contains an 8-page list of sources.

ENGLISH ROMANTICISM. Beers, Henry A. A history of English romanticism in the nineteenth century. New York, Henry Holt & Co., 1901. 9+424 p. 12°.

Contains a bibliography of seven pages.

PROFESSOR WILLARD FISKE issues, from Florence, a small pamphlet devoted to "The Reverend Lewis Rou, pastor of the French Protestant Church, New York City, and the missing manuscript of his tract relating to chess (1734)." This manuscript is referred to in Colden's "Letters on Smith's History of New York," printed in the New York Historical Society collections for 1868, and it was described by Mr. Fiske in "The book of the first American Chess Congress" (New York, 1859, p. 340-345). This description is here reprinted. It was for a short time in Mr. Fiske's possession, in 1858-59, but later all trace of it disappeared. Mr. Fiske says: "For literary-historical purposes it is earnestly desired to ascertain the present whereabouts of Mr. Rou's essay. Any information in regard to it will be gratefully received by the writer of the sketch, if addressed to the librarian of Cornell University, Ithaca, N. Y."

HUNTER, William. Fox, R. Hingston. William Hunter, anatomist, physician, obstetrician (1718-1783), with notices of his

friends. London, H. K. Lewis, 1901. 8+75 p. 8°.

Contains a bibliography of four pages.

LIVINGSTON, Luther S., *comp.* American book-prices current: a record of books, manuscripts, and autographs sold at auction in New York, Boston, and Philadelphia, from Sept. 1, 1900, to Sept. 1, 1901, with the prices realized. New York, Dodd, Mead & Co., 1901. 22+626 p. 8°.

The sales of 10,042 lots are recorded in this volume, a gain of more than 4000 over those listed in the initial volume in 1895.

MENDELSSOHN-BARTHOLDY, Felix. Stratton, Stephen S. Mendelssohn. London, J. M. Dent & Co., 1901. 15+307 p. 12°. (The master musicians.)

There are several appendixes which give classified and annotated bibliographies—more than 50 pages.

MONOPOLIES AND TRUSTS. University of the State of New York. New York State L., Bulletin 67, October, 1901. Bibliography 31: Monopolies and trusts in America, 1895-99; submitted for graduation by Fanny Borden, B.A., B.L.S., N. Y. State Library School, class of 1901. Albany, 1901. 34 p. O. 10 c.

POPPEBERG, Felix. Buchschmuck. (*In Westermanns illustrierte deutsche Monatshefte.* January, 1902. 91:479-504.) il.

Discusses both interior and exterior book decorations—illustrations and bindings.

RHODE ISLAND. Mowry, Arthur May. The Dorr war; or, the constitutional struggle in Rhode Island; with an introduction by Albert Bushnell Hart. Providence, R. I., Preston & Rounds Co., 1901. 16+420 p. 4°.

Contains a 6-page bibliography.

SAMOA AND GUAM. Library of Congress, *Division of Bibliography*. A list of books (with references to periodicals) on Samoa and Guam; *comp.* under direction of A. P. C. Griffin, chief of Division of Bibliography. Washington, Gov. Print. Office, 1901. 54 p. l. O.

SOCIAL ASSIMILATION. Simons, Sarah E. Social assimilation. Pt. 2. (*In American Journal of Sociology*, January, 1902. 7:539-556.)

This article concludes with a 6-page bibliography.

STUDENT LIFE. Sheldon, Henry D. Student life and customs. New York, D. Appleton & Co., 1901. 22+366 p. 12°. (International education series.)

The selected critical, annotated and classified bibliography (pages 307-351) on the student life of colleges and universities, mediæval and modern, is a most valuable feature of Dr. Sheldon's book. Three hundred and eighteen titles are included. Although the heading reads "Bibliography on student societies," it is in reality a bibliography of student life, as "college athletics" and similar headings show. The only criticism to be made is that the "small" colleges, outside of New England, are practically ignored.

INDEXES.

The *Journal of Biblical Literature*, vol. 20, part 2, 1901, contains a compact and careful "General index" to the first 20 volumes of that publication. There are two alphabets, authors and subjects, followed by an "index of biblical passages" and an "index of Hebrew words." The index is clearly printed, in a neat two-column page, references giving volume number in Roman and inclusive paging in Arabic numerals. It was prepared by Rev. Owen H. Gates, and is also issued in separate form. As the *Journal* publishes only original matter the subject index gives a good notion of what American biblical scholars have been writing about during the last two decades. The *Journal* is issued at the subscription price of \$3 per year, but sets of back volumes (except 1889, not published) may be obtained by libraries at \$1 per volume on application to the Congregational Library of Boston. It is indexed in Poole, beginning with Poole's vol. 3.

Anonymous and Pseudonyms.

Bridgman, Lewis Jesse, is the author of "Gulliver's bird book. . ."

White, Catharine A., is the author of "A brief history of the church. . ."

—*Catalogue Division, Library of Congress.*

Humors and Blunders.

AT THE DELIVERY DESK.—Diffident school-girl asks for "'The fool's dictionary,' or some such title. My teacher says it will help me get up a debate.'" Her teacher had referred her to "Poole's index."

An Englishman asks for the new book "'igh and dry," and is given "D'ri and I."

A book called "Sizzenberg" being interpreted proved to be "Citizen Bird."

The following note was recently received by a delivery desk attendant: "Please send me, if in, either 'A siren's love' or 'Lawyer Bell from Boston,' or 'She loved but left him,' or 'Beautiful but poor.' If none of them are in, send a good novel."

**PLANS OF REPRESENTATIVE BOOK STACKS

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet.

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is hand-somely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 *net*.

Unmounted, on 24 sheets in portfolio. \$25 *net*.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.
New York Agency, 45 William Street.

HENRY MALKAN,

Library Department.

BEING in the center of the book market of the country, and having correspondents in the principal book markets of Europe, we are able to pick up difficult and out-of-the-way books, and can furnish them at prices much lower than regular market rates. We make a specialty of procuring these books, and having what is probably the most extensive library of bibliography in the country, we are in a position to trace the books which are usually reported "cannot find" or "out of print." We have on hand at present a number of Fine Subscription Sets, of which we mention a few:

DUMAS' WORKS. 40 vols. Half morocco. Published at \$120.00. *Net*, \$65.00.

BALZAC'S WORKS. 53 volumes. Published at \$180.00. *Net*, \$90.00.

WARNER'S LIBRARY OF WORLD'S BEST LITERATURE. 46 volumes.
Edition de Luxe. Published at \$180.00. *Net*, \$90.00.

Send for list of Standard Works.

Quotations furnished promptly on any list of books.

HENRY MALKAN,

NOW READY.

The Annual Literary Index, 1900

Including Periodicals, American and English; Essays, Book-Chapters, etc.; with Author-Index, Bibliographies, Necrology, and Index to Dates of Principal Events. Edited by W. I. FLETCHER and R. R. BOWKER, with the co-operation of members of the American Library Association and of the *Library Journal* staff.

THE ANNUAL LITERARY INDEX complements the "Annual American Catalogue" of books, published each year, by indexing (1) articles in periodicals published during the year of its issue; (2) essays and book-chapters in composite books; (3) authors of periodical articles and essays; (4) special bibliographies; (5) authors deceased; (6) dates of principal events during the year. The two volumes together make a complete record of the literary product of the year.

"Of great value to all who would keep advised of the topics and writers in the periodical literature of the day."

—*Universalist Quarterly*.

"Good indexing could no further go."—*The Nation*.

THE BAKER & TAYLOR CO. LIBRARY DEPARTMENT

We have sold books to librarians for fifty years.

We have the largest stock in the largest book market of the country.

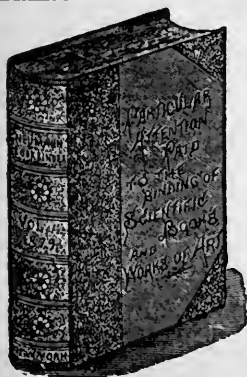

We fill orders promptly, completely, and intelligently.

We have classified our stock of books and knowledge, FOR YOUR CONVENIENCE, into

- (1) A Standard Library Catalogue of 2500 Books—a model library.
- (2) Semi-Annual Clearance Catalogues of Book Bargains.

We Make a Specialty of Pricing Lists.

33-37 East 17th Street, Union Square, North, New York

NEUMANN BROTHERS,

ESTABLISHED 1879.

Library Bookbinders,

7 EAST 16th STREET,

(Telephone Connection)

Near Fifth Avenue,

NEW YORK.

We make a specialty of the correct arranging and lettering of works in foreign languages.

We Say It, and with some emphasis because true, that THE RAPID GUIDE is the best and most economical Library Guide in the world. It is substantially made of pressed cardboard with metal projection in which a removable label is used. It thus provides for the exchange of one heading or title for another. THE RAPID GUIDE is practically indestructible, although very light in weight. There is no pasting, no breaking down, no wearing out, no rough edges. It is compact, economical, and was designed for the special requirements of the Library. It so far excels other known guides as to leave no room for comparison.

We shall gladly forward a sample of THE RAPID GUIDE to any Librarian making the request.

Also Manufacturers
Complete Filing Systems,
Cabinets, Cards, Etc.

VOL. 27.

MARCH, 1902.

No. 3

THERE is cause for general satisfaction in the manner in which the estimates of the Librarian of Congress for the next fiscal year have been accepted in the consideration by Congress of the general appropriations bill, now pending. The increase of force requested amounts to twenty-four in the Catalogue Division and nine in the Copyright Office, while various salary readjustments are desired. Among these, the provision of a salary of \$3000 for the head of the Division of Manuscripts has been granted, thus making possible the development of this division—certainly one of the most important adjuncts of a national library—by permitting the appointment of a head of that department, a post that has been left vacant until the salary granted should be sufficient to secure the right man for the place. The provision for opening the library on Sundays is practically assured, in accord with the principle that has opened art galleries and museums on the day when they may be enjoyed by many who at other times are debarred from their privileges. The propriety and value of Sunday opening of libraries is still a matter of question, but in a city like Washington which is at all times a goal for sightseers and tourists, and where there are hundreds of persons connected with the various government departments and bureaus who pursue special studies outside of office hours, it must undoubtedly be a gratification and a service to thousands. The appropriation for the purchase of books, set at \$60,000 in the House bill, has been amended in the Senate to the sum of \$100,000, as asked in the estimates—an increase that, if granted, will do much to round out the collection and strengthen its weak places.

UNDOUBTEDLY the appreciative treatment accorded to the Library of Congress estimates is largely due to the admirable presentation of conditions and possibilities made in the recent report of the Librarian of Congress. This report takes rank among the most notable library publications of the year, furnishing, as it does, not only a review of the library's past and an outline of its possibilities for

the future, but a comprehensive presentation of its present equipment and activities. Nor is it of value only in its relation to a single collection, for it represents fairly the ideals of modern American librarianship, and its outline of methods will be of practical service in a wide field. In the preparation and issue of this handsome volume Mr. Putnam has performed a public service of great utility.

JUST at present the fiction question, after some years of tranquillity, is again a subject of agitation and discussion. It is curious to note that in the very first number of the *LIBRARY JOURNAL*, and at the organization meeting of the American Library Association, in 1876, this subject was a paramount one, and the arguments that a quarter of a century seems not to have withered were there marshalled in opposing ranks. Yet the matter then was in some respects a less complex one than it is at present. The historical novel had not slain its tens of thousands and the "boom" had not become a central motor of the literary machine. To-day it is a hard problem that confronts the librarian—how to discriminate, how to select from the flood of novels new and old, good, bad and indifferent, that pour forth each year in increasing volume. Mr. Putnam's radical suggestion that no work of fiction be purchased by libraries until a year after its publication is widely regarded as possibly the most practical solution of the difficulty. The arguments in its favor are logical and cogent, and it would be most interesting to observe its practical operation and results. Mr. Carnegie has recently given his approval to the suggestion, and has even recommended that the period of exclusion be extended to three years—but this opens more ground for objection. The book of the moment whose merit lies in posters and press notices is unlikely to outlast the demand of a twelvemonth; but a three-year ban levied upon Kipling, Barrie, Lucas Malet, and the goodly company of sincere and worthy novelists seems unnecessary and inadvisable.

At the recent library meeting held at Atlantic City it was apparent that the question of the moment in the library world is the net price system, as maintained by the American Publishers' Association. The report of Mr. Bowerman, printed elsewhere, shows that the new rate of discounts has meant an average increase in the cost of "net" books to libraries considerably in excess of the advance that had been expected and that librarians were prepared to accept. Numerous instances are given by Mr. Bowerman as evidence of this; although it should be said that in some of the instances cited other causes than the net system may have influenced the cost of the book. This is certainly the case in regard to Fiske's "Life everlasting," where the increase in price, as compared with its previous volumes, was owing to circumstances quite outside of the new plan. Nevertheless the fact remains that the net prices bid fair to press more heavily upon libraries than was at first apparent. Mr. Bowerman has noted various ways in which current purchases may be shifted into other than regular channels; but these are at best but makeshifts, and there is evident a consensus of opinion that—if only as on the ground of their large and regular purchases—libraries are entitled to better terms have so far resulted from the present system.

Communications.

GOVERNMENT DOCUMENTS: AN OLD STORY AND A PLEA.

It is very evident to every one who has had occasion to use the documents issued by the government that a vast amount of valuable material, possessed by almost every library of any size in the country is in effect worthless by reason of the fact that it cannot be located.

The various departmental reports can be found with comparatively little labor, but there are hosts of special reports and other documents, to find which often requires a long and tedious search.

If we know the year or the session in which the required document was issued the task is not such a difficult one, but very frequently we do not have this information, and are obliged to stumble about until, often more by good luck than good management, we find it. Too many times we are obliged to confess ourselves beaten and retire from the field.

If we do not know what document we are seeking, the case is even worse. What is there to direct the student of shipping subsidies to the report of the Commissioner of

Navigation for 1899? How is the ordinary user of the library to know that we have that splendid monograph on the Capitol by Glenn Brown? Where is the librarian that can locate the various documents printed in reference to the pension question, Alaska or good roads?

What we need is an index. A few libraries have undertaken to catalog the collection, but with most of us it is one of those things for which we hope to have the money some day.

There are two ways of solving the problem. The A. L. A. might undertake the work along the lines adopted by the "International catalogue of scientific literature." It would be very difficult to get a sufficient number of subscriptions at a figure large enough to finance the project, but this is a possibility. Or, the work might be done at the expense of the government under the direction of the Library of Congress. This would be much the better way. I doubt if the government could do anything that would be of more material assistance to the libraries of the country than this. It has recognized its duty in this sort of work by giving us a checklist and an index to the documents of each session in recent years, and, through the Library of Congress, by the distribution of printed catalog cards. Is it not a good time to bring this old question to the fore again and to agitate in its favor?

It will be a work of large proportion, involving a great amount of labor and expense. This fact must be recognized at the outset. It must be done by expert indexers under the guidance of men who are specialists in every field represented in the index. Mr. Thwaites has set the pace in his index to the "Jesuit relations," and future indexes must not fall below it. The index must give us a direct reference to every document published by the government in the Congressional set, and tell us enough about its contents so that we will have some idea before looking up the reference whether it is a three-line note or a three hundred page report.

The coming session of the A. L. A. will be an excellent place to discuss this question and to make some plan for future action.

J. T. GEROULD.

UNIVERSITY OF MISSOURI, }

A LIBRARY MISSIONARY.

WOULD not a library missionary be a valuable assistant—that is, some one well acquainted in a certain district who would interest non-readers by leaving books at their houses on the sitting-room tables, to be at hand at all times? I think that the library must go more and more to the reader, and the library as a business proposition is behind the times in not giving free delivery and collection of books. These measures would greatly extend circulation.

H. M. STANLEY.

LAKE FOREST, ILL.

THE CLASSIFICATION OF FICTION.

BY JOSEPHINE ADAMS RATHBONE, *Pratt Institute Free Library, Brooklyn, N. Y.*

THERE is no subject before the library world to-day of greater importance than the problem of fiction. As has been said, fiction is the great fact of the time. Hitherto we have for the most part dealt with it negatively; have endeavored to limit, reduce, check its circulation; but we may as well face this fact and see what can be done with it. People will read fiction; they will read a great deal of fiction, and it is altogether desirable and necessary that they should. Certainly *we* do. I venture to say that fiction forms 75 per cent. of the reading, or at least 75 per cent. of the number of books read by the majority of librarians and library assistants, and why should we expect anything else of the public?

It makes comparatively little difference whether a given library circulates 75 per cent. or 70 per cent. of fiction, but it does make a very great deal of difference what percentage of that percentage is strong, wholesome, imaginative, true fiction, the product of the great minds and great hearts of the writers of power, what percentage is of fiction dealing with the problems and interests of the life of the day, what percentage is of morbid, introspective, decadent fiction, and what part is of the weak, sentimental, vapid or commonplace sort; and it is of the highest importance in estimating the work done by a library during a period of years to know how these percentages have relatively increased or decreased, as the result of the library's effort to better the taste of the community. Statistics of this kind would come much nearer being an index to the work of the library than any mere statement of the reduction of the percentage of fiction circulated. But how are we to determine these facts? As long as Mary J. Holmes, E. P. Roe, *et al.*, are grouped with Thackeray and George Eliot as *fiction*, as though that were all there is to it, we shall not and cannot know. And, moreover, so long as our fiction finding-lists are simply indiscriminating alphabetical lists of authors and titles, in which Mary J. and Oliver Wendell Holmes, Marion Harland and Henry Harland stand side by side, presented with sweet impartiality, how can we expect

the quality of the reading done to improve very greatly?

It is the experience at the information desk in the Pratt Institute Library, as it is doubtless in every open shelf library, that many people come to the library wanting to read the best, but confessing ignorance as to what it is, and it is information of this sort, this kind of discrimination, that the reader has a right to expect from the library. It is a curious thing, a result doubtless of the effort to reduce the circulation of fiction, that the libraries have been so ready to furnish this sort of information for every other class of literature. There are few libraries so poor that they have not some lists of books and articles—their own or taken from the bulletins of other libraries—on every subject except fiction. Something has been done, of course. There are Mr. Griswold's lists of descriptive novels, Mr. Dana's list of a hundred novels, Mr. Thomson's ideas, which are beginning to be talked about, and the recent symposium in the *Saturday Times*, that showed that much thought was being directed toward the subject; but very little has been actually accomplished so far as I know.

A word just here as to what we have done ourselves may be pardoned. About five years ago a class was started in the Pratt Institute Library School, in an experimental, tentative way, which we called the Fiction Seminar. The plan was to study, not the standard authors, with which the students were presumably familiar, but the more recent minor authors of promise and interest, of whose works we had found the average student very ignorant. I had come to realize by my own experience at the loan desk during the first few years of my work in the library the opportunities for helpful suggestion the desk assistant has, even in a closed shelf library, and the necessity of a knowledge on her part of the character and value of the largest possible number of the writers of fiction, and the course was an outcome of this realization. The plan also included a study of what we may term "border-land" fiction and of the writers of continental Europe. The aim of

the study is to find out the essential characteristics of the author; the kind of work, whether novels of incident, manners, etc.; influence of his work, wholesome, elevating, morbid or depressing; other writers he is nearest akin to; the kind of people to whom he would appeal, etc. With the borderland fiction, special study is made of the qualities that attract readers, the use that could be made of these books, and the writers next higher in rank whose works might be substituted, and through whom the reader could be led to better things. To stimulate thought in this direction we gave the class as a problem this year the construction of a ladder leading up from one of these "borderland" novelists whom they had studied to some author in standard fiction. The results are suggestive and interesting, of course not to be followed in any given case, but helpful.

One or two examples may not be without interest:

- Rhoda Broughton: "Joan," "Nancy."
 Jessie Fothergill: "Kith and kin," "Lasses of Leverhouse," "First violin."
 Mrs. Walford: "Mr. Smith," "Mischievous of Monica."
 Walter Besant: "Chaplain of the Fleet," "Armored of Lyonesse."
 Thomas Hardy: "The woodlanders," "Far from the madding crowd."
 R. D. Blackmore: "Cripps the carrier," "Kit and Kitty."
 Charlotte Brontë: "Jane Eyre," "Shirley."
 George Eliot: "Middlemarch," "Mill on the Floss."
 Mary J. Holmes.
 Rosa N. Carey.
 Amanda Douglas.
 Edna Lyall: "In the golden days."
 Amelia Barr: "Bow of orange ribbon."
 Charlotte M. Yonge.
 George McDonald: "St. George and St. Michael."
 Walter Scott.
 Amanda Douglas.
 Clara L. Burnham.
 Amelia Barr.
 Anthony Hope.
 Marion Crawford.
 Gilbert Parker.
 Bulwer Lytton.
 Walter Scott.
 Marie Corelli — *psychical novel*: "Romance of two worlds."
 "Zanoni."
 "Man with the broken ear."
 "Mr. Isaacs."
 "Amos Judd."
 "Brushwood boy."
 "Peter Ibbetson."

- Marie Corelli — *psychological novel*: "Sorrows of Satan."
 "Dr. Jekyll and Mr. Hyde."
 "Right of way."
 "Tale of two cities."
 "Romola."
 "Scarlet letter."
 "Tess of the Durbervilles."
 "Les misérables."

The students have been brought by the effort to a realization of the limitations of their own reading from the professional point of view, and to an appreciation of the need for some assistance to aid them in grouping and connecting authors of fiction. Any one who has done circulating work, especially in a closed shelf library, knows that dreadfully blank feeling experienced when called on suddenly by a borrower for a nice book "like that" (one just returned). "That" may be — we will say — "Ardathe." Here is an opportunity; can she think of something "like that," only better? It may be that "Phra the Phœnician" will occur to her, or "Mr. Isaacs," but if no such happy thought comes, where shall she turn for help? The catalog is of no assistance, the alphabetically arranged rows of books on the shelves stare at her without response; with a dozen other people waiting there is no time for prolonged search, and, baffled, she hands out "The sorrows of Satan," feeling regretfully that one chance has been missed.

It seems desirable, therefore, to have some kind of arrangement or classification of fiction, first, for the sake of the reader who wants the best but knows not what it is, or who wants a story about some subject in which he is interested, or who would want it if he knew such an one was to be found; secondly, for the assistant, whose own reading is not adequate to all the demands made upon it; and lastly, in order that library statistics should be approximately a true measure and indication of the quality as well as the quantity of the work done.

The next question is, What kind of an arrangement? There are several possible bases for a classification of fiction.

1st. By *type* or kind. There are novels of manners and social life, novels of incident, novels of character study and development, fanciful and fantastic tales, humorous stories, simple love stories.

2d. By *subject*. Historical novels (these may be novels of incident, as "The three

guardsmen," or of manners, like "Henry Esmond," or novels of character development, like "Romola"), sociological, scientific, religious, musical, novels, and so on *ad infinitum*.

3d. By *literary quality* or the grade of the author, a rank determined in part by his personal force and in part by his literary style. Dynamic force and literary quality are very different things, of course, and yet as manifested in literature they are so combined that it would be hardly possible to separate them as bases of arrangement.

4th. By *ethical influence*. This I mention merely as a possibility. It would be too difficult to determine to be practicable for use, but it would probably be found to be a factor in determining the rank of an author.

Now, which of these is the more important and which would be the more available in actual use? This must, I think, be considered in relation to the next question, which is of equal importance, How are we to apply practically this idea of fiction classification? On the shelves, in the catalogs, or by means of lists and bulletins?

Taking up for a moment the arrangement on the shelves: shall we arrange our fiction by kind, grouping the novels of incident, manners, character development? That is probably the line of cleavage along which our individual preferences divide. Some of us dislike novels of incident, others especially enjoy novels of character development, but too often the same book is enjoyed by different people for different reasons, and there would be great difference of opinion as to what type of novel any given story might be. This basis is therefore not to be seriously considered, I think. It is perfectly possible to work out a scheme for classifying novels by subject; the Decimal or the Expansive classification could be used with very little difficulty, as there are novels that would go into all of the main classes and many of the subdivisions. The difficulty in such a scheme is that it would separate the novels by the same author, and a very large number of people read novels because of their fondness for a given author rather than because of the subject dealt with.

It would be very possible to grade fiction into three or four classes by the rank of the author, an aristocracy, an upper middle class,

a lower middle class, and a lowest class. These could be marked 1, 2, 3, 4, with a Cutter number for the author. One great objection to this plan is that there are very many authors whose work belongs in more than one class—Charles Reade, for example. "The cloister and the hearth" would belong in 1, "Foul play" and "White lies" in 2, "A terrible temptation" in 3 or 4. Bulwer's work belongs in at least three classes. Many authors have one or two best novels very much above the rest, and this difference could not be emphasized by such an arrangement. For this reason I am strongly attracted by an idea worked out by Mr. E. W. Gaillard, of the Webster Free Library, for designating the rank of books by covers of different colors. By this plan the works of an author could be kept together, the authors arranged in alphabetical order, and yet the grade of the individual book shown unmistakably. Stars or other labels of different colors could be used by libraries that object to the use of covers, and the same designation on the book-card would enable the statistics to be kept by class.

But when it comes to the catalog, the thing is much more simple. Working on a suggestion received some time ago from Miss Hitchler, then of the New York Free Circulating Library, I have for several years advised our classes to make subject headings for fiction in their dictionary catalogs, and have given them practice in so doing. They have done this not only for historical fiction but for novels dealing with social, religious, and other questions, and I hope have carried on the practice in their own library work. Much can be done in this way to encourage the purposeful reading of fiction. The manner of treatment of the subject, whether it be a novel of incident and complicated plot, a novel of manners and social life, or a novel of character study, could be indicated by a note on the card, and such facts as that of the narration being in the first person and the use of dialect, should also be noted.

But the best field for this kind of work is the fiction finding-list. Instead of the simple alphabet of authors and titles, of which most of our finding-lists consist, we could have a classified list, with author and title and subject indexes, the great books in each class

indicated by an asterisk or other sign, or a dictionary list with subject headings and references, or graded lists with subject arrangement and indexes. The possibilities here are boundless. Of course the serious impediment in the way is the absence of any aids to the making of such lists. Few of us know our fiction sufficiently to care to expose our

knowledge to the rude gaze of the world. What is needed before any such plan becomes practical is a subject index to fiction, which to be successful must be the result of co-operative action. Some library association, or group of associations, could render no more important service to the cause of improved reading than by taking up this work.*

IS INDIVIDUAL READING INCREASING OR DECREASING ?

BY ARTHUR E. BOSTWICK, *Chief of Circulation Department, New York Public Library.*

MR. TEGGART'S remarks on the "science of library statistics" in the November LIBRARY JOURNAL are certainly just. It must be remembered, however, that every science is the result of growth. Every one who contributes his mite to the subject is making possible its ultimate reduction to a system. Probably the one thing that would hasten this end most would be the adoption of a uniform scheme of taking and recording statistics under the superintendence of the A. L. A., and their annual comparison and discussion by a competent committee.

I desire to call attention to one statement of Mr. Teggart's that is open to misconstruction. He notes that notwithstanding the reduction in the fiction percentage of circulation during the last ten years the total increase of circulation has been so much greater that "it is abundantly apparent that under the stimulus provided by the library its patrons are reading much more fiction than before."

That this is literally true of the total number of readers appears to be probable. But it seems to carry the inference that the amount of fiction read by each user of the library is larger. This of course depends on the meaning of the increase of circulation. Is it due to larger reading on the part of each individual user, or to an increase in the number of users? If the former, each person is of course reading more fiction, although its proportion to his total reading has decreased. If the latter, the actual amount of fiction read in each case has decreased as well as the percentage, the total amount of individual reading remaining the same.

Unfortunately the number of active read-

ers can not be easily ascertained. What is an "active reader"? Are we to draw the line at persons who have used the library within the last week, or the last month, or the last year? The trouble is that we have to do here with a continuous variable. At any one time the status of a library's readers may be represented by a curve in which the distance of each point from the vertical axis denotes the time elapsed since the last book taken, and the distance from the horizontal axis, the number of users who have allowed such time to elapse. A comparison of such curves for different periods of time would show whether the status of the users had varied, and how.

An indirect way of getting at the number of active users and comparing them from time to time is to count the book-cards in the circulation tray at stated intervals. This gives the number of outstanding books and in case each user is permitted to draw only one book at a time, it also gives accurately the number of persons using books at the time. With the two-book system the number of books outstanding can not be greater than twice the users nor less than their actual number, but may have any value between these two. As a matter of fact, however, when the number of users is large the proportion of those who have out two books probably does not vary much from time to time, so that the number of outstanding books may be taken as roughly proportioned to the number of users even where the two-book system is in use.

* The New York Library Club has, since this article was written, appointed a committee to consider steps to be taken toward the preparation of a subject index to prose fiction.

In most of the present branches of the New York Public Library the number of outstanding books has been counted and reported on the first day of each month since the year 1896. The following table shows the average for each library year:

	Nov., 1896, to Oct., 1897.	Nov., 1897, to Oct., 1898.	Nov., 1898, to Oct., 1899.	Nov., 1899, to Oct., 1900.	Nov., 1900, to Oct., 1901.

General average....	2142	2206	2527	2775	2812

* Number of books out Nov. 30, 1897.

† Number of books out Oct. 31, 1899.

As will be seen, the general average has not varied much. Its increase, however (about one-third), is roughly the same as that of the circulation during the same period, indicating that the increase of circulation has been due to increase in the number of readers and not to increased individual reading.

For more accurate comparison of the outstanding books with the number of books on the shelves and also with total circulation, the following tables have been prepared:

The percentage of a library's books that are out at one time is seen to vary more with locality than with time. From one-tenth to one-third are outstanding. The larger percentages are usually where the stock of books is small. The percentage of circulation out at one time, which is more pertinent to the present investigation, is fairly steady, with a tendency to increase. As the actual circulation was on the increase, this means that the average number of outstanding books, and hence the number of readers, was increasing still faster. In other words individual reading had decreased during these years instead of increasing and *a fortiori* the decrease in the actual amount of fiction read by each person was even greater than that indicated by the decreased percentage.

So far as these limited data indicate anything, they therefore indicate that the large recent increases in library circulation are due to the larger number of readers; that people now read less, instead of more, than they read four or five years ago; and that they read less fiction, both actually and in proportion to the total amount read.

These conclusions are unexpected and the matter should be investigated further. I make them public because probably few libraries keep record of the number of outstanding books, and fewer still have done so for as long a period as five years. This element of statistics is certainly important and should not be neglected.

SHOULD THE LIBRARIAN BE A BIBLIOPHILE?*

BY WILLIAM WARNER BISHOP, *Librarian Polytechnic Institute, Academic Department, Brooklyn, N. Y.*

To state this question is almost the same thing as to answer it. A librarian who is not a lover of books is indeed a sorry specimen of his kind. But of late years the term bibliophile has gathered to itself certain associations which have somewhat obscured its real meaning; in the popular mind it is now generally applied only to those persons whose love for books has taken the form of mania for works of a certain rarity or of a limited and strictly fictitious value. If the words collector and bibliophile are to be considered as interchangeable; if the bibliophile is to be thought of only as the man in whose eyes an uncut first edition in the original blue paper wrappers is worth ten times as much as the same book when it has delighted the eye of its owner and imparted its contents to his mind; if he alone is a bibliophile who is a bibliomaniac, then by all means librarians, as all other people of wholesome and well-balanced character should strive to guard themselves from bibliomania as from an insidious and dangerous disease.

But if by a bibliophile we mean one who truly loves books, in whose eyes a badly made book, a badly bound book, and a badly illustrated book are alike an abomination, one who loves a book not only for its form, but for its content, one who knows the history and technique of the art of printing, one whose books are his friends and companions, his inspiration and his solace, then by all means should the librarian be a bibliophile. And if we may read into the term, as without unduly stretching it I think we may, an idea of a man who values books because they contain the goodly heritage of past ages, because from them and from them alone we learn how to interpret that daily experience which our contact with human nature brings to each one of us, then indeed to become a bibliophile is not only an attainment to be desired, but a goal to be striven for.

My answer to this question might perhaps

stop here. There are, however, certain considerations which induce me to continue the discussion further. I think few will deny that on the part of a great many of our American librarians there is a lack of equipment for work on the historical and artistic side of their calling. There may be good reasons for this state of things, but still I think, disregarding the reasons, that it is clear to anyone whose observation has been at all extended that here we have paid but little attention to what I am disposed to call the higher and finer duties of our profession. There are too few of us who feel competent to attack problems involving a minute knowledge not alone of the history of book-making, but even of such allied subjects as the political and economic history of Europe in the Renaissance period. There are not many among our number who could lend intelligent aid to a historian seeking information on the Spanish colonies in the West Indies from what few original sources our libraries might have. How many of us feel ourselves reasonably well fitted to draw up a scheme for the careful preservation and at the same time the ready consultation of manuscripts deposited with us? If a bundle of letters of General Washington, or some manuscript diaries of President Madison, or the account books of General Scott, or a set of letters describing life in Alaska in 1899 were brought to us, how many of us would feel competent to prepare them for publication and to arrange for their proper preservation? Supposing a collection of rare and beautiful Italian books of the fifteenth century should be given to the library, is there someone at hand able to collate them, to catalog them, to say nothing of publishing a description of them which would be a lamp to the feet of scholars the world over? Have we many librarians equipped to distinguish between a true and a counterfeit Aldine, to describe the earmarks of "contemporary binding," or to tell with reasonable accuracy the date of a Greek or Latin manuscript at a glance?

* Read at a meeting of the Long Island Library Club, Feb. 21, 1902.

Nay, more than these things, which may seem to some matters of rather remote possibility, have all our librarians the ability to tell good from poor paper, to distinguish between different grades of morocco and other leathers? Can we all tell how a book should be sewed and berate the binder when he fails, with the perversity of his kind, to follow directions? Do we know the difference between good printing and bad? Can we appreciate that proper registration, clear and beautiful type, and serviceable bindings are more truly artistic than the combination of heavy and ugly type poorly set, muddy ink, and imitation chamois skin binding which now beguiles the innocent purchaser of supposedly "artistic" books—sent him "on approval," without request? And lastly are there many of us who know intimately the history of the finer and more expensive sorts of book-making, who love the books into whose making has gone the devoted skill of artist and printer and binder?

That we have in the ranks of the librarian's calling not a few persons competent to do many of these things, and some able to do all of them—and vastly more—is undoubtedly true. But I fear that we can hardly go on to say that the majority of those engaged in library work have any such qualifications. We are all aware that the great development in library work in America has been along two lines, first, the betterment and growth of the free public circulating library, and second, an increase in the material ease of handling books and making them quickly accessible to the reader. The number and size of our free libraries, the enormous quantity of books circulated from them, the magnificent and well-planned buildings recently erected, the mechanical devices for protection against fire and for compact housing of books, the card catalog system, our convenient, if not altogether logical, systems of classification, together with a host of accessory institutions for the promotion of reading and the circulation of books; these form at once the chief pride of our American librarians and their chief contribution to the science of librarianship. We have passed through a period of training in the last quarter century. Our energies have been given to the material side of our work, and we have no cause to be ashamed of our results. But we may well

pause for an instant to inquire seriously whether we have done all that we might have done, and whether new conditions are not facing us at the present moment.

Those of us who are at all familiar with some of the great libraries of Europe are perfectly well aware that they as a rule are conducted on an altogether different basis from most of our own. We are not a little disposed to ridicule the library in which the card catalog is unknown, or one in which a student must occasionally wait 48 hours after leaving a request for books before obtaining them. But true librarianship does not consist in standard sizes or pneumatic tubes. I shall never forget the remark of a German librarian to whom I once showed a very remarkable collection of some hundreds of pamphlets on the early history of Methodism. As I was lamenting that they had never been properly cataloged nor properly displayed, he said: "*Die Hauptsache ist die Bücher zu besitzen,*" *the main thing is to own the books.* That remark gave the clue to the difference between his standards and ours. We have not been wrong in thinking that our collections must be made available by every device in our power; but we have not always had strong collections. When we contrast our best libraries with those of Europe, we are painfully aware of the fact that the European institutions have been in the field for some hundreds of years longer than we have, and they "own the books." As a consequence, training for librarianship with them involves a study of palæography, for they have manuscript treasures; it involves a knowledge of the history of printing, for their collections exemplify that history; it involves learning and scholarship, for their libraries are the resort of scholars and of the leading men in all professions.

Now I think that we may safely say that with us the period of emphasis on the expansion of the circulating library only has come to an end. We shall not circulate fewer books, but more; we shall not have fewer branches and delivery stations, but more; we shall not cease from our missionary activities, on the contrary, we shall doubtless increase them in ways undreamed of at present. But the very state where the belief in the civilizing mission of the book is strongest, the state whose Free Library Commission sends out re-

ports of the work of its travelling libraries which can hardly be read without emotion, this state has just erected for its State Historical Society a magnificent building to shelter a collection of manuscripts and books which illuminate the early history of the entire northwest. In our own city, soon to be provided as a result of Mr. Carnegie's generosity with unexcelled facilities for the circulation of books through free libraries, there are growing great collections of incunabula, of Americana, of works on architecture, not to mention a host of others. We need only to glance at a few of the great libraries of the country from Boston to Washington and from New York to Chicago to see that the day of specialization, of more rounded collections, and of great reference libraries has truly dawned. We have reached a point where libraries are receiving endowments, and where a distinct purpose exists on the part of trustees to further research.

It may not be known to all of us to how remarkable an extent American collectors of wealth have been purchasing manuscripts, incunabula, and rare books in Europe in the past two decades. In the natural course of things the greater part of these collections will in time find their way from private hands to the shelves of libraries. Witness the collections of Mr. Ayer and Mr. Brown in the field of Americana, as recent examples, to say nothing of a score of others. Within easy reach of a student in New York City it is now possible to find no small amount of first hand material for the study of both Greek and Latin palæography, while a great amount of material of this sort may be expected in the future. Papyri are already finding their way to America in large quantities, owing to American assistance in financing the recent explorations in Egypt.

If it is once granted that we have arrived at this new stage in library progress, I think it will scarcely be disputed that the bibliographic, the scholarly, the historical side of their work must in the future engage the careful attention of a far greater number of librarians than it has, with us, in the past. In libraries created for special purposes, or containing large collections on special topics, works illustrating the history of those subjects must be gathered in large quantities. These cannot properly be handled in any other spirit

than that of the true bibliophile. While for bibliographic purposes the matters which lend an adventitious value to a book are scarcely worth noting, it yet remains true that one gifted with the knowledge and trained in the arts of the bibliophile will alone succeed in cataloging and classifying books whose value lies in their rarity, in the peculiar circumstances of their manufacture, or in the form in which they are preserved. There are therefore likely to be greater inducements for librarians to qualify themselves properly to handle rare books, manuscripts, and illustrative material in the future than there have been in the past.

It would indeed be a sad day which should find our library world divided into two camps. If those who serve a limited public and those who serve the greater masses should fail to recognize their mutual obligations and their mutual dependence, much would disappear which now goes to make pleasant and profitable the work of the profession. To recognize distinctly and to appreciate fully the missionary effort of the public library are required equally of all of us. May we not find in the spirit of the bibliophile one of the bonds which shall hold firmly together the members of our calling now rapidly differentiating to such a degree that we are obliged to flock by ourselves in a yearly increasing number of sections? May we not properly and confidently ask of our brethren of the public library, of the branch library, and of the delivery station, that they shall love the beautiful in books, that they shall care for the fine samples of early printing, and that they shall strive to educate their immediate constituents to some appreciation of these things? And may we not bid the cataloger or classifier deep in the problems of transliteration from the Slavic or the proper subordination of a special class under the general heading turn for a while from his labor and consider the beauty of the fine old Baskerville he has just put down? May we not confidently urge that the historical side of bibliography and the deliberate formation of collections which shall show the history of at least one subject be encouraged in every library of any size?

There are some very practical applications to be made of these theoretical views. The busy desk attendant or children's librarian may think that these remarks are not meant

for her. I think otherwise. It is in just these cases that they do apply. I do not mean that a long line of waiting applicants should be delayed while the desk attendant delivers a lecture on the superiority of morocco over sheep in bindings, or that bibliographic treasures should be turned over to children. But the "trivial round and common task" when steadfastly pursued are likely to result in both exhaustion and stagnation. A fine enthusiasm for old books, for fine books, for beautiful books, will be one stimulus which can generally be indulged in with ease and with safety. Moreover, I firmly believe that only those who have tried it know what an interest a bibliographic exhibit may arouse among the frequenters even of a small branch library. Such exhibitions are not impossible, yet they require some little knowledge on the part of the attendants who explain them, even when labelled in the most effective fashion.

Librarians who have charge of small collections and whose funds are limited have especial need of the training and the enthusiasm of the bibliophile. They are far too prone to believe that they can indulge in nothing so expensive as fine editions and good bindings. To any one who knows the possibilities of the auction and second-hand market of this city such beliefs are groundless. A succession of reasonably low bids placed with reliable auctioneers will produce results which will astonish those who have bought only of agents. Moreover no one knows how much good a few well bound books of fine quality will do. Few people will abuse a fine book, while almost anyone is careless with a paper-covered and poorly printed one. A librarian of a small library who will investigate second-hand stores and will persistently study auction catalogs can soon acquire book treasures.

In addition we may, it seems to me, make much more of such fine specimens of the printer's art or other treasures as we possess in all our libraries. I am a firm believer in the value of such things when exhibited with suitable explanatory labels. I well remember the effect on my own imagination of a few huddled and carelessly labelled old books and manuscripts placed in a show case in a wretched light in the public library I frequented as a boy. Had they been shown in an

attractive manner and with full, clear, and elementary notes, I have no doubt that they would have had a vastly greater influence. It is hardly possible to lay too much stress on effective explanation in such matters. I wish, without attempting invidious comparisons, to praise highly the work done in this line by the Museum of the Brooklyn Institute of Arts and Sciences for its scientific exhibits, and also that done last winter at the exhibit on the history of the book at Pratt Institute Free Library. If our heads of libraries will endeavor to show what they have of beautiful, rare, and costly volumes and bindings, and will at the same time encourage on the part of their assistants a devotion to the beautiful in books, we shall all of us have taken a long step forward in the direction of a larger and truer librarianship.

THE PERPLEXITIES OF GIFTS.*

OF the classes of gifts offered to libraries there are, first, new books and periodicals which may come from authors, publishers, or societies interested in a propaganda of some sort, or from benevolent individuals. Such books are desirable just in proportion to their usefulness. A book of privately printed poems by somebody's aunt who lives elsewhere may simply serve to gratify the lady by enrolling her among the poets in the library catalog; but that same volume, if written by a resident of the town in which the library is placed, has a unique value there for just that reason, whatever its literary merits.

The "crank" authors, as John Fiske pointed out, always seem to have plenty of money for printing and postage, and every library receives some of this class of new books. While Mr. Fiske was assistant librarian at Harvard he saw the need of a new term of classification for such literature, so that books on perpetual motion need not be placed under Physics, nor essays on circle-squaring under Mathematics. He called it at first *Insane Literature*, but when living authors not residing in asylums were likely to visit the Harvard library and be displeased by the imputation, it was thought best to change the designation to *Eccentric Literature*, which gave less offence and even implied a pleasing quality of originality to some minds. The distinction between crude reasoning from lack of complete knowledge of a subject and

* Part of a paper read at meeting of Connecticut Library Association, New Haven, Feb. 26, 1902.

the vagaries of an unbalanced mind were duly observed.

"Eccentric literature," says Mr. Fiske, "is usually marked by a shrill note of anger, as it is often written in a dudgeon." He remarks: "When you take up a pamphlet by 'Vindex' and read the title, 'A box on both ears to the powers that ought not to be at Washington,' you may be prepared for incoherency." He mentions also an edition of Plutarch's essay on Superstition, which seemed an ordinary Greek book until Mr. Fiske's eye fell on the last sentence of the editor's preface: "I terminate this my preface by consigning all Greek scholars to the special care of Beelzebub." "Oho!" said Mr. Fiske, "there's a cloven foot here; perhaps if we explore further we may get a whiff of brimstone," and it was so.

At the present time a certain western writer of this class is sending at intervals to many libraries pamphlets called "The universal law of forms and signs of character," a title rather attractive to minds of symbolistic leanings; but it is impossible to get a single coherent thought from the mass of language, and there is a curious punning use of words which betrays a mental twist, such as knoll-edge—knowledge, fall-see—false, miasma—my-asthma, etc., and when the author remarks that caged animals do not comprehend the *irony* of their situation.

Of the same class is "Oahspe, a new Bible in the words of Jehovih and his angel ambassadors. A sacred history of the higher and lower heavens on earth for the past 24,000 years. Also a brief history of the preceding 55,000 years—a synopsis of the cosmogony of the universe; the labor and glory of gods and goddesses in the Ethereal heavens," etc. On this Bible a community was founded by "Faithists" in New Mexico, called Shalam, where orphaned and outcast children were to be reared in its precepts and taught, "at a suitable age," spirit communion. The book is illustrated with weird pictures, from originals painted by spirits, and strange diagrams.

Manufacturers often send out very desirable little monographs on the history of their special lines, the subjects ranging from vanilla to reaping machines. An author of a biography of some ancestor of his own, which might never have been written without the stimulus of a genealogical interest, may present a copy of it to a number of libraries as a pious act. All kinds of pamphlets and periodicals from people of all kinds of hobbies come to libraries in shoals, and are often valuable to have in the right classification. Then there are the political and religious organizations, which gladly send their organs to the library if they may be placed in the reading room. It is a nice question to decide the expediency of accepting these gifts on account of the apparent partiality in representation. Another party or sect may question why you

have, say, the *Protectionist* or the *Christian Science Journal* and not their organs; but they ought to be pacified when they learn that they, too, might display their papers as a gift, provided they were not anarchists or off-color occultists. Some papers masquerade as gifts for a while only to send in a bill later, which the library does not necessarily pay.

The next class of library gifts is that of second-hand books. Various indeed are the old books that come in; from the generous gifts of really desirable and valuable books from private collections to the offering of those who say, in effect, "You take it, I don't want it." An old clergyman goes to Montana to live with his daughter, and, perforce, leaves his books behind him. He would like to benefit the public library, so he bestows upon it a trunkful of volumes which cost him dear during fifty years' ministry—the forgotten receptacles of the religious thought of those bygone years. Mrs. Thrifty clears her attic and discovers a store of old periodicals. "Not perfect sets, you know, but most of the numbers of *Harper's*, *The Century*, and *The Outlook* for several years. Will the library send for them?" One lady offered several volumes of *Littell's Living Age* to a certain library, and the janitor was told to call for them. He thought of taking a wheelbarrow along, but decided he would make two journeys if necessary instead, and carry the books in his arms. He presently appeared with seven slim *numbers* of the periodical, and that was all there were of them! A greasy little Italian bootblack brings in a copy of the "Young acrobat" as an offering on the altar of the library, in gratitude for happy hours with his borrowed books. An illustrated subscription book in folio numbers is sent in with a message that the donor "began taking this book a few years ago," but dropped it before the work was complete, and he knows you will be glad to have it as "far as the numbers go" for your library. Sometimes the organizers of a new library seek to interest the people of a small town in the project by soliciting gifts of books, and the harvest they reap surprises them. Truly everybody must love books, when you see how hard it is for them to give away one which anybody would care to read. Ancient school-books, sermons, and moral tales, odd volumes of bound periodicals, out-of-date science in Home Libraries and religious books in great variety of mediocrity emerge from dark closets to fill the committee's open arms. One library reaped as many as twelve copies of "Bringing in the sheaves," reminiscences of an evangelist, some years ago when collecting books from interested citizens with which to found a library. The wonder was, at first, how so many copies had been purchased, when it was discovered that an aged, but popular clergyman, had been the agent for the book, and it is evident that his own harvest was rich. And do not too lightly dismiss the unde-

sirable, believing that the donors will never know you did not find their gifts "available." In such an hour as ye think not a feminine visitor will appear and ask for "Sturm's reflections." She has never asked for anything before and you desire to please, so your wits are stimulated, and you recollect dimly that the title has been seen on an ancient book in the storeroom. While you seek it you wonder if "Sturm's reflections" had some value you know not of, and come back triumphantly to place it in the seeker's hands. "Oh! no. I didn't want to *take it*, thanks. I only wanted to see if it was here. My father gave it to the library some years ago!" Then you congratulate yourself on having an automatic memory for book titles which has saved the feelings of a rich spinster, who might, some day, remember the library in her will.

The third class of gifts likely to be offered to public libraries may be called that of works of art, curios and museum specimens. And this is the most delicate class of all to receive, for its donors always expect to see their gifts displayed in an honorable place. Sir Walter Scott was once afflicted with a gift of eight large, badly painted landscapes "in great gilt frames" by a "most amiable and accomplished old lady," greatly to his discomfort, for he could not refuse them. The library is more fortunate than Sir Walter under such trying circumstances in having "committees of directors" to whom they may be referred, and by whom the quality of mercy may be strained. A certain Massachusetts library had an inartistic painting of a homestead left it by bequest, in which the cocks and hens in the door-yard were the same size as the cow. The family of the donor was wealthy. This might be only a test of the library's gratitude before making a more substantial gift, so the committee dallied with temptation before it was finally refused a place in the art gallery. The "self-taught" amateur, who always takes his work very seriously and believes himself a genius whom the world of art jealously refuses recognition, is ever ready to present his masterpieces to a library. Our own little library was offered a six by four foot pastel of the "Blue grotto of Capri" by a day laborer of artistic ambition, and, though we could not accept it, his feelings were saved by hanging it for a short time in a back room, to which it imparted an air of gloom. Then there are owls. Some years ago it was the fashion to have a stuffed owl in one's house. Everybody had an owl just as, quite recently, everybody has had an Indian's head somewhere in their rooms. In time the owl's day went by; yet the birds were just as good as ever. What could be done with the owls? Then it occurred to some people that it would be appropriate for "Minerva's bird" to go home to roost in a library. Therefore you will find stuffed owls in many a public library, gazing wisely down from its high places.

Welcome every contribution to local history in your library, whether books, documents or pictures, say the library wise men. That is very sound doctrine, but what shall we do when 25 mayors' photographs, framed separately in deep black walnut frames, arrive, whose sombre monotony would blight any wall?

Some libraries have natural history collections which attract incongruous gifts, and one librarian complains of receiving dead birds which were "too far gone" for the taxidermist's art.

A sword once carried in the Civil War found its way to an obscure corner of a public library, where it was hung on the wall, though there was no collection of relics or curios there; and the gift was considered irrelevant until, one day, a use for it was suggested by an old man. He had asked to leave a package at the library until he called again later in the day, and it was placed just below the sword on the wall. When he called for his property the old man proved too garrulous and presently showed himself to be a decided crank, so the attendant was eager to have him take his bundle and go. He offered a grimy paw in farewell, which was declined as she civilly but coolly bade him good day. The man turned to get his package and his eye fell on the sword above it. Returning to the desk he leaned forward and asked in low but thrilling tones, "Do you keep that sword to cut off the heads of people who wish to shake hands with you?" Without a smile, the librarian replied, "Well, it might be used for that!" You see a little humor is sometimes necessary in order to recognize the full possibilities of library gifts.

Contributions of fresh botanical specimens, carefully labelled, are welcome gifts all summer in public libraries, and the revelation to some people of the fact that we have native "orchids" (a name to conjure with) has led to the study of the "nature books" on the shelves, opening a new path of enjoyment.

In disposing of the books which seem to be of no utility in the library there are a number of expedients. 1st. By giving them to other libraries to which they are suited, or effecting an exchange. 2d. By sending those of much value to auction rooms to be sold. 3d. By sale to second-hand dealers. Superfluous documents may be returned to the Superintendent of Documents at Washington, who will provide mail sacks and franking checks on request.

After these channels of relief are exhausted there may still be some books and periodicals not worth selling but useful in the country school where no literature is ever seen excepting text-books and dictionaries.

The Wisconsin Free Library Commission undertakes to distribute all kinds of literature sent to it among the isolated lumber communities in that state in connection with its travelling libraries. It is pathetically related by one of the members of the commis-

sion that one school was discovered which cherished the World's Fair number of the *Youth's Companion* for two years, during which time it had been lent to more than a score of families, and also that a cabin was found in which a well-printed picture of a coffin was tacked on the wall as the only picture the people had. Many things which are valueless in a library might be a delight to these people. We also have our Philippine schools and soldiers to remember with magazines, elementary text-books and dictionaries, which are asked for by teachers and army officers in their letters to the states.

Of course the library is often really enriched by the spoils of the hunter among discarded accumulations, and last and not least as a librarian's reward is the latent humor to be derived from scanning a lot of old books sent in, perhaps, from an attic where they have reposed for fifty years. Treasures sometimes come in such assortments, though more often they are dreary masses of worthless books. Usually some waifs of local interest appear, if it is only a volume of religious controversy some time published in the town. The amusement comes from such books as that by the Rev. John Angell James, called "The Widow directed to her God," whose preface introduces the author as one eminently fitted to comfort the bereaved since his first wife, "a lady of most estimable character, was early taken from him, and his present wife, a person of great amiability, is rapidly, though sweetly, passing to the skies." Then there is the "Peterson familiar science" in the form of a catechism, in which it is taught that the safest thing a person can do to avoid injury from lightning is this: "He should draw his bedstead into the middle of his room, commit himself to the care of God, and go to bed remembering that our Lord has said, 'The very hairs of your head are all numbered.'" If out of doors, it teaches that it is better to be wet than dry in a thunder storm. Why? "Because *wet clothes* form a *better conductor* than the *fluids in our body*, and therefore lightning would pass down our wet clothes *without touching our body at all*." The italics furnish the instructive emphasis. This Peterson text-book went through many editions, and is still used for instruction in a Bermuda convent.

The librarian is sometimes personally favored with gifts, much as a country minister is treated by his parishioners with preserves, fresh vegetables, fruits and flowers. Altogether the gifts which come in recognition of the courtesy and helpfulness experienced by the giver from the library attendants bring the pleasantest encouragement, to follow St. Paul's injunction to be "willing to communicate, ready to distribute," which might appropriately be chosen for the librarian's motto.

ANGELINE SCOTT,
Librarian South Norwalk (Ct.) Public Library.

THE PURCHASE OF CURRENT FICTION FOR LIBRARIES OF LIMITED MEANS.*

CHARLES DUDLEY WARNER once remarked regarding our New England weather that there had been more said and less done about it than about any other subject within his knowledge. If he could have narrowed his observation at the time to the restricted sphere of those concerned in the management and administration of public libraries, I believe he would have made an exception of the still-vexed question of fiction and its limitations.

But since the *New York Times Saturday Review*, by subtracting 61.8 from 75.5 finds that Mr. Dana has reduced the circulation of fiction in the Springfield City Library to the extent of 24 per cent. in a year showing an increased total of circulation, we must conclude that something has at last been done about it, with very gratifying results.

In the face of this situation, it may be said that never have we seen a larger crop of novels than during the past autumn and winter. As Thomas Carlyle found it seventy years ago, so in still greater measure do we find it—"still does the Press toil; innumerable Paper-makers, Compositors, Printers' Devils, Bookbinders, and Hawkers grown hoarse with loud proclaiming, rest not from their labors; and still, in torrents, rushes on the great array of Publications, unpausing, to their final home; and still Oblivion, like the Grave, cries, Give! Give!"

It is quite probable that Thomas Carlyle, if he were with us to-day in his customary atrabilious mood, would have us place in our public libraries only the few books, which Oblivion has not swallowed, thereby, no doubt, accomplishing the result of "the greatest good to the smallest number" and leaving an unselect and indiscriminate many to the tender mercies of the newspapers and the penny-dreadfuls. Something like this the Librarian of Congress proposes when he prescribes as an antidote for the use of fiction the exclusion of novels less than a year old.

The purchase of current fiction by libraries of limited means must, of course, depend on the importance which is placed on the issue of any fiction at all. The same condition would govern the purchase of fiction by a library of unlimited means. The beneficial and restraining influence of poverty, however, gives to the library of limited means the doubtful advantage of being forced to buy the best, which advantage sifts itself down to a convenient and equivocal excuse for refusing frequent urgent demands to buy the poorest.

In order to discuss this question intelligently, or even to discuss it at all, we must

* Paper read at meeting of Connecticut Library Association, New Haven, Feb. 26, 1902.

necessarily determine what restrictions shall be placed on the purchase of fiction by public libraries of both limited and unlimited means. Should the attitude of such libraries towards the circulation of fiction be antagonistic or friendly? Shall we pride ourselves on the issue of Mr. Dooley's dialect slang or even Mr. Bangs' more prolific humor, because they bear the magic number 817 which places them outside the pale of fiction and on the same level in the grand total with John Fiske's historical and philosophical works? Shall we at the same time refuse to deliver to the public Mr. Churchill's "Crisis," or Miss Johnston's "Audrey," or even Mr. Hornung's "At large," for the simple reason that they are not a year old, and Mr. Putnam says we must? I, for one, certainly hope not.

The average circulation of fiction in a free public library represents numerically three-fourths of the issue of books of all kinds. This means, roughly speaking, that the taste and choice of three-fourths of those who use the library is thus indicated. Speaking only of free public libraries of a general character, it must be asserted that, whether they are dependent on public funds for support or not, they are avowedly the servants of the public, and must recognize the taste and choice of those whom they attempt to serve. Even in this view of the case, however, we cannot say that we have reduced our problem to mathematical demonstration by asserting that three-fourths of our purchases in number of volumes should be fiction. I know of one library at least, of limited means, which keeps its circulation of fiction at 75 per cent. whose current purchases of fiction are less than one-third of its total purchases of all kinds in number of volumes.

Assuming then, that this proportion in volumes, and probably much less in money value, gives a fair estimate of what should be done in deference to the demand of the public, we have gone as far towards the solution of our problem as mathematics will take us. And that is not very far, after all: it is yet but a mere question of quantity, without regard to quality; and quality is, after all, the main consideration. How are we to reach that censorship which shall determine just what novels are suitable for circulation by our libraries? By what process shall we apply that recently adopted library term "evaluation" to our fiction, and when applied, how shall we act upon it? There is much to be said on this subject—too much for my present limits; and when all is said, we shall, I believe, have left us the problem of evaluating evaluation. There are the reviews, for example; some of them fairly reliable; yet one review of this class will sometimes praise a novel which another will condemn. Then there is the volunteer reading committee, composed of persons who know what suits their own tastes and views of literary merit far better than they know what is best adapted to the needs of a general public library. Then there

is the librarian, who, especially in libraries of limited resources, cannot devote the time to reading every novel under consideration for purchase, and who, in my opinion, never ought to undertake such a task.

The busy librarian needs such helps and guides in the purchase of fiction as have only been provided in a very limited scope by the Leypoldt and Iles' "List of books for girls and women." Selected lists even without annotation or criticism are better than nothing; but the clear-cut, brief and frank criticism in the list I have referred to seems to me a better guide for the librarian than any other I know of.

Much may be learned, too, from quiet, unobtrusive observation at the delivery desk of the library. Those in charge of this department should be able, by simple observation, and by such information as borrowers may volunteer regarding novels, to learn much that may be of value in their selection for the library. The tastes and the value of the critical judgment of a large proportion of the novel-readers of the library, may be learned by the simple observation of an intelligent deliverer of books. In many cases, it will be found that the mere fact that a certain person asks for a certain book is a good and sufficient reason for buying it, if possible.

No library of limited means can expect to provide a sufficiently large number of copies of a deservedly popular novel to supply the constant demand for it. The aim in such purchases should be to buy as many copies as can be actually worn out during the "run" of the book. This can only be done, of course, by watching the demand, determining the merit, and adding new copies gradually. And in replacing worn out copies of older fiction something can usually be saved by determining whether it is wise to replace them at all. I believe that it will often be found wiser to devote the money to new books, for I venture to make the assertion that American fiction especially is improving, on the whole, both in its literary and artistic features, though we often hear a wail over the absence of the "good old days"—a wail which each successive generation exercises the exclusive right of raising.

Fiction has been with us since the beginning of the world and will doubtless remain to the end. The child asks for it as soon as he can speak and reason, and the old man loves it in the parables of the New Testament and as many books and parts of books of the Old Testament as the higher criticism may select, and through the wonderful dramas of Shakespeare down to the novel pure and simple. As librarians, then, we fail if we regard the issue of fiction as an evil which we are forced to tolerate and reduce to a minimum, when we should regard it as a perfectly legitimate function of our libraries which it is our duty to study and provide for in its due proportion.

JONATHAN TRUMBULL,
Librarian Otis Library, Norwich, Ct.

THE NEW NET PRICE SYSTEM AND PUBLIC LIBRARIES.*

At the outset the fact must be insisted upon that there is no antagonism between publishers and booksellers on the one hand and librarians on the other. There was a time, in the early days of the library movement, when booksellers and perhaps publishers looked askance at public libraries, considering that for every book sold to a public library five might have been sold to private purchasers were there no public libraries. Leaving out of the account the large number of school duplicates bought by libraries and reference books which private persons would never purchase, publishers and booksellers will now generally concede, I think, that the circulation of books by public libraries still further increases their trade by implanting in the minds of readers a desire to possess their own private collections of books. Everywhere that the public library goes it induces a love for books, but no public library takes the place of private libraries. Almost any local bookseller will agree that the public library in his town has greatly stimulated the purchase of books by private individuals.

Again, the interests of publishers, booksellers and librarians are one, in that all three wish to perpetuate the existence of the local bookstore. The American Publishers' Association has announced that the purpose of the adoption of the new net price system is the saving of the local bookstore from annihilation by the department store. The book department of the department store in many cases sold its wares at less than cost in order that it might attract trade to other departments. This proved demoralizing to the trade and ruinous in its consequences to the local bookseller, who had to eke out his existence by selling not simply stationery and newspapers, but sometimes also tobacco, cigars and candy. Book departments of the department stores in most cases carry only the frothy books of the hour, whereas local dealers can, if well supported, carry a well-rounded stock. With the transference of the principal business from local dealers who offer worthy books to the great bazaars, where books that ought never to be bought by any one are sold by the cord, the standard of purchases has been lowered and public taste correspondingly demoralized. Through the adoption of the net price system, by which publishers are forbidden to furnish books to dealers who sell at less than net price (with 10 per cent. discount to libraries), the local bookseller has an equal chance with the department store, and can thus regain the trade which had been diverted from his establishment to the department store. I have always believed that if bookstores of high grade, such, for example, as the Old Corner Bookstore in Bos-

ton, could be planted throughout the country in every town of any considerable size, they would do an educational work for their communities only less important than that done by the public libraries. In my own work I therefore follow the principle that wherever it is possible to secure service approximately as prompt, intelligent and cheap from the local bookstore as from the metropolitan jobber the former should have the library trade.

As stated, the American Publishers' Association announced that almost their sole reason for adopting the net price system was the protection of the local bookseller, and that they did not expect to make a general increase in the prices of books. The publication in the January LIBRARY JOURNAL and in the February *Public Libraries* of the letter of Mr. Gifford, of the Cambridge Public Library, to the American Publishers' Association, enumerating a large number of series on which there have been substantial advances in price, has made it unnecessary for me to collect that matter independently or to treat this part of the subject at any great length. It is sufficient to refer to his table, which shows that seven of the most prominent publishers have made an average increase in the net cost of their publications of 24 per cent. This advance is calculated on series in which comparison can be made, and the assumption is that it is general throughout their lists. Analyzing this list we find that the per cent. of increased cost to libraries runs from 12 per cent. advance in the case of one item to a 36 per cent. advance in the case of three items. When it was first brought to the attention of publishers that there had been an advance in the cost to libraries, the publishers took refuge in the excuse that there had been an increased cost in paper stock, in labor and in advertising. It seems unlikely, however, that they will maintain that there has been an average advance of 24 per cent. in the cost of production. From the point of view of the librarian, this increased cost in the price of books appears to have been in large part an advance made for the benefit of the publisher himself, rather than for the much-beloved local bookseller. This is a serious matter to libraries. It simply means that with present appropriations libraries must buy 25 per cent. fewer books than in the past. City councils are ordinarily much more likely to reduce appropriations than they are to increase them. Every live library is constantly trying to get more and more readers. In turn the demands of those readers are such that a larger and larger number of books must be bought each year to satisfy them. But this action of the publishers at once reduces by 25 per cent. our ability to supply the demand, provided it is no larger than that of last year, to say nothing of meeting progressively increased demands.

If the local library associations throughout the country and the A. L. A. at its coming

* Paper read at Bi-State Library Meeting, Atlantic City, N. J., March 15, 1902.

meeting unite in protesting against this unwarranted advance in prices, the effect of which is to cripple library efficiency, it is possible that the publishers will give us relief. If not, provision must be made to meet the condition as well as possible. In this connection attention should be called to Mr. Dewey's letter in *The Publishers' Weekly* of Jan. 18, in which he makes suggestions for a line of action, although I do not sympathize with Mr. Dewey in his oft-repeated proposals to eliminate local booksellers by selling books through libraries.

To paraphrase his language, Mr. Dewey says in this letter: Without any disposition to boycott any particular publisher, it is inevitable that librarians will choose most liberally, other things being equal, from the lists of publishers who have not made inordinate advances in their prices on the pretext of helping the local booksellers. Mr. Dewey's other suggestions of buying second-hand books, completing sets and making larger importations are all timely, and in fact represent exactly what I have personally been doing since the adoption of the new rule. In my own library, after buying requested books and current books, the lack of which would obviously lay the library open to the criticism of not being up to date, I have devoted a large part of our book fund to buying books from second-hand, remainder and auction catalogs, to replacements and especially to importations.

Judging from my own observations, librarians do not make sufficient use of catalogs of remainders. Every year it is possible from remainder catalogs, chiefly English, to buy at one-third to one-half price books published the year before, and then considered too expensive. There are large numbers of books which it is not at all necessary to have as soon as published, but which even though bought a year or so after publication are of the utmost value to libraries. These can be bought in practically new condition from remainder catalogs. The same is true in the case of purchases made through such auction houses as Bangs of New York and Libbie of Boston. Partly because English books are almost always better printed on better paper (if not in all cases quite so well bound) it is a wise policy for libraries to make large importations rather than to confine their purchases to books of domestic manufacture. New fiction of course costs more when imported than if bought at home; but in the case of a large number of other books, provided one can wait six weeks or two months, it is possible to get an edition equally good and frequently better, put down in New York at a lower price than the American edition can be bought. On this point I wish to give a few instances. One book not on Mr. Gifford's list is John Fiske's "Life everlasting," published uniform with the "Destiny of man" and "The idea of God," by Houghton, Mifflin

& Co. The latter books were listed at \$1 and cost libraries 67c. each. The former, though having fewer pages than either of the others, was published at \$1 net and thus cost libraries 90c. The same book is on the London Macmillan's list at 3s. 6d., and would, therefore, cost delivered in New York 74c. Other instances are the volumes in "Our European neighbor series," published by Putnam at \$1.20 net, and thus costing libraries \$1.08; but these books are on the list of George Newnes at 3s. 6d., and thus cost the library 74c., a saving of 34c. on each volume. Dodd, Mead & Co. have just made a "special library offer" of a set of Helmholtz's "History of the world," in 8 volumes, at \$4.80 per volume. But Heinemann's price is 15 shillings net, or \$3.75 per volume. This trifle of \$8.40 difference on the set is quite worth saving. Brandes' "Main currents of 19th century literature," to be in six volumes, is listed by Macmillan at \$2.25 net per volume, and so will cost the library \$12.18. Again it is Heinemann whose price is 6 shillings, or a total of \$9 for the set. Two of the series on Mr. Gifford's list are the "Heroes of the nations" and the "Stories of the nations" (both Putnam). Each volume in each series costs us if bought at home \$1.22; but the former may be had from Putnam's London house at 5 shillings, and the latter of Unwin at the same price—a saving of 17c., or 14 per cent. in each case. A series needed by all public libraries is the "Library of useful stories." This was published by Appleton at 40c. per volume and cost libraries 27c. Their price is now 35c. net and the cost to libraries is 32c. But volumes may be had from Newnes at 1 shilling each, or 21c.—a saving of 34 per cent. The volumes of the "World's epoch makers" on Scribner's list at \$1.25 when ordered from a domestic dealer cost 84c.; but if imported from T. & T. Clark, of Edinburgh, who list them at 3 shillings, cost but 63c.—a saving of 25 per cent. Harper's publications of 1902 include Hensman's "Cecil Rhodes" at \$5 net, costing the library \$4.50. If obtained from Blackwood by importation the price of 12s. 6d. net brings the cost down to \$3.13—a reduction of 30 per cent. The new edition of "Chambers' cyclopaedia of English literature" is listed by Lipincott at \$15 net, and so will cost libraries \$13.50. If imported the total will be 31s. 6d. net, or \$7.88—a saving of 42 per cent. Though it is not always safe to order the English in preference to the American edition with the expectation of saving money, since some of the latter are published at a lower price, yet examples like those just mentioned could be multiplied and it is true that large sums may be saved to a library by importation. This might still be true even should the Publishers' Association readjust its prices or its discounts to libraries. At the same time the discrepancy is now so great as, under the present circumstances, to make

it decidedly worth while to read the English publishers' journals and catalogs with great care.

But, the American publisher and bookseller objects, you waste more in time spent in figuring out your saving on English publications than you save in money. It may be answered that where the library appropriation for books is small the librarian frequently has more time to devote to such matters than he has money to spend for books. In the case of a large library, where the book appropriation is extensive, I believe that the saving, even though slight in some cases, would when spread over the large number of accessions be sufficient to make it worth while for the library to employ as the chief of its order department one who is thoroughly alive to the advantages of saving in this way.

Our own local bookseller has viewed with alarm the decrease in his orders through their transference to second-hand dealers, and especially to importing houses. He tells me that the publishers are planning to stop all this by withdrawing from libraries the privilege of free importation. Of course we know that in these days the lobby is very powerful, yet the public library has so come to be regarded as a part of the educational system of every community that it is unlikely that any association of publishers could carry through Congress a measure to put such "a tax on knowledge." Even if they could receive congressional favor, it is in the highest degree probable that a president who in his first message showed so great appreciation of public libraries would veto such a measure.

It almost goes without saying that if equitable conditions could be arranged libraries would prefer to buy American editions. This new system has little effect upon fiction, but then I am one of those who are hoping that Emerson's rule as restated by Mr. Putnam will soon be the order of the day, and that the question of buying new fiction will shortly be eliminated. Mr. Putnam's plan provides that new fiction purchases being discontinued, the library shall undertake to supply the most important class books immediately on publication. To do that would necessitate the buying of American editions at once without waiting for remainder or auction catalogs, and without having recourse to importations. This condition of affairs is greatly to be desired, and it is hoped that the American Publishers' Association will recognize that the libraries are customers of sufficient importance to take steps to hold their trade.

To sum up, let us ask why librarians apply to publishers for a more equitable adjustment of prices, or if not that, then for larger discounts. Is it because libraries are philanthropic institutions, and for that reason deserve special consideration? By no means. Our reasons are based solely on business

principles. In the first place, libraries taken collectively and in many cases individually are large purchasers, the business is steady and sure and all accounts are good; secondly, public libraries foster larger and larger private purchases, and thus make business for publishers and booksellers; thirdly, the reduction of their ability to buy enough to supply needs cripples their usefulness, discredits them locally and thus sooner or later will surely decrease the volume of their purchases; fourthly, it will compel them to reduce the purchases of current net books to a minimum, and devote available funds to purchases from second-hand, remainder and auction catalogs, and especially to importations. It may be assumed that publishers want the library trade. It seems to me that by the continuance of this system they are pursuing the best possible course to defeat that end. This is distinctly not an appeal. It is simply a plain statement of conditions, their effects on libraries and the means proposed for relief, provided the publishers persist in their present course. We await their action with interest.

GEORGE F. BOWERMAN,

Wilmington (Del.) Institute Free Library.

ONTARIO LIBRARY ASSOCIATION.

THE second annual meeting of the Ontario Library Association will be held at Toronto on Easter Monday and Tuesday, March 31 and April 1. Sessions will be held in Castle Memorial Hall of McMaster University. The morning of March 31 will be devoted to business, reports of committees, and three papers—"The value of a public library to a community," by J. Davis Barnett, of Stratford; "Some difficulties I have met in library work," by Miss Scott, of Owen Sound; "Public documents of Canada and Ontario," by W. George Eakins. In the evening the president's address will be delivered, followed by an address on "Library buildings," probably by W. R. Eastman, of New York. Tuesday morning a visit will be made to the Legislative Library and the libraries of Toronto and Victoria Universities, followed by a session at which papers will be read by Miss Carnochan, of Niagara, on "Vicissitudes of a library during fifty years," and Miss Rowe, of Brockville, on "Some useful methods in a small library." For the closing, afternoon session, the program is as follows: "The training of librarians in this province," by E. A. Hardy, Lindsay; "Canadian literature—fiction, periodicals," by L. J. Burpee, Ottawa; "How to secure the passing of a free public library by-law."

The officers of the association are: President, James Bain, Jr., Public Library, Toronto; secretary, E. A. Hardy, Public Library, Lindsay; treasurer, A. B. Macallum, Canadian Institute, Toronto.

THE REID MEMORIAL LIBRARY, PASSAIC, N. J.

THE Reid Memorial Library, now in process of erection in Passaic, N. J., is the gift of Mr. Peter Reid, of that city, in memory of his wife, Jane Watson Reid.

It is located in the heart of the manufacturing district known as Dundee, the field of many of Mrs. Reid's good works.

The style of architecture adopted is the Ionic Greek, simple and dignified, which cannot fail in its refining and uplifting influence upon the crowded and squalid life in that part of the city. Bedford limestone, with a granite base, are the materials used in the exterior. The main feature of the façade is the engaged colonnade, flanked on each side by a wing containing a reading room, over the windows of which are medallions with symbolical carvings of stone. On the main floor are: the delivery room, 24 x 26 ft., which is lighted by a skylight; a children's room and a main reading room, each 22 x 37 ft. in size.

Around the walls of the reading rooms are built bookcases of quartercut oak four feet high.

The stack room is in the rear of the delivery room and directly opposite the entrance. This room will be furnished with metal stacks having space for 27,000 volumes, and with tables and chairs for the convenience of persons using the reference department. The cataloging room and the librarian's office are also on this floor, which has been laid out with the especial object of promoting economy of administration. The rooms are connecting, and the partitions between the delivery room and the reading rooms are of glass, in order to facilitate supervision by the attendant.

On the second floor is the lecture hall, designed to accommodate 350 persons. There are also on this floor rooms which may be utilized as special collection rooms, meeting rooms, etc. The exterior and first floor plan are shown elsewhere, and the second floor plan is here presented:

SECOND FLOOR PLAN, REID MEMORIAL LIBRARY, PASSAIC, N. J.

In the basement are located the heating and ventilating apparatus, coal room, repairing room, receiving room; an apartment consisting of living room, dining room, two bedrooms, bath, kitchen and pantries for the use of the caretaker; and a newspaper and men's club room, where smoking will be permitted. The building is strictly fireproof, and nothing but the best materials and equipment will enter into its construction, the desire being that the Reid Memorial shall represent the best type of a modern medium-sized library.

Dundee, where there is everything for such a library to do, is a little world by itself. The Botany Mill, alone, one of many, has 3600 employes. And with these great ugly structures have come the Slav, the Hungarian, the Pole, the Italian, and the Jew, bringing with them their native institutions. They have their own doctors, their priests, pastors and rabbis, their banks, their churches and fraternal organizations. In the congested, ill-smelling tenements where they live their children are born and here is their children's playground. But while the foreign-born parents cling to their native customs and traditions the children will have none of it. They want to be Americans.

There has been a branch of the main library in Dundee since 1895, when a reading room was opened in a store as an experiment. Its success was assured from the first, and the demands upon the library's slender resources grew at an alarming rate.

With the \$2000 donated by Mr. Reid books were purchased and a children's room opened, where ever since there has been a daily attendance of from 100 to 200 children. It is not an unusual thing for the visitor to find every chair and every inch of available floor space occupied, and as the two simple requirements—cleanliness and order—are rigidly enforced, there has been a marked change for the better in the appearance of the children as well as in the streets and the neighboring back yards. It is told that "Jesse James," the leader of a "gang" of street Arabs, who is still serving out his sentence of two years' banishment from the library, says "there is nothin' doin', fer the fellers is all inside readin' fairy tales." In place of this once popular organization whose motto was, "If youse is tough enough youse kin belong," has grown the "American Boys' Club," with an insatiable demand for hero tales which the library endeavors in vain to supply.

It is to this spirit of Americanism that the new library will minister. As the branch library in its inadequate way has fostered it, so the new Reid Memorial, with its adequate equipment, will perform the same service with a much greater measure of power, and will, it is hoped, have no small part in converting Dundee into a section of the city, where sturdy patriotism, moral uprightness, and good citizenship shall prevail.

THE PATERSON (N. J.) PUBLIC LIBRARY.

THE Public Library of Paterson, New Jersey, housed in the recently enlarged and improved Danforth library building, was totally destroyed on Feb. 8 by a fierce fire that raged in the heart of the city and reduced to ashes property estimated at ten millions of dollars. The building and its contents were entirely destroyed, the only books saved being those that were at the time in the hands of borrowers. Almost immediately after the catastrophe the library trustees received a letter from Mrs. Mary E. Ryle, of Paterson, the giver of the Danforth library building, offering to give the sum of \$100,000 for a new building, which should serve, as the former had done, as a memorial to her father, Charles Danforth. Mrs. Ryle's offer was presented at the meeting of the library trustees on Feb. 18, and was accepted with expressions of sincere gratitude. The trustees will receive about \$77,700 as insurance on the old building and its contents, and this, in addition to Mrs. Ryle's generous gift, will make possible the erection of a modern and adequate building, far better adapted to its purpose than the former structure, which had been originally a residence. The new building will be erected upon a site at Broadway and Auburn street.

It will be a difficult and tedious work to build up a collection equalling that destroyed. Some of the volumes can never be replaced—notably the bound files of early New Jersey newspapers. The library contained in all about 40,000 books, on which an insurance of \$35,000 was carried; of course a considerable proportion were in circulation, and these will make the nucleus of the new collection. It is hoped to shortly secure temporary quarters, which will be used for reading room and circulating department until the completion of the new building. The trustees hope to have a library of 10,000 volumes in working order within three months.

NEW BUILDING FOR THE BOSTON ATHENÆUM.

THE trustees of the Boston Athenæum have issued in pamphlet form announcement and specifications regarding the new library building, which it is proposed to erect on Newbury and Arlington streets, Boston. Plans will be secured through a mixed competition, in which ten architects have been invited and have agreed to participate, others being also at liberty to enter. The plans submitted will be judged by a jury consisting of the building committee, the professional adviser (Edgar V. Seeler, of Philadelphia), and the president of the Athenæum, and selection will be made by majority vote. Plans must be sent in on or before April 30, 1902.

The site chosen is a corner plot, 112 x 120

in dimensions, overlooking the public garden. The building is to be of fireproof construction, and is to cost \$320,000, exclusive of lighting, heating, stack, equipment, etc. A schedule of rooms desired is given, which includes stack room for 300,000 v., requiring 37,500 linear feet of shelving, seven shelves to each story; periodical and newspaper reading room; delivery room, with seating space for 20 persons and space for 2200 linear feet of shelving, alcove or gallery; general reading room, with 3500 linear feet of shelving, to open from stack; reference room; cataloging room, opening into reference room; conversation room; trustees' room; librarian's room; map and atlas room; special study and reading rooms; document room; art room; exhibition room; and rooms for storage, duplicates, bound newspapers, staff, and administrative purposes.

CONSOLIDATION OF BROOKLYN LIBRARIES.

THE bill providing for the merging of the Brooklyn (N. Y.) Library with the Brooklyn Public Library, introduced into the New York State legislature by Assemblyman John Hill Morgan on Feb. 6, has met with opposition from a minority of the directors of the Public Library and others, and has not yet been passed. It is modelled upon the merging and organizing act upon which the New York Public Library was created, providing for an independent library corporation with a board of 25 directors, of whom 11 shall be appointed by the mayor from the board of directors of the Public Library, and 11 from the trustees of the Brooklyn Library, the other three being *ex-officio*, the mayor, controller, and president of the borough of Brooklyn. All vacancies are to be filled by the board, this provision, creating a self-perpetuating body, being the one to which most objection has been made. The bill was drawn in consultation with members of the Public Library and Brooklyn Library boards, and was approved by the city controller and other officials. It passed the lower house of the Assembly on Feb. 19 by a vote of 79 to 40, and then became a center of discussion and controversy. The opposition was largely on the part of a small minority of the directors of the Public Library, and was based mainly upon the necessary reduction in the number of directors provided from that library, and upon the self-perpetuating feature. At a meeting of the Public Library board on Feb. 18 resolutions denouncing the bill were introduced by A. H. Eastmond, but were voted down by a vote of 14 to 5. A later meeting to consider the matter was held on March 1, when the report of the law committee was presented, approving of the bill on the whole, and recommending several minor amendments. The report of the committee was adopted by a vote of 14 to 5. At a special meeting of the Brooklyn Democratic

Club held the preceding evening resolutions were passed disapproving of the bill as "against public policy, detrimental to the best interests of the community, contrary to the provision of existing laws, and the traditions and usages of Brooklyn," and it was decided to send a delegation to Albany to represent these sentiments.

A Senate hearing on the measure was given at Albany on March 11. On behalf of the Brooklyn Public Library there appeared, in support of the bill, Frank P. Hill, the librarian, and Henry Sanger Snow. The opposition delegation from the Brooklyn Democratic Club was led by Herman A. Metz. A communication was submitted to the chairman of the Senate committee, signed by the officers, the chairman of all standing committees, and 16 members of the board of directors of the Brooklyn Public Library, urging favorable consideration of the bill as amended. It expresses strongly the opinion that "the enactment of this legislation will serve to a high degree the public library interests of the people of Brooklyn, making available, as it will, for free public library service, the large and exceedingly valuable collection of books now owned by the Brooklyn Library, together with its entire real and personal estate, which will also be devoted to free public service. The aggregate value of the property which the corporation proposed to be created under this bill will receive upon this enactment amounts to not less than \$750,000. This gift which the Brooklyn Library proposes to make to the new corporation is hardly second in its value to the munificent gift of Andrew Carnegie for library service in Brooklyn, and we believe that no action could be taken which would more fully supplement and effectuate the purpose of Mr. Carnegie's gift to create here a great free public library system. We believe the bill as now amended provides every reasonable safeguard for the interests of the libraries and of the city in relation thereto and that public sentiment in Brooklyn favors the enactment of this legislation with practical unanimity."

During the consideration of the bill a telegram was received by Chairman Stranahan, of the Senate committee from Andrew Carnegie, who said: "Permit me to say that all parties, without exception, favor the consolidation library bill for Brooklyn. It seems to all of us desirable, and I bespeak its passage." It is understood that the bill will be favorably reported, but its passage is uncertain. Amendments were incorporated giving the mayor power to appoint the directors at large, instead of confining himself to the membership of the two present library boards, but not affecting the self-perpetuating clause. The opposition demand that all vacancies when they occur shall be filled by the mayor. Among those who spoke against the bill was Coroner Flaherty, representing the Central Labor Union, and former Controller Bird S. Coler.

IN MEMORY OF EDWARD EDWARDS.

ON February 7 there was unveiled by Dr. Richard Garnett, at Niton, in the Isle of Wight, a monument raised by Thomas Greenwood, the Free Libraries historian, in commemoration of the life-work of Edward Edwards, the pioneer of the free libraries movement in England. Edward Edwards, who was born in 1812 and died in 1886, may be said to have been "discovered" at the British Museum Library. He was at all events a frequenter there, and ultimately, in 1839, an appointment was found for him there, as assistant in the department of printed books. He only held it for a short time, but it had the result of opening his eyes to the want that existed for libraries to which the public could have free and unrestricted access. He made it the work of his life to do something to remedy the existing deficiencies in that respect, and he was fortunate in securing the co-operation of William Ewart and Joseph Brotherton, who both had seats in the House of Commons. Mr. Ewart's efforts were successful in obtaining the appointment of the committee on public libraries, and he it was who drafted and introduced into Parliament the Free Public Libraries Act of 1850. It became law during the same session. Edwards was the moving spirit of the movement and of the committee, and his was the pioneer work of which the English public now reap the liberal harvest. The Manchester Free Library was the first institution of its kind which came into existence under the new act, and Edward Edwards was made its chief librarian. In this capacity he did useful service of more than local value for seven years, and he did good work in other ways besides, while his pen was seldom idle when there was anything to be advanced by its aid in the matter of free libraries.* He resigned his office in 1858, and for several years he was engaged in cataloging the library of Queen's College, Oxford.

It seems curious that while it was an Edward Edwards who did the pioneer work of the free libraries movement in England, it is a Passmore Edwards who, for many years past, has followed it up with a substantial support and an unobtrusive munificence, which have helped to make its work—at least, so far as Greater London is concerned—a reality and a pillar of educational strength to thousands upon thousands.

* Among his published works are "Free town libraries," "Memoirs of libraries, including a handbook of library economy," "Lives of the founders, augmentors and other benefactors of the British Museum, 1570-1870," "Comparative tables of schemes which have been proposed for the classification of human knowledge," "Synoptical tables of the records of the realm," and "Chapters of the biographical history of the French Academy," "Account of American libraries" for Trubner's "Biographical guide to American literature," 1858, and the article on "Newspapers" in the eighth edition of the "Encyclopædia Britannica."

LEATHER FOR BOOKBINDING.*

DR. PARKER, who was a member of the committee of the Society of Arts that reported on leather for bookbinding in the *Journal of the Society*, July, 1901 (see L. J., September, 1901, p. 681-684), recently contributed to the *Journal of the Society* a paper detailing the various investigations which were carried on by sub-committees, and on which the main committee based its report. Dr. Parker says that "every statement and recommendation made in the report, the grounds for those statements, and the experimental and practical work on which they are based, were confirmed by each individual member of the sub-committee, so that these conclusions cannot, as has been stated by some critics, be considered as being simply the 'opinions or fads of professional men.'"

One of the facts that impressed the sub-committee very forcibly was the number of disguises under which ordinary sheepskin masqueraded. "We found books bound, nominally, in levant morocco, straight grain morocco, pigskin, calfskin, crocodile and alligator leathers, which leathers, on close microscopic examination, were found to be the ordinary common sheepskin, on which had been stamped, probably by electrolyte rollers, the special grains and markings of the skins they were got up to imitate. In many cases both the bookbinders and the librarians had bought these leathers under the impression that they were buying the genuine article, the buyers having probably been tempted by the low price which would naturally be charged in a case of this sort."

Dr. Parker recommends that librarians, when they really desire high class work, put in their specifications the following: "That the leather must be of pure sumach tannage; secondly, that no mineral acids must have been used in any process connected with the manufacture of the leather; and thirdly—also an important point—that the skins used must not have been pared down or split to paper thickness."

A paper on "The fastness to light of leathers dyed with coal tar colors" is contributed by Mr. Charles Lamb to the *Journal of the Society of Chemical Industry* for Feb. 15, in which are described the results of experiments with reference to the fastness to light, made on 1500 small pieces of sumach tanned leather dyed with coal-tar dyestuffs, each piece with its own special dyestuff. The experiments were carried on in a glass house of the Royal Botanical Society of London, in Regent's Park. At the end of 13 months all the colors had gone, many of them in a much shorter time. In the same issue of the *Journal* there appears an interesting "Analysis of some new tanning materials," by F. Austyn Blockey.

* Parker, J. G. Leather for bookbinding. (*In Journal of Society of Arts*, Nov. 29, 1901, 50:25-35.)

BI-STATE LIBRARY MEETING, ATLANTIC CITY, N. J., MARCH 14-17.

THE sixth annual meeting of the Pennsylvania Library Club and the New Jersey Library Association was held at Atlantic City, N. J., March 14-17, 1902. There was an attendance of about 100, including representatives from New York, Massachusetts, Washington, Delaware, Maryland, and other states. The A. L. A. Publishing Board's special committee on catalog rules held extended conferences, and there was an interesting informal meeting to consider the effect of the present system of net prices upon the purchase of books by libraries. The meeting was not so large as the one of last year, and numerous changes from the program, as printed, were made, owing to the absence of expected speakers; but it proved a thoroughly successful one. The Grand Atlantic Hotel had again been chosen as headquarters, and the sessions were held in its large assembly room.

The first session was held on the evening of Friday, March 15, under the auspices of the Pennsylvania Library Club. The president of the club, Dr. Morris Jastrow, librarian of the University of Pennsylvania, presided, and in the absence of Mr. Luther Hewitt, Mr. G. F. Bowerman, of the Wilmington (Del.) Institute Free Library, was chosen secretary. Mayor F. P. Stoy, of Atlantic City, made a brief address of welcome, in which he spoke of the local movement which had resulted in the establishment of a free public library, and F. P. Hill called attention to the fact that Mayor Stoy in appointing the library trustees had appointed the first woman ever named to serve on a library board in any New Jersey municipality.

The general subject of the evening was then announced as "Some aids in book selection," and was presented in four ten-minute papers on various phases of reviewing work. The first, by Miss Haines, of the LIBRARY JOURNAL, dealt with "General reviews"—the vast mass of current literary criticism. She said that the "review" of 50, or even 30 years ago, no longer existed, in this country at least, its place being taken by the "notice," ranging from three lines to three columns. Its general characteristics were noted as "superficial, trite, vaguely approving, a passive encouragement rather than a warning or appraisal," and three common types of notice were described—the "publishers' notice," based upon advertising material only; the "unfolding of the tale," in which the skeleton of the plot is remorselessly laid bare; and the interesting discursive little essay upon the subject treated in the book, which is readable but uncritical, and omits the information most necessary as an aid in book selection. The influence upon reviewing of the immense commercial machinery for the selling of books was touched upon; and the need of better equipment, more literary knowledge and sympathy, and better taste in reviewing work, was emphasized. Mr. T. L. Montgomery pre-

sented the advantages and disadvantages of "Reviews by specialists." He pointed out the standard value of reviews such as those appearing in the *Athenaeum*, the work usually not of specialists, but of cultivated men of catholic taste and literary skill. In contrast with their work that of specialists was often narrow, tinged by personal theories and prejudices, of which their readers were ignorant. "Reviewing from a bookseller's standpoint" was considered by C. P. Everett, of New York, who took the ground that book reviewing as a means of advertising was of very little help to publisher or bookseller. "Why? I believe it is because of the fact that the great reading public has become aware of the fact that the mass of the reviewing is being done by incompetent hack writers. This does not mean that book reviewing as a means of publicity is a failure, but that a favorable review does not help the sale of a book any more than an unfavorable one, provided the same amount of space is given." "Consulting experts" was the last paper of the series, by Miss Isabel Ely Lord, of Bryn Mawr, who gave a thoughtful analysis of the quality and value of the service that could be rendered to librarians in the selection of books by trained specialists.

Discussion followed, opened by Dr. Jastrow, who said, among other things: "The general reviews in the daily press are usually worth little. They are frequently written by specialists, but the copy is required in such haste that their value is seriously detracted from. The over-production of books, especially of series, is a great evil. Publishers feel that they must keep their name before the public, even at the expense of producing sadly inferior books. Much reviewing by specialists is very unjust, on account of personal jealousies and differences of theory. This is especially true in Germany, where most reviewing is by specialists." Melvil Dewey spoke in favor of the short review, or reader's note, advocated by George Iles. He said that of course all experts can make mistakes, but that their reviews are the best we have, and we should make most use of them. Other speakers were Mrs. S. C. Fairchild, who urged that more attractiveness and interest be imparted to book annotations, John Thomson, and G. F. Bowerman, who spoke of the value of unsigned reviews when the weight of the name and fame of the journal is behind the review, rather than the individual writer. Adjournment was taken shortly after 10 o'clock.

Saturday morning's session was held under the direction of the New Jersey Library Association, and was called to order by the president, S. G. Ayres, at 10.30, a group photograph having previously been taken on the hotel steps. The president's address, read by Mr. Ayres, dealt with "The librarian," and was an exposition of ethical and practical qualities at once suggestive and directly helpful.

A discussion, "Co-operation among the

smaller libraries," was opened by J. C. Dana, who described the work done in western Massachusetts, where small towns have been reached by special meetings and library institutes have been held in scattered communities. Mr. Dana emphasized the idea that librarians should not have the false missionary spirit, the self-righteousness of the Pharisee, but the kindness of sincere fellow-feeling. Mr. Elmendorf spoke briefly of the library institutes that are to be held in New York state.

"Reading for the poor" was the next paper, by W. F. Persons, assistant editor of *Charities*. It was a presentation of the condition of life among the "submerged tenth" in the great cities, and a plea for books that should awaken in them ideals of life and character. It led to an animated discussion. Dr. Jastrow said he thought that personal contact rather than reading was needed, and that before the library had entered this field, work had been done by different organizations with more or less success. Mr. Dana gave his opinion that newspaper reading, even of the yellow journals, was better than no reading at all, to which Mr. Dewey replied that better did not mean good, and that because such reading was better than none we should not stop here. At the end of the discussion Mr. Faxon spoke briefly of the plans for the A. L. A. conference in June.

In the evening the final session was opened at 8.30, W. C. Lane, of Harvard University, presiding, and Mr. Carr, of Scranton, acting as secretary. The first speaker was Frank B. Heckman, of the Free Library of Philadelphia, who gave a talk on "Some Germantown writers," of earlier years and the present day. W. W. Bishop, of Brooklyn, N. Y., read a paper on the question, "Should the librarian be a bibliophile?" printed elsewhere (*see p. 126*), and G. F. Bowerman, of Wilmington, opened a discussion of great interest with his report upon "The new net price system and the public libraries," also printed elsewhere (*see p. 134*). The discussion that followed was participated in by C. P. Everett, H. L. Elmendorf, Melvil Dewey, W. W. Bishop, J. C. Dana, and others. The fact that the new system had raised the prices of net books much beyond the increase that librarians had been led to expect was brought out by several speakers, and a strong plea was made that libraries, by virtue of the volume and regularity of their trade, should be put upon the same plane as the dealer in the granting of discounts. A resolution was offered by Mr. Collins, of Princeton, expressing the opinion that libraries should receive the same discounts as retail dealers. This was amended, on suggestion from Mr. Dana, to request that dealers and publishers be permitted to give to libraries a discount up to 25 per cent. on net books. The resolution was adopted, and the meeting adjourned at 10.40 p.m.

Sunday was generally given up to rest and enjoyment of the "board walk" along the ocean front. Several minor conferences were held, and in the afternoon there was an in-

formal meeting to continue the consideration of the net price system, that proved most animated and interesting. Mr. Dewey acted as chairman, and among those in attendance were W. C. Lane, W. T. Peoples, V. L. Collins, J. C. Dana, G. F. Bowerman, S. H. Ranck, H. J. Carr, W. W. Bishop, Dr. Jastrow, F. W. Faxon, S. G. Ayres, W. P. Cutter, G. W. Cole, and F. P. Hill. One of the projects discussed was the practicability of forming a co-operative buying union on the part of libraries, with a selling agent in New York, although it was felt by others that concessions in discounts that would permit the employment of local dealers would be preferable, especially for the smaller libraries. The meeting was not called to take any formal action, but for direct personal interchange of opinion and experience, which it was hoped might result in the presentation of definite recommendations.

Monday was the day set for the breaking up of the convention, and although a number of the delegates returned on Sunday evening, the majority remained until the next day.

American Library Association.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th General meeting: Boston and Magnolia, Mass., June 14-20, 1902.

A. L. A. PUBLISHING BOARD.

Library tract no. 4, devoted to "Library rooms and buildings," by Charles C. Soule, is the latest publication of the Publishing Board, and a most timely and welcome one. Mr. Soule has in this prepared a general practical outline of the first principles and essentials in buildings for small libraries. How to establish a library in a single room—the shelving, space and arrangements desirable—is first outlined, thence passing to the consideration of two or more rooms, adaptation of old buildings, and the planning and equipment of new buildings. The limitations of a tract have unfortunately prevented anything but the most summary treatment—unfortunately, because, in the present state of library affairs, nothing would be more thoroughly useful than a comprehensive and authoritative monograph on the desirable and undesirable in library architecture, with abundant illustrations and examples. It is, however, announced that the Publishing Board may, if the demand warrants, issue a supplement to this tract, reprinting various articles on library buildings and including a bibliography of the subject and representative plans. There can be little doubt of the need of such a supplement, and it is to be hoped that it may be promptly undertaken. The tract should be ordered of the A. L. A. Publishing Board, 10½ Beacon street, Boston; price, 5c. per copy, \$2 per 100, in lots of 50.

State Library Commissions.

DELAWARE STATE LIBRARY COMMISSION: Miss F. B. Kane, organizer, Dover.

The handbook to be issued by the commission is now in course of publication. It will be sent free to any library in the state, accompanied—if to a free public library—by the gift of Miss M. W. Plummer's little book on library organization, "Hints to small libraries." Miss Kane, the library organizer, visits on request, without charge, communities desiring advice as to library development. The commission has received from Mr. G. F. Bowerman, librarian of the Wilmington Institute Free Library the gift of an excellently chosen travelling library of 53 volumes.

NEW JERSEY PUBLIC LIBRARY COMMISSION: H. C. Buchanan, secretary, State Library, Trenton.

The commission issues its second report, for the year ending Oct. 31, 1901, to which is appended a recommended list of the "First one thousand books for a New Jersey library." There is also a careful statistical tabulation of the libraries of the state, giving data as to librarian, contents, foundation, etc. Numerous libraries of the smaller towns have been aided by advice from the commission, and in several cases trained librarians have been sent to assist those engaged in the preliminary work of establishing libraries. There are 102 libraries reported for the state, exclusive of academic and seminary libraries, and of the 1495 free school libraries recorded by the superintendent of public instruction. There are many subscription libraries, and whenever possible the commission has advised that these be turned over to city control, under the provisions of the state library law.

"Princeton University Library, established in 1746, is the oldest in the state, as it is also by far the largest. Burlington came 12 years later, in 1758, with a charter from King George II., and is the oldest public library. Then follow the Rutgers College Library, established in 1766, and the Library of the Theological Seminary of the Reformed Church in America, in 1784. The total number of books and pamphlets in all of the public and semi-public libraries of the state will probably reach 1,200,000. 52 of the 102 libraries reporting are free, and 38 subscription; and of the 88 cities and towns in which libraries are located, 76 have libraries in the public schools also."

The list of 1000 books was prepared mainly under the direction of Dr. E. C. Richardson, and was intended for those interested in the organization of small libraries, and without experience in or facilities for selection of books. It includes practically all classes save philosophy and religion, the choice of books on these subjects being left to the local li-

brary authorities. It is a classed author list, giving date, place of publication, publishers and price. While a selected list of this sort can never give general satisfaction, the present one should serve its purpose satisfactorily enough, though one might deprecate the large representation given to semi-juvenile books. Thus, of the 39 titles in Individual biography, six are the familiar Abbott volumes. The list is also overbalanced, naturally perhaps, in favor of American subjects and authors.

State Library Associations.

CONNECTICUT LIBRARY ASSOCIATION.

President: H. M. Whitney, Blackstone Library, Branford.

Secretary: Miss Anna Hadley, Ansonia Library, Ansonia.

Treasurer: Miss J. P. Peck, Bronson Library, Waterbury.

At 11 o'clock on Wednesday morning, Feb. 26, the members of the Connecticut Library Association assembled in the hall of the new library building of the New Britain Institute. After the call for order and the reading of the minutes, the reports of secretary and treasurer, Prof. David N. Camp, of the library committee, welcomed the association, and in a most interesting historical sketch outlined the growth and development of the New Britain Institute, referring incidentally to places in and near the city with which the names of Elihu Burritt, Prof. Andrews, James Gates Percival, Emma Willard and Almira Lincoln Phelps will be forever associated. At the close of his paper Prof. Camp noted certain details in the architectural plans of the new building, referring particularly to the arrangements made for the housing of patent reports, a complete set of which is owned by the institute, for "as the United States leads the world in the granting of patents for new inventions, so Connecticut leads the United States, and New Britain, Connecticut."

Miss Hewins, as representative of the A. L. A. for the state of Connecticut, made the preliminary announcements regarding the coming A. L. A. conference to be held at Magnolia during the second week in June. From her vivid description of the place itself, and the enthusiasm aroused thereby, the Connecticut delegation in attendance at the conference should be a large one. A letter from Mr. Faxon, secretary of the American Library Association, was read, in which he stated that Wednesday afternoon, June 18, the program (of the A. L. A. convention) is left free in order that various state associations may hold meetings. "Maine, New Hampshire and Massachusetts library clubs have already arranged to meet at Magnolia on Wednesday afternoon, June 18," closing with the hope that Connecticut will also have a meeting at that time and place. By vote

of the association the matter was referred to the officers, with power to act.

The subject "Purchase of current fiction by libraries of limited means" was presented by Jonathan Trumbull, of the Otis Library, Norwich, with a paper calculated to open the matter for a spirited and general discussion. Those following Mr. Trumbull were: W. A. Borden, New Haven Institute; W. K. Stetson, New Haven Public Library; Miss C. M. Hewins, Hartford Public Library; Miss Ida Farrar, Springfield Public Library; Miss J. P. Peck, Silas Bronson Library, Waterbury; F. B. Gray, Watkinson Library, Hartford.

After further inspection of the beautiful building so thoroughly adapted for the work carried on within its walls, the members of the association, at the cordial invitation of the library committee, gathered in the main corridor and proceeded to the Hotel Russell, where dinner was served.

The afternoon session was opened at 2.30. The chairman of the nominating committee, Prof. W. J. James, of the Wesleyan University Library, submitted the report of that committee, and by unanimous vote the same was accepted, which resulted in the re-election of the present board of officers.

Miss Angeline Scott, of Norwalk, followed with an entertaining paper on "Gifts: shall we accept? If not, how refuse?" which is given in part elsewhere. (See p. 129.)

Miss Farrar, of the Springfield City Library, announced a library institute to be held by the Western Massachusetts Library Club some time during May in a small town near the Connecticut border—probably Granville—in which the Connecticut Library Association is cordially invited to join.

Miss Mary E. Robbins, who at present is engaged in recataloging the Brookline (Mass.) Public Library, read an entertaining paper, in which she recounted many personal experiences in organization and reorganization.

Miss Anna Culver, of Middletown, gave a 10-minute talk on the Congressional Library, noting particularly certain phases of architectural and mural decorations.

Net prices for books was the subject of a warm discussion, which resulted in comparison of former and present cost of books to libraries, with reference also to the action taken by the Massachusetts Library Club. At the close of the discussion it was voted that the matter of book-prices be left in the hands of the officers, with power to act.

In the question box were found two questions, one as to the disposal of worn-out books, the other as to circulation of bound magazines, both calling forth the various methods and rules followed in the many libraries represented.

After a hearty vote of thanks to the librarian, Miss Anna G. Rockwell, and to the library committee for their hospitality, the meeting adjourned. ANNA HADLEY,
Secretary.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas H. Clark, custodian of the Law Library, Library of Congress.

Secretary: R. K. Shaw, Library of Congress.

Treasurer: F. E. Woodward, 11th and F streets, N. W.

The February meeting of the District of Columbia Library Association was held on the 12th inst., at 8 p.m., the president, Thomas H. Clark, in the chair, and 86 members attending.

The resignation of the secretary, Mr. Hugh Williams, who is obliged to be absent from Washington indefinitely, on account of severe illness, was submitted. Mr. R. K. Shaw, of the Catalog Division, Library of Congress, was chosen to succeed him for the remainder of the term.

Under the topic "Current events and notable books of the month" Mr. W. P. Cutter, chief of the Order Division, Library of Congress, mentioned, among other matters of interest, the disposal of the private libraries of McKee and Nordenskjöld; and Miss Josephine A. Clark, librarian of the Library of the Department of Agriculture, referred to a method of indexing new botanical species, published as a bulletin of the "Herbier Boissier," at Chambézy, near Geneva. Mr. Crandall, of the Office of Documents, spoke of the sumptuous *édition de luxe* of Dickens, notice of which appeared in a recent number of *The Publishers' Weekly*.

The paper of the evening was given by Mr. Juul Dieserud, of the Library of Congress, and his subject was "Henrik Ibsen and the modern drama." Mr. Dieserud represented Ibsen as an innovator of dramatic form, and explained his analytical method that made it possible for him to adhere almost strictly to the old law of unity of time, and also his attempt to revive, in altered form, the principle of destiny or fate, as exhibited in Greek tragedy.

Following the paper, which was enthusiastically received, Mr. Stefansson, of the Library of Congress, added a few remarks regarding the individualism of Ibsen, to which Mr. Dieserud made a brief reply. The association then adjourned at 9.20.

R. K. SHAW, *Secretary*.

NEW HAMPSHIRE LIBRARY ASSOCIATION.

President: Miss Grace Blanchard, Public Library, Concord.

Secretary: H. W. Denio, State Library, Concord.

Treasurer: Miss B. I. Parker, Public Library, Dover.

The annual meeting of the New Hampshire Library Association was held at Pittsfield, Jan. 29, 1902. The meeting was called to order at 2.30 p.m. by the president, Miss Grace Blanchard. The minutes of the June

meeting were read and approved. Mr. F. S. Jenkins, of the local library, welcomed the association to Pittsfield, and the response was made by the state librarian, Mr. Arthur H. Chase. The nominating committee reported and recommended for officers of the association for the coming year as follows: for president, Miss Grace Blanchard; 1st vice-president, C. Edward Wright, of Whitefield; 2d vice-president, Miss Harriet Crombie, of Nashua; secretary, Mr. Herbert W. Denio; treasurer, Miss Bessie I. Parker. The report was accepted and the ticket was elected. The by-laws were amended so far as relates to the date of holding the annual meeting. In the future the annual meeting will be held on the last Thursday of January.

Appropriate resolutions were passed respecting the death of Miss Eldora Pickering, of Newington, a former member of the association. A resolution was passed providing for the holding of the June meeting at Magnolia, Mass., June 18, during the annual session of the A. L. A.

Interesting papers were read by the following persons: Miss Clara F. Brown, of Concord, on "Decorum in the library"; Miss Lydia S. Coleman, of Newington, on "What can be done at the loan desk to help readers in the selection of books"; Miss Edith O. Simmons, of Manchester, on "How to increase the usefulness of the reading room, its Sunday opening"; and Miss Bessie I. Parker, of Dover, on "Picture work in the library." These papers will appear in the *Bulletin* of the New Hampshire library commission. The report of the treasurer was given at the evening session, and then the topic of "What the library expects of the public" was discussed by Mr. Olin S. Davis, of Lakeport, and "What the public expects of the library," by Miss Cyrene Emery, of Concord. Several lists of desirable books for small libraries were presented by different members, after which the session adjourned.

H. W. DENIS, *Secretary*.

NEW YORK LIBRARY ASSOCIATION.

President: Miss M. E. Hazeltine, Prendergast Free Library, Jamestown.

Secretary: Mrs. H. L. Elmendorf, 319 Norwood Ave., Buffalo.

Treasurer: E. W. Gaillard, Webster Free Library, New York City.

LIBRARY INSTITUTES.

Arrangements are well advanced for the series of library institutes, to be held this spring under direction of the library association. A series of eight such institutes will be held during April. The first will be held in Cortland on April 15. Then will follow Binghamton on the 16th, Olean on the 18th, Rochester on the 22d, Ogdensburg on the 25th, Iliou on May 6, Albany on May 7, and Newburgh on May 9.

The subjects to be considered at the meeting are: "How to select books," "How to order books," "The business record of books bought," "How to arrange books on the shelves," "Catalogs good and bad," "Principles of a charging system," "Necessary records and reports," "Suggestions as to how to increase one's efficiency as a librarian." In addition to this program, which will be carried out by short talks from different trained librarians in each district, one public evening meeting will be held in each district, to which all interested will be invited, and where "The public's interest in the public library will be discussed by two or three good speakers. Dr. J. H. Canfield will talk at most of the eastern institutes and H. L. Elmendorf will speak at the western end of the state.

Library Clubs.

CHICAGO LIBRARY CLUB.

President: A. G. S. Josephson, John Crerar Library.

Treasurer: C. A. Torrey, University of Chicago.

Secretary: C. R. Perry, Public Library.

A regular meeting of the Chicago Library Club was held at the Public Library, Thursday evening, Feb. 13. In the absence of the president and vice-presidents, Miss Mabel McIlvaine, who was in charge of the program for the evening, was elected as chairman. Mary E. Downey and Jennie M. Dignum were elected to membership.

For the committee on library work at the county jail Mr. Roden reported a recommendation that the club make an annual appropriation, to be expended under the direction of the committee, for the jail library. Mr. Roden paid a tribute to W. R. Moss, a public spirited Chicago attorney, who has voluntarily looked after this library for several years, giving many of his evenings to the work. At the request of the committee Mr. Moss was in attendance at the meeting, and upon invitation he addressed the club, presenting a vivid description of the work that he was doing at the jail. He thought that the club could be most helpful by securing donations of money for the purchase of selected lists of new books, by advising in the selection of those books, and by appointing some one who might always be appealed to for information on technical questions pertaining to library work. The matter was referred to the executive committee for consideration and report. Miss Ahern's report from the committee on library and school relations was made a special order for next meeting.

Professor James Westfall Thompson, of the University of Chicago, the speaker of the evening, then addressed the club on "France since the Dreyfus case." It was a most interesting and instructive address, giving a comprehensive and at the same time a very

clear insight into the troubles and perplexities of modern France. A vote of thanks was extended to the speaker. It has been suggested that it would be well for the club to arrange for frequent scholarly addresses in the various fields of knowledge, that our members may keep better posted as to what is going on in the world.

CHESLEY R. PERRY, *Secretary*.

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

President: Camillo von Klenze, University of Chicago.

Secretary: A. G. S. Josephson, John Crerar Library.

Treasurer: C. B. Roden, Public Library.

A regular meeting of the society was held in the John Crerar Library, Thursday, March 6. The following amendment to the by-laws had been proposed by the secretary: "Section III. The affairs of the society shall be in the hands of a council, consisting of president, vice-president, secretary, treasurer, and three other members, *one of whom shall be a non-resident member*, to be elected at the annual meeting of the society." It was proposed that the words printed in italics be added. The amendment had been discussed by the council and referred to the committee on a national society. The committee had, however, not yet reported. After a short discussion, in which it was pointed out that there was nothing in the by-laws to prohibit non-resident members from becoming members of the council, the amendment was laid on the table, with the suggestion that the nomination committee be instructed to nominate a non-resident member in case the committee on national society reported favorably.

The secretary reported from the council: (1) that the council had decided to issue to subscribers a reprint of Augustus De Morgan's paper "On the difficulty of correct description of books," in an edition limited to 200 copies, 25 of which were to be reserved for the society; (2) that \$25 had been appropriated for the binding of books in the society's library, and that the books would be loaned to members, subject to rules to be framed; (3) that the indexing of bibliographical periodicals had been well started; (4) that the council recommended that a nomination committee be appointed.

A motion that the president appoint a nomination committee was carried.

Dr. C. R. Mann read a very interesting paper on "Histories and bibliographies of physics" which will be printed in the forthcoming Year-book of the society. Discussion followed.

The secretary reported that he had received information from the secretary of the American Library Association that the program committee of the Association wished this society to take charge of a part of the fourth general session at the annual meeting of the Association in Magnolia, June 19, "for

a report on and discussion of the question of a bibliographical institute"; also that arrangements were being made for a meeting of the society during the A. L. A. conference to discuss the formation of a national bibliographical society. Both of these matters were referred to the council with power to act.

The secretary read a letter which he had received from the Chief of the Department of Education of the Louisiana Purchase Exposition Company, in regard to the proposed Commissioner of Bibliography, and asking for estimates. The letter was referred to the secretary for answer.

Mr. Elmer J. Robinson was elected a member of the society.

AKSEL G. S. JOSEPHSON, *Secretary*.

NASHVILLE LIBRARY CLUB.

President: Miss M. H. Johnson, Carnegie Library.

Secretary: Miss J. E. Lauderdale, University of Nashville.

Treasurer: Miss Anne Warren, Vanderbilt University Law Library.

Upon a call issued by Miss Mary Hannah Johnson, librarian of the Carnegie Library of Nashville, Tenn., a meeting of the librarians of the city was held in the rooms of the Tennessee Historical Association Dec. 6, 1901, which resulted in the organization of the Nashville Library Club. 13 charter members were present, all active librarians of the city.

The following officers were elected: president, Miss Mary Hannah Johnson, Nashville Carnegie Library; vice-president, Edwin S. Wylie, Vanderbilt University Library; treasurer, Miss Annie Warren, Vanderbilt University Law Library; secretary, Miss Jennie E. Lauderdale, University of Nashville and Peabody Normal College Library. Executive committee: chairman, Miss Kercheval, Nashville Carnegie Library; Miss Mary Payne, University of Nashville and Peabody Normal College Library; Mrs. L. B. Epperson, Tennessee State Library; Miss Johnson *ex-officio* member.

The object of the club, as expressed in the constitution adopted, "is to promote the growth of, and interest in, libraries in Nashville and vicinity." With this club as a nucleus, and by means of similar clubs in the other cities of the state, a state organization is hoped for.

At present there are in Tennessee 77 libraries containing 392,221 volumes. Nashville contains 13 of these with about 133,707 volumes maintained at an average cost of \$1000 per library. The public interest in libraries, in their educational and moral value, is developing rapidly, and is keeping pace with the material development of the state, as is shown by the statistics of library growth in the report of the U. S. Bureau of Education for 1900—the south central states in which Tennessee lies making a gain of 39%.

JENNIE E. LAUDERDALE, *Secretary*.

NEW YORK LIBRARY CLUB.

President: Dr. H. M. Leipziger, Aguilar Library.

Secretary: S. H. Berry, Y. M. C. A. Library, 317 W. 56th st.

Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.

By invitation of the Grolier Club the New York Library Club held a special meeting at the rooms of the former on Thursday afternoon, Feb. 13, about 100 persons being present. An address of welcome was made by Mr. Howard Mansfield, president of the Grolier Club. He outlined the club's purpose as the glorification of the art of printing, by adorning books with the decorative dress with which, from time immemorial, it has been the instinct of man to clothe everything of value to him, from his own person to the temple in which he worships. The New York Library Club had been invited to this exhibit of the Grolier Club's idea of good book-making because the two clubs were one in spirit. Beneath the finest dress, the most artistic and costly decoration, would be found subject matter of value worthy of the adornment.

Dr. Leipziger responded briefly, expressing the highest appreciation and praise of the work of the Grolier Club and of this exhibition representing the progress of four centuries in the art of bookbinding, and pleasure that the club had been given this opportunity to see and enjoy it. He also conveyed the thanks of the club for the courtesy of the invitation.

The minutes of the last meeting were read and approved, followed by reports of the treasurer, showing a balance of \$356.45, the executive committee, and committees on dinner arrangements and handbook. The last reported that the handbooks may be expected about March 1. Names reported by the executive committee were elected to membership.

Mr. Henry W. Kent, librarian of the Grolier Club, then gave a most interesting address on "Mosaic bookbindings" which he illustrated by crayon sketches. Mr. Kent was followed by Mr. George H. Baker with a paper on "The librarian's duty as a bookbuyer," giving many practical suggestions.

The resignation of the secretary having been announced, and Mr. S. H. Berry appointed to that office, the meeting was adjourned. The members tarried for some time to examine the beautiful exhibition of bindings and the library of the club, which was also thrown open for inspection.

ELIZABETH L. FOOTE, *Secretary*.

The March meeting of the club was held at the 23d street branch of the Young Men's Christian Association, on the afternoon of the 13th inst., at three o'clock. Ten names were proposed, and the persons elected to membership in the club. Mr. A. E. Bostwick, reporting for the committee on library insti-

tutes, stated that an institute had been arranged to be held in White Plains in April.

The treasurer's report was presented, showing a balance of \$301.20 in the treasury.

The feature of the afternoon was an address by Melvil Dewey on "Library prospects and possibilities." He said that if any one 40 or 50 years ago had undertaken to prophesy concerning the development of the library movement in America, and had suggested anything approaching the real development, he would have been considered a dreamer. While the same progress has been made in all departments of activity and thought, here it has been beyond an enthusiast's expectation. He who looks into the future now must meet opposition, for some do not like to look ahead, prefer to look back, and are always troubled at anything that has a tendency to disturb the existing order, but we know that it is with the human mind, and human institutions, as it is with a tree—as soon as it stops growing it begins to decay.

One of the next movements for progress must be the supplying of books to the people who live in isolated places; to the country homes; 52 per cent. of our people live in the country, they, who have the leisure to read and digest good books, have least reading matter available, and receive less than one per cent. of the benefit to be derived from our large library funds, and modern libraries. We are now looking for some one who wants to spend about \$3000 to equip the first country circuit library—giving us a team and wagon accommodating about 1000 volumes, and about 1000 volumes more in the homes of the people on the circuit, the wagon making its trips at regular intervals and permitting the examination and exchange of books. Another move is being made in large libraries in securing specialists in reference work, making what we might call a Faculty Library. Among these are children's librarians, and librarians for the blind, and this development of specialized work is bound to be one of the important elements in the library work of the future. Mr. Dewey also touched on the disposal of duplicates and the possibility of libraries serving as centers for bookselling at wholesale cost to private buyers.

In the evening the annual dinner of the club was held at the rooms of the Aldine Association, 111 Fifth avenue. The guest of honor was Andrew Carnegie, and the evening was a most delightful one. A reception was held in the club parlors from 6.30 to 7.30, and the dinner which followed was served at long tables in two dining rooms. There was an attendance of nearly 300.

Dr. Leipziger presided as chairman, and opened the speechmaking with a few words of greeting to the members and the guest of honor. He said that Mr. Carnegie had turned iron into gold and then converted that metal into a great spiritual force, and added that he felt sure that if ever there was to be a

saint's day in the calendar of the American librarian it would be "St. Andrew's day." Melvil Dewey followed with a stirring plea for libraries that should benefit country hamlets and bring the benefits of books to country folk. He thought such libraries were more needed than \$100,000 structures in the cities. He said he was not so much afraid of fiction as some persons were, and believed that the boy who deserted profane company to read a yellow newspaper had made an advance, and that when he deserted the yellow journal to read a weak novel he had made another step forward. He closed with the wish that he had three hours to tell those present some of his ideas about libraries.

Mr. Carnegie was the next speaker, and he began with the assurance that it was never necessary for Mr. Dewey to speak for three hours—"he strikes the nail on the head in a few minutes. He would never find applied to him what Josh Billings said about ministers: 'If a preacher don't strike ile in twenty minutes he ought to stop—boring.'" He said, in part: "I have thought a great deal about delivering books in rural communities, and I was delighted to hear Mr. Dewey say that a practicable plan had been arrived at by which this large problem could be solved. We ought to have some plan by which books could reach every hamlet in the country.

"I have made to-day a sort of library day. The idea of coming here to be with librarians to-night seemed so delightful that I thought I would make a full day of it, so I have passed upon 40 applications for libraries. And I am happy to say that all of the applications considered to-day were approved. I assure you that it was a very great privilege to be able to give the money that was required. Many of these applications came from towns in the west—towns of from 2000 to 5000 inhabitants, and you would be surprised to see how many of these small places said they were able to raise the \$1500 or \$2000 a year necessary to maintain the library after it was built. There was also one application from your not highly developed city of Albany. I felt that I should be very lenient with a city where legislators and Senators met together, so I have agreed to their suggestion for an endowed library among the others approved to-day.

"It has occurred to me, however, that it might be a good plan if a man intended to leave his fortune for books and libraries to so arrange that in providing for works of fiction to be contained in the library, books less than three years old should not be included. Is anything that doesn't last three years a book? Of a book that does not last this long it may well be said:

If I was so soon to be done for,
I wonder what I was begun for.

"Is it really true that we are known by the company we keep? Then you librarians belong to the highest society that this world can produce. If you should happen to build

a house—just as a trial to your patience—you'll find that after it is completed a good deal of trouble will be encountered in furnishing it. I agree with Dean Swift that the finest furniture for a room is books. Why should you smile when I say a book is good to have even if it is never opened? You're in good company—very good company—if you only look at the backs of books. The lover of books—when he has trials, let him just walk around his library, and before he's got all the way he must feel better. It ought to do him as much good as any sermon that was ever preached. I believe so in libraries that I would say let everybody have them, no matter whether they ever saw the insides of the books or not, so long as they realized what those insides signified.

"You live among books. You haven't much time to read. But you must experience great delight to know that you are continually in the presence of the master spirits of the world which time has left to refine and bless us all. And it is strange how few books time leaves us! I once asked Lord Acton how many books it would be necessary to put into a library representing the world's best literature. Four thousand volumes was the number he named. That is not more than one volume a year for all the years we have known man to have ever written at all. That one book a year has told the truth in the simplest form. No long words were used. The sayings are pithy. Nevertheless, thousands of books are written which bless their own generation, and I would always say that an author who has helped his own generation has deserved the gratitude of mankind."

The other speakers were C. C. Burlingham, president of the board of education, who spoke of the school library system of the city, and the need for its reform and extension; John Kendrick Bangs, who made a delightful speech, full of happy allusions and amusing anecdotes; Dr. John S. Billings, as representative of the national library association; and Miss Mary E. Hazeltine, on behalf of the state association of libraries.

PENNSYLVANIA LIBRARY CLUB.

President: Dr. Morris Jastrow, Jr., University of Pennsylvania.

Secretary: L. E. Hewitt, Law Association Library, 600 City Hall, Philadelphia.

Treasurer: Miss M. Z. Cruice, American Philosophical Society, Philadelphia.

The usual monthly meeting of the Pennsylvania Library Club was held on Monday, Feb. 10, in the lecture room of the Free Library of Philadelphia, when Dr. Jastrow, the president, presided. After the conclusion of the usual routine business, a paper was read by John Thomson on "The chronicles and memorials forming the Master of the Rolls series." Mr. Thomson noted many of the quaint and curious narratives hidden away in this most interesting series, and

pointed out the need of a careful index to its contents. His paper abounded in curious information and humor. At the conclusion of the address, a long discussion ensued and Dr. Jastrow suggested that inquiries should be made among the different libraries and associations interested in this matter, whether a sufficient fund could be raised to enable the catalogue *raisonnée* and indexes, spoken of by Mr. Thomson, to be printed. Mr. Thomson said that he had been at work on this matter for several years and the whole thing could be printed within a year if the necessary funds were forthcoming. Many interesting criticisms were offered and what would have been ordinarily a "dry topic" proved a matter of considerable general interest.

Library Schools and Training Classes.

NEW YORK STATE LIBRARY.

NEW ADMISSION REQUIREMENTS.

The most important event of the month is the decision of the faculty to require a degree from a registered college for admission to the school. This action has been taken after long deliberation, and with the knowledge that it will shut out a few who have the natural qualifications for library work. They can, however, secure library training in other schools. Any young man or young woman with fitness for library work will do better service with than without a good college course. The previous requirements for admission to the school, though resulting in classes largely made up of college graduates, have certainly kept some from finishing a college course who might easily have done so.

The following requirements for special college courses are still in force:

1. 15 hours a week for a year in literature and history. Nine hours a week in literature and six hours a week in history are preferred, but this exact balance is not insisted on. Courses in political economy and political science are accepted as history.

2. 15 hours a week in foreign languages, of which five must be French and five German.

A statement from the registrar of the college that the work outlined above has been completed is accepted in lieu of entrance examinations. If a student should be deficient in any one requirement, he is obliged to pass an examination in that subject.

The limit of numbers makes it feasible to select from college graduates, offering these special courses, those who seem most likely to be of service in the library field.

Of those applying later than March 1, 1902, only those meeting the conditions stated above will be admitted.

SALOME CUTLER FAIRCHILD.

WISCONSIN LIBRARY COMMISSION COURSE IN PUBLIC DOCUMENTS.

The Wisconsin Free Library Commission issues a special announcement of the special course in public documents to be given in connection with its summer school session of 1902. The course, which has already been noted in these columns, will be conducted by Miss A. R. Hasse, of the New York Public Library staff, and will cover three weeks, Aug. 6-27. "One day will be given up to colonial documents, three days to federal and state constitutions, statutes, municipal charters and ordinances, and treaties; four days to the publications of Congress, state legislatures and municipal councils; four days to the publications of federal, state, and municipal departments, and two days to the reports of federal, state, and city institutions. As each subject is considered, such bibliographies, catalogs and check-lists of it as there may be in existence will be reviewed. The collections of the state library and of the State Historical Society Library will be available for demonstration work. In addition to the work with United States federal documents, the course will include instruction in the building up of document collections, both city and state, by showing what to select and what to discard in order to make the collection either an intact expression of the administration of a given city or state, or an expression only of certain activities of its administration. The difficulties of long general series and their adaptation will be explained; the importance and care of pamphlets in city or state collections will be dwelt upon. Some time will be spent in the preparation of examples and illustrations of the distinctions between bibliographies, check-lists, indexes, calendars and catalogs." Applications for admission must be made before May 1.

Reviews.

JESUIT RELATIONS AND ALLIED DOCUMENTS:

travels and explorations of the Jesuit missionaries in New France, 1610-1791; ed. by Reuben Gold Thwaites. Vols. 72 and 73: Final preface, additional errata, index. Cleveland, The Burrows Brothers Co., 1901 [1902.] 380, 398 p. O.

The elaborate two-volume index which concludes the great series of the "Jesuit relations" calls for special attention in any record of current bibliographical literature. Indexes, strictly speaking, are not bibliographical literature, but a good index, in its analytic work, consistency of treatment, and handling of related topics, demands bibliographical skill and thorough proficiency in subject cataloging. These demands are the more insistent in an index of the scope of the present work, which in extent and in precision of method is probably the most notable example of index-making

produced in this country. For it presents in compact and workmanlike form the facts, down to the most minute details, contained in the three score and ten volumes of the "Jesuit relations"—covering, at a rough estimate, some 27,000 pages, and dealing with various aspects of what is practically a single subject. It is this last fact, of course, that gives the index its special interest, for the work of the indexer increases in difficulty in proportion as his subject matter centers upon a single theme. To index a work dealing with a wide variety of unrelated subjects is simple enough, but in a field where every topic overlaps upon and is interwoven with others of the same nature, where inaccuracies and variations of a single term or statement abound, and where there is a constant repetition of persons, places and incidents, the index maker's task is not a happy one. In the present case Mr. Thwaites and his corps have been able to overcome the difficulties of their undertaking by a thorough and systematic scheme of work, and have carried through their index in a remarkably short time after the completion of the series of "Relations."

In the preliminary "suggestions for use" the general plan of the index is outlined. It is based entirely upon the English text, including all prefaces, translations, bibliographical data, notes, and supplementary matter. Distinctive classes of entries appear in class groupings or under form headings; thus, in the former division, all lakes appear only under "Lakes," rivers, capes, forts, etc., being treated in the same way, while in the latter Cartography and maps, Periodicals and newspapers, Chapels, Libraries, Museums, etc., are among the headings used. As references from individual entry to class entry are not given, there is large economy of space in this plan. Of course it may be said that a person looking for Fort Chartres under "Chartres" and not finding it may not think of turning to the list of "Forts" but the indexer is obliged to take for granted an ordinary modicum of intelligence on the part of the searcher. For the most important subjects—Canada, Indians, Iroquois, Jesuits, etc.—careful subject classifications have been prepared, massing the entries into distinctive groups. Thus for Indians, there are eight main classes: Anthropology and ethnology; Archæology; Philology; Mythology, folk-lore and religion; Social and economic life; Oratory, poetry and music; Inter-tribal relations; Relations with the whites. Each main class is divided and subdivided, as necessary, bringing all related items into orderly arrangement. Variants of all proper names are given in parentheses, with references from frequently used variants to standard form, the variants ranging from a single term, as "moose of France" for horse, to twenty different appellations for the Andaste Indians, fourteen for the Susquehannocks, thirteen for the Abenakis, and so on.

The mass of material co-ordinated and presented may be judged from a few examples. "Indians" covers nearly 50 pages; "Jesuits," 38; "Iroquois," 10; Quebec has nearly 10 pages, Montreal three, "Chapels," "Fur trade," "Beaver," "Hospital nuns," a page-and-a-half apiece; while the minuteness of the work may be judged from the fact that "Beads" yield 113 entries, "Calumet" over 50, "Tobacco" 123, and "Canoes" over 300. Entries are as compact as possible, volume numbers being in heavy face and paging in ordinary Arabic numerals. A somewhat careful examination of the index confirms its first impression of careful thoroughness. Some minor inconsistencies bear witness to the work of many hands—as the fact that books cited are given sometimes in italics and sometimes in quotation marks, and that there are variations of practice regarding references, while in one case at least different entries referring to the same person appear in two places ("Bastard," "Flemish bastard"), without any reference or other connection. But these are simply evidences of human fallibility. The fact remains that the present index is an example of the art of index-making at its best, and a worthy crown and finish to a work that must always be indispensable to the study of American history.

LIBRARY OF CONGRESS. Classification: Class Z, bibliography and library science. Adopted 1898; as in force Jan. 1, 1902. Washington, Gov. Print. Office, 1902. 68 p. O.

From the preface of this interesting scheme of classification we learn that the order of the main groups, the arrangement under Library science, and many other details, are taken in part from Cutter's 7th Expansive classification. Indeed, the Class letter, Z, suggests that at once.

As would be expected of a system devised to meet the needs of a great national library, the scheme is elaborate. Taking for a basis of judgment the five criteria of practical classification formulated by Dr. Richardson in his recent work on that subject, how does this system stand the test?

1. "It [the classification] should follow as nearly as possible the order of things." As we are considering but one section of a scheme, this rule has but a limited application.

First and naturally comes the History of books and bookmaking, followed by Writing, Autographs, Typewriters and typewriting, Shorthand and Paleography. The natural order would place paleography first after writing as a whole. Next comes Printing, its history and biography, followed duly by Early printing (Incunabula and block books), Practical printing, Binding, Bookselling, and Copyright.

After the book, the collecting and care of books. We are accustomed to think of li-

brary science as a recent development, especially belonging to the era of the public library movement. But as we learn that the Alexandrine library was classified into at least six main divisions, and that even the names of the four writers on cheesecakes were arranged in alphabetical order, with titles and full bibliographical details of their works, perhaps we are wrong in thinking the science such a new one, and the maker of this classification may be even theoretically right in putting Library science before Libraries of all countries and ages. As that topic naturally leads to Book-collecting, and Book-collecting to Bibliography, national, subject and personal, —a vast subject—the practical wisdom of putting Library science before Libraries is obvious.

National bibliography is divided by continents, and under those by states and countries, the arrangement being alphabetical in the main. This is followed by Subject bibliography, also arranged alphabetically, and that in turn and lastly by Personal bibliography. So on the whole the development of the classification seems natural and harmonious.

2. "It should be carried out in minute detail." The last division number assigned is 8973, and as many of these divisions may have topical subdivisions, the requirements of this rule are fully met.

3. "It should be provided with a notation which will allow for indefinite subdivision, using mixed symbols, but with a predominant decimal base." In this notation the class number Z is followed by a consecutive whole number. Thus no idea of subordination is conveyed as in a decimal notation, and indefinite expansion is precluded. In all sections spaces are left for future use, a very convenient way should the subjects chance to develop in just those places. Topical subdivisions under the number are made possible by the use of Cutter numbers, e.g., Z7845, Bibliography of sects and churches; Z7845.A5, Anglican; Z7845.B2, Baptist. "See also" references and comparisons with other numbers are frequent. This notation has the great advantage of being very brief, considering the minuteness of the subdivision, and the great disadvantages of not permitting indefinite expansion, or lending itself readily to the needs of smaller collections.

4. "It should be provided with a detailed and specific index." The index seems to have been developed by practical use rather than made theoretically to fit the classification. Thus under the entry Scotch-Irish the index gives 5314.S63, no such number appearing in the classification. We note also, by way of illustration, the omission of the printing of etchings and lithographs, although reference to presswork is made under engravings. As a whole, the index, which occupies 15 pages, is clear and detailed.

5. "The value of such a system is increased

in direct ratio to the generalness of its use." The conditions which this system has been devised to meet will preclude its general use.

As an illustration of close classification in a specialized library, it is interesting to compare a small portion of this very full classification with the corresponding part in the "Tentative scheme of classification for the library of the Grolier Club." In the Library of Congress system, Bookbinding has an allotment of six numbers, with a seventh for its history by countries, arranged alphabetically. In the Grolier Club scheme this same subject has 55 numbers, exclusive of 10 numbers for its history divided by countries.

Viewed as a whole, this classification of bibliography and library science is very convincing, made especially so by the choice of type, the indentation, and other typographical details. All interested in classification will await with interest the publication of succeeding classes.

M. L. DAVIS.

Library Economy and History.

GENERAL.

BISSELL, Fannie S. What the libraries are doing for the children. (*In Outlook*, Feb. 15, 1902, p. 420-424.)

An account of the children's rooms, library league, story-hour and like features of library work for children, as carried on in Pittsburgh, Brooklyn, Boston, New Haven, Eau Claire, Hartford, and elsewhere.

DOUBLEDAY, PAGE & Co., New York, announce that they have arranged to print every month the best eight illustrations from each of their magazines *The World's Work* and *Country Life in America*, for use on bulletin boards in public libraries. The *Country Life in America* pictures will follow the changes of the season, while the *World's Work* illustrations will deal with current events, portraits of distinguished men, etc.

A. CONAN DOYLE's new book, "The South African war: its cause and conduct," will, it is announced, be sent free to any public or institutional library, upon application to the publishers, McClure, Phillips & Co., New York.

FOOTE, Elizabeth L. How the secretary and librarian may work together. (*In Sunday School Times*, Feb. 22, 1902, 44:103-104.)

This article in Miss Foote's series on the Sunday-school library discusses the registration of readers and catalogs and lists for the Sunday-school library.

"HINTS TO SMALL LIBRARIES," Miss M. W. Plummer's useful little handbook is now in press in a third edition and will be shortly issued. It will be published by Miss Plummer, from the Pratt Institute Free Library.

The *Library Record of Australasia* quar-

terly completes its first year's volume with the number for December, 1901, containing the table of contents for the year. It opens with a sketch of John Howard Clark, one of the founders of the Public Library, Museum, and Art Gallery of South Australia, and includes the usual notes, practical articles and record of publications.

PUTNAM, Herbert. A national library for the United States. (*In Bookman*, March, p. 52-57.)

An outline of the scope and functions of a great national library, presenting the various directions in which the Library of Congress may promote and serve the interests of libraries and students.

SHARP, Katharine L. Library schools on a graduate basis. (*In Publications of the Association of Collegiate Alumnae*, series 3, no. 5, Feb., 1902, pp. 24-33.)

A study of the requirements for successful library work and the training the students receive in the New York State Library School and the Illinois State Library School. Of these schools Miss Sharp says: "Each of these requires two years of college work for entrance and gives two years of technical instruction." She urges that library schools connected with universities require a degree for entrance and accept no equivalent.

SOULE, Charles C. Modern library buildings. (*In Architectural Review*, Jan., 1902, 9:1-6.)

il.
An historical account of the architectural development of the present-day library building. This number of the *Review* is a special "library number." Nearly 50 pages are given to plans of library buildings.

LOCAL.

Alabama State Dept. of Archives and Hist. Progress has been made toward the development of Department of Archives and History, created by act of Feb. 27 (1901). The objects of the department are "the care and custody of official archives, the collection of materials bearing upon the history of the state, and of the territory included therein, from the earliest times, the completion and publication of the state's official records and other historical materials, the diffusion of knowledge in reference to the history and resources of the state, the encouragement of historical work and research," etc. The director is Thomas M. Owen, whose plans of work include the preparation and publication of the report of the Alabama History Commission; the arrangement and indexing of the state archives; the collection of all printed and documentary material relating to Alabama; the development of a museum and an art gallery; and the compilation of the Alabama war records.

Altoona (Pa.) Mechanics' L. The library report, as presented in the local press, gives the following facts: Added 1732; total 32,750. Issued, home use 36,159. Total membership 999. Receipts \$4438.82; expenses \$4205.34.

Atlanta, Ga. Carnegie L. Owing to the failure of Miles & Bradt, contractors, to carry out specifications, the hard-wood floors in the two upper stories of the new library building have been rejected by the supervising architect. These floors will have to be removed and new floors laid before the building can be accepted. Nevertheless, the library was opened to the public on March 4, using the basement and the stack. The basement has a rear entrance, is well lighted, and contains two large work rooms 30 x 60 feet. One of these rooms is entirely finished and furnished and makes an ideal children's room. The other room will be used for a delivery room as it communicates directly with the stack. The trustees greatly regret the difficulties, but as they are amply protected in a money way, by the failure of the contractor to perform his obligation, they feel justified in taking this time to have the work done over. Miss Wallace says: "Our public opening will not take place until the building is finished, but in the meantime the public will be given a cordial welcome and our 'back yard' will soon be the most popular place in town." At the opening only informal exercises were held, but these were largely attended.

Augusta (Ga.) Y. M. L. Assoc. (53d rpt. — year ending April 1, 1901.) Added 626; total 9530. Issued, home use 6912, a gain of 1620 over the preceding year. The list of subscribers has increased, and a reduced fee has been granted to teachers. A special membership ticket at 50 c. is offered to children during certain months of the year — June to September or July to October — and 26 were issued last year. The library was closed for eight days in October, during which time the rooms were rearranged and decorated with most attractive results.

Boston Athenaeum. (Rpt. 1901.) Added 3471; total 202,166. Issued 57,276. Spent for books and binding \$9466.67. The number of shares in use is given as 802, the total number of non-proprietors using the building as 804.

During the year the special collection of the late Francis Hinde Groome, of Edinburgh, was purchased, the sum required being subscribed by four proprietors. The collection was received in October. It includes over 100 v., many rare, and all bearing upon the study of gypsies, while there are also over 30 v. of manuscript notes and correspondence with Bataillard, the eminent French student of gypsies.

"One of the most difficult of our problems in years past has been the disposition of pamphlets, which flow steadily in upon the

library without regard to season. Thousands of our pamphlets lie in what may be termed the attic, covered with the dust of at least a quarter of a century, thousands more are in boxes, cataloged by authors, and many more are fully cataloged, but unbound. When it became evident that the Athenæum Library would be moved it seemed best to face this problem at once. All of our biographical sketches have been arranged alphabetically and bound; new pamphlets are cataloged as fast as they are received, and are as soon as possible made into bound volumes for the shelves. All other pamphlets, if within our field and of any value, are considered as books, cataloged and put in stiff covers, that they may be placed with volumes on the subjects of which they treat. We hope to distribute throughout the library valuable material which has heretofore been lost to all except the most persistent searchers for information."

Naturally the most important event of the year, in its future results, was the decision to erect a new library building on Arlington and Newbury streets.

Boston Medical Library (26th rpt., 1901.)

The principal event of the past year has been the transfer of the library to the new library building on the Fenway, next to the building of the Massachusetts Historical Society, which the society has erected at the cost of over \$150,000. "The librarian and cataloger, realizing that the prestige of having the best adapted building in the country, would be marred were the classification and arrangement of books in the shelves not up to the best system endorsed by the leading librarians of the country, set to themselves the task of evolving from the various systems in vogue that which was best adapted to the practical requirements of the library. To accomplish this they have made a profound study of the details of the different schemes advocated by library experts, made several visits to New York, Philadelphia and Washington to consult with other librarians, and have finally settled upon a classification which embraces the best points of all the systems which they have considered."

The library has received from Dr. H. R. Storer, of Newport, an extraordinary collection of medical medals numbering 2139, which have been arranged around the walls of the reading room in swinging leaves, so that both sides of each medal can be examined. A card catalog of the entire collection has been made, giving complete descriptions, and some 250 engravings and photographs of medals not yet represented in the collection are added.

The librarian further says: "A new departure in library administration has been made by me with the assent of the executive committee. It has been the invariable custom in all libraries to keep and to place upon the shelves every edition of every book that chanced to come into their possession. This

rule is a proper one to follow with regard to the classics of medicine, to works embodying original research, and to special monographs, but when extended to handbooks compiled chiefly for the use of students, it cumbered our shelves with books embodying only the state of medicine at the time when they were written. After a few years they become antiquated, teach many doctrines long since repeated [rejected?], and, as a matter of fact, they are never consulted. I have consequently gone through the whole library and thrown out every edition of any general treatise and handbook between the first and the last that we have. By this process I have reduced the library by 1082 books, with a great gain in shelf room, and, as I believe, no loss of efficiency. That we might know where we could find, and, in case of need, borrow, any edition of any book thus excluded, we have given to the library of the Surgeon-General's office in Washington all such as they did not already possess. The number which they accepted amounted to 384 volumes."

Brooklyn (N. Y.) P. L. The following tables have been prepared to show the 1901 monthly circulation of the library, arranged according to the size of the circulation, and the seasons of the year. It is pointed out that these figures are rather curious, in showing that the library has no light and no heavy season:

Circulation.

Nov.....	95,441	Jan.....	74,426
Oct.....	89,822	Sept.....	73,897
Dec.....	88,382	May.....	72,210
Aug.....	87,386	June.....	69,332
July.....	80,857	Apr.....	69,162
Mar.....	74,635	Feb.....	68,245
Dec.-Feb....	231,053	June-Aug....	237,575
Mar.-May....	216,007	Sept.-Nov....	259,260

On Feb. 12 the city sinking fund commission authorized the Public Library directors to lease one floor of the building known as Avon hall, on Bedford avenue, for a term of two years, at a rental of \$1800 per year. This step has long been desired by the library authorities, but there have been a succession of obstacles to carrying it out. It is proposed to transfer the Bedford branch of the library to these new quarters, leaving the present building, at 26 Breevoort place, which is not well adapted for public use, for the administrative work of the library.

A party of the directors, accompanied by Mr. Hill, the librarian, recently visited Philadelphia, Pittsburgh, Allegheny and Buffalo, on a trip of library inspection, in the interest of the new Carnegie branches, now planned. Cleveland, Toledo and Detroit were also visited by some of the members.

Sites have been recommended for seven of the Brooklyn Carnegie branches. These are as follows: 1, block bounded by Marcy avenue, Rodney street and Division avenue, \$50,000; 2, Franklin avenue, opposite Hancock, between Fulton and Jefferson avenue, \$25,-

000; 3, northwest corner of Clinton and Union streets, \$26,000; 4, southeast corner of Fourth avenue and Pacific street, \$30,000; 5, south corner of Bushwick and DeKalb avenues, \$30,000; 6, corner of Norman avenue and Leonard street, \$36,000; 7, corner of Fourth avenue and 51st street, \$12,500.

Buffalo (N. Y.) P. L. (5th rpt., 1901.) Added 19,465; total 169,728; in addition there are 97 v. of directories, 1847 v. of permanent collection, and 4166 children's picture books, making a total of 175,838 bound volumes. Issued, home use 966,450 (fict., incl. juv. fict., .656 %); issued from stack for lib. use 39,488. New cards issued 20,660; total cards in force 58,239. Receipts \$88,575.88; expenses \$87,903.01.

The total circulation shows a decrease of 14,785, due probably to the distractions of the Pan-American exposition, and to the closing of the circulating department for three days on special occasions. "The Pan-American had, however, a greater effect on our circulation than the small falling off would indicate, for if we analyze the figures, they show that the circulation at the main library, which would be most affected by the exposition and its attractions, fell off 68,275, while the outside agencies, such as schools, branches and the like, made a net gain of 53,490. Mr. El-mendorf adds: "The percentage of fiction read is about as I would have it. The figures show a reduction from .671 to .656. This has been through no special effort to reduce the number of books of fiction read, as there has been no such effort. There has been an effort to improve the class of reading, and particularly to improve the grade of fiction read."

In the open shelf department from a stock of about 18,000 v. the home use circulation was 240,188, giving an average turnover of more than 13 per volume. "The books on the open shelves are all selected, recommended books, and it would seem to prove that all a good book needs in the way of recommendation is to put it where it can make its own attractions felt, that is where people can see it, handle and examine it for themselves."

There are now 33 schools, with 532 separate class room libraries, using in all 25,114 books. The home circulation for the year was 233,102. It is urged that the work be extended as fast as possible to all the schools of the city. 84 travelling libraries, of 2482 v., were sent out to fire houses, police stations, hospitals, clubs, societies, etc.

There are now eight delivery stations, one having been opened during the year. There are three branches, only one of which, the William Ives branch, really deserves that name, the others being too small to come properly within that designation.

The removal from the library building of several societies which have been quartered there since its erection, will soon give much-needed room for library purposes.

Burlington (Ia.) P. L. (15th rpt. — year ending Dec. 31, 1901.) Added 2088; total 21,148. Issued, home use 49,461; school issue 4998; ref. use 5000. New cards issued 534. Expenses \$6149.41.

"The public has been admitted to the stack room since the first of July. The privilege has been greatly appreciated and no bad results have come to light.

"We accomplish what libraries do not often attempt with the same working force, namely, our work with the schools and our reference work for the women's clubs and others. But we are in one particular behind even the small libraries which are up with the times. I refer to our lack of a children's department."

President Crapo, of the board of trustees, refers to the meeting of the state library association held in Burlington last October, and urges an increase of the levy for library maintenance. He says: "We must not lose sight of the fact that our library has been growing rapidly in spite of the comparatively small revenues. Since we have occupied our new building the spheres of influence of the books, and the other educational opportunities afforded by our building, have been developing and increasing at a very rapid rate. We have no longer a small library, but a large one, for a city of this size."

Burlington, Vt., Fletcher F. L. (28th rpt. — year ending Dec. 31, 1901.) Added 560; total 27,319. Issued, home use 43,802 (fict. and juv. 33,293.) New cards issued 484. "About half the books circulated from the library are taken out by teachers and scholars."

The event of the year was the gift of \$50,000 from Andrew Carnegie for a new library building; "no one but a librarian who has endured for years the inconveniences of the old building can understand the pleasure and gratitude with which we look forward to a properly constructed library building."

Cedar Rapids (Ia.) F. P. L. The observance of the annual "Library day" on Feb. 14 proved most successful. A special exhibit of art and illustrated books, photographs, etc., was displayed, and there was a large attendance of interested visitors. In the evening addresses were delivered in the library auditorium, among the speakers being J. J. McConnell, superintendent of schools, Miss Irene Warren, of the Iowa University school of education, and R. C. Barrett, state superintendent of public instruction.

Chattanooga, Tenn. Carnegie L. A letter recently received by Mayor Chambliss from Andrew Carnegie suggests certain amendments in the language of the ordinance recently passed accepting Mr. Carnegie's gift of \$50,000 for a library building and making an appropriation of \$5000 for the maintenance of the library. When these amendments have been made, and a site for the building se-

cured, arrangements will be made to make payments on the building as the work proceeds. The amendments called for by Mr. Carnegie are on one point only. The ordinance, as passed, fixes the appropriation at \$5000 for the first year and adds, "and said city will hereafter make suitable provision for proper support and maintenance thereof." The amendment called for by Mr. Carnegie is covered by the words, "at a cost of not less than \$5000 yearly," thus binding the city to expenditure in the future of not less than the sum named each year. It is thought that the change required in the ordinance will be promptly made.

Cheyenne, Wyo. Carnegie L. On Feb. 4 Ross C. Irvine was appointed librarian of the new Carnegie Library. He also succeeds Mrs. E. Mason Smith as county librarian, as the county library will be consolidated with the Carnegie institution.

Cincinnati (O.) L. Soc. for the Blind. (Preliminary rpt., Jan., 1902.) As the work described in this little pamphlet is hardly more than a year old the report deals mainly with details of aims and organization. The purpose of the society is to reach with books and readings the 400 blind persons known to reside in Hamilton county. Many of these have been taught to read in the state institution and trained in some art or trade, but after leaving the institution they are shut off from books or from further help and instruction. Members of the society serve as volunteer readers and as guides to bring blind persons to and from the library, and a weekly course of instruction in reading and writing is also conducted. "For a year and longer there have been readings at the Public Library, to which the blind have come in encouraging numbers. The attendance has varied from three or four to 20 and more. An average attendance has been eight or 10." There are now five readings each week, in courses on English literature, from current magazines, French history, political science, and current novels. Special authors' readings have also been given. The collection of books for the blind in the Public Library now numbers several hundred volumes, and is maintained by the society. The president of the society is Mr. N. D. C. Hodges, the librarian of the Public Library.

Cincinnati (O.) P. L. A successful public entertainment was given on Feb. 1 by the Library League of Cincinnati, in the city Auditorium. It consisted of recitations, music, and the two-act play "Little women." The league was established in April, 1901, by Miss Elizabeth Abbott, who is in charge of the children's work at the library, and is modelled upon the children's library leagues developed elsewhere. It has now a membership of 1600, secured without the aid of the schools. Such entertainments as that recently given are planned at intervals, to give a social interest to the league.

Columbia University L. New York City. Memorial resolutions upon the death of the late William Goddard Baker were recently drawn up by the library staff and transmitted to Mr. Baker's family. The resolutions were as follows:

"The members of the library staff of Columbia University have learned with deep sorrow of the death of William Goddard Baker, who was for many years connected with the library work of the University. Antedating us all in length of service, we cherish the memory of his kindly greeting, as one by one we came into relations with him and learned to know him. Quiet and unassuming in manner, most kind and gentle in disposition, ever ready to lend assistance or to give wise and helpful counsel, he went in and out among us a constant example of the courteous gentleman of the olden school. Such will ever be our pleasant remembrance of him and of his genial influence.

"We extend to his sorrowing relatives our sincere sympathy, with the hope that their sense of loss may be tempered by the consciousness that this is but the close of a long and useful earthly career.

"C. ALEX. NELSON,

Reference Librarian (for the staff.)"

Columbus (O.) P. School L. (25th rpt. — year ending Aug. 31, 1901.) Added 4371; total 47,928, of which 7094 belong to the ref. dept. and 24,670 to the circulating dept. Issued, home use 205,172, including 76,734 v. of supplementary reading; lib. use (including periodicals) 271,700. The percentage of adult fiction was 16.842%; of juvenile fiction 37.385%; "this is nearly three per cent. higher than last year." New cards issued 2377; total cards in use 21,630.

The report includes a brief historical sketch, and comparative statistics for the work of the last 10 years. The library now maintains special collections in 22 different schools, from which books are issued to pupils. Its policy is "to add to the number of these branches gradually until every elementary building desiring such a branch shall be supplied, and then increase the number of volumes in each branch. At present about 100 volumes are sent to these libraries, though in some cases, especially in the larger buildings, or where the capacity for operating them is better, 25 to 30 volumes more. Judging from the experience of the last two or three years, the plan of co-operation with the schools, as adopted by the library, has been so satisfactory that no change in the present method is contemplated."

Fitchburg (Mass.) P. L. (29th rpt. — year ending Nov. 30, 1901.) Added 1662; total 39,228. Issued 77,181, an increase of 5626 over the previous year. New cards issued 1294. Receipts \$883.80; expenses \$8812.02.

"Vacation cards," each permitting the withdrawal of six books for four weeks, were issued for the first time in June, and were used by 53 persons. Nearly 3000 books were sent to the public schools, a gain of over 600. Sunday attendance in the reading room reached a total of over 1200. The children's room now contains about 400 books; 5 v. were lost during the year. It was visited by nearly 13,000 children. In the art room exhibitions were held through the facilities of the Library Art Club.

Gloversville (N. Y.) P. L. The common council at a meeting on Feb. 17 voted to accept Andrew Carnegie's offer of \$50,000 for a library building, on condition that the city appropriate \$5000 annually for maintenance.

Helena (Mont.) P. L. The library report for 1901, as printed in the local press, gives the following facts: Added 1784; total 30,529. Issued, home use 75,132 (fict. 59%). New registration 711; total registration 11,127.

The juvenile circulation for the year amounted to 40 per cent. of the total issue, of which fiction formed 52 per cent. "Two of the library assistants took the course in library science offered last summer at the Chautauqua assembly, thus increasing the efficiency of the staff."

Library of Congress, Washington, D. C. The legislative, judicial and executive appropriations bill, now pending in Congress, carries the usual provisions for the maintenance of the Library of Congress. These include the following increases in salary and additional service, according to the estimates prepared by the Librarian of Congress:

The salary of the assistant to the chief clerk is raised from \$900 to \$1000, and a messenger at \$840, instead of an assistant messenger at \$720, is provided for. The salary of the chief of the order and purchasing division is increased from \$2000 to \$2250.

Additional assistants in the Catalogue Division are provided for as follows: Two at \$1800 each, one at \$1500, five at \$1400 each, five at \$1200 each, three at \$1000 each, three at \$900 each, two at \$800 each, and three at \$720 each, making a total increase of 24 persons at \$27,560.

The salary of the chief of the Bibliography Division is increased from \$2000 to \$2500. The salary of the assistant in the reading room for the blind is increased from \$1000 to \$1200. An important increase, involving a new appointment, is that of the head of the Manuscripts Division, for which the salary is increased from \$1500 to \$3000, and two assistants at \$1200 and \$900, respectively, are given in lieu of two assistants at \$720 each. The salary of the chief of the Maps and Charts Division is increased from \$2000 to \$2500.

In the Copyright Office additional employees are given as follows: three clerks at \$1400 each; one clerk at \$1200; one clerk at \$1000; two clerks at \$900 each, and two clerks at \$720 each, making a net increase of nine persons at \$9640.

For opening the library on Sundays, from 2 o'clock until 10 p.m., \$10,000 is recommended under the librarian, and \$2500 under the superintendent of the building.

The bill as amended in the Senate increases the fund for the purchase of books from \$60,000, provided in the House bill, to \$100,000, as asked for in the estimates.

An amendment to the bill was submitted

on Feb. 17, by Mr. Lodge, providing an increase of the salary of the chief of the Division of Bibliography from \$2500 to \$3000.

Maryland, Library legislation for. A bill has been introduced into the legislature providing for county maintenance of public libraries. It authorizes the board of county commissioners to levy an annual tax not exceeding five cents on each \$100, to be known as a free library fund. The commissioners have the power to establish libraries and reading rooms where desired, and the governing boards of any municipality in which they are placed may levy an additional tax of seven per cent., which is to be paid over to a board of trustees, consisting of nine persons, to be known as library directors, who are to be named for the county at large by the commissioners. These directors are to serve six years, two being appointed biennially, and are to have complete control of the county libraries.

In addition there is to be appointed a free library commission of five members, to be named by the governor and to serve without pay. One thousand dollars is appropriated to pay incidentals, including pay for a secretary.

New Orleans, La. Howard L. The library prints from time to time in the local press short lists of books on special subjects, new accessions, etc., among the most recent being a careful and full list of the material contained in the library relating to Washington. This was classed under Washington as an author, Lives of Washington, Special periods of the life of Washington, Washington and others, Washington celebrations, Portraits, Washington papers, Mount Vernon, Mary Washington, Martha Washington.

New York P. L. Sites for six of the Carnegie branch libraries have been selected, as follows: 1, in East 79th street, between Second and Third avenues; 2, nos. 29, 31 and 33 East Broadway, \$102,000; 3, plot 45 feet frontage with 100 feet depth on the southerly side of 82d street, 100 feet east of West End avenue, \$47,000; 4, on the southerly side of 138th street, 175 feet east of Lincoln avenue, \$20,000; 5, Tremont, near the Harlem Railroad station and the borough building; 6, nos. 224, 226 and 228 East 125th street, to be acquired by condemnation proceedings at an estimated cost of \$17,000 or \$18,000.

The purchase of the first site has already been authorized by the Board of Estimate and Apportionment.

Newark (N. J.) F. P. L. The annual meeting of the trustees was held on Feb. 6. The report of Miss Beatrice Winsor, acting librarian during the greater part of the past year, showed a circulation of 304,926. The estimate of expenses presented for the year 1902 amounted to \$48,121. Regarding this estimate the finance committee reported as follows:

"This estimate provides only for the maintenance of the library as it is now running. It allows a little for the natural and normal growth, which must come in any event, but nothing for that increase in popularity and usefulness which our new building makes it incumbent on us to use every effort to secure. In the schools, we have already come to a limit of use through the lack of appropriate books. 5000 volumes added to the shelves of the children's room would find users almost at once, and would, through schoolhouse branches, carry the habit of using our library into hundreds of houses in every quarter of the city.

"The employees of our manufacturing establishments should have plainly presented to them the fact that this library is for them and that they will confer a favor on it, on its management and on their city, which built it, by coming often to it and using freely of its books. This can be done by notices in factories, through the children in the schools and also, of course, through the daily press.

"But to do this and like work calls for funds for 'publicity and promotion,' and especially for technical books of every kind. These are expensive and soon out of date.

"The delivery stations need more care and should be increased in number. More lists for the use of persons in remote parts of the city should be compiled and published.

"A beginning should be made at once on a system of branch libraries. The branch is a much more effective method of extending the use of the library than a delivery station. It takes to the people, not only the single book, often not the one wanted, but a good collection to select from and a competent person to wait upon visitors. Branches could be established and maintained for a year for from \$1500 to \$4000 each, depending on their size, rent, cost of fittings, number of volumes and number of days per week on which they are open."

The local Wednesday Club on Feb. 19 gave a dinner in honor of J. C. Dana, the recently appointed librarian. At its close Mr. Dana spoke of the needs of the library and its advantages and suggested ideas for future extension. He thought that the library should be open longer each day and should be open more on Sundays and holidays. "The assembly-room, which is not yet seated, should be more used for gatherings. The exhibition rooms should be employed for loan shows of pictures or collections which would illustrate the principal manufacturing interests of the city.

"More citizens should be brought to understand the uses of the reference room. The collection of patents might be increased in usefulness by the addition of plans and specifications at a cost of about \$1500. Photographs of the great paintings might be procured for the art room at a moderate cost. The reference room should be more widely advertised." More children's books were

needed, and branches also were required. Regarding branches, Mr. Dana said:

"Two kinds might be suggested. One is a new kind. I would hire a large store on the ground floor, near Market and Broad streets, but perhaps a block or two away so as to avoid the very high rents. Here I would have no novels, but a small collection of the best literature, belles lettres; a fine collection of technical books and dictionaries on technical subjects, maps to be hung upon the walls, the directories of cities, atlases and general dictionaries, all the trade journals and books and periodicals dealing with municipal improvements. There would be a room in the rear in which smoking would be permitted. It should be understood that this was a working library, a business institution. It would be an experiment, but I think it would be worth trying.

"I would make the other branch of the more popular kind. It would be located in the southeastern section of the city, in a commodious building, say 30 by 150 feet, and this would be stocked with literary books, technical books of the best kind and children's books."

Niagara Falls (N. Y.) P. L. The sixth birthday of the library was observed by the annual "library day" on Feb. 1. In the evening a public reception was held, which was attended by about 200 persons; there was music, and refreshments were served. The next birthday party will, it is hoped, be given in the new Carnegie building.

Norwich (Vt.) P. L. The handsome new library building was dedicated on Feb. 26, in the presence of a large audience. The building was erected by public subscription, and is a one-story brick structure attractively and adequately fitted up.

Northampton, Mass. Forbes L. (7th rpt. — year ending Nov. 30, 1901.) Added 7647; total 84,543. The number of books purchased was 7249, at a cost of \$12,890.50, or an average of \$1.78 per v. Issued, home use 88,134 (fict. 47.3%; photographs 10.3%); lib. use 7584. New registration 967; total registration in force 5386.

It is noted that the three public libraries of the city (City, Lilly, and Forbes) now contain a total of nearly 125,000 v., and have a total circulation of 153,038 v., with a fiction issue of 42%. "The population being 18,643 (by the census of 1900), the issue was 8.2 per annum per inhabitant (home use 7.4)." Mr. Cutter states that the Forbes Library circulation appears to have reached its limit; "it is only 3½ per cent. more than in 1900, and nearly two-thirds of this increase is due to the growing use of photoprints and photographs." There are now seven branches in operation.

The Hampshire District Medical Association has been granted the use, for meetings, of the room containing medical books. In

this connection reference is made to the desirability of the bill for cheap library postage, now pending in Congress. "This library is forming an excellent collection of the latest medical books, which are freely lent and would be much more useful if they could be freely ordered and sent by mail; but medical books are heavy and postage and expressage are dear, and country doctors' receipts are not large. The passage of the bill would quadruple the usefulness of our medical library and what we call our life-saving service."

The art department has grown to be unusually large and comprehensive. The collection of photographs numbers 44,000. "That the opportunities for art study are more and more appreciated is shown by the growth of the art clubs which have become a permanent feature in the social life of the city." Mr. Cutter adds: "In the selection and showing of our photographs and photoprints we have followed no restrictive policy. We have not thought it necessary to exclude Murillo's and Raphael's Madonnas for fear of shocking Protestants and Hebrews, representations of heathen gods as offensive to Christians, war pictures as painful to the advocates of peace, drinking scenes as distasteful to teetotalers, or the modest nude for fear of Anthony Comstock. We have assumed and have found that our adult visitors are enlightened enough to enjoy the art of pictures whose subject they may not sympathize with; and for the young it is not altogether the best preparation for life to close one's eyes or to have them bandaged. So while excluding what everybody excludes we have put on our walls what every art gallery admits."

Oberlin (O.) College L. (Rpt. — year ending Aug. 31, 1901.) Added 4689 (gifts 3724); total 49,394. Total no. of readers 73,843; 13,164 v. were drawn for home use by 1023 persons. The notable increase in additions is mainly due to the accessioning of the collection of Gen. Jacob D. Cox, which had been in possession of the library since his death, and the gift of 500 volumes from Mrs. Mary B. Ingham. General Cox's collection made a total of 2200 additions, rich in the literature of military science, the Civil War, the microscope and the diatomaceæ.

Mr. Root makes an urgent presentation of the need for more room and more books. It is thought that the annual book purchase fund should as soon as possible be raised to \$5000. The overcrowding of the shelves made it necessary to store over 18,000 volumes of duplicates in a small room formerly used by the chemical laboratory. A rough shelf list was first prepared, so that the books can be found if desired. "The remainder of our duplicates, together with our large collection of duplicate magazines and newspapers, are waiting until some other room can be provided. The shelf room in the third story of the library building, made vacant by the removal

of this large number of duplicates, was immediately assigned to a portion of the regular collection of the library, classes 500 to 799 being transferred to that floor. In making this transfer the opportunity was seized to bring back into their regular order the large number of long sets which some six years ago were placed in the basement to give us more shelf room. This division of subjects, while unavoidable at the time, had proved in practice extremely unsatisfactory, and we were glad to take the opportunity to bring all the books of a class together once more." It is thought that this change, and the rearrangement made possible by it, will provide for two years' growth.

During the year two or three apprentice assistants were employed with satisfactory results. The staff library club has been continued, and has been very helpful "in stimulating all the staff to a higher ideal of library service and to that personal study of library problems, without which even the most efficient is in danger of falling into ruts."

Ohio, Library legislation for. The committee on legislation of the Ohio State Library Association, W. T. Porter, chairman, has drafted a bill providing for county libraries in Ohio. It provides that where there is already a public library at a county seat it may be made a county library by agreement between the library trustees and county commissioners. Then stations may be established throughout the county and the county taxes help to support the system. Where there is no public library at a county seat the bill provides that the county commissioners may establish one. The plan is the same as is now in existence in Hamilton county.

Plainfield (N. J.) P. L. Arrangements have been made by the librarian by which each afternoon excepting Saturday is especially devoted to giving information and reference aid to readers. During the hours from 2 to 5.30 p.m. the librarian remains in charge of the information desk, to give attention to all requests for assistance. So far as possible users of the reference department are asked to make their inquiries during the hours mentioned. Persons who visit the library only in the evening may use the information desk by leaving a memorandum of the information desired, and any material available will be set aside for their use on the following evening. The reference work of the library has recently received favorable notice in the local press.

An interesting exhibit of books, pictures and designs relating to domestic architecture and house decorations and furnishings was held on Feb. 15 and 16. It included many valuable books from the Babcock Scientific Library, interesting pictures, and reproductions of interiors, and several interested specialists in different subjects—architecture, woodcarving, etc.—were in attendance to give information and explanation.

Portland (Me.) P. L. (13th rpt.—nine months ending Dec. 31, 1901.) Added 1217; total 50,519. Issued, home use 658,412 (fict. 59 %). Reading room attendance 23,416; reference room attendance 13,519; Sunday attendance 2798. New registration 2784; active cardholders 6219. Receipts \$11,847.29; expenses \$9990.31.

The young people's reading room had an attendance of 17,675.

Reading (Pa.) P. L. (Rpt.—3d rpt., 1901.) Added 2076; total 11,717; lost 18. Issued 79,718 (fict. 69,314). New registration 1717; total cards issued 6902.

An encouraging report, while "not marked by any such rush and enthusiasm as the opening and second year brought to us. The newness has passed away and the library has to a great extent settled down and become a factor of daily usefulness and interest." Shelving is inadequate, and more room is greatly needed. It is pointed out that the number of borrowers has increased 31 per cent. or nearly one-third over 1900, while the number of volumes has only increased 21 per cent., or about one-fifth, "which is out of all proportion to the ratio that should obtain."

St. Joseph (Mo.) F. P. L. Removal to the handsome new building was begun on Feb. 20 and completed by Feb. 24, the library being closed for the following week to permit inventory and other necessary work to be carried through. As an aid in the removal, the library board, at its previous meeting, authorized the librarian to issue double the usual number of books to readers, if desired. The books thus issued were made returnable two days after the opening in the new building.

South Bend (Ind.) P. L. The library was founded in 1888, when it opened with about 1000 books in rented rooms. In 1895 and '96 a library building was erected at a cost, for building and lot, of \$40,000. This building has a book capacity of 60,000 volumes, with lecture halls and society rooms. At present it houses the collections of the Northern Indiana Historical Society. In 1898 the library was classified according to the Dewey system and a card shelf-list was made, which has since answered the dual purpose of a shelf-list and a subject catalog. A dictionary catalog was begun in February, 1902, and will be completed during the summer. The library now contains 10,041 volumes, has 3035 registered borrowers, and during the year 1901 circulated 37,998 volumes. Miss Evelyn C. Humphrey has been librarian since the opening of the library.

Spokane (Wash.) City L. The librarian's report, as printed in the local press, gives the following facts: Total 7600. Issued, 62,641 (fict. 45,449; juv. 9254); membership 1560. The circulation shows an increase of 89.3 % over the previous year, due mainly to

abolition of the membership fee. "The demand for fiction remains about the same, while the demand for juvenile books steadily decreases, and for general works as steadily increases. The decreased demand for juvenile works, we believe, is due in part to the unfortunate location of the library, and the fear many people entertain of contagious diseases owing to the proximity of the city health office."

Syracuse (N. Y.) P. L. At a meeting of the trustees on Feb. 7 a resolution was passed increasing the salary of the librarian, E. W. Mundy, from \$2000 to \$3000 per year.

Waterloo (Ia.) P. L. (Rpt.—year ending Dec. 31, 1901.) Added 1482; total not given. Issued 43,682; lost 12. Receipts \$1950.19; expenses \$1942.97.

Westborough (Mass.) P. L. Added 605; total 13,252. Issued 29,486; visits to reading room 8063. New registration 225; total registration 3914.

"Another year has passed and but little progress has been made toward the construction of a library building." A site was purchased several years ago, and from bequests and other sources a building fund of nearly \$10,000 has been raised. Plans and specifications have also been drawn up independently by two architects, who offer, if accepted, to give them, together with their services, without charge to the town. Eight exhibitions were held during the year, through the facilities of the Library Art Club.

Wilmington (Del.) Institute F. L. The library has extended a cordial invitation to all the residents of Newcastle county to avail themselves of its privileges. There are now 694 non-resident borrowers, but this number would be largely increased if the possibility of non-resident use of the library were more largely known. The Rockford branch of the library has recently been developed in various ways, including the establishment of a children's department. The branch was originally the Rockford Library, a proprietary institution, which was later transferred to the Institute Free Library and maintained as a branch. It is housed in a large room on the second floor of a business building. The original collection comprised about 2200 v., which has now grown to over 3000, including a small but good reference collection. Other books are sent on request from the main library.

Windsor (Vt.) L. Assoc. (19th rpt., Jan., 1902.) Added 346 (238 purchased); total 8997. Issued, home use 10,778 (fict. 79 %). New cards issued 91. "The use of books in the library rooms shows a tendency to increase, but is hindered and smothered by the continually increasing pressure of the wholly insufficient accommodations both for readers and librarians." A catalog of fiction and juvenile books in the library was published

in March, and sold at half the cost of printing. But only 50 copies out of an edition of 500 have been disposed of. The librarian, Mr. Goddard, says: "This is only another illustration of a well settled fact that for a library like ours printing catalogs is a gross waste of money. We are not likely to try the experiment soon again."

During the year the library received a bequest of \$1900 from the late Hon. C. C. Beaman. Maxwell Evarts, Mr. Beaman's successor on the library board, has announced that he will continue for the present, "in substantially the same form, Mr. Beaman's annual donation of books to the library on the selection of the resident clergymen." This donation, it is noted, has already added about 615 volumes to the library shelves, "of which about one-third represented the distinctive denominational theology of the reverend gentlemen selecting and about one-fifth more were also theological books" — not it would seem, the most satisfactory proportion in the case of a small town collection.

Wisconsin State Hist. Soc., Madison. The proceedings of the annual meeting held Dec. 12, 1901, are just issued in pamphlet form. The report of R. G. Thwaites on the work of the library was previously noted in these columns (L. J., Jan., p. 44). The duplication of the official card catalog for public use is one of the most important tasks before the library staff and is receiving constant attention.

"During the year there has been completed a card catalog of our large collection of genealogy. Ours being one of the three or four most important collections of genealogical material in the United States, this department is largely resorted to by men and women from various portions of the west, either personally or by letter. A special card catalog of this description is a valuable addition to our working machinery. We already possess a similar catalog to our great newspaper collection, and one to the sources of information relative to the biographies of prominent men and women of Wisconsin. Others, devoted to maps and manuscripts, and public documents, will be prepared in due course."

FOREIGN.

Hamilton (Ont., Can.) P. L. R. T. Lancefield, for several years librarian of the Public Library, disappeared just prior to the annual meeting of the board on Feb. 7, when it was learned that his accounts revealed a shortage of about \$4900 in the library funds. Warrants were later issued for his arrest on the charge of defalcation. The books were promptly turned over for examination by an expert accountant, who reported that the discrepancies in record began in July, 1900, and extended to the present time. It was evident that Mr. Lancefield had several times, in the absence of the chairman of the board, obtained duplicate checks for his own salary, and had made other salary overdrafts. From

January, 1901, no entries were made in the books, the bank book and checks found being the only means of learning the state of affairs. The minute book, check book and order book had all been mutilated and the minutes and stubs subtracted. "In the month of January, 1901, the larger part of the discrepancies begin, the practice apparently being to obtain checks from different chairmen simultaneously, and for this purpose the change in the chairmanship, under the rules of the board, appears to have furnished the first opportunity."

At a later meeting of the board, Mr. John Kenrick, a member of the board and a former chairman, was appointed to act as librarian and secretary for the present year, without salary. Mr. Kenrick had offered his services in this way to aid in settling affairs straight again, and they were gladly accepted.

Mr. Lancefield was thoroughly trusted by his associates, and was a man of wide popularity. It is now stated that he was an inveterate gambler, and that the cause of his defalcations was undoubtedly race-track and pool-room gambling. To his wife and family the news of his disappearance and the reason for it came as a distressing shock. Mrs. Lancefield at once offered to turn over her husband's life insurance, amounting to \$15,000, to the library board, to make up the shortage; the present value of the insurance is estimated at about \$3000.

Victoria, P. L. of Western Australia. (Rpt. — year ending June 30, 1901.) Added 5212; total 43,940. Visitors to lib. 121,253, of whom 5551 were women, "being the largest attendance during any one year since the opening of the library." The new library building, plans for which are now under way, is very greatly needed, as the present quarters are quite inadequate to the demands made upon them.

Winnipeg, Manitoba, Can. The city council on Feb. 10 by a vote of six to five decided to accept without reservation the offer of Andrew Carnegie to give \$75,000 to Winnipeg for a free public library building.

Winnipeg, Manitoba, Can., Provincial L. (Rpt. — year ending Dec. 31, 1901.) Added 888; total 14,798. Receipts \$4250; expenses \$4365. The special feature of the report is its renewed emphasis upon the need of a new building.

"A hope was expressed last year that the government would have acted upon the recommendation of the library committee and the legislature upon the proposed new building for the library and museum. The construction of such a building will take nearly two years, and just what is to be done in the interim, is a problem somewhat difficult of solution. The rooms at present occupied by the library are urgently required for other congested departments."

Gifts and Bequests.

Mattapoisett, Mass. On Feb. 3 at a special town meeting George H. Purrington, Jr., of Mattapoisett, offered to give \$10,000 for the erection of a suitable library building. The offer was accepted, and a committee was appointed to report upon location and cost of site. The site will be furnished by the town.

Oconto, Wis. George Farnsworth, of Chicago, formerly of Oconto, has notified the common council of the latter city that he will present it with a \$15,000 building for a public library.

Pine Hill, N. Y. Henry Morton, president of Stevens Institute, has decided to erect a library building at Pine Hill, as a memorial to his wife, who died there last summer. A small public library, containing about 1000 v., has been maintained in the village for several years, largely through Dr. Morton's efforts.

Carnegie library gifts.

Amsterdam, N. Y. Feb. 9. \$25,000.

Bessemer, Pa. Feb. 20. \$30,000.

Chippewa Falls, Wis. Feb. 17. \$20,000.

Dillon, Mont. Jan. 26. \$7500.

Fond du Lac, Wis. Feb. 8. \$30,000. Accepted.

Grand Island, Neb. Feb. 7. \$20,000.

Kokomo, Ind. Feb. 28. \$25,000. Accepted.

Mitchell, S. D. Jan. 28. \$10,000. Accepted Feb. 10.

Peterboro (N. H.) Town L. Feb. 19. \$5000.

Pomona, Cal. Feb. 17. \$15,000.

Port Huron, Mich. Feb. 6. \$40,000. Accepted Feb. 10.

Pueblo, Colo. Feb. 14. \$60,000. Accepted.

Salina, Kan. Feb. 25. \$15,000.

Santa Ana, Tex. Feb. 3. \$15,000.

Smith's Falls, Can. Jan. 31. \$10,000.

Sparta, Wis. Feb. 12. \$10,000.

Watervliet, N. Y. Feb. 10. \$20,000.

Wilmington, O. Feb. 7. \$10,000.

Winfield, Can. Feb. 18. \$15,000.

Librarians.

EDWARDS, Miss Ella May, of the New York State Library School, 1894-95, formerly librarian of the Buffalo Historical Society, is now engaged in cataloging the Public Library of South Bend, Ind.

GARDNER, Miss Mary C., was on Feb. 1 elected librarian of the Helena (Mont.) Public Library, succeeding Frank C. Patten. Since Mr. Patten's resignation two years since Miss Gardner has served as acting librarian. She has been a member of the library staff for a number of years.

HENRY, W. E., librarian of the Indiana State Library, is about to publish in book form a compilation "Political platforms of the two dominant parties of Indiana, 1850-1900." The edition is to be small and privately printed.

JONGHAUS, Werner, librarian in charge of the 23d street department of the Y. M. C. A. Library of New York, died suddenly of pneumonia at his home in New York, on Feb. 20, 1902. Mr. Jonghaus was born in Germany in 1846, and since 1881 has been connected with the library of the New York Young Men's Christian Association. After the death of Mr. Poole, Mr. Jonghaus was acting librarian for some three years, and after the removal of the main library to its new quarters up town he remained as librarian in charge of the 23d street department.

PERRY, Miss Lucy Ware, Pratt Institute Library School, classes 1899, 1900, has been appointed librarian of the Brooks Memorial Library, Brattleboro, Vt.

POPE, Seth E., of the New York State Library School, 1900-1901, has been appointed reference assistant in the Watkinson Library, Hartford, Ct.

POOLE, Franklin O., assistant librarian of the Boston Athenæum, has been appointed assistant librarian of the Association of the Bar, of New York City. Mr. Poole has been connected with the Boston Athenæum since his graduation from Harvard, class of '95.

TYACKE, Miss Margaret, a graduate of the Boston University, who served an apprenticeship at the Public Library of Medford, Mass., has been elected librarian of the Walpole (Mass.) Public Library. For eight months of last year she was classifier and cataloger at the new Carnegie Library, at Fort Worth, Texas, and assisted at the opening of that library.

WELLMAN, Hiller Crowell, librarian of the Brookline (Mass.) Public Library, has been appointed librarian of the Springfield (Mass.) City Library, succeeding J. C. Dana. Mr. Wellman has been actively engaged in library work since his graduation from Harvard in the class of '94, and succeeded Charles Knowles Bolton as librarian of the Brookline library in April, 1898. He was assistant in the Boston Athenæum after leaving Harvard, and in January, 1897, was appointed to the then newly-created post of superintendent of branches of the Boston Public Library, which he gave up a year later to go to Brookline. His work in that field was most successful, and he has also effectively developed the Brookline Public Library, especially in the direction of school reference work. Mr. Wellman is a member of the American Library Association, and is now president of the Massachusetts Library Club, of which he was secretary from 1897 to 1899.

Cataloging and Classification.

BIRMINGHAM (Eng.) F. Ls., Reference Department. An index to the Shakespeare Memorial Library. Second part: English Shakespeariana. Birmingham, 1901. p. 53-165. sq. O.

Like its predecessor, this is an interesting and well-made index, remarkable in its exposition of the extent and variety of Shakespeare literature. Contents and analytical work is especially good.

The BOSTON P. L. *Bulletin* for February prints some interesting historical manuscripts, taken from its collection. Especially curious is the letter of William Little to Samuel Tilley of Sept. 29, 1901, regarding the case of an Indian "redeemed out of Goal" by payment of a sum which he was to serve out; and several declarations regarding the counterfeiting of paper money, by which it appears that the plates from which the counterfeits were struck were made "at Rhoad Island by the Ingraver who made the Government Plates, and therefore they were very good and exact."

The CINCINNATI (O.) P. L. issues two special classed reading lists in leaflet form, one on "History of architecture," by Mirzah G. Blair, the other on "History of literature," covering ancient literature, Chaldean and Egyptian, by Stella Virginia Seybold.

The KANSAS CITY (Mo.) P. L. *Quarterly* for January is mainly devoted to an author and title list of the Sociology division of the library, covering 32 pages. In a prefatory note we are informed that "Sociology is a Mephistophelian fish, whose tentacles embrace the whole system of abstract science"—rather a cryptic utterance, which is followed by an outline of the various "tentacles." The list is a closely-printed, short-title record, inverted titles being depended upon to give partial subject references. The workmanship is crude.

The NEW YORK P. L. *Bulletin* for February is mainly devoted to the record of Brooklyn civic and institutional documents. It prints seven checklists, recording publications relating to Brooklyn finance and commerce, churches, libraries, schools, clubs, charities, missions, etc., and hospitals.

NEWCASTLE-UPON-TYNE (Eng.) P. Ls. Catalogue of the books and tracts on pure mathematics in the Central Library, 1901. 4°, vi+50 p.

The catalog of a rich collection. About 1800 titles are listed, and in many cases the library has several copies of a book. There are no less than nine editions of Euclid printed before 1600, among them being the first Latin edition of 1482, the first Greek text of 1533, and the first English translation

of 1570. The Newcastle collection is probably larger than that of any American public library except Boston, where the Bowditch collection had exceptional advantages from gift and bequest.

The catalog is alphabetical by authors. Reference and loan books are listed separately. Anonymous works have alphabets of their own, and there is a list of addenda, so that there are five alphabets in the book. The alphabetizing differs from Cutter; L'Huile and La Grange come before Lachlan, Lagrange. The preface does not say why an author list was chosen. A closely classified arrangement with an author index is what one would expect, but this catalog does not even contain a subject index. The author arrangement is the more unexpected because Newcastle is one of the few English libraries that seemed to realize the importance of classification.

The SALEM (Mass.) P. L. *Bulletin* for February devotes its special reading list to "Decoration and ornament."

The SPRINGFIELD (Mass.) CITY L. has issued a set of "40 lists of interesting books," each list containing from 20 to 30 titles. The selection shows good taste and wide scope, and the lists are so printed that they may be used as call slips by checking the books desired. Among the subjects covered are Stories of travel in Africa, for boys; American colonial stories; Books everybody reads in youth; Cheering-up stories; Chemistry, engineering, building, etc.; books on cookery and household science; Electricity, telephone, telegraph, etc.; stories of French history; French novels; German novels; Pillow-smoothing books; Spanish and Italian novels; Thrillers, novels of surprising adventures.

U. S. DEPARTMENT OF AGRICULTURE L. Catalogue of the periodicals and other serial publications (exclusive of U. S. government publications) in the library; prep. under direction of Josephine A. Clark, librarian. Washington, Gov. Print. Office, 1901. 362 p. O.

A careful and well-printed list, giving data as to dates, place of publication, size, etc. There are frequent annotations.

FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress:

Adams, Myra Winchester (Polly, and other poems);
Bailey, Middlesex Alfred (Primary and intermediate arithmetic);
Baily, Rebecca Chalkley (Mabel Thornley);
Bowen, Littleton Purnell (A daughter of the covenant);
Boyden, Henry Paine (The beginnings of the Cincinnati Southern Railway);
Browne, Robert Henry (Abraham Lincoln and the men of his time);

Caffin, Charles Henry (Photography as a fine art);
 Coddington, Frederick Miron (As they did it; or, the first church of Warden);
 Cunningham, Francis Aloysius (The awakening);
 Farquharson, Agnes Crum (St. Nazarius);
 Fradenburgh, Oliver Perry (Twenty-five stepping stones toward Christ's kingdom);
 Garrison, Carl Louise (Manual and diagrams to accompany Metcalf's grammars);
 Gary, Frank Ephraim Herbert (Ober-Ammergau and the passion play);
 Hoyt, Louis Gilman (The practice in proceedings in the probate courts of New Hampshire);
 Jennings, John Ellis (A manual of ophthalmoscopy);
 Kingsley, Homer Hitchcock (The new era word book);
 Kirby, Ellwood Robert (Manual of surgery).

Bibliography.

The Bibliographer, published by Dodd, Mead & Co., makes its first appearance with the number for January. As the subtitle sets forth, it is "a journal of bibliography and rare book news," edited by Paul Leicester Ford. It will appear monthly, nine months of the year, the issues for July, August and September being omitted. The first number opens with a paper on "The Kelmescott style," by T. L. De Vinne, and includes reviews of "The first American edition of Wither's poems and Bacon's essays," by Wilberforce Eames, and "Donkin's military collections," by P. L. Ford. There are also bibliographical, antiquarian and book club notes by V. H. Paltsits, L. S. Livingstone and others, and the first instalment of a facsimile reproduction of Hariot's "Briefe and true report" of Virginia. The magazine is handsomely printed, and contains numerous facsimiles; it includes, in appendix, lists of rare books for sale by Dodd, Mead & Co.

CERAMICS. Huddilston, J. H. Lessons from Greek pottery; to which is added a bibliography of Greek ceramics. New York, Macmillan, 1902. 8°, net, \$1.25.

The bibliography is classed and annotated, those books and articles which the compiler has found most helpful being indicated by an asterisk.

CHILD STUDY. Wilson, Louis N. Bibliography of child study for the year 1900. (*In Pedagogical Seminary*, Dec., 1901, 8:515-537.)

An annotated bibliography followed by a subject index. 331 titles are included.

CHINA. Leavenworth, Charles S. The Arrow war with China. London, Sampson

Low, Marston & Co., Ltd., 1901. 14+232 p. 12°.

A classified bibliography of 7 pages is added.

GREEK LITERATURE. Capps, Edward. From Homer to Theocritus: a manual of Greek literature. New York, Charles Scribner's Sons, 1901. 9+476 p. 12°, net, \$1.50.

There is an 8-page classified and annotated bibliography of some importance.

The INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE *Bulletin*, fasc. 1-3, 1901, recently issued, is mainly devoted to a "Bibliographia bibliographica: répertoire annuel des travaux de bibliographie" for 1899. The record includes 504 entries. They are given in a classed (D. C.) order, with full entries printed in catalog card form, each entry being numbered continuously, this record being supplemented by a cumulative author index to the records of both 1898 and 1899, with reference to D. C. number and entry number.

KELMSCOTT PRESS PUBLICATIONS. Clarke Conwell, of the Elston Press, New Rochelle, N. Y., has issued a limited reprint of William Morris' essay on "The art and craft of printing," containing the short description of the Kelmescott Press by S. C. Cockerell, and the annotated list of Kelmescott publications. The original is now so rare that the publication of this reprint is distinctly welcome.

MASQUES AND PAGEANTS. Gregg, Walter Wilson. A list of masques, pageants, etc., supplementary to a "List of English plays." London, printed for the Bibliographical Society . . . February 1902 for 1901. 12+36+132 p. sq. O. pap.

Besides an essay in which Mr. Gregg has sought to supply an introduction to the study of dramatic bibliography, historical and technical, with appendices dealing with the antiquities of the subject, this volume, which supplements the "List of English plays" published by the Bibliographical Society in 1900, includes a list of masques, pageants, entertainments, shows, and all such nondescript pieces as can make any pretence to dramatic form. The two volumes together supply a survey of the whole of the English dramatic literature previous to the civil war, which has survived in prints of the 16th and 17th centuries.

MISSIONS. Beach, H. P. Missionary literature of the nineteenth century: character and uses of recent books on foreign missions. (*In Missionary Review of the World*, Feb. 1902, 25:81-90.)

Mr. Beach is the educational secretary of the Student Volunteer movement. He says he knows intimately 2000 missionary books and has a slight knowledge of an additional

3000. The article closes with a selected classified list of 200 missionary works, the author indicating those that are of reference value, those of especial interest to children, to women, etc.

PENNSYLVANIA REDEMPTIONERS. Geiser, Karl Frederick. *Redemptioners and indentured servants in the colony and commonwealth of Pennsylvania.* New Haven, Ct., The Tuttle, Morehouse & Taylor Co., [1901.] 128 p. 8°, \$1.50.

Contains a 6-page bibliography.

PSYCHOLOGY. Calkins, Mary Whiton. An introduction to psychology. New York, Macmillan Co., 1901. 15+509 p. 12°, net, \$2.

The 12-page classified bibliography is confined almost entirely to works published or republished since 1890.

REGENERATION (in biology.) Morgan, Thomas Hunt. *Regeneration.* (Columbia University biological series.) New York, Macmillan Co., 1901. 12+316 p. 8°, net, \$3.

Contains a bibliography, pages 293-310.

STEEL WORKS. Brearley, Harry. A bibliography of steel works analysis. Part 9: Copper. (*In Chemical News*, Feb. 14, 21, 1902, 85:77-79, 87-89.)

UTLEY, George B. Rare books of the Diocesan library. I.: Bibles. (*In Maryland Churchman*, Feb., 1902, 16:175-176.)

This is the first of a series of articles by the librarian of the Maryland Diocesan Library (often known as the Whittingham Memorial Library) on the rare books in his collection. Among the Bibles described in this article are the Latin Vulgate, St. Jerome's translation, printed at Nuremberg in 1478, and the Bible printed by R. Aitken in Philadelphia in 1781. An imperfect copy of the latter was sold to the Library of Congress in 1891 for \$650.

WESTMINSTER CONFESSION. Warfield, Benjamin B. The printing of the Westminster confession. II: In the United States. (*In Presbyterian and Reformed Review*, Jan., 1902, 13:60-120.)

The first part of this bibliography, noted in the November number of *L. J.*, was published in the October, 1901, number of the *Review*. It was limited to the editions of the confession printed in Britain. The same extended scholarly notes characterize this part. There are 88 editions noticed. Mr. Warfield thinks this list of American editions contains almost a complete set of the editions issued by the Presbyterian church in the United States of America, but only about half of the issues of the other churches.

INDEXES.

ENGINEERING INDEX, vol. 3, 1896-1900; ed. by Henry Harrison Sufler and J. H. Cuntz. New York, *Engineering Magazine*, 1901. 16+1030 p. 8°.

This volume contains nearly 40,000 entries, taken from about 200 sources. Volume 2 contained about 6000 entries, taken from 62 sources. As in the preceding volumes the index gives a short and concise, but adequate description of the article indexed.

INDEX TO RECITATIONS. A. C. McClurg & Co. announce that they are considering the publication of a comprehensive "Index to recitations, readings, and dialogues," to be published in one volume, at a price of from \$3 to \$4. It is intended to include probably 15,000 pieces, to be found in some 200 of the best collections, giving the references in an index to titles, an index to authors, and an index to first lines, and to adapt the work especially to library use. Its publication will depend upon the demand existing for such a work, and to determine this the publishers have sent out advance order blanks, requesting subscriptions. The need of such an index has been recently referred to by correspondents of the *LIBRARY JOURNAL*, and if carefully and compactly executed it should be of constant service in library and school work.

The **INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE** has issued a general cumulative index to its bulletin, vols. I. (1895-96)-4 (1899). In addition to the seven-page nonpareil index, there is a cumulative decimal index arranged by D. C. numbers, and an author list of contributed articles printed in catalog form and intended to be cut out and pasted on cards.

Anonymous and Pseudonyms.

The following are supplied by Catalogue Division, Library of Congress.

"Ariel," pseud. of Thomas Henry Kane. ("Planetary influences and human affairs.")

Clinton, Major, pseud. of Frank Clinton Culley. ("Barbara.")

Drum, Blossom, pseud. of Blossom Drum Oliphant. ("A dog-day journal.")

Ivry, pseud. for Fritz v. Briesen, tr. of Jones Barton Stay's "The mind telegraph."

Lake, Frederick, is the author of "Roulette at Monte Carlo."

L., B. H., see Lippincott, Bertha Horstmann. "Chevrons: a story of West Point."

Sharp, B. A., pseud. for Platon Gregoriewitch Brounoff. ("Stolen correspondence from the 'Dead letter office between musical celebrities.'")

W. H. G., see Wood, Miss H. G. "Living by the day; selections from the writings of Minot J. Savage, D.D., by H. G. W."

Hough, P. M., pseud. ("Dutch life in town and country.")

PLANS OF REPRESENTATIVE BOOK STACKS
MAILED ON RECEIPT OF POSTAGE—10 CTS.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 net.

Unmounted, on 24 sheets in portfolio. \$25 net.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.
New York Agency, 45 William Street.

HENRY MALKAN,

LIBRARY BULLETIN PICTURES

"Announcement is made by DOUBLEDAY, PAGE & Co. that they are arranging to print every month the best eight illustrations from each of their magazines,

THE WORLD'S WORK

AND

COUNTRY LIFE IN AMERICA

The plates are printed on beautiful and substantial paper, with the idea of their being used for bulletin boards, which are now regarded as essential in the work of every library.

"The 'COUNTRY LIFE IN AMERICA' pictures will follow the changes of the seasons, while the 'WORLD'S WORK' illustrations will more closely follow current events, with portraits of distinguished men and incidents of contemporaneous importance. Bulletins in every department of Public Libraries are now a permanent feature, and nothing could be more welcome than worthy pictures of current events, men of the times and nature studies. Various well-known collections provide copies of famous paintings, statues, buildings, historic scenes, and portraits of leaders of the past. But it remains for the publishers of a magazine of contemporary history to share with the libraries and their patrons pictures of history in its making, and also seasonable pictures to point the way to a closer observation of nature and a more careful reading of nature books."—*From N. Y. Times*.

POPULARITY OF RECENT NOVELS IN THE UNITED STATES

NOVELS MOST CALLED FOR AT PUBLIC LIBRARIES

Reports compiled in *The New York Journal*, March 8, 1902, from public libraries in twenty of the principal cities of the United States show, that in the list of thirty novels most called for, five of the titles (or one out of every six), are published by The Bowen-Merrill Company, viz.:

Lazarre. By Mary Hartwell Catherwood.

Alice of Old Vincennes. By Maurice Thompson.

My Lady Peggy Goes To Town. By Frances A. Mathews.

The Puppet Crown. By Harold MacGrath.

When Knighthood Was in Flower. By Charles Major.

The above statement is ample proof of the merit and popularity of these novels.

HAVE YOU A GOOD REPRESENTATION OF THEM

Andrew Carnegie, in the *New York Herald*, March 14, 1902, says: "Now, if I had my way, I would not think of robbing the seeker after books of his fiction."

HENRY MALKAN,

Library Department.

WE are furnishing books to a large number of the representative libraries located in every section of the country and are giving satisfaction in all our dealings as any of the librarians can testify. An essential qualification for the retention of this desirable class of trade is the ability to furnish books promptly and at the lowest rates, a faculty which we possess in a very marked degree as is amply attested by the significant fact that our library trade has increased four fold within the past twelve months. Our stock at present is larger and more diversified than ever before, and from it we have selected the following items to convey to librarians with whom we have had no dealings a faint idea of the prices at which we can furnish books.

BALZAC'S WORKS. 16 vols. Cloth. Introduction by G. O. SAINTSBURY.	\$32.00, net,	\$12 00

No. 4

SERVICE from the public library to the public school is, to a greater or less degree, an accepted fact. Theory and practice are still to be fitted together, and the most efficient working methods have not yet been fully tested; but the principle that one of the functions of the public library is to induce the use of books by the teachers and scholars of the public schools is no longer questioned. This granted, and granting also the practical and ingenious methods by which this use of books is being fostered by the public libraries—in their children's departments, their school work, school visits, special school lists, picture bulletins, and story-hours—it should be pointed out that after all the use of books is of less importance than the choice of books, and that the step that counts for most, in the public library's work with children and young people is not the provision of a great mass of juvenile literature, but the selection from that mass of what is the best and the most wholesome. Good work in this direction has been done in the publication of special lists, to which interesting additions have recently been made. But these should be simply stepping stones toward that knowledge of the books themselves that is a first essential in the work of the children's librarian or the librarian teacher.

WITH the increasing establishment of classroom libraries and school collections of books, for the use both of teachers and pupils, there comes the difficulty of securing the best use of books by the teacher. As Miss Moore has pointed out, public school teachers are heavily burdened with tasks and responsibilities, and most of them simply do not know how to make the use of books a help instead of an additional burden in their work. It will not be until the training of teachers includes drill in the use of books and an effort to impart at least a surface appreciation of the essentials and influence of good literature that the best kind of library work will be done through the medium of the schools.

There has been more than a beginning in this direction. Many of the normal schools give special instruction regarding books for children, in addition to the usual literature courses, and in New York there is systematic and organized work by the state literature inspector of the public schools. The public library can also be a potent factor toward this end, by work along the lines of the school visits described by Miss Moore, but especially by bringing teachers to the personal use and appreciation of the library's resources, and cultivating in every way possible the sense of the relationship and mutual dependence of these two instruments of public education.

THE statement of Mr. Peoples, chairman of the American Library Association committee on relations of libraries and the booktrade, gives hope that a readjustment of the library discount will be made by the American Publishers' Association. In the meantime, the resolutions passed at the Atlantic City meeting have been widely circulated among state and local library associations, and have received general endorsement. If this united protest is brought definitely before the Publishers' Association, with a cogent presentation of the facts upon which the libraries base their claim for better rates, it should and will, we have reason to believe, receive considerate and favorable attention.

Much of the library criticism has taken the form of statements that the prices of specific books have been scaled higher. This is a matter difficult to gauge, and is one over which the Publishers' Association has not assumed jurisdiction. But in the long run it is likely to adjust itself, for if publishers make mistakes of this sort they must expect to reap the result of limiting the sale of books that are too high priced. Libraries, especially the smaller ones, are confined, by their fiscal limitations, to a given sum for book purchases, and higher prices will necessarily mean fewer purchasers. 'Tis an ill wind that

blows no one good, and a more conservative buying policy, and a consequent decrease in the purchase of new books, recommended only by the publishers' imprint or the advance notices, would have manifold and manifest advantages. How far this will affect the volume of publications of books that are made only as "sellers" — new novels, new series, new manuals — depends of course upon how important a factor in the book market library purchases are, a question upon which librarians and publishers hold different opinions. But in any event a modified working policy is likely to have good results, for it will necessitate a more careful selection and a serious weighing of the claims of various elements in the library's constituency; while on the side of the public it will make evident the fact that the unlimited supply of new books, simply because they are new, is neither proper nor practicable for a public library. In this connection it is interesting to note that in at least one library a modification of Mr. Putnam's suggested rule for book purchases has for some time been in force. At the Brooklyn Public Library, for several months past, the rule has been that no book issued by an unknown author should be bought until it has been published at least six months. So far the rule has worked successfully, and there has been no evidence of public dissatisfaction.

WITH the passage of the bill providing for the consolidation of the Brooklyn Library and the Brooklyn Public Library there is assured a development of library interests in Brooklyn that should place that city in a few years on a level with the goodly number of other cities where the public library is a recognized factor in the municipal life. It is a curious illustration of the difficulties under which the library movement in Brooklyn has labored from its beginning that this consolidation has been effected only in the face of determined and persistent opposition. The opposition centered upon the feature of the bill that provides for the creation of a new library corporation, representing both the Brooklyn Library and the Brooklyn Public Library, with the power to fill vacancies in its membership. There is force in the argument that a public institution should be subject to the control of the taxpayers who support it; but in the present

case this argument is practically provided for. As Mayor Low has pointed out, representation is given on the library board to the mayor, controller and president of the borough, all expenditures come under the supervision of the city board of estimate, and the right to modify the library contract, or amend the act, remains with the city or state authorities. Continuity of administration is as advantageous in the building up of a library as it is in any business enterprise; and the freedom from changes of policy and from political influences that the new organization should ensure ought to count for a great deal in the development of the Brooklyn Public Library.

Communications.

THE NET PRICE QUESTION: STATEMENT FROM THE A. L. A. COMMITTEE.

I WISH to be conservative and not make any rash statements, but my intercourse with various publishers during the past few weeks leads me to think that the American Publishers' Association will accede to the demand of the libraries for a more liberal discount. I have strong assurances to this effect.

Our committee has been urging and pressing for an early meeting of the American Publishers' Association so that a decision may be had in time to report something definite to the Magnolia meeting of the A. L. A. This has been conceded, as is shown by the subjoined letter of Mr. Charles Scribner, the president of the American Publishers' Association.

The extent of the concession cannot be stated, but we hope to obtain a substantial increase over the present rate.

W. T. PEOPLES,
Chairman A. L. A. Committee on Relations to the Booktrade.

Mr. Scribner's letter is as follows:

NEW YORK, April 1, 1902.

DEAR MR. PEOPLES: According to my promise I send this letter before leaving. Mr. Dodd and I had a conference yesterday on the library question and were waited upon by a committee of librarians. We are agreed that some further concession in discount should be made, though as you know the question must be brought for action before the entire Association. While no date for a meeting has been fixed, I think it strongly probable that there will be a meeting in May, which would be before the annual meeting of your Association. More than that I could not say to-day. I shall be home about May 20th.

Yours sincerely,

(Signed) CHARLES SCRIBNER.

To W. T. Peoples, Esq.

LIBRARY VISITS TO PUBLIC SCHOOLS.

BY ANNIE CARROLL MOORE, *Children's Librarian, Pratt Institute Free Library.*

THE subject of co-operation between libraries and schools from the standpoint of the supply of books and methods of circulating them has been admirably presented from time to time by librarians who have been doing organized work with schools for many years. The object of this paper is to present the social side of a most desirable relationship by a partial record of personal experience in unorganized work with the elementary public schools of a large city.

During the very first month of work in the children's library of Pratt Institute the need for active human relations between the children's librarian and the teacher, the children of the library and the children of the school room was felt, and efforts, often spasmodic rather than systematic by reason of the conditions to be taken into account, have been made to bring this about. While gathering statistics of the number of schools represented by our clientele by means of a check list kept upon cards and arranged by school and grade, both of which facts are recorded on the application blank and in the children's register, we were endeavoring to make personal acquaintance with every teacher who visited the room, studying the public school reports, the location of the various school buildings, etc., and reading with interest the various records of public school and public library conditions in other cities.

There are about 130 public school buildings for the primary and grammar grades in the borough of Brooklyn, covering a very large area. Up to the time of the establishment of the Brooklyn Public Library, our own library, with its two branches (one since discontinued and the other transferred to the Brooklyn Public Library) and the Union for Christian Work (also transferred to the Brooklyn Public Library) were the only free libraries in the city. There was no seeking after library privileges except in the case of a very few individual teachers. The majority of the teachers in the elementary schools were not aware of the privileges afforded by the libraries mentioned. With facilities for

organized work it was and is a field of splendid prospects. We, however, were not prepared to supply school duplicates nor to send books to the schools. We were prepared to receive the teachers and the children at the library and to give them every possible means of assistance in connection with their school work as well as in their general reading. Our problem then was how to make this fact known in such a way as to make children and teachers really want to come.

We wrote letters of invitation to school principals and teachers, telling them that the library would be glad to lend assistance in various branches of the school work, particularly in the study of English, in nature study, history, geography, etc. The letters sent to school principals received a little more notice than a general circular. They were usually read at the opening exercises of the school, and were sometimes passed about among the teachers. The letters sent to individual teachers brought more satisfactory results. Many of them visited the library and procured application blanks for their classes and teachers' cards for themselves. The teacher's card entitles the holder to six books for school room use. The books may be kept one month.

We sent, and continue to send, notices of the exhibitions which are to be held in the art gallery of the library during the year. A great many teachers have responded to this invitation.

In order to get a better idea of actual conditions in the schools, and a better knowledge of the reading ability of the average child in a given grade, it was decided that the children's librarian should visit five representative schools noted upon our list. Out of the 130 schools 50 at least have been represented in our records.

The school visits began in the principal's office, where half a precious morning was sometimes spent before an opportunity of speaking to the chief functionary could be granted. The visitor was invariably treated with great politeness, the library was spoken of as "an important part of an admirable in-

stitution doing noble educational work," but there was no apparent desire on the school side for a union of forces. The request to visit certain classes was readily granted, and the principal frequently offered to conduct the visitor through the building. One such visit, at the very beginning of the work, filled her with great awe of the "system." The tour of the building was made in breathless haste, and there was no time for visits to the class room. We simply rushed through the rooms. How might one hope to penetrate walls of apparent impenetrability and really come to know the inmates? That even such a visit might have results was a great surprise, but was evidenced by the return of one of our old boys with several new ones, who were introduced after this fashion:

"These fellers here want to join. I told 'em about the lib'ry. I left my card here and forgot all about it. When I saw our principal chase you through our school yesterday I thought I'd like to belong again. I told the teacher you was from Pratt's, and she said she guessed she would come to the lib'ry some day. She's never seen it."

The visitor was usually introduced by the school principal to the head of the department, and by her to the grade teacher to whose class the visit was to be paid. The same grades were visited in each school and a very striking demonstration of the value of books, other than text-books and supplementary readers, in the primary grades was furnished by a comparison of the efforts of individual children and by the testimony of their teachers.

It had been requested that the regular school work should not be set aside on the occasion of these visits, and that an exercise in reading should be introduced at the close of the regular lesson when it did not form the subject of the lesson itself. We, therefore, listened to a great many interesting and uninteresting exercises; some remarkable feats were performed in the field of phonetics, by one of which a little boy, who read delightfully, was cured of saying "twistles" for "twirls," and promised, to my great regret, never to say "twistles" again. Among illuminating sentences for blackboard sight-reading the following seemed worthy of note: "There are many wild scenes in Africa," read a boy with lusty lungs. At the mention of

Africa several dull faces brightened. "Boys, what is a scene?" "Another kind of animal" seemed a very natural reply. "Boys, a scene is anything you can see. There are many of these wild in Africa." The class sank back into lethargy.

Lessons in drawing, sewing, singing and in physical exercises were observed, and after filling out a list of the requirements made upon the grade teacher we ceased to wonder that a letter or a proposition upon any subject, however closely allied to her own work, fails to produce more than a faint shade of interest on the teacher's part. What with the pressure of the closely crowded school curriculum, demanding semi-annual promotions, the lectures on psychology, pedagogy, art, nature study and other subjects recommended by the school board, and frequently with most exacting demands in her home life, the public school teacher of the conscientious type feels herself too heavily burdened to undertake what is bound to seem like another task if presented from the outside, even when presented in the light of a help. She must *feel* that it will help before she can commit herself to it.

From this introductory round of visits we gathered a good deal of practical information concerning the conditions under which public school work is done, and the various ways of doing it, as expressed by the personalities of the teachers as well as by the attitude of the children. We enlarged our circle of acquaintance very appreciably and found here and there a teacher with the book sense and the child sense so united that her work was an inspiration. We noted a decided gain in the readiness with which we were able to recommend books to the children of the grades visited. The reading ability of individual children in a grade varies greatly of course. I have frequently noted that a child will read and enjoy a book from the library which would be considered out of the range of his comprehension by his teacher. On the other hand, the library assistants may be so eager to swell the circulation of non-fiction that the children may be encouraged to take books from which they would get no enjoyment whatever.

A year later we used the various picture exhibitions—the animal exhibition, the hero exhibition, the spring exhibition, as occasions

for school visits. Supplied outwardly with lists, pictures, and two or three books, and inwardly with a neat little speech about the animal pictures the visitor presented herself at one of these same schools, feeling sure that this time she would be asked to say something to the children.

Vain hope. The principal received her with the most polite expressions of interest, and said he himself would take great pleasure in speaking of the exhibition at the opening exercises of the school, to which no invitation was extended. On her way down stairs the visitor, feeling very dubious about ever making what she considered successful school visits, was attracted by the strains of a violin. Looking through the stairway window she saw an old man, with the sunniest smile, standing in the midst of a room full of happy-faced children and drawing his bow across his fiddle as if he loved it and could not help it. Presently they all began to sing, quite naturally and spontaneously. One felt at once, even through dingy glass, that the relations were absolutely harmonious between the children, the teacher, and the old violin player.

A teacher who passed on the stairs was asked if the old man came often to the school.

"Oh, yes," she said, "he teaches the children music, and they look forward to his coming with the greatest delight." The incident, trivial though it may seem, was full of suggestion for the matter in hand. It was quite evident, if he had any other business, the old violin player had left it all behind when he came into the school room. He came to make music, and he played till the children wanted to sing. While we cannot hope to strike the same chord with library books and library privileges that is reached by a violin note, for the charm of music is more subtle than the charm of books, may we not hope to so master the technique of our subject as to be able to present its essence as the violin player presents his melody, rather than the exercises which have made more perfect melody possible? Books must seem to us like real life, and human experiences must seem like chapters from unwritten books.

There is a certain technique of library visits to schools which seems to me to consist in taking things exactly as one finds them, and adapting one's self so completely and cheerfully to the situation, whether it means sitting

in an office, standing in a passage way, rushing through class rooms, receiving polite but immediate dismissal, or having pleasant talks with children and teachers, as to make it seem the most natural experience in the world while it lasts, and to make it the basis for future experiences. Theories, methods, the habit of looking too early for results, and, above all, an aggressive or a too retiring personality, must be got rid of at any cost if we are to beget a love for books and win confidence and respect for our ways of giving them into the hands of those who want them, or who may be induced to want them. After having made a great many experimental visits and having at last received several invitations to speak to the children, a more definite plan of action for the school year 1900-1901 was carried out in two of the public schools in our neighborhood.

In accordance with this plan short lists of books, twelve in number, were prepared for eight different school grades, beginning with the third year in school and extending through the sixth school year.

These lists were presented in two forms, on catalog cards (i size) with the subject headings in red ink, and on a typewritten sheet divided by subject headings corresponding to those upon the cards, the two forms illustrating the card catalog and the printed finding-list.

The typewritten sheet was headed "Good Books for Boys and Girls in — Primary Grade," and was pasted in the center of a bulletin sheet $22\frac{1}{2} \times 28$ in. of dark green paper, with one picture of the children's room above and another below the typewritten sheet. The list upon cards was arranged at the sides of the central sheet with a small picture of the children's room below each row of cards. The heading "Pratt Institute Children's Library," with red initial letters, was placed at the top of the bulletin.

The bulletins were designed to illustrate talks to the children on the use of the library, not as model reading lists for the different grades.

It was suggested by the head of a department that it might facilitate matters to speak to four classes at once, about 200 children. She was quite willing, however, to yield to my preference to visit each class in its own class room, a plan which has very decided

advantages over that of addressing children *en masse* at morning exercises, affording as it does the opportunity to become a little acquainted with the class teacher, to observe in some measure the effect of her personality on her class, and, above all, that of meeting the children on their own ground, in a room they are used to.

How important a part atmospheric effort plays in the process of "getting at" children, it needs only a few visits to different school class rooms even under the same roof to determine.

The general outline for the talk, which was always informal, in the form of question and answer, and adapted to the ages or understanding of the children and the condition under which it was given, was as follows:

How many boys or girls have ever taken books from Pratt Institute Free Library? How many are now taking out books? Why did those of you who are not taking out books stop? After a show of hands, they were called upon one by one to state reasons. Some of the reasons called for explanation on the part of the visitor. Many children had lost their cards and did not know how to get new ones, others had moved away for a time and had come back into the neighborhood again, but supposed their library connection was severed forever. Several children had given up taking out books because they said they had to study, and to these we must explain how the library may be made a means of help in school work. "Got tired of reading," "No time for reading," were very common reasons; "Owe fines," less often stated, but very often the real reason. "Too cold" or "too warm," "moved too far," "eyes hurt," "German school," "music lessons," and many children who had *forgotten* all about taking books. The latter swarmed back to the library to take up their cards again.

In presenting the bulletin to the children they were told that the pictures represented different parts of the children's library. Very often a child who was familiar with the library enjoyed telling about it. The cards for the reading list were explained part by part, beginning with the subject heading as indicating the kind of book; the author's name as telling who wrote the book; the title as giving the name of the book itself, and the class and

book number as showing the arrangement of the books on the shelves. An illustration which seemed to make quite clear the distinction between subject and title was afforded by the particular school grade and an individual boy or girl usually known to me by name. Every book has a name just as every boy has a name, and if a boy wanted to get "Red mustang" at the library he would not be likely to get it if he simply asked for a book about Indians—he might be given the "Hiawatha primer." This proved an interesting point in several classes, and there have been many evidences of greater familiarity with book titles on the part of the children of those classes.

Another question which was productive of interesting replies when asked at the proper psychological moment was, How do you know what book to take home with you from the library? "Look at the pictures," "Read the headings of chapters," "Ask the lady at the desk," "Look at the tins" (shelf labels), "Know what kind of a book I want and ask the lady who knows all the books for that kind," "Somebody says it's nice" (very common experience with girls), "Read in the beginning, middle and end."

How many of you have ever taken books to help you in writing compositions or in history or nature study lessons? In every class in the grammar grades a fair number had taken books with this object in mind, sometimes finding help, very often failing to find it. A small tray of cards taken from the subject catalog was used to illustrate the variety of subjects to be found in books. The boys were immensely interested in a discussion of subjects, and many of them gave up their recess time to ask questions. It was much more difficult to get response from the girls, especially in the higher grades, the range of subjects with which they seem to be familiar is so very limited. In the primary grades the girls were decidedly freer and more spontaneous, and when called upon to describe the children's room showed excellent powers of observation. The attention of the younger children was especially called to the careful handling of books at the library, putting them back in the right places on the shelves with the backs out.

Five or six books were usually taken along

to show the arrangement on the shelves, the position of the number on the back, where to look for the author's name, the title and the index, if there was one. These books were usually selected with an eye to the teacher's interest, as being particularly suitable for reading aloud or for use in connection with special work for the grade.

At the conclusion of the talk, which was very much modified for each class, occupying in time from 10 to 20 minutes, opportunity was given to all children who had never taken books to sign applications then and there. The application form was read and explained by the visitor.

The bulletin was left in the class room for which it was intended, and was allowed to remain for one month. At the end of a month a second visit was paid in order to find out whether the bulletin had been of practical use. The twelve book titles were read off one by one, and the children were asked how many had read each one or had tried to get the book at the library. The results do not go to show that as reading lists the bulletins were successful. They were more so in the case of the boys than in the case of the girls, but in order to test them as reading lists it would be necessary to send the books with the bulletins to the schools.

Many of the teachers delivered up the bulletins with real regret, "because they looked so ornamental" rather than because they had found them distinctly useful and helpful.

During the second visit the children in each class were given an opportunity to mention a favorite book. All who wished to do this, and in all classes, except the higher classes of girls, both boys and girls were eager to mention books, raised their hands and were called upon in turn. The results, to such an extent as seemed practicable, were noted for future reference, and some very unique graded lists might be made from them, preferences for "Ben Hur," "Fighting dogs," "Tale of two cities," "Little lame prince," and "Bessie on her travels," all existing in one class of girls. It is, of course, quite often the case that a child mentions a book he has just read, or a book mentioned by a friend whose opinion is well regarded rather than the book he actually prefers, or he may have no decided preference. In order to get at decided preferences or to lead children to form

preferences, it is quite necessary to talk with them familiarly about the books. They were frequently asked who wrote the books they mentioned and to tell a little of the story. I also asked them about different characters in the books. Who was Robin Hood? One boy confused his identity with that of Robinson Crusoe, another promptly responded, "He was a first-class bow and arrow shot." I sometimes read aloud from one of the books I had brought, and at others told anecdotes of authors.

In the first school visited, many of the children came from homes where books were talked about, and seemed in consequence much less dominated by the teacher's attitude toward books and reading.

In the second school very few of the children had books at home, and the personal influence and interest of the teacher was very marked. One of the teachers who conducts a class in connection with the New York City History Club, had a travelling library of 100 volumes in her class room. This teacher told me she never recommended a book to a boy which she had not first read herself. She reads aloud five or 10 minutes at every session, and has read several of Henty's books, skipping the parts the boys usually read and reading the parts they are in the habit of skipping.

The results of these school visits have been manifest in an increase in the circulation of books and in membership, in the return of large numbers of former users of the library, and notably in a very much more intelligent use of the children's library on the part of children and of teachers. Interest in the room itself, in the pictures and bulletins, the catalogs and lists, the care of the books, etc., has been greatly stimulated and in some cases has been created.

Social relations have been vitalized, the desirability of self-expression along new lines, as exemplified in talking about the books one likes with somebody else who likes them, has been suggested to many children and to some teachers. Teachers who would never have visited the library except by personal invitation have come and have brought friends from time to time, and teachers who had never thought of studying in the library itself have become devoted patrons of the reference department. Best of all, the strange and rather

strained feeling of establishing a relationship has quite worn itself away, and we are conscious of a warm welcome whenever it is possible to claim it from the schools already visited, and from other schools whose principals or teachers have expressed a desire to receive visits.

Though full of interest and not altogether lacking in a certain spice of adventure, no kind of library work I have yet undertaken has proved so exhausting mentally and physically as public school visiting. If half a day is given to this work the remaining half should be spent in doing the easiest kind of work possible.

One should never start out on a round of visits unless she is able to command any situation which may be presented.

It is far better to break a statistical record

of visits paid than to be conscious of a moral record of visits which never should have been paid. It is true that teachers often have to teach when they are manifestly unequal physically or mentally to the task; but that is all the stronger reason why the occasional visitor should never bring less than a healthy effect to the school room.

She must be able to command her resources; therefore, she needs time to read the books the children are reading, and those they ought to read; she needs time to study the curriculum which the teacher must follow out; and she needs time to enable her to give such expression to her interpretation of the place of the children's library and its librarian in the larger educational scheme as shall make her work practical, vital and inspiring.

SCHOOL AND LIBRARY.*

BY J. H. HILL, *State Normal School, Emporia, Kan.*

I HAVE interpreted the theme here suggested to mean the relation of the public library to the public school and the purpose of the discussion to grow out of it to be the suggestion of the best methods of co-operation for these two educational agencies, so as to secure the common end which they have or ought to have in view, the enlargement and enrichment of the community life.

First, in the study of this subject let me say that I am not particularly concerned as to the organic relation of the public library and the public school. They are both community interests. They are both educational agencies. Each is managed by people who as a class are doing the work the community sets them to do with high ideals of consecration for helpful service. Each has its specific field, yet each can help the other in furthering the ends for which both are organized; but that the question of the form of organization is a matter of secondary importance to be worked out according to the traditions, the local circumstances and the special needs of each community is well illustrated by the fact that in the two great cities of this commonwealth of Missouri admirable results are being secured in the line of

co-operation of school and library, in the one with the two organically united, in the other with entire independence so far as the governing bodies are concerned. The question then resolves itself into a matter of personal co-operation. Understanding between teacher and librarian, understanding of the possibilities of mutual helpfulness, harmony of aims and methods, appreciation of each other and each other's work, it is through these that the ideal relationships are to be wrought out and ideal results secured.

Mr. Dana in his report at Waukesha last summer for the committee on co-operation with the National Educational Association, while making honorable exceptions of leaders in the educational field, complained that the teaching profession as a whole is not fully alive to the possibilities of the library as an agency co-operating with the public school. While some facts that he presented gave strong color to his assertions, I was inclined to feel that on the whole, Mr. Dana was a little pessimistic and that while to one who sees clearly the modern library movement and its possibilities, some degree of impatience is pardonable because those possibilities are not fully and immediately grasped, the attitude of the teaching body in general toward that movement is most hopeful, so

* Read before Missouri Library Association, Kansas City, Oct. 25, 1901.

far as they know about it. The facts are that librarianship as a profession is itself so recent a thing, that uniform methods of classification, systems of card cataloging on a scientific basis, and all the other means by which the library has been made available for use, something more than a mere collection of books, have been advance strides so bewildering and taken so rapidly that it is little wonder that their full significance is not yet fully appreciated save by the few whose work brings them constantly in contact with large collections of books. The library method, as a method of instruction, is but now working its way downward from the universities into the common schools. We, who are teachers, are just beginning to realize the possibilities of the library as a laboratory, but we *are* beginning to realize them; and once realized even in part, the strides in the direction of the use of the library by the school may be just as rapid and bewildering.

The point that I am trying to make is that there is no particular essential contention as to which is the farther reaching or the more important educational agency. Both belong to the community. The efficiency of the library for the future depends very largely upon what it can do for the children of today, and the school is an inadequate educational agency if it does not lay the foundations, if it does not develop the taste and interest for that after-school education so hopefully characteristic of our time—education represented by the club, the Chautauqua circle, the university extension lecture and the multitudinous other impulses toward self culture of which the library is the very center and the source of power. The library then enlarges the possibilities of the school. The school—or its equivalent—is necessarily antecedent to the library.

The common school as the means of popular education has been the glory and the boast of this civilization of ours. We are just beginning to realize that there must be for this people an intellectual life that projects itself into the years of maturity; if we are to be well governed and well ordered socially and morally, an intellectual life that is something more than the scanning of the daily newspaper or the street corner or street car discussion of the issues of the last political caucus. For such an intellectual life, the

library of the future is to be the institutional center. From this point of view, the library, with the art museum and other related agencies, as a community force, with the growing complexity of our civilization has possibilities that were they not so full of inspiration might well evoke from those who are engaged in that form of service the cry: "Who is sufficient for these things?"

That something of this ideal has been in the minds of the educational workers and the social reformers who have been face to face with the problems of city life, of the librarians and those who have founded the great popular libraries and art institutes is apparent; yet the school as an organized institution taken as a matter of course reaches practically every part of the community; the library as a popular educator will never realize its full mission till popular sentiment accords it, and its organization enables it to reach, a field co-extensive with the school. Hence the special importance both to school and library of practical plans for co-operation along the lines in which their work can touch. Naturally, so far as such plans have already been evolved, the best results have been the outgrowth of the experience of the superintendents, teachers and librarians who have been at work in the larger communities. They doubtless see much more that can be done, but there are communities, and communities too with good schools and efficient teachers, where practically nothing is being done at all.

Ideal co-operation between school and library is just as attainable where both are side by side in the smaller community as it is with the resources of the great library and the machinery of the great school system in the larger one. Put a genuine book lover in the school room and a genuine lover of children in the library and there need be no trouble about it.

Just here, that expression "a genuine book lover" tempts me to this digression. We may consider the library from the point of view of an instrument of study and thus as an aid to the school, a place for reference, for the collection of information, for the comparison and weighing of authorities, but more important, from my point of view, is the library as the place where the children may in some sense enter into the intellectual life, cultivate

the genuine reading habit, learn the delights of the companionship of books, be introduced to the great thinkers of the ages and live with them the ideal life of beauty and of power. This cannot altogether be taught, but it must be felt; and only he who has felt and knows and loves the companionship of books can be to others in the world of books an inspiration and a guide.

The danger in the schools is from the mechanical teacher and from the mechanical processes. On the other hand from the side of the library there is a danger. The value of the reading habit is not to be measured by the number of books that we read, and there is a sense in which access to a great library with the very bewilderment of its treasures is to some, so far as the development of the real intellectual life is concerned, a genuine misfortune. The craze for new books, for books about books, the temptation to let the ideal standard be "What do people call for?" make the great library to many a means of literary dissipation rather than a source of strength. The adult constituency of such a place is often perhaps too far gone to do other than let it have what it calls for, but for the children, the joint work of the appreciative teacher and the appreciative and discriminating librarian ought to be to introduce them to the lofty companionship of the great world thinkers, the few rather than the many, the best rather than the good. Such an end can be attained wherever a few books, a few children, a librarian, a teacher can be gathered together.

In the line of specific suggestion let me say:

1. Every community library should have at least its nook or corner, and, if possible, its room—specifically designated as the children's reading room. Where the library is as yet a subscription library, a special children's ticket is desirable.

2. Emerson said a generation ago: "The printing press daily brings a university to the poor man's door in the newsboy's basket." He was mistaken about the daily newspaper as a real university, but he might have said that about the printing press had he foreseen the travelling library. Now the travelling library idea is feasible in every town that has half a dozen school houses (or perhaps we may better say half a dozen school teachers), in the distribution from the library as a cen-

ter, through responsible agencies, of selected and appropriate books to the grades.

3. Teachers may adjust their courses of study and their reading suggestions definitely to material that is accessible in the public library; librarians may advertise in schools what books are on the shelves for certain parts of the course, and may bulletin in schools literature bearing on school work.

4. Librarians may invite teachers to bring classes to the library for reading and research; teachers may invite librarians to join in patrons' meetings held by the schools and to give library talks to parents as well as to teachers and children.

5. This co-operation in making material accessible and in bringing library and school together must always be reinforced by individual interest in the individual child. It is after all the mind that touches it that makes the book vital. It is the child we are after. The true librarian as well as the true teacher is a worker not alone with books but with boys and girls, with men and women.

There has been growing in my mind an ideal of what I would like to see, and what I am visionary enough to believe some of us here may yet see, widespread in the villages and rural communities.

The philanthropic impulse that Mr. Carnegie has given to the brick and mortar side of the library movement has made it a possibility that we shall soon see in every city large or small, either through public taxation, local philanthropic enterprise or the munificence of wealth, well housed and endowed, with adequate attendance, a respectable public library equipped for the carrying forward of these ideal ends for which the library stands as a community force. Why not an ideal for the village and the rural community, not of the school house which is a matter of course everywhere, but of the public building which, at twice the cost perhaps, shall in the country include under one roof its school room, its hall or place of public meeting, its reading room and library, an institutional and social center for the school district, a combination of educational forces that in rural and village life would work a marvellous transformation?

For such an ideal possibility in community life, however the form of its realization may be modified, to my mind the library movement stands.

STORY-TELLING, READING ALOUD AND OTHER SPECIAL FEATURES OF WORK IN CHILDREN'S ROOMS.*

BY ELIZABETH PORTER CLARKE, *Reference Librarian, Evanston (Ill.) Public Library.*

WHAT a potent influence the telling of stories has ever possessed over mankind for good or evil! From the days when blind old Homer told his tales of love and war, and the wanderings of Ulysses over the wine-dark seas to the Saturday morning story-hour and the group of eager children clustered around their librarian as she repeats the same old story, ever new—the charm has never failed. And how helpful this influence has been in arousing an interest in history and travel, and in drawing the child into those delightful realms of mythology, poetry and romance into which his feet might otherwise have never strayed, enthusiastic reports from all over the country give their testimony. There seems not one dissenting voice—in every place where story-telling and reading aloud have been tried, the results have been the same, and many a child has been led up to the "Idylls of the King," and the "Vision of Sir Launfal" by a simple recital of the tale of the "Knights of the Round Table," or has developed a taste for nature study from a few talks on the habits of birds and animals.

The pioneer in this work is Miss Hewins, of Hartford, who for twenty years has read aloud on Saturday mornings to a club of young people. For the last three years she has also given vacation book-talks, in her office, to the school children. "Indians," "The north pole," "Wonderful adventures," "Animals and out-of-doors," "Fairy tales old and new" are some of the fascinating subjects presented.

Miss Hewins writes: "What children need most is a wider knowledge of books. The children's range is very limited and they have no power of comparison or discrimination. A children's room can easily have a book-talk every week, if it has the right kind of a librarian. It is of the greatest importance that she should know both grown-up books and children's books and should be able to seize upon whatever she finds in her reading that children would like and assimilate."

Probably the library in which story-telling is carried out most systematically is the Carnegie Library of Pittsburgh, Pa. There are six children's rooms in this library and its branches. Once every week a story-hour is held in all the rooms at once, and the books from which the story is taken are brought together for circulation. The result has been a great increase in the attendance of the children and the circulation of the books. Each group is limited to 30 and many have to be turned away for lack of room. Last winter an interesting course of stories from Homer was given. For this the librarians in charge were prepared by a course of seven lectures on Homer. These lectures were designed solely to arouse a literary interest in the Homeric epics and serve as an inspiration, the story-tellers later adapting the stories to the capacity of the children. Stories from Greek mythology and Homer were placed on special "story hour" shelves and circulated 2051 times, and the story-hour attendance from November to April was over 5000. A charming picture bulletin, composed of the colored plates illustrating Church's "Story of the Iliad" and "Story of the Odyssey" was made by Miss Wallace, and exhibited in each of the children's rooms in turn, adding much to the pleasure and interest in the subject.

In the Pratt Institute Free Library work along these lines has been carried on in the evenings, when the room is filled with children, many of whom are employed in the daytime. The students of the library school have had this work in charge, and many delightful evenings have been planned and carried out by them for the children's entertainment and profit. "Rhine legends," "Burroughs and the birds," and "Norse myths" are some of the subjects presented, always well illustrated by books and pictures, and the interest created has been proved by the subsequent demand for the books. Some of our less familiar children's books, as the "Franconia stories" and the "William Henry letters," have been introduced to the children by brief extracts read aloud, and a liking for poetry has been created in the same way.

* Report prepared for Club of Children's Librarians, for presentation at Waukesha Conference of American Library Association, July, 1901.

In the Buffalo children's room stories are read aloud from eleven to twelve every Saturday morning during the winter. Reading aloud is also a feature of the work in the branch libraries at Cleveland.

At Cedar Rapids, Iowa, there is a story-hour every Wednesday evening, primarily for the boys. The librarian reads aloud for one half-hour, and short stories, and talks on travel and current topics take the rest of the time.

At Oak Park, Miss Lyman, like Miss Hewins, gives talks on summer afternoons on groups of books, as for instance "Stories in verse" illustrated by "Paul Revere's ride," Browning's "Pied piper"; "Arctic exploration," De Kane, Nansen, etc.—"with the direct purpose not of entertaining but of suggesting books not much used but full of interest when once begun." This has been carried on, though not regularly, through the winter.

In many of the smaller libraries, as Menasha and Oshkosh, Wis., and Champaign, Ill., story-telling and reading aloud have been tried with gratifying results. Indeed, this work seems more practicable in a small children's room than a larger one.

Miss Dousman, of Milwaukee, reports reading aloud *after* library hours, and I am inclined to agree with her opinion that a large library should provide a place for lectures, story-telling, etc., outside of the children's room. In a large, crowded room where circulating department and reading room are all in one, it must be difficult to attain the needed quiet and extra help necessary to a story-hour without interrupting the regular work. A club room or study room for those who came to do reference work might solve the difficulty, and often volunteers from the women's club would gladly come in to assist in this work.

A valuable suggestion comes from Miss Elliott of Marinette, Wis. She writes "Not having room in the library, the teachers have been asked to read aloud to the children each week on special topics, which many have done. Result—largely increased attendance, and interest in the books read from."

Other features of children's work reported from many libraries include illustrated lectures and talks, clubs, games, etc. One of the most successful boys' clubs is at Men-

asha, Wis., which numbers 78 members. Their pledge somewhat resembles that of the Library League—"To read the library books and be quiet in the reading room. To learn something new to tell the club every week." This is certainly admirable for its simplicity and spirit. Military drill is a feature of the exercises, followed by music and a story read or recited. Bad conduct results in suspension and this has had an excellent effect on the behavior of the boys in the library.

At Chippewa Falls, Wis., there is a girls' club whose members are pledged to help the librarian in every possible way. Their principal work has been that of making the reading room attractive, bringing fresh flowers daily and providing pictures for the walls and bulletin board. The Cedar Rapids library owns a hand printing press on which the boys print the library bulletins. At Providence a dark room is provided for photographers, and they exhibit in the children's room all original work in electricity, etc., having had, in the last few months, two hand-made cameras, two telegraph machines, an induction coil and a motor.

Quiet games are allowed in some children's rooms and the use of a microscope has been suggested. The advisability of the introduction of amusements of various kinds to attract children to the library seems to be a debatable point. Whether games and amusements pure and simple do not belong more properly to the Y. M. C. A. and how far they should be introduced into a public library is a question. Perhaps it is as well that a gymnasium should be attached to the library in which the children may work off their animal spirits, and prevent them from turning the library into a gymnasium, as seems their inclination at times. If this is the case, the librarian will be careful to prevent its location *over* the reading room.

Where there are suitable rooms, splendid work may certainly be done for our boys and girls in encouraging a taste for science and the arts, and in the formation of study clubs.

Much has been done even under the most discouraging conditions. And with new libraries, with fine equipments of children's rooms and club rooms springing up all over the land, next year's report will undoubtedly make a much larger showing along these lines of work.

PICTURE BULLETINS IN THE CHILDREN'S LIBRARY.*

BY MARY E. ROOT, *Children's Librarian, Providence (R. I.) Public Library*; and ADELAIDE B. MALTBY, *Children's Librarian, Buffalo (N. Y.) Public Library*.

THERE has been a rather marked difference in activity between the eastern and western libraries on this subject of picture work, we of the east seeming more conservative, somewhat prone on the whole, because there is not time for elaborate work, to doubt its practical usefulness. The questions upon which this report is based were sent out in a circular letter to different libraries. These questions with their answers may be considered in order:

Question 1. If you make picture bulletins in your library, what is your object in so doing?

To supplement school work, advertise the books, stimulate non-fiction reading and celebrate anniversaries are the four answers which the majority give.

There is no question but bulletins made for school helps are useful, help teacher, pupil and library; but we are all studying to do away with suggestions of a school atmosphere in our rooms, as far as possible, so, primarily, these bulletins should give pleasure. They offer a strong point of contact between the children and the librarian, and if too strongly labelled with "school work," do we not rob the child of the one place where he could have the indescribable charm of learning what his natural tastes prompt him to acquire? It is easy enough in our libraries to teach without calling it teaching. Again, a bulletin to "advertise our books," especially new ones, seems misdirected energy, as the new books are always eagerly sought and there is often need of checking in some way the desire for the new just because it is new. If the books to which the attention is directed by the bulletins enlarge the child's experience, well and good, but we do not need to post a bulletin merely to circulate the books or with the feeling of advertisement in any sense of the word.

Question 2. Are these bulletins used only to illustrate books owned by the library or are they general, commemorating anniversaries, etc.?

The majority of bulletins seem of the most general character—book bulletins, illustrations of school work, holidays and anniversaries especially dear to childhood. Miss Putnam, of the library at Los Angeles, offers a most serviceable suggestion in her guide to the books in the children's room: "This is composed of pictures, each representing a book, clipped from the publisher's catalogs, each author kept separate, mounted on large sheets of tagboard, and when the author's picture, call number, criticism of books are added, the sheets are kept on the tables for the children's use." At Detroit there is constantly on the walls a bulletin board about 28 x 32 in. covered with dark green burlap, on which are placed lists of books, pictures of their authors, illustrations, current events, public affairs, etc., not of sufficient interest to demand a separate bulletin. Some change is made in this every week, keeping two lists of books, taking down one and moving the other as a fresh list is added.

Question 3. Of what material and by whom are your bulletins made?

The best material is classified clippings and pictures from duplicate magazines and illustrated papers. Braun & Cie photographs, Perry prints, bird portraits from Chapman's "Bird manual," and from *Birds and All Nature*, Fitzroy prints and Perkins' Mother Goose pictures can also be used to advantage. Card board can be obtained at slight cost, in some cities at \$4.20 per hundred. Pulp board, book cover paper and charcoal paper, all can be utilized for this purpose. Where the book cases are low enough to admit of it, red denim stretched above the top of the cases makes an effective background for the bulletins. Where the cases are five feet in height this is not practicable, as the pictures must be opposite the eyes of our small readers.

* Report prepared for Club of Children's Librarians, for presentation at Waukesha Conference of American Library Association, July, 1901.

In the Providence Public Library an excellent substitute for this is in the shape of a six-panelled mahogany bulletin surrounding the large circular pillar in the center of the room. The mahogany serves as an excellent frame to the panel and the many sides offer opportunities for a series of bulletins on a given subject, each simple in itself and conveying one idea to the child, which seems far preferable to us than trying to crowd all on one bulletin.

Other libraries use a stationary framework across the tables, with glass each side, so that pictures may be slipped in between.

At Minneapolis Public Library an interesting experiment was tried with success by Mrs. Ellison. Arrangements were made with the Director of Drawing to have the pupils furnish the picture bulletins, Mrs. Ellison furnishing the subjects and doing the reference work.

The making of bulletins in most cases devolves on the children's librarian, but we hear from several libraries where different members of the staff take their turn, all showing a keen interest in gathering material.

Questions 4 and 5. Do you have more than one bulletin at a time? Have you noticed any poor results from exhibiting more than one at a time?

The returns as to this point were not all that had been hoped. Two bulletins seem to be an accepted number, but more than that a question. We do not desire to confuse our children, or to detract in value from a bulletin when once posted, and most certainly not to cheapen our rooms; but if the standard is held high in each case, the number would not matter. Take for instance a hero bulletin. Here is a wealth of material which overwhelms us, and even when we have selected with the utmost thought our heroes and placed them side by side, we realize we have more or less of a jumble and have not told our story simply enough. Some division is absolutely necessary. We saw a bulletin on this subject grouped under three excellent heads: When all the world was young; In the glorious days of chivalry; Heroes of modern times. We should like to adopt this suggestion, but instead of one, offer three bulletins, as a safeguard against confusion.

Question 6. Can you show by citing cases that this picture work is of sufficient practical use to the children to pay for time and money spent?

One library—and this is an eastern one—gives us an encouraging, inspiring reply: "Case after case, actually hundreds of letters from teachers thanking us for the work." A general summary of reports from all the libraries shows an increased demand for the books on the subject posted. The perfectly evident pleasure of the little ones in the mere looking, to say nothing of their joy in telling at one time or another something they have seen before, shows with what keenness they observe. At the Buffalo Public Library there have been on exhibition some excellent silhouette pictures made by cutting figures, trees, etc., from black paper and pasting them on white backgrounds. "The pied piper" was one subject illustrated. To appreciate this it should be understood that the figure of the piper and of each little rat, some not more than a half inch high, were cut with scissors, without any drawing whatever. These were labelled "Scissors pictures. Can you make them?" When they had been up a week, one of the boys, 14 years old, brought in four, one of which was better in composition than any of those exhibited. This was posted as showing what one boy had done, and this boy is studying drawing and designing this summer, with good promise. Another library cites a case in relation to school work, where the superintendent of schools offered rewards in each school of five of Landseer's pictures for the best five compositions on Landseer and his work. A collection of his pictures was gathered, a bulletin made with lists, which at once attracted the boys and girls, set many earnestly to work who would not otherwise have given it much thought, and finally received the hearty commendation of the superintendent. Miss Clarke, of Evanston, says: "We have no children's room, and have not done enough of bulletin work to be able to speak very surely of results." Yet she can give us this, which speaks for itself: "An Indian exhibit which we gave, where among the Indian curios and Navajo blankets I had all our books on Indian life and customs and our best Indian stories displayed, aroused a great demand for the books. I kept the list of Indian books

and stories posted for some months, and it was worn out and had to be replaced by a new copy, owing to its constant use. Our boys at that time really read a great deal of good literature on the subject, including Mrs. Custer's books and those by Grinnell and Lummis." These are but a few of the many interesting illustrations, yet we all know there is a great part of our work of which we can see no results, but if these bulletins beautify the room, offer some new thought to the child and give pleasure, then the time and work spent on them is a small factor, and even in that we are the gainers, as we unconsciously acquire in the making of these bulletins much general information, and an ability to present subjects in their relative value to each other which is invaluable.

Question 7. Are these bulletins allowed to circulate?

In most cases, no. Several libraries allow them to go to schools and a few make duplicates for both library and school, and in Indianapolis the bulletins are sent to other libraries in the state. This should prove very helpful to small libraries which are open but a few hours in the week. The bulletins may wear out, but a bulletin once planned, three-quarters of the work is accomplished, and it is little labor to make the duplicate one.

Question 8. Please describe the exhibit which has proved of the greatest interest in the past year.

We wish that time and space would allow a repetition of all the replies to this question. Miss Hewins says: "The exhibit which has proved of the greatest interest is on Queen Victoria. Within an hour after we heard the news of her death we had the bulletin for her last birthday and 40 portraits of her on our walls. I made one bulletin on her for the children out at Settlement Branch, and gave them a little talk about her. In this bulletin there were pictures of the dolls' house and toys that she gave the nation, and I told the children how careful she must have been of them to be able to keep them so many years, and something about how careful she was taught to be also of her spending money, and that even although she was a princess and lived in a palace, she never could buy anything until she had the money to pay for it. I made a Stevenson bulletin for them on his

birthday, and we had Stevenson songs and a talk about him and his childhood, his loveliness, courage and cheerfulness." At Buffalo the most popular exhibit was one illustrating the changes of the last century, taking the post-office methods, transportation of all kinds, *i.e.*, carriages, boats, railroads, electricity in all its uses and those which could be appreciated by the children—guns, life-saving methods, diving, etc. In each instance an old and a new type was shown. The children swarmed around the boards every day for the two months it was up, one of the pages who was interested in numbers having counted 60 an hour. Nature exhibits are always popular with the children. "Our own birds" was the title of a bird-day bulletin at Evanston. A green poster board, on which were tied bunches of pussy-willows, among whose twigs were perched some of the common birds around Evanston, was used. The plates used were the nature study bird plates, brightly colored, which were cut out and pasted on the board in such a way that the effect was very lifelike. Much the same idea was carried out in Providence, only in this library the title is "Procession of the birds and flowers," each bird being added as it arrives. At the same time in the class room adjoining this library there was an exhibit of 150 photographs called "Joy in springtime," all being charming pictures of flowers, birds and happy children, with appropriate selections of poetry affixed. The long windows were hung with transparencies, a framework being built in which to slide the transparencies, that they may be changed from time to time. Invitations were sent to all the schools, and the exhibit was a great delight to the little ones. Miss Moore, of Pratt, tells of a picture bulletin illustrating life in Porto Rico and a companion bulletin illustrating the Porto Rican village at Glen Island (a summer resort accessible to the children), with objects such as water jugs, cooking utensils made from gourds, etc., a hat in the process of making, musical instruments made from gourds, such as were used by the native band at Glen Island. The objects were carefully selected with the aid of the gentleman who instituted the village at Glen Island, and who had made a study of the country and people of Porto Rico. "The bulletin led not so much to the

reading of books, because there are few on the subject, but it gave the children a very clear idea of the manner of living of the Porto Ricans and drew the attention of many visitors to Glen Island, as an educational point as well as a pleasure resort."

Question 9. Do you do anything with Perry pictures, scrap books, etc., for the little children?

At Medford scrap books are made by the children themselves, much to their delight. Several librarians make their own scrap books, Miss Hammond, of St. Paul, sending perhaps the best description of work of this nature. For the little children she always keeps on hand several scrap books made from worn out books, by Howard Pyle and Walter Crane. Other scrap books enjoyed alike by the older children and the little ones are "Colonial pictures" and "Arctic explorers," the last especially liked by the boys. Miss Hammond also cuts whole articles from discarded magazines, putting on heavy paper covers, labelling and arranging in a case according to subject for the use of teachers and pupils.

Question 10. Mention five examples of pictures suitable for a children's library.

The pictures suggested are given in order, according to the number of votes assigned to each one:

Raphael,	Sistine Madonna,	6
Watts,	Sir Galahad,	6
Guido Reni,	Aurora,	4
Bonheur,	Horse fair,	4
	King Arthur,	
	(Chapel of Innspruck),	3
Corot,	Landscape,	3
Hardie,	Meeting of Scott and Burns,	2
St. Gaudens,	Shaw monument,	2
Murillo,	Children of the shell,	2
Stuart,	Washington,	2
Van Dyck,	Baby Stuart,	2

The selection of these pictures must, of course, depend on the library, but there are a few other suggestions which are worthy of mention:

Regnault, Automedon and the horse of Achilles.

Raphael's Madonna of the chair.

Reynolds, Penelope Boothby.

Question 11. In preparing your lists of

books to accompany bulletin, do you prepare an analytical list or refer to book only?

An analytical list seems preferable where any list is used, although some librarians seem to question the advantage of lists. Miss Brown, of Eau Claire, says: "I have, however, decided for myself that the bulletin that pays is the one which tells something of itself and has no long list of books. If the child is interested in the bulletin it is no sign that he will take a book listed, but if he gets a fact from looking at it he has gained something and you lose the bad effect of having him get into the habit of skipping the books on the bulletin, which he usually does." On the other hand, lists help the systematic reader and relieve the librarian.

In closing we will quote a criticism of an eastern librarian, as a thought on which we all need to dwell: "From the artistic point of view such bulletins as I have seen are commonly too scrappy, ill arranged and given too much to detail. One or two pictures on a large card, with a brief descriptive note, all conveying one idea or emphasizing one point only, is the best form. In bulletins, as in many other things, the rule to follow first of all is simplicity."

A CLUB FOR LIBRARY AND SCHOOL WORK.

A LOCAL library club on somewhat novel lines has been formed in the organization, on March 13, of the East St. Louis (Ill.) Library Club. This is intended solely for co-operative work by the East St. Louis Public Library and the teachers in the local schools, and its immediate undertaking will be the preparation of select reading lists for the use of children and young people, especially those who have been obliged to leave school at an early age, and have not become familiar with the use of the Public Library. Members of the club are expected to give advice and guidance in reading, and to bring the library in every way practicable to the attention of school children. An executive committee, with H. F. Woods, librarian of the Public Library, as chairman, has been appointed to prepare the graded reading lists desired. The foundation of such a club had been discussed at several preliminary meetings of the city school superintendent and principals with Mr. Wood, and the organization meeting was a large and enthusiastic gathering of principals and teachers. James P. Slade was elected president, to serve for one year.

CHILD-STUDY AND EDUCATION.

James Sully, in International Monthly.

NOTWITHSTANDING the many good things achieved by child-study it can hardly hope to avoid the critic's salutary castigation. It is, alas, the way of enthusiasm to swell into turgid exaggerations and expectations. Further, it is to be looked for that a movement like child-study, which has broadened out into a wide, popular current, should take on something of shallowness here and there. The ill-prepared amateur has been rather too prominent, the scientifically trained student not prominent enough. Given fervid zeal and defective training in the student, any study is pretty sure to yield a certain crop of absurdities; and the worst of it is that when a movement like child-study has gained volume and momentum, the guiding hand of the connoisseur, even when gently proffered, is wont to be roughly declined as a restraint. Critical advice will be rejected as "uninspiring."

The common mode of inquiry by setting questions to numbers of children and young persons and collecting the answers can have but little if any scientific value. For one thing, it is open to the objection that applies to every form of questioning, that we cannot be sure of obtaining an honest "shelling out" of the inner self in answer to our question. Of this more presently. Another objection is that the particular points investigated in the "questionnaire" are apt to be small and unimportant. How much do we learn of child-nature when we ascertain that a certain proportion of children of a particular country and class think George Washington or the Duke of Wellington the biggest of the world's heroes? Whatever statistical reasoning is carried out on the basis of such observations could, one imagines, have, at best, only an ethnological or sociological value. A study of the various forms of the doll-cult among different races has, as we know, an ethnological significance. A comparison of the ideas and sentiments of different classes of English children at this moment with respect, say, to the right and wrong of the war in South Africa, would possibly be interesting as bringing out certain differences in the intellectual and moral atmosphere of the homes of these classes. The most likely direction for obtaining useful results here would seem to be the elucidation of the mental differences of the two sexes. Yet the difficulty of making sure that we are evoking children's ideas and feelings is a formidable obstacle to our acquiring certain knowledge in this domain of inquiry. . . .

Yet experimenting on a child's mind has its serious risks. An untrained person is pretty certain, when "teasing" the young mind, to go wrong by overlooking this and that influence which he has introduced and the effect of which makes the meaning of the result other than he supposes it to be. To go back to the simple experiment of a question: the supposi-

tion that a child's answer to your question will certainly give you his net idea or his unadulterated feeling shows a touching simplicity of faith. When you take up the attitude of questioner he will be apt to take up the attitude of one who wants to know what sort of an answer you are in pursuit of, whether from the amiable desire of giving it to you, or, as may happen with the "contrary" sort of child, from the less amiable wish to baffle or "dish" you. In this way he may, without having a clear intention to deceive you, mislead you as to the character of his real ideas and feelings.

In addition to these sources of error in particular cases, there is in much of this questioning of children a tendency to induce in the unformed mind a precocious habit of "introspection," of digging up, so to speak, and examining its thoughts and feelings. The development of such a habit must be fatal to all our attempts to get at child-nature, for the very good reason that this, in its genuine and characteristic modes of working, has ceased to be. A child that has begun to think about his fears, his preferences, and so forth as a matter of importance, since you care to ask him about them, has begun unconsciously to transform them, so that you can no longer get into touch with them in their original form. . . .

One warning seems necessary as a last word on the subject. The parent and the teacher must not suppose that child-study, even after it has been greatly improved, will meet all their wants when they take on themselves the weighty business of educating children. Much of the extravagant talk of the advocates of this child-study seem to imply that the whole problem of training a child consists in understanding its nature. This idea has come to us from Rousseau, who, by the way, had the courage of his convictions, and bade the would-be trainer stand by and allow the child to unfold himself in nature's own beautiful way. Rousseau urged the need of a careful study of the child in order that we might not clumsily interfere with this natural self-development. It is to be feared that this idea of being merely a handmaid of nature in her work of unfolding child-nature lurks to-day in the twilight background of many a parent's consciousness. Teachers, too, though they cannot but see how Rousseau's theory leaves no room for their work, are, I believe, still infected with this idea of studying nature in order to follow her as though she were supreme.

Those who reflect even but little know how far this is from being an adequate view of the educator's task. To try to educate a child means surely to work for the consummation of human development, for the fruition of the full potency of manhood. If, then, we are bold enough to essay the work, we must have at the outset a clear conception of the make of this high man-soul which we wish to help in forming, and we need to make and to keep the conception very clear. That would be a

fatal day for a community in which its educators became wholly preoccupied with problems of child-study. The ideal conceptions, too, of a wise man, of one strong yet gentle, and the rest, need to be considered and reconsidered. The whole of ethical literature, ancient and modern, cannot supply us with such firmly drawn outlines of the ideal types of human character that we parents and teachers have nothing to do for ourselves in the way of hard reflection. Nor can we blame the writers as if they had omitted something. For ethics is bound to treat of the virtuous man in a somewhat abstract manner, to assume that every individual may be trained to grow into one and the same type of personality. We know, every experienced parent or teacher knows, that the problem of training is often made grievously hard just because human nature is so various, because it seems almost impossible for us to say beforehand what is the best, so carefully hidden away, as it often seems, in the boy and girl; or what is the ideal self which has never been before, and will not be now if we fail to discern the rich diversity of human excellence, and the hints of their potential realization which may announce themselves only in faint, fugitive flashes in the raw, unformed child-soul.

Nor is this all. The world is ever moving on and the spirit of the age becomes a new one. In the common consciousness of a community, that reflected, say by our better class of journals and our imaginative literature, new types of the admirable emerge and get accentuated. At this moment new modifications of the idea of the "fine man" may be detected, among which the trinity of virtues—smartness, strength and daring, the sure harbingers of "success in life," is conspicuous. These changes in our conception of what sort of character is desirable will affect the ideas of the parent and teacher. Half unknowingly, perhaps, the mother of to-day is aiming at preparing her boy to take his place in society as it is, and that means at fashioning him after society's standards. Those who aspire to the high dignity of the educator must carefully guard themselves against the insidious influence of the vulgar extollings of the hour. Let them remember the words of Kant: "Parents usually educate their children in such a manner that however bad the world may be, they may adapt themselves to its present conditions. But they ought to give them an education so much better than this, that a better condition of things may thereby be brought about in the future."

I take it that there is a special behest laid on us just now to raise our ideals in education. It is not necessary to say that we have fallen on a day of vulgar aims and lowered standards of life. It is enough to remind the reader that the air is full, as, perhaps, it has been full before, of the worship of what is not the best, not the best attainable; full, too, alas, of a cynical laughter at any suggestion of aspiring to this higher moral level. The

minds of the young come at an alarmingly early age in contact with the newspapers and magazines which reflect this worship of the less worthy. What chance, then, of our children growing up so as to help to bring about "a better condition of things"? Shall we trust in these days to the pulpit to neutralize the effect of the worse features of the popular temper? It may suffice to say that this would be risky. If the parent and teacher fail to hold up the standard of a "nobler good" we can have no assurance that our children will ever get near it. One cannot ignore the fact that there is much in the state of education at this moment to make one feel uneasy on this point. The moral training of the home, the most vital of influences, is apt in these days to be shirked, and where it is undertaken with some degree of seriousness hardly escapes the lowering effect of easy popular standards. Teachers, again, with the pressure of the examiner and the inspector ever behind them, have but little time to consider any more remote end than school-successes. It is to be added that in this scientific age the tendency of thought about education with parents and teachers alike will be towards child-study rather than towards any thoughtful reconstruction of ideals of character.

CHILDREN'S READING AT HOME.

From lecture on "*The choice of books for children*," by Charles Welch.

EVERY teacher knows that the brightest and aptest pupils are, generally speaking, the children who read the best books at home. Indeed, what the children read out of school is perhaps more important than what they read in school, for they will read of their own choice the books they like, and the books we like are the books which influence us. "Books," as Bulwer says, "suggest thoughts, thoughts become motives, motives prompt to action. Man is a complicated piece of machinery. Hundreds of nerves and muscles must act and react for the slightest turn of the body. Yet the very wind of a word, a casual hint or association, can set the whole in motion and produce an action. Actions repeated form habits, and determine the character, fixed and firm and immovable for good or for evil."

As soon as the child has acquired the power of getting at the sense of the printed page, the taste for the good or the bad in literature may begin to grow, and it may do so even while he is acquiring this power. Then he enters on the perilous path so well described by Mrs. Browning in "*Aurora Leigh*": "To thrust his own way, he, an alien, through The world of books. . . . The world of books is still the world; The worldlings in it are less merciful And more puissant. For the wicked there Are winged like angels. Every knife that strikes Is edged with elemental fire to assail a spiritual life."

Many of the public libraries do a great work in guiding children's reading, but hun-

dreds of thousands of parents need enlightenment as to the right books to place in the way of their boys and girls. To direct parents how wisely to choose the books their children should read is a problem well worth attention, and it is far more important than most people are apt to consider it. Not only are there the vicious books which children find on the newsstands, or which are brought to their attention by other means, but there is a vast quantity of weak and frivolous material not precisely or immediately harmful, perhaps, but which ought to give place to stronger, sounder, and more healthful mental food.

The reading of newspapers and magazines, for example, which are placed almost unreservedly in the hands of children all over the country, tends to beget a loose habit of mind, and to weaken the power of sustained concentration in reading. Many and many a grown up person has had cause to regret the hours of useless reading which he has frittered away, thus destroying his power of getting at the content of more valuable works with which, when it is too late, he desires to make himself familiar.

The influence that indiscriminate newspaper and novel reading has in presenting distorted views of human life, of human environment, and of human character, it is scarcely possible to realize. Many a boy and girl is in a constant state of expecting something to turn up which will change their lives in some wonderful way, after the fashion of some story they have read, and they are thus made more or less unfitted for the practical realities of life and for the everyday conditions which surround them. Instead of manfully obeying the old English motto, "Do the next thing," they are always waiting for some great and unexpected turn of fortune which will place them beyond their present surroundings in some lofty imagined sphere. As John Ruskin says: "The best romance becomes dangerous if by its excitement it renders the ordinary course of life uninteresting, and increases the morbid thirst for scenes in which we shall never be called upon to act."

Few people to-day ever think of opening the pages of Southey's "Doctor," but there is a passage to be found there on the influence of books which is worthy of printing in letters of gold. He says: "Would you know whether the tendency of a book is good or evil, examine in what state of mind you lay it down. If it induces you to suspect that what you have been accustomed to think unlawful may, after all, be innocent, and that that may be harmless which you have hitherto been taught to think dangerous . . . if so . . . throw the book into the fire, whatever name it may bear upon the title-page. Throw it into the fire, young man! Young lady, away with the whole set, although it should be the prominent feature in a rosewood book-case!"

THE LIBRARY IN UNIVERSITY AND COLLEGE WORK.

From "The trend of university and college education in the United States," by William R. Harper; in North American Review, April, 1902.

THE place occupied by libraries and laboratories in the educational work of to-day, as compared with that of the past, is one of commanding importance. Indeed, the library and the laboratory have already practically revolutionized the methods of higher education. In the really modern institution, the chief building is the library, with the stacks for storage purposes, the reading room, the offices of delivery, the rooms for seminar purposes; it is the center of the institutional activity. The librarian is one of the most learned members of the faculty; in many instances, certainly, the most influential. Lectures are given by him on bibliography, and classes are organized for instruction in the use of books. The staff of assistants in the library is larger even than was the entire faculty of the same institution thirty years ago. Volumes are added at the rate of thousands in a single year. The periodical literature of each department is on file. The building is open day and night. It is, in fact, a laboratory; for here now the students, likewise the professors, who cannot purchase for themselves the books which they must have, spend the larger portion of their lives. A greater change from the old order can hardly be conceived. The days are coming when, in addition to the library of an institution, each group of closely related departments will have its separate departmental library. This will include the books in most common use, the maps and charts of special value. It is true that the cost of administration will be great, but the need will be still greater. The student of the future will do little of his work in the study; he must be in the midst of books. No ordinary student can afford to own one book in a hundred of those which he may wish at any moment to consult. As the scholar, though having thousands of volumes in his own library, must find his way to the libraries of the Old World when he wishes to do work of the highest character, so the student, though having hundreds of volumes in his own room, must do his work in the departmental library of the institution. His work must be done where, without a moment's delay, without the mediation of the zealous librarian, who may think more of the book than of its use, he may place his hand upon that one of 10,000 or 20,000 books which he desires to use. Some of us will see the day when, in every division of study, there will be professors of bibliography and methodology, whose function will be to teach men books and how to use them. The equipment of the library will not be finished until it shall have upon its staff men and women whose entire work shall be, not the care of books, not the cataloging of books, but the

giving of instruction concerning their use. That factor of college work, the library, fifty years ago almost unknown, to-day already the center of the institution's intellectual activity, half a century hence, with its sister, the laboratory, almost equally unknown fifty years ago, will have absorbed all else, and will have become the institution itself. . . .

The libraries and the laboratories with their equipment might be said to constitute the outside of educational work. But that would be only partially true. When we realize that the method and spirit of the work are largely determined by these outside factors, we may consent to allow them a place on the inside.

THE PUBLIC LIBRARY AS A PART OF THE SCHOOL SYSTEM.*

AN interesting argument for the public library as a component part of the public school system is given in the brief for the appellee, submitted in the case of the Board of Education of Covington, Ky., now pending against the trustees of the Public Library of that city. The suit rests upon the contention of the Board of Education that the law granting an appropriation of three per cent. of the school levy in cities of the second class in Kentucky for the maintenance of a free public library "is unconstitutional, on the ground that the library is no part of our educational system, and that said appropriation is a diversion of the proceeds of taxation from the purpose for which it was imposed." A decision was rendered in favor of the Public Library, on the ground that the legislature had made the public library a part of the public school system of the city, and the case was then carried to the Court of Appeals.

In the brief for the appellee it is pointed out that "this appeal presents the anomaly of a Board of Education protesting against an act of the legislature which marks an epoch in the history of the progress and development of the public educational system of Kentucky; an act which incorporates with that system the one element necessary to its completeness and efficiency; an element which has always been considered absolutely essential to education, and without which no private educational institution, from the university down to the most unpretentious academy, can be conceived to exist." A general summary is given of the legislation existing in relation to libraries and schools, with citations from the laws of Arizona, Colorado, Florida, Maryland, Ohio and other states which provide for the establishment of school libraries or public libraries maintained from school taxes. The Kentucky act is an outgrowth and development of the earlier laws of the state relating to distinct libraries; according to its provisions "the free public li-

braries of cities of the second class are not made dependent upon the school fund entirely, but other sources contribute to its maintenance; in consideration of which it is free to all the citizens. But it must be clearly understood that the library is a school institution, and that it is the city that comes to the aid of a school institution, and not the school coming to the aid of a merely municipal institution.

"The argument of appellant is based upon the idea that the public library is not at all or not sufficiently connected with public education to justify an appropriation of part of the school fund to its support and maintenance. The foregoing citations, however, show that all legislation in relation to free public libraries had its origin in the idea that the library is essential to the success of the public school system, and they show that all legislation relating to free public libraries began with the district school library and is nothing but a development of the district school library laws."

The Kentucky law at first placed the public library under the control of the Board of Education, but by the amendatory act of 1898 it was placed under the direction and control of a board of five trustees, and at the same time the appropriation was increased from one per cent. to three per cent. of the net amount of taxes levied annually in the city for school purposes. "The fact that the management is now vested in an independent board of trustees does not in any manner alter the case. The legislature can take away the management of the whole school system from one board and vest it in another body; or vest part of it in one board and part in another. If the legislature thinks that any part of the public school system can be better managed by some board other than the regular Board of Education, it has the power to order accordingly. The wisdom of the change in our very city has been attested by magnificent results. Our present board of trustees has by its efforts secured by donation alone the sum of \$75,000." The work done by public libraries in aid of school studies is described, with many citations from the *LIBRARY JOURNAL*, *World's Congress papers*, *Journal of Education*, and elsewhere; and in conclusion Mr. Thiessen says: "I have not undertaken to prove that a library is an essential part of all education, but my aim was to show that the free public libraries of the United States had their origin in the public schools, and that, although the privileges of these libraries have been extended to all citizens of the district or city, that nevertheless these libraries have continued to be considered or conducted as part of the public school system. It seems to me that if the legislature has the right to impose any taxation in aid of a public library, it is precisely because of its educational character. Municipal expenditures for library purposes can be justified upon no other ground."

* Kentucky Court of Appeals: Board of Education of Covington, Ky., plaintiff, vs. Trustees of Public Library, defendant. Brief for appellee, H. C. Thiessen, attorney for appellee.

TWO LIBRARY LISTS FOR SCHOOLS.*

THE lists of books chosen for school use issued by the public libraries of Buffalo and Evanston are interesting evidence of the way in which the public library's relation to the public schools is being constantly developed and strengthened. These are the most notable publications of the sort, since the issue of the "Graded and annotated list" of the Carnegie Library of Pittsburgh, and they will take place with that among the working tools of children's and school librarians.

Although intended for practically the same use, there is some difference in the aim and scope of each list. The Buffalo list seems to provide more fully for the use of books by the teacher and in school work; while in the Evanston list the selection of books for general and home reading is a strong point. Each list is graded, though in a different arrangement, and each contains an author-and-title index.

The Buffalo list is in four divisions: graded author lists, from the first to the ninth grades (27 p.); author-title list (26 p.); subject index to books in graded list (65 p.); and "Books suggested for reference libraries in public schools" (200 titles). In the first and last divisions publisher, price and series are noted; and in the author-title list the grades to which books are assigned are indicated. Books given in two or more grades are repeated in each grade list. There are no annotations, that feature being in a measure supplied by the subject index. This index is interesting and suggestive, and represents much careful analytic work. Naturally the majority of the entries are analytic, and in the case of such selections as Holmes' "Old Ironsides," Lincoln's "Gettysburg address," etc., half a dozen or more references are given. A wide variety of subjects is represented, ranging through biography, history, nature, science, holidays, different countries, useful arts and games; and an attractive, though not essential, feature is the selection of short introductory quotations for many subjects. Thus the references to Africa are headed by Montgomery's lines—

"Regions immense, unsearchable, unknown,
Bask in the splendor of the solar zone."

The general division of American history opens with Longfellow's invocation to the "Ship of state"; for the French and Indian wars Holmes' lines,

"The lilies withered where the lion trod,"

have been chosen, and so on. In biographical subject headings dates of birth and death are given. Analytical references indicate paging,

in the case of collections or composite books. Subjects in American history and biography are most fully given, but care has been taken to cover other topics sufficiently, and to give stories and poems as well as descriptive literature. Thus, for Austria-Hungary the references are to Benedict's "Stories of persons and places in Europe," p. 252; Brooks' account of Kossuth, in his "Story of the 19th century"; Mrs. Jackson's "Salzburg," in "Bits of travel"; Knox's "Boy travellers in central Europe," Stevens' "Around the world on a bicycle"; Miss Yonge's "Book of golden deeds"; and Adelaide Proctor's poem, "Legend of Bregenz." The permanent usefulness of this index, as a prompt and exact guide to reading on special topics, for school or home use, will be at once apparent. Perhaps the only criticism to be made is that the selection is limited in some directions and too complaisant in others. Thus, among others, we miss Bynner's "Zachary Phips," Kingsley's "Hereward," and Doyle's "White company" and "Refugee," for whose absence the noble army of "Boy travellers" can hardly make amends. For a story of Shakespeare's time we are given Imogen Clark's slight tale, "Will Shakespeare's little lad," while John Bennett's charming story "Master Skylark" is absent; and surely some of Hawthorne's "Twice-told tales" or "Mosses" might have been indicated as illustrative of New England life—as "Main street," with its historic panorama, or the glimpse of "Morton of Merrymount." On the other hand, the Abbott books, Church's adaptations, the "Zigzag journeys," "Boy travellers" and others of that ilk have perhaps an undue representation. For the 200 books suggested for school reference libraries there can be only praise; it is a capital selection, practical and well balanced.

The Evanston list in its main divisions covers 500 books suggested for the first to the sixth grade, and available in one graded collection for school use. The arrangement is in a classed list, with separate grade lists in each class. Thus, under the class division "Mythology fairy tales," etc., we have five titles for grades 1-2, 18 titles for grades 3-4, 15 titles for grades 4-5, and so on. There is no repetition of titles in the grade lists, but the inclusive numbering makes it possible to put the same book in two or more grades. Following this list is a classed list of reference books for children; three lists of "Good stories of adventure for boys," "Good stories for girls from 12 to 13," and "Stories of Indians and cowboys," and an author-and-title index to the graded list. As the graded list goes only to the sixth grade, it is more distinctly of children's books than the Buffalo list. The selection is creditable, and there are good compact annotations. Of course there are always titles that one looks for and does not find, and here we miss Stevenson's "Child's garden of verse," Hughes' "Tom Brown at Rugby," Flora Shaw's "Castle

* Buffalo (N. Y.) Public Library. Class-room libraries for public schools, listed by grades; to which is added a list of books suggested for school reference libraries. Buffalo, February, 1902. 134 p. O.

Evanston (Ill.) Free Public Library. Graded and annotated list of the 500 books in the school libraries. Evanston, January, 1902. 61 p. O.

Blair," Jean Ingelow's "Mopsa the fairy" (also absent from the Buffalo list), and other children's classics. The two separate lists of adventure stories, and stories for girls, are excellent. This list is the work of Miss Elizabeth Porter Clarke, assistant librarian in charge of reference and school work.

A comparison and examination of these lists is interesting and encouraging. The work of book selection for children is undoubtedly reaching better standards of discrimination and method, and there is evident a growing effort toward a working system for their intelligent and most efficient use. There remains the need of more careful selection, based upon real knowledge of the books; and the courage to eschew the great mass of wishy-washy, superficial and commonplace "juveniles," even though such a policy means fewer books. H. E. H.

THE PROBLEM OF INCREASED COLLECTIONS.

President C. W. Eliot, in Report of Harvard College, 1900-01.

THE increasing rate at which large collections of books grow suggests strongly that some new policy is needed concerning the storage of these immense masses of printed matter. The university teachers in arts and science, asked to indicate every year the books which in their judgment should be freely accessible to students in their several departments of instruction, are content to have about 55,000 volumes accessible without restriction to the direct handling of their students. These freely accessible books may be called the contemporary working-library for arts and science, or the total number of books which 2500 students, distributed among about 360 courses of instruction, may be expected to utilize. Again, 63,673 books were borrowed from the College Library during the year 1900-01. It may safely be inferred from these figures that there is already a large mass of unused, or very little used, books in the Gore Hall collection of 367,000 volumes.

It may be doubted whether it be wise for a university to undertake to store books by the million, when only a small proportion of the material stored can be in active use. Now that travel and the sending of books to all parts of the country have become safe and cheap, it may well be that great accumulations of printed matter will be held accessible at only three or four points in the country, the great majority of libraries contenting themselves with keeping on hand the books that are in contemporary use, giving a very liberal construction to the term "contemporary." If the Congressional Library, the combined libraries in New York City, and the combined libraries in Chicago would undertake to store any and all books, making them accessible to scholars in every part of the country, the function of the thousands of

other libraries in the United States might safely be considerably simplified.

In every well-conducted library, the stamped date, put inside of each book when it is lent, supplies, in the course of years, the needed information as to whether the book is, for present use, dead or alive. An examination of the books once in five or ten years might divide the unused from the used. The unused might be stored in a much more compact manner than they are now, even in the best-arranged stacks. The card catalog of a great library might also be divided into two distinct parts—the catalog of the dead and the catalog of the living books. When a card catalog numbers millions of cards, its daily use is greatly obstructed by the mere multitude of its cards, and much time is wasted in handling it, both by readers and the library staff. Such a division of the books in a library is repulsive to librarians, and to many learned men who like to think that all the books on their respective subjects, good, bad and indifferent, alive and dead, are assembled in one place. In a university, however, the main object of a library must always be to teach the rising generation of scholars. Whatever injures a library for the use of learning's new recruits should be avoided, but without making it impossible for the library to serve also the needs of veteran scholars.

THE LIBRARY SITUATION IN CALIFORNIA.*

WE cannot dignify the free libraries of California as being parts of a system. There is no system. It is true that 50 odd libraries exist by reason of a certain law providing for their establishment and support, but they are 50 separate institutions without bond of connection or sympathy—excepting as the personality of their librarians draws them into contact.

A score of these libraries receive a support which enables them to do moderately good, and, in some cases, excellent work; the others are meagrely sustained.

There is no advisory supervision or suggestive assistance supplied by the state; whenever a new library is organized it must find its own pathway, perhaps by costly experience, or be content with the hints that may be given at the nearest library.

There are no public libraries which supply books free of charge beyond their city limits.

The library cause seems to have few friends who believe that it is the birthright of every boy and girl in the state, whether in the city or the country, to have the broadest possible education which the times afford. Public sentiment is inert, apathetic, profoundly indifferent.

And what are the local conditions of rural

* Part of address delivered before the California Club.

California, in the vast area of over 150,000 square miles?

Look into the homes of all but the prosperous. Rarely will books be found or even newspapers in thousands of homes; there is blank, gaunt poverty of all mental resources. There are no book stores, no reading rooms, no libraries—save school libraries—nothing whatever in the large majority of California towns to which the boy and girl who have early become breadwinners can resort for healthful instruction and stimulus. But there are ample supplies of flash newspapers, weak novelettes and salacious stories; the evil place and evil associates are in frequent evidence; all these have the common aim of corrupting and destroying our young manhood and our young womanhood.

To-day there are 28 counties in California with a school population of 64,000 and a total population of over 300,000 which do not possess one free public library, so far as is known, and 18 other counties which own but one free library in each county.

A good library law is indispensable to successful efforts in the expansion of library work. The new statute, passed last winter through the efforts of the League of California Municipalities, provides for an appointive board of trustees, with partial change of membership yearly; that men and women are equally eligible as trustees; authorizes contracts between library boards and county supervisors for the use of travelling libraries, and allows increase of library tax in smaller cities from one to two mills on the dollar.

Its distinguishing feature is the mandatory provision for the establishment of free libraries in all incorporated cities upon petition of 25 per cent. of the legal voters.

Coming directly to the discussion of important measures which should be undertaken to promote public library interests, perhaps the most important of all is the creation by the legislature of a state library commission.

The functions of such a board would be to sustain advisory—not supervisory—relations with all free libraries in the state wishing assistance. Manifestly, its special duties would be to foster the founding of new libraries, extend all possible assistance to struggling libraries already established, advance travelling library interests, and to render counsel and directive aid in the settlement of questions constantly arising in library administration.

All library interests in the state, of whatever nature, should feel authorized to call on the board for expert counsel and assistance. Among these needs are the preparation of lists of new books; information as to purchasing both old and new publications; advice upon charging systems, classification and cataloging, and, what is of exceeding importance, suggestions concerning the planning of new library buildings.

Without doubt, the commission could also

render constant valuable aid to the long-established system of school libraries by supplying lists of juvenile and miscellaneous works to the various county boards of education. Under the school library law these county boards have the sole power of adoption of books for their respective libraries; many of these in the remote mountain counties are badly handicapped for lack of opportunity to make careful selections of publications.

Among the many efficient library commissions, those of Massachusetts and Wisconsin (the latter having a field most like our own) have accomplished results notable in themselves and of special value to the country as examples.

There can be no question that when a competent library commission begins its efforts in California it will become a red letter occasion in the library annals of the state. In due time public confidence will be freely given to such a board; private benefactions will rapidly increase when it is seen that the state has created and will foster a system of free libraries, and, eventually, a great tide of benefits will be realized by the owners—the people.

Only second to the need of a library commission is our want of a school of library science for the training of librarians. It is gratifying to be able to report that the state university authorities have taken up this subject after careful consideration; that they will probably in the near future—perhaps next summer—open a summer library school, and, further, will probably establish a regular library course as part of the curriculum, when space can be had at a later day in the projected library building. This also will be an advance of the utmost importance to the library cause.

The travelling library system should also prove an important factor in library extension in the state. What shall be its line of development in California? So important a question can receive but a partial reply at present. Briefly, travelling library legislation is to-day in an experimental condition. In eight or 10 states where the best legislation has been had, the local problems vary widely and among leaders of library progress there is not as yet a unity of views. But the expressions of the last 12 months indicate a growing opinion that in states of large area, and even of moderate size, the work can be carried on with more economy and with the most real service to the communities interested by putting it on a county basis. That is, that where local free libraries already exist in a county, co-operation should be had between boards of county supervisors and library boards for the circulation of the books among country residents. Under a clause in our new library law measures of this kind are now being attempted in southern California. In those counties where such plans are impracticable by reason of the non-existence of incorporated cities, it is proposed to establish systems of county travelling libraries. Wisconsin has passed a law

providing that any of its counties may appropriate \$600 for the starting of such a county system, and annually thereafter the sum of \$200 for its increase and support. Bills of this nature will this winter be introduced in other states. California will therefore have opportunity to profit by this tentative legislation before providing definitely for her own line of development.

The state library at Sacramento is a splendid collection of perhaps 125,000 volumes, including the legal and medical departments. This library is strong in the departments of California and United States history, in biography, art, literature and viticulture; in fact it is so rich that it should be a source of pride to every citizen of the state. But while owned by the state it is under such ironclad regulations that it is of no more value to a resident in San Diego county than if it was located in the heart of Siberia. It is maintained purely for reference purposes; any one may use it who will take the trouble to visit Sacramento.

Unquestionably, the reference feature should continue to be its supreme function, but the time is fully come when the citizens and study clubs throughout the state should be allowed access to this storehouse of books without leaving their homes. Successive librarians of the library have recommended a change in the law that would permit a wider use of the volumes, but nothing has been done.

A due consideration of the subject will show that travelling libraries to be absent for months cannot be organized by taking the books now on the shelves without injuring the high value of this reference feature. It is, however, feasible to so change the law as to allow the state librarian to send out at his discretion a single volume, or a number of volumes to remain out a short time subject to speedy recall after a few days. For a more ample supply of volumes for the study clubs, a duplicate collection, in time to contain a large number of books, should be provided in connection with the state library, or otherwise, to be under the charge of the state library commission. Such is, substantially, the successful plan in use in Iowa and Ohio. In New York this arrangement has obtained a great development. Study clubs send their courses of study for the next season, during the spring or in summer, to the state library at Albany where they receive the most painstaking attention. Fully 300 special libraries solely for study club use are thus provided by the state of New York.

But there is one feature of library extension which calls for immediate labor. There are about 120 incorporated towns and cities in California, and in less than one-half of that number are to be found public libraries. Why should not a free library be founded in every one of these places?

This feature of creating more local libraries is the most urgent one in the present library situation. Not that these vacant places are clamoring for them. By no means! These cities have grown up without them and have no just realization of their standing deprivation.

There is now an opportunity for some excellent work to be performed in this direction. Correspondence can be opened with women's clubs, or other organizations, with the promise of the use of some good travelling libraries *providing* local agitation is begun for the starting of a library. As soon as public sentiment is created in favor of the plan, a petition with as many names as possible should be presented to the city authorities, respectfully asking their attention to the clause in the library law which requires them to establish a library when a petition is placed before them with the signatures of 25 per cent. of the legal voters. Earnest labor of this kind ought to result in the founding of a large number of libraries during the present year, and indeed the cities of Red Bluff and Santa Clara have lately taken this action under the new law.

W. P. KIMBALL.

HINTS TO THE PUBLIC.

THE Carnegie Library of Pittsburgh prints in the current issue of its *Monthly Bulletin* the following announcement to the public:

You may not know that in the Reference Department you can find:

Large photographs of famous buildings in England, Italy, France, Spain, Germany, Greece and Turkey. These may be borrowed for use in classes and clubs.

Several thousand smaller pictures of places, buildings, statues and paintings. Teachers find these useful in illustrating a geography or history lesson.

A large collection of books on chemistry, electricity, iron and steel making and other industries of this region, and an experienced assistant who can help anyone looking for information on such subjects.

An index to 15,000 poems contained in seventy volumes of poetical selections.

Indexes to magazine articles, which will be found of great assistance in preparing speeches, debates, school essays and club papers.

Assistants whose whole time is given to helping readers find what they want. We have an excellent catalog and other bibliographical aids, but the personal attention of a trained assistant is necessary in making all the resources of the library accessible to the public.

Please telephone to the Reference Desk if you want to know what we have on any subject. Bell telephone, 540 Park.

THE NET PRICE QUESTION.

SINCE the March meeting in Atlantic City of the library associations of New Jersey and Pennsylvania the question of the present net price system maintained by the American Publishers' Association, in its effect upon library purchases, has received attention from several of the state and local library associations, and the resolutions passed at the Atlantic City meeting have been generally endorsed by other library organizations. These resolutions are as follows:

"Whereas, The Pennsylvania Library Club and the New Jersey Library Association recognize that the interests of publishers and libraries are closely connected, and

Whereas, We believe that the present net price system instituted by the American Publishers' Association does not conserve the mutual interests of publishers and libraries,

Resolved, That the American Publishers Association be requested to consent that dealers and publishers be permitted to give to libraries a discount up to 25 per cent. on net books."

From the committee appointed to consider this subject by the Massachusetts Library Club the JOURNAL has received the following communication:

"Will you permit some observations upon the letter from Mr. Charles Scribner, president of the American Publishers' Association, printed in your February issue, relative to the cost of books under the net-price system.

"Mr. Scribner begins with a mere assertion that 'The publishers are not seeking to increase the prices received by them for their books.' Opposite to this assertion may be set the testimony of the members of the Pennsylvania, New Jersey, Connecticut, Massachusetts, and other state library associations to the effect that they are paying from 12 to 36 per cent. more than formerly for the same classes of books.

"This position is supported by evidence of various sorts. For example, the New York State Library issues annually a list of 500 books as a tentative selection from the best books of the year. The cost to libraries of the books in the list for 1900 averaged (exclusive of fiction and juveniles) \$1.47 a volume. In the list for 1901 the average cost per volume of the books published net (exclusive of fiction and juveniles) was \$1.88—showing an average increase in the cost to libraries of over 27 per cent.

"Again, the actual prices of a score of series, including most of the common series, a class of books where the comparison is absolute, have shown an increase of cost averaging 24 per cent. This statement is met in the following way by Mr. Scribner:

"I have looked up the various books referred to, and in almost every instance the reason for the price is clear. In the case of Birrell's new book, published by us, though the price is \$1, the same as the "Obiter dicta" volumes published some years ago, it is forgotten that those books were published before the International Copyright Bill was passed,

and therefore in competition with reprints not paying royalty."

"Coming from Mr. Scribner, this statement must be accepted as an honest attempt at explanation on the part of the publishers. But Mr. Scribner neglects to say that *since* the enactment of the international copyright law he has published two other books by Mr. Birrell, 'Res judicatæ' and 'Men, women and books,' in the same general style and in uniform binding with the new book, one containing somewhat fewer, the other more pages, and that each of those volumes cost libraries 67 cents, while the present work costs 90 cents.

"Mr. Scribner says: 'We have not attempted to fix the prices of books. Publishers fix their own prices without any interference by the association. What we are trying to do is to *maintain the retail price* for a year. I do not think the association would be willing to attempt any regulation of the retail price.'

"Librarians do not insist on any regulation of the retail price, nor do they ask anything which will prevent maintaining the retail price for a year. Doubtless the producer has a perfect right to charge for an article whatever he may choose. What librarians object to is action resembling that of a publishers' trust, which under the guise of protecting and aiding the local booksellers has forced them to maintain such prices that some of the booksellers themselves have felt obliged to protest in print that, while satisfied with the net-price plan, they have found the general increase in prices a serious detriment.

"All that librarians ask is that, in default of equitable adjustment of prices by individual publishers, the Publishers' Association grant its permission to local booksellers to give, if they so desire, such a discount to libraries as shall enable the libraries to procure books at a cost not more than eight per cent. higher than formerly.

"W. L. R. GIFFORD, *Chairman;*
OTTO FLEISCHNER,
G. M. JONES,
THEODOSIA E. MACURDY,
H. C. WELLMAN,
G. E. WIRE,
Committee of the Massachusetts Library Club."

Among the organizations that have endorsed and accepted the Atlantic City resolutions are the Missouri Library Association, the Keystone State Library Association, the Western Massachusetts Library Association, the Indiana Library Association, the Wisconsin Free Library Commission and Wisconsin Library Association, and the Mabel Tainter Library Society of Menomonie, Wis. The Wisconsin association in transmitting their endorsement state that "the librarians and trustees of the Wisconsin libraries feel that the publishers are making an unjust discrimination against them and charging them exorbitant prices."

BEST 50 BOOKS OF 1901 FOR A VILLAGE LIBRARY.

THE annual list of the best 50 books of the previous year for a village library has been prepared by the New York State Library, based upon votes received from librarians within the state, and some others. The list is as follows, arranged in order of rank according to number of votes received:

Rank.		Votes Received.
1.	Churchill, Winston. The crisis. Macmillan. \$1.50.....	108
2.	Parker, Gilbert. The right of way. Harper. \$1.50.....	102
	Riis, J. A. The making of an American. Macmillan. net, \$2.....	102
	Washington, B. T. Up from slavery. Doubleday. \$1.50.....	102
5.	Thompson, Ernest Seton-. Lives of the hunted. Scribner. net, \$1.75...	97
6.	Kipling, Rudyard. Kim. Doubleday. \$1.50.....	82
	Van Dyke, Henry. The ruling passion. Scribner. \$1.50.....	82
8.	Fiske, John. Life everlasting. Houghton. net, \$1.....	74
9.	Gordon, C. W., "Ralph Connor," (pseud.) The man from Glengarry. Revell. \$1.50.....	73
10.	Cable, G. W. The cavalier. Scribner. \$1.50.....	71
11.	Bachelor, I. A. D'ri and I. Lothrop. \$1.50.....	67
12.	Evans, R. D. A sailor's log. Appleton. \$2.....	64
	Wilkins, M. E. The portion of labor. Harper. \$1.50.....	64
14.	Hadley, A. T. The education of the American citizen. Scribner. net, \$1.50.....	62
	Runkle, Bertha. Helmet of Navarre. Century. \$1.50.....	62
16.	Howells, W. D. Heroines of fiction. 2 volumes. Harper. net, \$3.75....	60
17.	Scudder, H. E. James Russell Lowell. 2 volumes. Houghton. net, \$3.50..	56
18.	Catherwood, Mrs. M. H. Lazarre. Bowen-Merrill. \$1.50.....	54
19.	Jewett, S. O. The Tory lover. Houghton. \$1.50.....	51
20.	Burroughs, John, (editor.) Songs of nature. McClure. \$1.50.....	47
21.	Mitchell, S. W. Circumstance. Century. \$1.50.....	46
22.	Riggs, Mrs. K. D., (Wiggin.) Penelope's Irish experiences. Houghton. \$1.25.....	43
23.	Champlin, J. D., (compiler.) Young folks' cyclopædia of literature and art. Holt. \$2.50.....	42
	Lang, Andrew, (editor.) The violet fairy book. Longmans. net, \$1.60..	42
25.	The benefactress, by the author of Elizabeth and her German garden. Macmillan. \$1.50.....	40
	Chambers, R. W. Cardigan. Harper. \$1.50.....	40
	Crawford, M. E. Marietta. Macmillan. \$1.50.....	40
	Maeterlinck, Maurice. Life of the bee. Dodd. net, \$1.40.....	40
	Muir, John. Our national parks. Houghton. net, \$1.75.....	40
30.	Moffett, Cleveland. Careers of danger and daring. Century. net, \$1.80.	39
	Strong, Josiah. The times and young men. Baker & T. net, 75 c.....	39
32.	Balfour, Graham. Life of Robert Louis Stevenson. 2 volumes. Scribner. net, \$4.....	38
33.	Abbott, Lyman. Rights of man. Houghton. net, \$1.50.....	36
34.	Fletcher, W. I., and Poole, Mary. Poole's index to periodical literature, abridged edition. Houghton. \$12.....	35
	Wyckoff, W. A. Day with a tramp, and other days. Scribner. net, \$1..	35
36.	Dawson, W. H. German life in town and country. (Our European neighbors.) Putnam. net, \$1.20.....	34
	Dunne, F. P., "Martin Dooley," (pseud.) Mr. Dooley's opinions. Russell. \$1.50.....	34
	Harper's encyclopædia of United States history. 10 vols. Harper. \$31.....	34
39.	Peary, Mrs. J. D. The snow baby. Stokes. net, \$1.30.....	33
40.	Brady, C. T. Colonial fights and fighters. McClure. net, \$1.20.....	32
	Burnett, Mrs. F. H. The making of a marchioness. Stokes. net, \$1.10...	32
	Earle, Mrs. A. M. Old-time gardens. Macmillan. net, \$2.50.....	32
	Higginson, T. W. American orators and oratory. Mrs. C. W. Merrill. \$1.50.....	32
	Tomlinson, E. T. Old Fort Schuyler. (Blue and Buff series.) American Baptist Publication Society. \$1.25..	32
45.	Latimer, Mrs. E. W. Last years of the nineteenth century. McClurg. \$2.50.....	31
46.	Palmer, F. H. E. Russian life in town and country. (Our European neighbors.) Putnam. net, \$1.20.....	30
47.	Bates, Arlo. Talks on writing English. Houghton. net, \$1.30.....	29
	Miller, Mrs. H. N., "Olive Thorne Miller," (pseud.) Second book of birds. Houghton. net, \$1.....	29
	Phillips, Stephen. Herod. Lane. \$1.50.	29

	Wright, M. O. Flowers and ferns in their haunts. Macmillan. net, \$2.50.	28

THE FREE PUBLIC LIBRARY OF ST. JOSEPH, MO.

AT noon on March 13, 1902, the new home of the St. Joseph Free Public Library was opened to the public. It had been closed for two weeks, during the period of removal and taking of a complete inventory. Prior to the closing, card-holders were permitted to take double the number of volumes ordinarily allowed, teachers all that they could use to advantage, and clubs sufficient to carry on their work without interruption. No penalties were charged for overdue books, but all volumes were required to be returned to the library within four days after reopening. There was no especial program for the opening, the library simply announcing that it was ready for business. On the Saturday following the opening, the library closed at six o'clock p.m. and reopened at 7.30 for a reception to the public by the members of the school board, the library board and the library staff. An attractive feature of the building is the provision made for special illumination, and the large number of visitors who attended were greatly pleased. There was no formal program for the occasion.

The building now occupied as the home of the library and the offices of the school board is the result of a "ten years' war" waged by friends of and believers in the library movement. The establishment of the library was authorized by a vote of the people in April, 1890. Ten years later, lacking two days, by another vote bonds in the sum of \$100,000 were authorized for the building. No outside aid was asked for or received. The library regards as more than an implied honor the fact that the building was erected by the school district in acknowledgment of the work it is doing and has done along educational lines—thus making it officially a part of the educational system of the school district. It is worthy of notice that the school board has no official connection with the library and is not even represented on the library board, the latter being a separate and distinct body. A premium of \$4480 was received from the sale of the bonds, \$2300 from interest on unexpended balances, and \$380 from the sale of buildings on the grounds. The building cost \$66,500, including stacks, shelving and a portion of the furniture. \$11,000 was paid for the site, which is 120 x 140 in size. The selection of the plans and construction of the building was placed in the hands of a joint committee of six, three from the membership of the school board and three from the library board. At an early meeting of this committee, competitive plans were asked, a suggestive blue print of floor arrangement being supplied to competing architects. Seven plans were submitted, those of E. J. Eckel,

of St. Joseph, being awarded the first prize of \$500. Two other awards of \$300 and \$200 were made, the plans submitted becoming the property of the school board. Mr. Eckel was appointed supervising architect. It is worth noting that the plans receiving the awards approached nearer the blue print suggestions than any others, and that the building as erected is almost on identical lines with the preliminary suggestions.

The building is 98 x 110 feet on the ground, two stories high with high basement. On account of the slope of the ground, the approach side from the city shows three full stories, the floor on this side of the building being on a level with the lot. It is built of Silverdale limestone, a light buff stone secured in Southern Kansas. As may be seen from the view given elsewhere, it is on classic lines. Entrance to the building is secured by means of side steps with turn to landing, thence through an open vestibule of white Italian marble. To the left of the entrance is the bicycle court, fitted with a locker bicycle holder. Three double doors, with plate glass, lead to the rotunda, 22 x 58 feet. On the left is the stairway of steel and Tennessee marble leading to the second floor, and back of this the children's room. This room contains all the children's books, and is fitted with small tables and chairs. The use of this room for the present purpose is but temporary, as it will soon be too small (28 x 35). Eventually the children's department will be transferred to the first floor on the west side, where a room over twice as large, now in use for museum purposes, will be given for this purpose. Adjoining the children's room is the reading room, 32 x 35. This use is also temporary, as with the growth of the library this room will be transferred into a reference department and the reading room will be removed to the second floor to the room at this time used as an assembly room, and so marked on the floor plans. The partition between the rotunda and the reading room is of plate glass, serving the several purposes of assisting in lighting the rotunda, of making the library cheerful and, better than all, of doing away with the necessity of a special reading room attendant, as the room is at all times under complete surveillance from the charging desk, situated at the entrance to the open shelves. The floor of the rotunda is of mosaic tiling, with marble wainscoting, scagliola columns and pilasters. Additional light is provided through a light well in floor above, surmounted by a dome which affords the real architectural effect of the building. On the right on entering the rotunda is a ladies' reception room, back of it being the large class and study hall. Adjoining this is the office of the librarian, and between this and the stack room is the cataloging and work room of the library. From

a library standpoint, this latter room is as complete as possible. Situated on the east side of the building, it has fine light, and is provided with supply closets, lockers for the attendants, elevators and stairway to the bindery immediately beneath. In size it is 18 x 26 feet. From the rotunda access to the shelves is obtained through turnstiles on either side of the charging desk. This desk is of Tennessee marble, and is large enough to accommodate seven people, with ample working room.

The open shelf room is 48 x 54 feet, with 26 foot ceiling. A gallery runs along the north wall, occupied at present by the government collection. As the library grows, a second gallery will be added. The present shelf capacity of the library is 45,000 volumes, but with the arrangement as it will be finally, double this capacity will be afforded. It is understood, of course, that everything owned by the library is accessible to the public. Abundant light is provided in this room, even in the darkest corner under the gallery, by windows and ceiling light. The right corner of the stack room contains the card catalog, convenient to the public and to the cataloging department. Between the rows of shelving are tables for the use of the public, and the information desk. The stack room is provided with three dust ducts; electrical heaters start a draught, which carries dust knocked from books out of the building through openings in the walls and roof. While the building is wired for incandescent electric light, and fixtures include this, light is secured from gas, required by the company's franchise to be furnished free, and arc light, furnished by the city from its street lighting plant. As an extraordinary feature for show occasions, like the opening, all lights may be used, and the effect is striking.

The ground floor or basement contains in addition to the museum previously mentioned, a room for bound newspapers, fitted up with roller shelves, at present containing the files of the local newspapers, practically complete, deposited through the courtesy of the newspaper owners. The value of this collection will be appreciated by librarians when it is understood that the papers date from 1845, and contain the first newspapers published in this portion of the middle west. Temporarily, the Patent Office *Gazette* is filed in this room. There are also on this floor two supply rooms used by the school board, toilet rooms for men and women, bindery, janitors' room, lunch room for library attendants, and a large boiler room. A fumigating room is provided, in the receiving or unpacking room, near the entrance to the east side. This has a flue or duct to the roof and works well. The building is heated by steam, and the boiler capacity is sufficient to furnish heat for two school

buildings, one across the street and the second one block distant.

On the second floor, besides the school board offices, consisting of five rooms, is the art room, a handsome little room, with ceiling light only, 16 x 44 feet. This room now contains a loan exhibit of pictures by home artists, the only exception being a picture by Brown, the artist of street waif life. It will be followed by other collections in the near future, the aim being to arouse sufficient interest to form a local art league, to which will be turned over the management of this room. The assembly room on this floor has a seating capacity of about 300. It is used at present for teachers' meetings, lectures, etc. Eventually it will be converted into a reading room. The school board also promises that as the library grows and the need becomes apparent, the other rooms on this floor will be vacated and turned over to the library for study rooms and other library purposes.

There is additional room in the attic for storage purposes, and it is now being arranged to put this to immediate use, and turn the storage rooms on the ground floor over to the library.

In planning the building, the one idea sought to be developed was that of making every book, pamphlet or other thing of value accessible to the public, and this has been accomplished. Of course it is too early to judge of the effect of the open-shelf system upon the public, but we have yet to hear the first word of complaint or disappointment. We hear nothing but expressions of satisfaction.

The building is located on the central business street of the city, within two blocks of two street car lines which transfer to all portions of the city, and is within three blocks of the heart of the retail district. It is not only a handsome structure, but is well built, none but the best materials being used. It is of fire-proof construction, steel and metal being used, with steel and concrete used in the roof, on top of which are Spanish tiles.

The shelving was furnished by the Art Metal Construction Company, Jamestown, and is satisfactory in every way. The contractor was a local man, Charles Nowland, and no fault has yet been found with his work.

With an eye to the future, the building is so planned that, while being practically complete to-day, it is susceptible of enlargement to many times its present capacity. The present building duplicated to the north will give it another street frontage, the stack rooms coming together, with room for a closed stack, if deemed desirable, to accommodate hundreds of thousands of volumes. Hopes are cherished of fulfilling these plans some day, and seeing an institution on the order of the Pittsburgh Carnegie Institute established here for the middle west.

PURD B. WRIGHT, *Librarian*.

THE CARE OF PUBLIC DOCUMENTS.

From announcement of Wisconsin Free Library Commission.

STUDENTS of history and economics, and men in public life depend largely upon public documents for their information upon public questions. The national, state, and municipal documents are the original sources from which are drawn materials for popular works used by the reader, content with second-hand information. These documents, precious as they are, have been neglected. In most libraries they are inaccessible because ill-arranged, uncataloged, and presided over by an attendant ignorant of their use and value. Collections are imperfect, and students in the future are to suffer from the lack of knowledge of the librarians of to-day. Methods of cataloging and distributing federal documents have been very greatly improved within the past few years. The Superintendent of Documents at Washington is making an effort to open the treasures of document storehouses. A few states have issued check-lists of their documents and a general bibliography of state publications is being published. In the majority of states, however, there is no accurate record of state documents, no check-list to serve as a guide for public men, librarians, and students, and no system of depository libraries making it possible to obtain documents within a reasonable distance from each town. There has been no attempt to evaluate such literature. The money spent for investigations and printing has been to a great extent wasted. The time has come when every state library should have a specially trained attendant in charge of public documents. Every university library needs a librarian or assistant who knows documents thoroughly. No public library can afford to miss the opportunity to build up a valuable department of public documents because of the lack of an assistant who knows what to collect and how to collect.

THE LANSING (MICH.) CARNEGIE LIBRARY CAMPAIGN.

THE offer made on Jan. 9 by Andrew Carnegie to give \$35,000 to the city of Lansing, Mich., for a public library building, was accepted by popular vote at a city election held on Feb. 22. The Carnegie gift was made on the usual conditions, that an annual maintenance fund of 10 per cent. (\$3500) should be insured, and a site provided. Its acceptance was secured only after a vigorous campaign, which, as it repeats the experience of many of the towns receiving Carnegie libraries, is of more than local interest.

Mrs. Mary C. Spencer, the state librarian, had carried on the preliminary negotiations with Mr. Carnegie, and was active in securing the acceptance of the gift. The campaign to secure voters in favor of the library bill lasted for three weeks. There was strong op-

position from a small minority, who used every effort to defeat the project by appeals to the prejudices and fears of the working class and the small taxpayers of the city; circulars and newspaper material were issued urging that the city would be burdened with increased taxation and would find the library an elephant on its hands. Many of the newspapers, however, supported the project, and the influence of the Women's Club and the Women's Relief Corps was enlisted in its behalf. Mrs. Spencer says: "These organizations did good work on the day of the voting, and our methods would have excited the admiration of the most finished politician. There were three weeks of this work, and they could be characterized as follows: First week, indifference; second week, active opposition; third week, interest which developed into enthusiastic endorsement. On the day of the vote the project was carried by about 4 to 1. The most enthusiastic factor were the school children. I gave them two talks in the high school, and through them the parents became interested, so that we had a steady stream of voters from eight o'clock a.m. to eight o'clock p.m."

Previous to the election a circular, of which copies were also printed in German, was widely distributed, setting forth reasons why Mr. Carnegie's offer should be accepted, as follows:

"BECAUSE

In this city of nearly 20,000 people there is no reading room where a laboring man or a student can go to read or study.

"BECAUSE

There are more than 4000 children in Lansing who have no place for carrying on their school work, no place for using the books so necessary for their better education. Nearly ninety per cent. of these children leave school at the age of 14. The public library is their only hope.

"BECAUSE

The added expense of supporting the library in its own home will be about \$1000 a year, an increase in taxation of about ten cents a year on \$1000 assessed valuation. \$3500 covers the entire cost of maintenance, including addition of books; this is the condition upon which the vote is based.

"BECAUSE

The offer is a free and unconditional gift to the city of Lansing of \$35,000, the entire amount to be paid out to the laborers of this city, and by them distributed through the various channels of trade. Remember that the \$3500 is not to be spent for books alone, but for all expenses of maintaining this library. The sum of \$35,000 completes the building for occupancy.

"BECAUSE

In the near future the library must be removed from its present location and an added expense of \$600 a year be incurred for rent and heating, with no prospects of bettering the present conditions.

"If we accept the offer made by Mr. Carnegie a beautiful building will be erected, centrally located for the benefit of the whole city, furnished with every convenience for study, carefully planned for the convenience of the mechanic, the children, and for all seeking a higher education. As has been done in other cities, the privileges of the library can be extended to the township thus lightening even more the small addition of taxation.

"The reading room will be open evenings, thus affording opportunity for reading to many who are now, by occupation, debarred the privilege.

"The establishment of a free public library in a home of its own will result in the moral, intellectual and spiritual improvement of the city, making better citizens, better homes, better schools and an additional inducement for individuals, as well as institutions, to become residents of Lansing.

"If the offer is refused the result will be as follows:

"Some other city in Michigan will profit by our mistake and will rejoice in the building which might have been ours. A hundred cities in Michigan are waiting for our chance.

"In less than three years the expenditure for the library will equal the sum asked by Mr. Carnegie, and we will still be without a library building.

"In less than five years a new building will be imperative and the citizens of Lansing will be obliged to raise money by taxation, or virtually be without that great factor in the education of the masses, a free public library.

Expense of library last year..... \$2429.75

Expense in new building..... 3500.00

Increased expense..... \$1070.25

"Increase to taxpayer on \$1000 assessed valuation, TEN CENTS."

On the night before the election an opposition circular was scattered broadcast over the city. It opened with the appeal, "Do you want Higher Taxation? Read and then decide," and it urged all taxpayers to vote against "this scheme of Mr. Carnegie to perpetuate his name." Mrs. Spencer adds: "For a little while I was in despair, but found that it was working for us rather than against us, and the results showed this to be the case."

American Library Association.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th annual meeting: Boston and Magnolia, Mass., June 14-20, 1902.

CONFERENCE ANNOUNCEMENTS.

The secretary sends the following preliminary program, as arranged for the Boston and Magnolia Conference:

June 14, Saturday, Boston.

Morning, 9 o'clock. Lecture Hall, Boston Public Library.

Greeting by local committee, James L. Whitney, chairman.

General announcements.

Morning and afternoon will be devoted to visits to the principal libraries of Boston and Cambridge, planned especially for those who have never seen these places.

June 15-16, Sunday-Monday.

Delegates may remain in Boston or go to Magnolia. The hotels there are open June 14 for such as care to go.

June 16, Monday. Magnolia.

Arrival of delegates, committee meetings, etc.

Afternoon:

Council meeting, 2 p.m.

Evening, 8.30:

Informal reception, social.

June 17, Tuesday.

Morning, 9.30-12. First general session, president in chair.

Secretary's report.

Treasurer's report.

Endowment Fund report.

Finance Committee.

Committee on International Co-operation.

Committee on Co-operation with N. E. A.

Committee on Handbook of American Libraries.

Committee on Express and Postal Rates for Library Books.

Committee on Title-Pages to Periodicals.

Committee on Foreign Documents.

Committee on Public Documents.

Afternoon. Free.

Evening, 8-10. Second general session.

Greeting on behalf of Massachusetts Library Club, Hiller C. Wellman, president.

President's address, Dr. John S. Billings.

Address by President C. W. Eliot, of Harvard University.

June 18, Wednesday.

Morning, 9.30-12. Simultaneous meetings:

(a) College and Reference Section.

(b) Children's Librarians' Section. 1st session.

(c) National Association of State Librarians. 1st session.

Afternoon. Free for state meetings, alumni meetings, etc.

(Massachusetts, Maine, New Hampshire and Bibliographical Society of Chicago have already voted to hold meetings at this time.)

Evening, 8-10. Simultaneous meetings:

(a) Round-table meetings of officers and members of state library associations.

(b) National Association of State Librarians. 2d session.

June 19, Thursday.

Morning, 9.30-12. Third general session.

Report on Gifts and Bequests (summary).

Report of Committee on Library Training.

Report of Committee on A. L. A. Exhibit at Louisiana Purchase Exposition.

Report of A. L. A. Publishing Board.

Report of Committee on Libraries and Booktrade.

Report of Committee on Library Administration.

Paper: "Pains and penalties in libraries," by A. E. Bostwick.

Afternoon, 2.30-4.30. Simultaneous sessions:

(a) Catalog Section.

(b) Trustees' Section.

(c) Children's Librarians' Section. 2d session.

Evening, 7.30-10.

Fourth general session, 7.30-8.30, in charge of Bibliographical Society of Chicago, to for report on and discussion of question of a Bibliographical Institute, and related topics.

Simultaneous session, officers and members of state library commissions.

Fourth general session, continued:

- 8.30 Paper on "A current bibliography of science and engineering," by Charles F. Burgess, of the University of Wisconsin.

Ten-minute papers on bibliographical topics, as follows:

Selection of scientific books for public libraries, by N. D. C. Hodges.

General scientific bibliography and the international catalog, by Dr. C. Adler.

Report on bibliographical work in the United States, and especially in the Library of Congress, by W. D. Johnston.

Work and plans of A. L. A. Publishing Board, by W. I. Fletcher.

General bibliographical work, by George Iles.

Report on incunabula list, by John Thomson.

June 20, Friday.

Morning, 9.30-12. Fifth general session.

Election of officers.

Unfinished business.

Supplementary reports.

Three 15-minute papers on branch libraries:

1. Organization, E. H. Anderson, Pittsburgh.
2. Equipment, Langdon L. Ward, superintendent of branches, Boston Public Library.
3. Administration, F. P. Hill, Brooklyn.

Discussion.

Paper on Boston Public Library, 1852-1902.

Afternoon. Free for final committee meetings, etc.

Evening, 8-9.30. Sixth general session.

Report of Committee on Resolutions.

Address by speaker to be announced.

Paper: "The gift extremely rare," by Miss I. E. Lord, of Bryn Mawr.

Paper: "Books that are not read," by John Ashhurst, of Philadelphia Mercantile Library.

Adjournment.

9.45. Dance.

June 21, Saturday.

Leave for post conference trips as follows:

- (a) Inspection of libraries of eastern New England.
- (b) Tour of historic towns.
- (c) Excursions to
 - (1) White Mountains.
 - (2) Coast of Maine.

June 27, Friday.

Final adjournment of Boston-Magnolia Conference.

HOTEL ARRANGEMENTS.

From responses already received in answer to preliminary circular a large attendance is assured. There seems, however, to be some

misapprehension concerning headquarters. The three hotels, Hesperus, New Magnolia and Oceanside, will all be headquarters. Some of the sessions will be held in each of these hotels and some in Library hall within one block of all. Each of the hotels will take an equal number of delegates. All the rooming will be done by a local hotel committee of the A. L. A., and applications should be made as soon as possible for rooms to the undersigned, chairman of that committee, stating when room is wanted and who room-mate will be. Preference will be given to early applicants.

The second and final announcement will be issued early in May, and will require an answer, whether those who intend to be present have written or not.

F. W. FAXON, *Secretary*,
108 Glenway st., Dorchester, Mass.

A. L. A. PUBLISHING BOARD.

PRINTED CATALOG CARDS FOR BIBLIOGRAPHICAL SERIALS.

The Publishing Board will begin this spring to issue the proposed series of catalog cards for 21 bibliographical serials. Price for the series is \$2.50 per 100 titles (two cards for each title); 40c. per 100 cards for extra cards, 3, 4, or more for each title.

Those wishing the cards should subscribe promptly. Circulars will be sent on application to the A. L. A. Publishing Board, 10½ Beacon street, Boston.

LIST OF BIBLIOGRAPHICAL SERIALS.

1. *Bibliofilia*.
2. *Bibliographie Moderne*.
3. *Bibliographica*, complete.
4. *Bulletin du Bibliophile*.
5. *Bulletin of Bibliography*.
6. *Centralblatt für Bibliothekswesen*.
7. *Centralblatt Beihefte*.
8. *Congrès Bibliographique International, compte rendu*, 1878, 1889, 1898, 1900.
9. *The Library*, series 2.
10. *Library Association Record*.
11. *Library Journal*.
12. *Mittheilungen des Oesterreichischen Vereins für Bibliothekswesen*.
13. *Revue Biblio-Iconographique*.
14. *Revue des Bibliothèques*.
15. *Revue Internationale des Archives des Bibliothèques et des Musées*.
16. *Rivista delle Biblioteche*.
17. *Sammlung Bibliothekswissenschaftlicher Arbeiten*, no. 6, 8, 10, 11 (Dziatzko's).
18. *Transactions of the Bibliographical Society*, London.
19. *Verhandlungen der Sektion für Bibliothekswesen auf der 44. und 45. Versammlung deutscher Philologen und Schulmännern*.
20. *Yearbook of the Bibliographical Society of Chicago*.
21. *Zeitschrift für Bücherfreunde*.

The Board has a few sets of printed catalog cards for the following publications:

Amer. Economic Assoc., Economic studies, v. 1-2.....	28c.
Amer. Economic Assoc., Publications, v. 1-II.....	\$1.13
Amer. Historical Assoc., Papers, v. 1-5.....	1.13
Columbia Univ. Studies in History, Economics and Public Law, v. 1-7....	.33
Mass. Historical Soc., Collections, 1792-1900.....	4.00.
Old South Leaflets, v. 1-4.....	1.61
Cards for v. 5 will be printed to fill advance orders.	
Smithsonian Contributions to Knowledge, v. 1-32.....	2.17
Smithsonian Miscellaneous Collections, v. 1-39.....	2.40
U. S. Bureau of Education, Circulars of Information, 1873-1900.....	2.14
U. S. National Museum, Bulletins, 1-49.....	1.02
U. S. Special Consular Reports, v. 1-14.....	.28

State Library Commissions.

CONNECTICUT PUBLIC LIBRARY COMMITTEE: Miss C. M. Hewins, secretary, Public Library, Hartford.

The committee's third report, for the period Jan. 1, 1897, to July 1, 1901, is just issued as a substantial volume of nearly 250 pages (246 p. il. O.) The report proper covers but 23 pages, the remainder being devoted to an appendix of most useful practical papers, book lists, summary of library laws, and data regarding buildings, with illustrations, statistics and other phases of the subject. It is of general interest and value, especially to the librarians of small town and village libraries, and in its preparation the commissioners have rendered a service that deserves wide appreciation.

Since the last report 17 towns have adopted the provisions of the library act of 1893. From the reports made by librarians 59 towns are classified as having free public libraries organized under the law of 1893 and the amendment of 1895; 27, as towns in which there are libraries free to all the people but having no connection with the town; 7, as cities, boroughs, and towns having libraries owned and controlled by the public and free to all the people; 4, as towns in which there are free public libraries to which town appropriates money but has no part in the management; 29, as towns in which there are libraries charging fees; 50, as towns having no libraries. In connection with these statistics a map in colors is published showing the different classes of libraries in towns and the towns which have no libraries.

The state grant for libraries since the law was passed has been \$23,915. The number of free libraries in the state at the beginning of 1900 was 91; and the number of subscription libraries, 40; number of free libraries under state law, 51; number of volumes in all, 711,-

529; circulation, 1,835,608; expended for salaries, books and periodicals, in 1897, \$108,272.05; in 1898, \$99,866.69; in 1899, \$93,197.90; number of buildings used exclusively for libraries, 58; number of reading rooms, 60.

Several travelling libraries are sent out by the committee to schools, 20 having been lent for such use by the Society of Colonial Dames of Connecticut. The same society has also contributed more than 1000 pictures to be used in schools. Statistics are given as to the work done by libraries and schools, and it is pointed out that "facilities for meeting on common ground are much needed by teachers and librarians." A state summer school for the instruction of librarians of small libraries is regarded as desirable.

Among the features of the appendix are the interesting series of views of library buildings, and the lists of books in various classes and for school, reference, and other work. The papers include "Suggestions for the smallest libraries," by Caroline M. Hewins; "Mounted pictures and picture bulletins," by Grace Child; and "The sin of ignorance," by Hon. W. C. Case. The usual full tabulated statistics of Connecticut libraries are given, and there is a good index.

VERMONT LIBRARY COMMISSION: Mrs. Matthew H. Buckham, secretary, Burlington.

Mrs. Matthew H. Buckham, of Burlington, has been appointed secretary of the Vermont Library Commission.

State Library Associations.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas H. Clark, Custodian of the Law Library, Library of Congress.

Secretary: R. K. Shaw, Library of Congress.

Treasurer: F. E. Woodward, 11th and F st., N. W.

At the regular monthly meeting of the District of Columbia Library Association, held March 12, at the Columbian University, a paper was read by Mr. Felix Neumann, of the Order Division, Library of Congress, who chose for his subject "Daniel Denton's description of New York, formerly called New Netherlands: a bibliographical treatise."

"In the middle of November, 1900," Mr. Neumann began, "there was sold in London a part of the library of Lord Ashburton. The highest bid, reaching £400, was for a tract of only twenty-one pages entitled 'Daniel Denton's Brief Description of New York,' London, 1670. The pamphlet is always considered by connoisseurs, and with good reason, as one of the scarcest Americana, not only as it seems to be the first printed account of New York in English, but also on account of its excessive rarity. It has been twice reprinted, first in the proceedings of the Historical Society of Pennsylvania, 1845, and, secondly, in

the same year, as volume I. of Gowan's 'Bibliotheca Americana.'" A third reprint, with facsimile of original title-page, is planned for the near future by Mr. Neumann himself, who will use this treatise presented to the association as his introduction.

Mr. Neumann has traced 24 copies of this pamphlet in all, making due allowance for those which are recorded as having changed hands. But this number may be still further reduced, supposing that one or more of the copies sold at auction found its way to the libraries which the writer mentioned. In speaking of the commercial history of the pamphlet, Mr. Neumann stated that its auction price varied from 18s. in 1824 to £400 above mentioned. The copy in possession of the Library of Congress was obtained from William Menzies in 1875, at a cost of \$220. Joseph Sabin, in making a note upon this copy, states: "The title-page being printed on paper larger than the rest of the book, the date is often cut off by the binder." This was regarded by Mr. Neumann as the salient point, which he discussed at some length, arriving at the double conclusion: first, that an edition of 1670 with two different imprints does not exist, and, secondly, that an edition of 1701, the existence of which has been maintained by some bibliographers, was never published.

The latter part of Mr. Neumann's instructive and exhaustive study was devoted to the condition of the title-page of Denton's "Description," showing that, in opposition to Joseph Sabin's view, it was not printed on paper larger than the body of the pamphlet. The narrative of Denton's life, presenting much of interest to the student of American history, the writer reserved for a later occasion.

The meeting was adjourned at nine o'clock, 48 members being present.

R. K. SHAW, *Secretary*.

KEYSTONE STATE LIBRARY ASSOCIATION.

President: E. H. Anderson, Carnegie Library, Pittsburgh, Pa.

Secretary-Treasurer: Robert P. Bliss, Bucknell Library, Chester, Pa.

The resignation of Miss H. P. James from the post of the secretary-treasurer, on account of ill health, has been followed by the appointment to that office of Mr. R. P. Bliss, of the Bucknell Library, Chester.

MASSACHUSETTS LIBRARY CLUB.

President: H. C. Wellman, Public Library, Brookline.

Secretary: G. E. Nutting, Public Library, Fitchburg.

Treasurer: Miss Theodosia Macurdy, Public Library, Boston.

The next meeting of the Massachusetts Library Club will be held at the Boston Public Library, on Thursday, April 24, 1902. President Eliot, of Harvard, is to be the principal speaker. GEORGE E. NUTTING, *Secretary*.

Library Clubs.

LIBRARY CLUB OF BUFFALO.

President: H. L. Elmendorf, Buffalo Public Library.

Secretary: R. F. Morgan, Grosvenor Library.

The regular meeting of the Library Club of Buffalo was held in the rooms of the Buffalo Historical Society, Friday evening, March 21. The entertainment was in the nature of a Shakespearean evening. Instrumental selections were rendered by Miss Grace Grattan. Mrs. William E. Robertson, soprano, sang "Who is Sylvia?" and "Hark, hark, the lark." Mr. William E. Robertson, baritone, sang Ben Jonson's song, "Drink to me only with thine eyes." Miss Baker, of the Buffalo Public Library, sang a solo from "Othello." Mr. Charles Rohlfis read selections from the play "As You Like It," which were received with great appreciation.

At the business meeting which preceded the entertainments reports were made by the chairmen of the various committees. Miss Hawkins, of the home library committee, reported that four new libraries had been established on the east side of the city, and that the work was progressing very satisfactorily. Up to the present time the home libraries and the home library workers are distributed as follows: 1, Miss Anderson, on Trenton avenue; 2, Mrs. Eisele, on Jefferson street; 3, Miss Andrus, on Beech street; 4, Dr. Gleason, on Sycamore street; 5, Miss Kemmel, on William street; 6, Miss McCreary and Miss Wallace, on Walnut street. The Charity Organization Society has been very helpful in selecting both locations and visitors.

Mr. E. D. Strickland, chairman of Library Institutes Committee, reported that the meeting of the institute would take place in Buffalo, May 30 and 31. Representatives from the various libraries in the five counties—Erie, Niagara, Orleans, Genesee and Wyoming—over which the Library Club of Buffalo has jurisdiction, will be present. The committee has the work well in hand, and will give the visiting delegates a cordial welcome.

Miss Chandler and Mr. Boechat reported for the committee appointed to help further the idea for the evening use of the public schools for public gatherings.

Following the meeting refreshments were served. RICHARD F. MORGAN, *Secretary*.

LONG ISLAND LIBRARY CLUB.

President: Miss M. W. Plummer, Pratt Institute Library.

Secretary: Miss M. S. Draper, Children's Museum Library.

Treasurer: Miss Mabel Farr, Adelphi College Library.

A special meeting of the Long Island Library Club was held by invitation at the rooms of the Grolier Club, 29 East 32d street,

New York, on Friday afternoon, Feb. 21, at three o'clock. Despite a heavy rainstorm and extremely bad travelling about 50 persons, members of the club and students of the library school, were present.

The meeting was called to order by the president. The first address of the afternoon was given by Mr. Howard Mansfield, president of the Grolier Club. The speaker extended a very cordial welcome to the visiting club, and offered to the guests the opportunity to inspect the library and other rooms occupied by the club, as well as the privilege of examining the special collection of mosaic bookbindings then on exhibition. He explained the object for which the club was founded and which it still holds before its members; and also told of the artistic work done by the club at the club bindery, some examples of which were to be seen in the exhibition.

Mr. H. W. Kent, librarian of the Grolier Club, gave a valuable paper on the history of mosaic bookbinding, during the last three or four hundred years, and illustrated the subject by crayon drawings of the motives used by different bookbinders.

A suggestive and practical paper was presented by Mr. W. W. Bishop, of the Polytechnic Institute, Brooklyn, answering the question, "Should the librarian be a bibliophile?" This was printed in the *LIBRARY JOURNAL* for March.

A very hearty expression of thanks was voted to the Grolier Club for their generous hospitality, and also to the president and librarian of the club for their interesting and valuable addresses.

MIRIAM S. DRAPER, *Secretary.*

Library Schools and Training Classes.

AMHERST SUMMER SCHOOL.

The summer school of library economy, conducted at Amherst, Mass., by W. I. Fletcher, will hold its twelfth yearly session of six weeks from July 7 to Aug. 15, 1902. The usual course of instruction will be given, comprising daily lectures from Mr. Fletcher, and practice work in the college library. The tuition fee is \$15, and necessary supplies will not exceed \$5. Full information regarding admission and other details may be obtained on application to W. I. Fletcher, College Library, Amherst, Mass.

CALIFORNIA SUMMER SCHOOL.

A summer school of library science will be conducted this year at the University of California at Berkeley, by Miss Mary Floyd Williams, assisted by the librarian, J. C. Rowell, and the assistant librarian, J. D. Layman. It is intended for those who already have library experience or are actually engaged in library work. The class will be limited to 20 students (possibly 25).

CHAUTAUQUA LIBRARY SCHOOL.

The library school conducted by the Chautauqua Assembly will hold its session for 1902 during the six weeks, July 5-Aug. 15. Melvil Dewey of the New York State Library is general director and will be present for one week or more and give lectures on library administration. Miss Hazeltine, of the James Prendergast Free Library, Jamestown, N. Y., is resident director. Miss M. E. Robbins, of the Brookline (Mass.) Public Library, recently library organizer and instructor of library training classes in University of Nebraska, will be head instructor, with Miss Anna R. Phelps and Miss Alice Hazeltine, of the New York State Library School, as assistants during the entire session. Special lectures will be given by H. L. Elmendorf, W. R. Eastman, A. L. Peck, and others.

The course is designed for librarians of smaller libraries and library assistants who cannot leave their work for extended courses offered in regular library schools, but who can get leave of absence for a six-weeks' course which will help them to gain a broader conception of their work and an understanding of modern methods. Only those candidates will be admitted who are already engaged in library work.

Entrance examinations will not be required, but candidates are expected to have had a high-school course or its equivalent as the minimum basis of education, and at least one year's successful experience in actual library work.

Application for admission should be made before June 15 to Miss M. E. Hazeltine, James Prendergast Free Library, Jamestown, N. Y. The class will be limited to 40 students, and the tuition fee will be \$20 for the course, to which must be added the regular Chautauqua gate fee of \$5. Supplies are estimated at from \$6 to \$10.

DREXEL INSTITUTE LIBRARY SCHOOL.

PERSONAL NOTES.

Miss Jessie M. Allen, class of '01, has been appointed assistant cataloger in the Library of the State University of Missouri.

Miss Helen Sharpless, class of '01, has resigned the position of assistant librarian in Haverford College Library, to accept a position in the order department of the Library of Congress.

Miss Elizabeth V. Clark, class of '00, has been appointed assistant librarian in Haverford College Library, Haverford, Pa.

Miss Charlotte K. Hannum, class of '00, has accepted a position as assistant in the Drexel Institute Library.

Miss Mary Krichbaum, class of '01, has been engaged as assistant in charge of travelling libraries by the Free Library Commission of Pennsylvania.

NEW YORK STATE LIBRARY SCHOOL.

Professor H. H. Powers, of Cornell University, well known as a popular lecturer on art, spoke to the school, March 13, on the principles of selection of books in the fine arts. He was unusually successful in grasping the significant points of the problem, from the standpoint of the librarian, giving us, not a list of books, but fundamental principles illustrated by well-known books. The entire treatment of the subject was discriminating and practically helpful.

Two members of the A. L. A. committee on library training, Mr. Arthur E. Bostwick, chairman, and Mr. S. S. Green, have appointed dates for visiting this school.

SALOME CUTLER FAIRCHILD.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL.

LIBRARY VISITS.

The seniors made their annual inspection visit to Chicago libraries, March 31-April 5, with the following itinerary:

March 31. Chicago Public Library; A. C. McClurg & Co.

April 1. Newberry Library; P. Ringer & Hertzberg's bindery; Parmelee Library Co.; Lakeside Press.

April 2. John Crerar Library, with lecture by Mr. Andrews.
Afternoon free.

Supper with the Chicago Library Club and Illinois State Library School Association at Restaurant Roma, followed by meeting of Chicago Library Club in Handel Hall, with lecture by Professor Zeublin, of Chicago University.

April 3. Scoville Institute, Oak Park, with lecture by Miss Moore on children's work in libraries.

Library Bureau, with lecture by Miss Ahern; Rand, McNally & Co.

Hull House, with lecture by Miss Ellen G. Starr on "Bookbinding," followed by supper in the Hull House Coffee House.

April 4. Chicago *American*.

Studio lecture by W. Irving Way, on "Private printing presses," illustrated by examples.

Evanston Public Library, with lecture by Miss Clarke on school library work; Northwestern University Library, followed by tea in the Guild room.

April 5. Chicago University Library, with lecture by Mrs. Dixon.

Field Columbian Museum.

Armour Institute of Technology.

The uniform kindness shown in the libraries visited, the propitious weather, and the outside attractions of grand opera, Maude Adams, and Richard Mansfield made the trip an unusually pleasant one.

KATHERINE L. SHARP, *Director*.

Reviews.

COCKERELL, Douglas. Bookbinding and the care of books: a text-book for bookbinders and librarians. N. Y., D. Appleton & Co., 1902. 342 p. D. (Artistic crafts ser. of technical handbooks.) net, \$1.20.

Mr. Douglas Cockerell's new work on book-binding forms the first volume of the "Artistic crafts series of technical handbooks," edited by W. R. Lethaby. The objects of the series as expressed in the general preface are "to provide trustworthy text-books of workshop practice, . . . to set up a standard of quality in the crafts which are more specially associated with design," and "to treat design itself as an essential part of good workmanship." In the book before us, these objects are admirably carried out. Beginning with the receipt of the book at the bindery, Mr. Cockerell carefully and minutely describes all the processes that a book must go through from the collating and sewing to the finishing. His descriptions of the various processes, although necessarily technical, are in general very clear, and are accompanied by numerous illustrations. The greater part of the book deals with "extra" binding, and while as a book-lover the librarian will be interested in and perhaps tempted by this part, he will turn to the pages devoted to library binding, to the durability of materials, and to the care of the bound book, with the hope of obtaining practical aid. And in this hope he will not be disappointed. Mr. Cockerell recognizes the need for low prices for library work and the still greater necessity for sound, honest workmanship that will stand the hard wear that books in a public library are subjected to. Here is his summing up of the requirements: "Appearance must to some extent be sacrificed to strength and durability, and not, as is too often the case, strength and durability sacrificed to appearance. The essentials of any good binding are, that the sections should be sound in themselves, and that there should be no plates or odd sheets 'pasted on,' or anything that would prevent any leaf from opening right to the back; the sewing must be thoroughly sound; the sewing materials of good quality; the slips firmly attached to the boards; and the leather fairly thick and of a durable kind, although for the sake of cheapness it may be necessary to use skins with flaws on the surface. Such flawed skins cost half, or less than half, the price of perfect skins, and surface flaws do not injure the strength of the leather. By sewing on tape, great flexibility of the back is obtained, and much time, and consequent expense, in covering is saved. By using a French joint much thicker leather can be used, with corresponding gain in strength." While of course, he recommends half-binding for library work, it is a curious oversight that he gives no technical directions for this kind of work.

Mr. Cockerell quotes with full approval the recent report of the Society of Arts on leather for bookbinding, and accompanies it with practical notes and suggestions. At the end of the book he gives in tabular form the specifications for four different kinds of binding: (1) for extra binding suitable for valuable books; (2) for good binding for books of reference, catalogs, etc., and other heavy books that may have a great deal of use; (3) for binding for libraries for books in current use; (4) for library bindings of books of little interest or value. For the first class he recommends whole leather—goatskin (morocco), pigskin or sealskin; for the second and third classes, whole or half leather of the same varieties, with the addition of properly prepared sheepskin. (But elsewhere he states that "much of the leather now made from sheepskin is quite worthless"—an opinion in which most librarians would coincide.) And for the last class he recommends whole buckram or half linen with paper sides. In all the other details of binding the specifications are equally sound, and except that the present American tendency is toward a more general employment of cloth and buckram, the librarian would do well to copy off the specifications for the three last classes and insist on his binder following them.

The second part of the book contains a few pages (291-306) on the "Care of books when bound," and here too the suggestions, if not specifically new, are thoroughly practical and useful. The note on the injurious effect of direct sunlight on leathers, and the suggestion that in library windows exposed to the sun tinted glass be used, are certainly worthy of consideration.

Both to the bookbinder and to the librarian, Mr. Cockerell's book will prove to be a work of real utility. A. C. P.

Library Economy and History.

GENERAL.

DANA, John Cotton. What people read. (*In The World's Work*, March, 1902.)

A statistical analysis of the character and quantity of matter printed in current newspapers, as compared with the number of books read annually, illustrating how small a part books play, comparatively, in the reading of a nation. Mr. Dana has reduced the contents of the periodical publications of the United States to volumes of the size of "David Harum" and finds the total output equal to 2,000,000,000 copies of "David Harum." 28 per cent of this total, or 560,000,000 copies of the size of "David Harum" is advertising.

HALSEY, Francis Whiting. Our literary deluge and some of its deeper waters. New York, Doubleday, Page & Co., 1902. 8+ 255 p. D.

Among the essays on books, writers and

other phases of literature which make up the volume is an appreciative survey of "Librarians and their influence." Of the American Library Association Mr. Halsey says that "it has done more, probably, for what may be called the intellectual growth of libraries—the intelligent enlargement of their numbers, the widening of their educational influence on proper lines—than all other forces which have been active in their behalf."

PUTNAM, Herbert. The relations of the national library to historical research in the United States. (*In Educational Review*, March, 1902. 23:217-232.)

This paper was read by Mr. Putnam before the American Historical Association at its meeting in Washington, Dec. 28, 1901. In it he tells how far the Library of Congress is likely to be competent (1) in scope; (2) in facilities for aiding research upon its premises; (3) in endeavors to promote research in the country at large.

LOCAL.

BROOKLYN, N. Y. *Library consolidation.* The bill providing for the consolidation of the Brooklyn Library with the Brooklyn Public Library was passed by the state senate by a vote of 28 to 11 on March 25. A hearing upon the bill was given in the mayor's office, in New York City, on April 7, when the arguments in its favor were presented by Henry Sanger Snow, F. W. Hooper, and Andrew H. Green. A large delegation was present in opposition to the measure, among whose spokesmen were ex-Mayor Schieren, F. W. Hinrichs, and Dr. A. W. Catlin. They urged that the bill was opposed to democratic principles, in its creation of an independent self-perpetuating body to administer a city institution. The bill was signed on April 12 by Mayor Low, who pointed out that the consolidation it effects "is desired by everybody" and could not be secured on other terms. He added: "It has been opposed on the ground that it turns over an already existing public library to a corporation, whose directors, although originally appointed by the mayor, except as to the *ex-officio* members of the board, becomes thereafter self-perpetuating. It is impossible to deny that there is force in this objection. On the other hand, it must be remembered that the policy embodied in this bill has given to the boroughs of Manhattan and the Bronx such splendid institutions as the Metropolitan Museum of Art, the American Museum of Natural History, the New York Botanical Garden, and the Zoological Society. In such a matter a policy may fairly ask to be tested by its fruits. The pending bill simply gives power to create a corporation capable of holding the Public Library and the Brooklyn Library in trust, and capable of contracting with the city to conduct the consolidated library as a free

public library. The board of estimate and apportionment is charged with the duty of making the necessary contract on behalf of the city; and I think it can and should draw this contract in such terms as to provide that the city shall hold the title to all property hereafter acquired at public expense; to insure a broad policy in the purchase of books and to reserve to the city, explicitly, the right of amending the contract in case of need." The bill was signed by Governor Odell on April 15.

Brooklyn (N. Y.) P. L. All branches of the library were closed on Easter.

The library reached its high-water circulation mark in March, the number of books issued from the various branches for home use being 114,919. The fiction percentage, including that of juvenile books, was 68 per cent. About 5000 books were added to the shelves during the month. The library opened its roth children's room on April 7.

Brooklyn (N. Y.) P. L. Assoc. This association, which is a private organization, composed largely of women, is now making plans for the establishment of a vacation house or librarians' home, to be maintained under its direction. An attractive site for such a home has been given by Mrs. Mary E. Craigie, the president of the association, at Baldwins, Long Island, located on an arm of Hempstead Bay, with facilities for salt water bathing and boating. The secretary of the association writes: "It seems to be in every way an ideal and convenient place to locate a vacation house—where librarians may find quiet and restful surroundings and the combined attractions of country and seashore. A committee of ways and means are considering plans and the best way to organize so that librarians themselves may become interested and made to feel that the Home belongs to them and not that it is a charity. It is quite possible that a stock company may be formed with shares so low that all librarians may become stockholders in the enterprise. It is estimated that there are over a thousand librarians in the various libraries of greater New York and within the radius of 100 miles, who could take advantage of the vacation house during the summer vacation or for occasional outings. The ladies in charge of the undertaking are women of means and leisure, and they are greatly interested in the undertaking and sure to make a success of it."

Cambridge (Mass.) P. L. (44th rpt.—year ending Nov. 30, 1901.) Added 3796; total 60,759. Issued 186,322 (fict., incl. juv., .691 %), of which 8972 were drawn through the schools and 47,862 through delivery and branches. Receipts \$19,000; expenses \$18,998.75.

The abolition of the age limit, recommended in the last report, has been put into effect, and the transfer of all juvenile books to the children's room is recommended.

Chattanooga, Tenn. On March 17 the city council passed an amendment to the Carnegie Library ordinance, providing a yearly appropriation of \$5000 for library maintenance. The library trustees have been appointed by the mayor as follows: Edward G. Richmond, Dr. John H. Race, Gen. R. W. Healy, Lewis M. Coleman, Milton T. Freeman, A. N. Sloan, Henry Schwartz, Paul S. Poindexter, Z. W. Wheland.

Chicago, Ill. Newberry L. (Rpt., 1901.) Added 22,703 v., of which 19,520 were purchases, 1491 pm.; total 184,418 v., 67,325 pm. Visitors 78,483, of whom 59,555 were men. Books consulted 123,484.

"On March 25 a new room was opened for the department of Genealogy; and in June was secured the unique philological library of the late Prince Louis-Lucien Bonaparte; a collection of some 17,000 volumes and pamphlets, illustrating most of the known languages of the world."

Cleveland (O.) P. L. At a recent meeting of the Labor Lyceum, W. H. Brett spoke upon "The growth of economic literature." He said that out of the total circulation of books from the Public Library between five and six per cent. were to be classed under sociology.

Mr. Brett, at the beginning of his talk, said that his intention was not to speak on socialism or any other economic theory, but to say something about the growth of economic literature, irrespective of what view might be taken on socialism. The public library was strictly a non-partisan institution, and its aim was to furnish to the people of Cleveland literature on all subjects that were of interest and gave information. He read a list of works on economics, commenting on each sufficiently to show what view the authors took. Five or six per cent. of the total number of books drawn from the library under so broad a head as sociology, he said, was not large, but it nevertheless meant that about 39,000 books on the subject were read during the year.

Concord (N. H.) P. L. (Rpt.—year ending Dec. 31, 1901.) Added, by purchase, 1250; total not given. Issued, home use 89,000. New registration 639.

The absence of statistics is the only defect in this bright and suggestive report, which gives evidence of alert and sympathetic work. Miss Blanchard notes that the circulation has increased, and that in four years the percentage of fiction read has diminished from 85 to 76. "The tendency is markedly toward a more serious use of the library for purposes other than recreation. The use of the reference room by children is rapidly growing. Pupils are finding out that there is a relation between their ordinary text-books and literature. To foster this, we sent out postal cards at the beginning of the school year, reminding our teachers of what the library accords them in the way of privileges and of what

more it might easily be persuaded to accord."

Among the purchases of the year were a set of stereoscopic views of different countries, "which we let out on borrowers' cards judiciously, as we do valuable books. These pictures and accompanying lenses are so fine that only praise has come from those who have already seen them; and we foresee a long life of usefulness for the stereographs among invalids and travel clubs."

Dallas (Tex.) P. L. The weekly children's hour at the library is proving a most gratifying success. The children's room was well filled for the first and second talks on books and pictures interesting to children, and the third week, when the program was readings from "Uncle Remus," brought out about 500 children. It was necessary to adjourn to Carnegie Hall for the reading, as the children's room could not give even standing room to the crowd.

Dover (N. H.) P. L. (19th rpt., 1901.) Added 1720; total 27,709. Issued, home use 66,731; "for the first time in our history the whole year's circulation has been effected without the loss of a single book." Reading room attendance 26,682; Sundays 2150. New registration 437; total registration 9960. Receipts \$3931.61; expenses \$3924.36.

Among the gifts were a collection of music and music books numbering 360 volumes, including scores of oratorios and cantatas, church and choral music—some of large historic value. For these books new shelving was provided and a special list is to be printed. The collection of mounted pictures and illustrative material has been increased, and now numbers nearly 1000 items. It has been fully cataloged, each picture being treated as if it was a book. Looking back upon the 10 years passed in the present building Miss Garland says: "At the time of removal here it was supposed that ample space had been provided for many years, yet already almost all wall and stack space is occupied, and it is growing difficult to provide for the yearly accessions. Nearly 12,000 volumes have been added in these 10 years, a very good sized library of itself, and more than half a million books have been issued in circulation. Sometimes a glance like this at work in the mass enables one to realize, in some degree, the influence that the library in this time must have exerted on the life of the community."

Galveston, Tex. Rosenberg L. Assoc. At a meeting of the directors, on March 21, the contract for the library building was awarded to H. Devlin, of Galveston, for \$126,500.

Goshen (Ind.) P. L. At the March meeting of the board Mrs. Ella R. Heatwole was elected librarian for a two years' term, at a salary of \$500 per year. An assistant will be later appointed, at a probable yearly salary of \$200.

Germantown, Phila. Friends' F. L. (Rpt., 1901.) Added 526; total 20,764. Issued, home

use 14,370; (biography 2707; juv. 2553). New cards issued 411. Total visits to lib. 24,424.

"In procuring material for the library we have felt in the past, and still feel ourselves very much restricted from works of fiction, yet it has been a leading desire with the committee to provide our patrons with carefully selected volumes from almost every other department of literature. These it is intended shall fairly represent the more meritorious productions of the best authors in their respective branches, so that, while practically excluding a large class of books, only too popular at the present day, we may hope to beget and foster a taste for works which possess attractions of their own, and will prove no less stimulating and helpful to their readers."

Greenfield (Mass.) P. L. (21st rpt.—year ending March 1, 1902.) Added 702; total 13,076. Issued, home use 40,410. Registration 1557; "about one person in five in the town is a library cardholder."

A "duplicate pay collection" of popular books was begun in November, and has proved popular. More room is greatly needed in all departments.

Hackensack, N. J. Johnson F. P. L. (1st rpt.) As the library trustees were organized April 8, 1901, this first report covers only part of a year. It is mainly a review of the work of organization, carried on under the direction of Miss Mary P. Farr. The library was opened on Oct. 5, 1901, when dedication exercises were held. The circulation of books began Oct. 7. "The total number of volumes now in the library is 7092. The number of borrowers is 1711. During the month of October the number of books in circulation was 4053; November, 5726; December, 5256; January, 5914; a total for four months of 20,949 volumes; the average circulation per month was 5237. This is a most remarkable showing in itself, and when we compare it with reports from other libraries of our class, as in such towns as Bayonne, Madison, Passaic and South Orange, averaging about 8000 volumes each, with a total monthly circulation of about 12,000, an average of 3000 each, the showing becomes still more marked, because these towns have a population averaging over 12,000 each, as compared with our 10,000. Seventy-five per cent. of our books are constantly in circulation. Our reading room is very largely used, and the busiest hours for the librarians are from four to six in the afternoon."

Harvard University L. (Rpt., 1900-'01.) Added 24,238 v., 13,797 pm.; total 575,888 v., (college lib. 387,097) 328,174 pm. The total gifts for the year amounted to 18,984 v. Total issue 87,853 (books lent 63,673; used in building 24,180); over-night use of reading room 13,566. The lending of reserved books for over-night use ceased in 1896, when the reading room began to be kept open in the evening. No record is kept of the large use of

accessible reference books, which number in all about 52,500 v. Loss of books from the reading room shelves amounted to 25 v. During the year 350 cards of admission to the book stacks were issued, which were used 6067 times. Of the 3501 students 2308 take books from the library. It is pointed out that most of those who do not make use of the library have access—as in the scientific, law and medical schools—to technical collections, conveniently placed in their own buildings. "Divinity students, on the other hand, although they have at their own school a library which is far from being confined to a narrow field, seldom fail to make good use of the college library as well.

"As in other years, frequent applications for the loan of books have been received from other libraries, especially college libraries, and from schools in distant parts of the country, and the library has sent away 744 v. in response to these requests."

The constantly-increasing difficulties arising from the need of larger quarters are again referred to. "The lack of this enlargement cramps the library's activities on every side, abridges its usefulness, and makes the work of administration more difficult and in some degree less efficient. Every year the relief is delayed the problem becomes more serious. Every year more varied service is demanded of us and we are less able to render it." One danger of the present condition of affairs is its tendency to split the collection into a series of departmental libraries. "It is now so long that the library has been unable to offer to professors and advanced students the facilities they need for the use of its books, that each department, in planning for the improvement of its work, is inclined to accept as permanent the present crippled condition of the central library, and to demand a special collection in a separate building for its individual use. Under present conditions such separate collections are in fact necessary, but if this should lead to the general installation of extensive special collections in separate departmental buildings, the gradual disintegration of the central library is likely to follow. The separation from the main library of some of the scientific and technological divisions may possibly be found to have enough advantages to outweigh the general disadvantage; but to drift into a policy that involves the separation from the general library of such subjects as Education, Philosophy, or any division of Literature or History, would be a calamity that would affect unfavorably the whole educational method and standing of the college."

An interesting collection of photographs and other prints illustrating the history and topography of the college has been begun. The material is mounted on cards in two sizes, 18 x 14 and 9½ x 6½ inches, the former size being kept in numerical classed order in portfolios, the latter arranged like a card catalog in drawers.

Notable among the accessions of the year

is the Slovak collection of Lombardini of Sollein, secured by Professor Wiener, and augmented to form a collection of 123 v. and 1567 pamphlets, including many rare periodicals and much folk-lore material, the whole being the gift of Professor A. C. Coolidge.

The use and extent of the various special reference libraries kept in class rooms and laboratories is noted, and there are the usual summaries of the reports from the heads of the shelf and catalog departments. The arrangement of works in Economics has been completed under the new classification, after a year and a half of work, and it is stated that this is the last of the large subjects that can be taken up under present conditions of lack of space. In the catalog department abbreviated and partial record only is practicable for the less important current accessions, owing to the limited force available through lack of working space and lack of means. Reference is made to the printed catalog cards undertaken by the Library of Congress, and some interesting figures are given of the saving effected by the use of the co-operative printed cards for serials issued by the A. L. A. Publishing Board. The total average cost of these cards is given as about 8.3 cents per title—this estimate including cataloging cost of titles contributed by the Harvard Library, sorting and classifying, etc.—which, "compared with the 22 cents per title which we are now paying to the college printer for printing alone, to which must be added the cost of cataloging and the cost of card stock, shows very plainly the advantage to be had from co-operative work." The saving is still encouraging, although all the titles received have not been available for the library catalog.

Kentucky, Library commission for. The legislature has passed the bill introduced by Senator J. Embry Allen, establishing a free library commission for the state, to consist of five members appointed by the governor, who are to serve without pay, except that traveling expenses are to be defrayed.

Long Island City, N. Y. Queens Borough L. (6th rpt., 1901.) This is a mimeographed report, dealing mainly with the results of the consolidation of Queens Borough libraries. The consolidation was effected on Jan. 1, 1901, and included four libraries of the borough, the Union Free Library of Ozone Park, the Richmond Hill Free Library, Hollis Public Library, and Queens Free Library, making, with the three libraries of the Long Island City institution, seven branches in the Queens Borough Library system.

The Union Free Library of Ozone Park contained 300 books. The Richmond Hill Library contained 2100. Hollis Public Library contained 1200 books. Queens Free Library contained 427 books.

"Until June the staff consisted of eight assistants, half of them inexperienced, an office girl, and one, sometimes two apprentices. The libraries were kept open, one for 12 hours

daily, two for eight hours daily, one for eight hours on five days in the week and the other three hours on three days in the week.

"At the present time, Ozone Park and Hollis Branches are organized, *i.e.*, the books have been accessioned, cataloged and shelf listed, our charging system introduced, which necessitated the writing of many cards and our statistics, which are nearly the same as those kept by the New York and Brooklyn Public Libraries, kept from day to day. The librarians in charge of the new branches were quite untrained and had to be taught their duties before they could perform them."

Details of the various branches, and of the work of organization—which seems to have been a difficult and hampered task—are given. The number of accessions, exclusive of the Hollis and Ozone Park collections, is 4730; total 24,439. The total home circulation was 104,632 (fiction 51,729; juv. fict. 29,094). Reading room attendance was 35,841; registration 8673. It has so far been practicable to do reference work at but a single branch—the Nelson branch. This, it is pointed out, has been "the strenuous year" of the library's existence, and it is hoped that it has given a foundation for further development and improvement.

Ludlow, Vt. Fletcher Memorial L. Miss Mary Mastin, the librarian, reports that the library, which was dedicated November 1, 1901, has already issued 700 readers' cards in a town of 2000 inhabitants. "For the first four months only 63 per cent. of the reading was fiction. The weekly circulation is over 500. The library hopes soon to loan books—possibly pictures—to the district schools of the town. Talks are given by the librarian to the district teachers and students of the academy on the use of the library and reference books."

Lynn (Mass.) P. L. (39th rpt.—year ending Dec. 31, 1901.) Added 3223 (gifts 2491); total 62,041. Issued, home use 166,708 (fict. 116,345); ref. use 94,963, of which 35,297 were used in the children's department. New borrowers 1909. Receipts \$19,939.74; expenses \$19,576.13.

The increase in use of books amounts to 14 per cent. in the circulating department and 31 per cent. in the reference department; 2145 v. were delivered on teachers' slips and 5765 on teachers' cards.

Malden (Mass.) P. L. (24th rpt.—year ending Dec. 31, 1901.) Added 3734; total 39,913. Issued, home use 135,387 (fict., incl. juv., 75.87%); lib. use 7727; school use 1405. Cards in use 7420. Receipts \$15,446.77; expenses \$15,092.46.

There are now seven delivery stations. Among the year's accessions were 880 v. for use in the public schools. "By this means collections of selected books, graded for the pupils for whom they are intended, are sent to the several schools, where they are retained

for stated periods and used by the scholars both in school work and at home." From the children's room there was a loss of 18 volumes, "a witness to the danger of open shelves. If the system of open shelves applied to a limited number of books under partial supervision were to be extended to the alcoves and stack of the main library, what would be the result? Would it tend to education in petty crime or would it increase the observance of honesty, while throwing temptations in the way of those who are too weak to resist them? The saving of a few dollars in the salaries of attendants and the fancied convenience of the public, which are the stock arguments of the advocates of open shelves, are of less importance than the nursing of dishonesty by favorable opportunities in the alcoves of a public library. So long as a class in the community, whether of children or of adults, is dishonest or careless in the appropriation of public property, so long will the maintenance of open shelves, except under exceptional conditions and the closest supervision, be a menace to public morals."

The valuable music library of the late Obadiah Bruce Brown, bequeathed to the library, is now in process of classification and arrangement. An interesting collection of views of local scenes and houses has been begun, the earliest item being a view of the center of the town in 1837.

New York P. L. A Rossetti exhibition was opened on March 19 in the print galleries of the Lenox building. It consists of nearly 200 photographs of paintings and studies by Dante Gabriel Rossetti, many of which are from the collection of the artist's brother, William Michael Rossetti, and bear his signature. The whole collection forms part of the Avery donation to the library. In addition to the photographs are some of the books illustrated by Rossetti: the "Poems" of Tennyson, published by Moxon in 1857, with illustrations by Rossetti, Millais, Hunt, Stanfield, Mulready and others; and "The Prince's progress and other poems," by Christina Rossetti. There are also numerous photographs, portraits, and sketches of Rossetti, and many books on Rossetti, including a copy of *The Germ*, and various manuscripts.

New York, Library legislation. An amendment to the university law regarding establishment and support of libraries has been passed by the legislature, which provides for the acceptance of gifts similar to those made by Andrew Carnegie, thus obviating the necessity of securing special legislation to enable individual towns to accept such gifts. The amendment is as follows: "A municipality or district named in this section may raise money by tax to establish and maintain a public library, or to provide a building or rooms for its use, or to share the cost as agreed with other municipal or district bodies, or to pay for library privileges under a con-

tract therefor. It may also acquire real or personal property and administer the same for public library purposes. By majority vote at any election any municipality or district or by three-fourths vote of its council any city may accept gifts, grants, devises or bequests for public library purposes on condition that a specified annual appropriation shall thereafter be made for maintenance of the library. Such acceptance, when approved by the regents of the university under seal and recorded in its book of charters, and in a school not subject to their visitation when approved by the state superintendent of public instruction, shall be a binding contract, and such municipality and district shall levy and collect yearly the amount provided in the manner prescribed for other taxes."

Newark (N. J.) F. P. L. At the March meeting of the trustees the salary of Miss Winsor, assistant librarian, was increased from \$1200 to \$1400.

Norfolk (Va.) F. L. (Rpt., 1901.) Added 803; total not given. Issued, home use 24,943; attendance 49,710.

The noteworthy event of the year was the offer of \$50,000 from Andrew Carnegie for a library building. The gift was accepted in June last, and arrangements to secure a site are now pending.

North Adams (Mass.) P. L. (6th rpt. — year ending Nov. 30, 1901.) Added 1987; total 19,929. Issued, home use 80,501 (fict. 51%; juv. fict. 24%). New registration 1264; total registration 7175. Receipts \$6532.04; expenses \$6522.67.

Two branch libraries, consisting of small travelling collections and a reading room for periodicals have been opened, one in a mill district, the other in the suburb of Houghtonville, and in both there has been a continued and most encouraging appreciation of the books. A new charging system has been installed, and the two-book system adopted. Talks on nature subjects have been given in the children's room, and six art exhibitions have been held. "Believing that it would be better to show the school children how to help themselves, rather than to find for them each time not only the book but often the chapter and page desired, a beginning has been made this fall of teaching the high school scholars by test questions how to use the library, and especially its reference books, in writing their essays. It is hoped before the year is out to carry this same instruction with the necessary modifications into the higher grades of the grammar schools."

Omaha (Neb.) P. L. The children's room of the library has received numerous art gifts of pictures and bas reliefs from the local Woman's Club, and recently the club ordered a seven-foot cast of "Diana and the stag," to be placed in the center of the room. The

gift was made without the authorization of the library board, and at its March meeting the board passed a resolution "That while gratefully acknowledging the work and contributions of the Omaha Woman's Club toward decorating the children's room, the library board respectfully requests that any plans for the further decoration of the rooms be first submitted for the board's indorsement."

The resolution was received with some indignation by the Woman's Club, which at once decided to transfer its "scorned benefactions" to the high school. On the library side it is explained that the children's room is already overcrowded, and that it is undesirable for large statues or other contributions to be ordered for it without consultation with the board.

Philadelphia (Pa.) F. L. (6th rpt., 1901.) Additions not stated; total 239,183. Issued, home use 1,915,687 (fict. 1,479,253), an increase of 89,050 over the preceding year. No record of reference use is given. Receipts \$148,043.86; expenses \$143,839.26.

The activities of the library have been curtailed by the reduction by \$50,000 of the city appropriation for the years 1901 and 1902. In consequence there has been a reduction of the working force, no places made vacant by resignation are filled, fewer books are bought, and applications for new branches and travelling libraries are necessarily disregarded.

During the year 22,007 v. were rebound, in addition to the binding of a large number of magazines and other periodicals, at a cost of \$10,523.08. Mr. Thomson says: "The unsatisfactory condition of binding as turned out by the ordinary publishing houses is a matter of common notoriety. A record has been kept in the library in many cases of the number of times that a volume goes out, as received from the publishers, in comparison with the number of times the same volume goes out for home reading after being bound in our own bindery. Many instances can be shown in which the first binding has survived not more than from 20 to 25 issues, while after being rebound in our own establishment it is not an unusual thing to find the same volume go out 90 to 110 times and yet be in good, serviceable condition for home use."

Strong appeal is again made for an adequate central library building. "The board are most grateful to have the use of the present building. The work of the library in it has proved of the greatest value to the city and has been an extraordinary success, but as a building it is nothing less than a mere fire trap. The rent paid for it at the present time is \$13,500 per year, and not less than \$900 a year has to be paid for insurance."

Plainfield (N. J.) P. L. The sixth in the series of special book exhibits was held at the library on the afternoon and evening of March

15 and 16. It was devoted to books of interest to women—cookery, domestic science, household matters, etc. The books were displayed on four tables, devoted respectively to cookery, food values, domestic science and servants; home nursing, domestic and school hygiene, physical culture; kindergarten methods and games; and womanhood, including marriage, children, women in business, etiquette, and ethics. Charts showing food values and quantities were displayed on the walls; and each table was in charge of women especially interested in the subjects there presented.

Pomona (Cal.) P. L. At the March meeting of the trustees Miss Mabel E. Prentiss, acting librarian, was elected librarian, to succeed the late Mrs. E. P. Bartlett. A site for the new Carnegie building has been chosen at the southeast corner of Main and Center streets.

Providence (R. I.) Athenæum. The library authorities have decided to make a six months' trial of the plan of a duplicate collection of popular novels and other books. Books from the duplicate collection may be drawn on payment of a charge of one cent per day for each volume, except in the case of novels, when two or more volumes may be counted as one. These books may be drawn in addition to books drawn by members from the main library. Duplicate books will not be reserved.

A circular announcing the new plan has been sent out by the president, Mr. Stone, who points out that "with a limited income of less than \$7500 a year it is obvious that the demand requiring from three to 50 copies of a popular book cannot be met without sacrificing much that is essential in building up a library of permanent and substantial value."

Salem (Mass.) P. L. (13th rpt.—year ending Nov. 30, 1901.) Added 2303; total 41,994. Issued, home use 111,099 (fict. 77.76%); ref. use 6203. New registration 752; total registration (from Sept. 14, 1899) 5355.

Mr. Jones says: "I am becoming more and more convinced, and in this I find myself in agreement with many leading librarians, that the library should not aim to buy every new book that is published, but rather buy fewer titles and duplicate more freely. This is especially the case in fiction and juveniles. The demand is mostly for certain popular books which are much discussed, and the public is better satisfied by getting these promptly than by having a long list of new books in which they take little interest. We cannot afford everything. We should buy only the best."

A "children's corner" has been arranged, with two book cases, which it is hoped may be a precursor of the much-needed children's room.

Sandusky, O. At a meeting of the local Trades and Labor Assembly, on March 17, Miss Virginia Davis, librarian of the Carnegie Library, spoke upon the library and the services it could render to all citizens. Special preparations had been made, without her knowledge, for her reception, and the meeting was most successful. She gave a brief description of the contents of the library, its technical and general magazines and newspapers, its books on mechanics, engineering and varied trades, and its good stories; outlined the simple rules regulating its use; and extended a special invitation to all present to visit the library on the next Sunday afternoon, when arrangements would be made to permit inspection of the building and to issue books. Application blanks were distributed at the close of the meeting.

Savannah, Ga. An effort is being made to secure a fund from Andrew Carnegie for the erection of a public library building, and it is suggested that the local Historical Society should transfer its collection to city control, as the nucleus of a free public library. A letter was received from Mr. Carnegie's secretary on March 17, as follows:

"Mr. Carnegie places all the libraries he gives under the control of city councils. In cases where the management is delegated to a commission or library trustees by councils, he, of course, acquiesces, but his aim is to have a popular institution supported by popular taxation, which alone can give the feeling to the poorest citizen that it is his library, he paying for its support just as other citizens do."

"The question is for Savannah to decide how much per year it will tax itself for a free public library."

Steubenville, O. Carnegie L. The opening exercises of the library were held on Tuesday evening, March 11. Addresses were given by the leading clergymen, the superintendent of schools, the editor of the oldest newspaper and representatives from the glass and iron works. Mr. G. W. McCook, president of the board of trustees, made the address presenting the library to the citizens, and the mayor of the city accepted it on behalf of the people. After the exercises the whole building was opened to the public for the first time. On the following morning the routine work of the library was begun.

The total cost of the building is given as nearly \$65,000. It is of stone, brick and terra cotta, 36×117 feet in dimensions, with a wing nine feet wide at the south end, and is absolutely fireproof. The main entrance is through a massive stone tower 18×18 feet square and 102 feet high from the grade line to the top. A flight of heavy stone steps leads up between ornamental lamp posts to a tile floored veranda surrounded by a balustrade of heavy stone. The entrance vestibule is of marble, finished in buff enamelled tile, and within this is another vestibule, from which opens the lobby, floored, as are all the rooms on this story, with white Vermont marble. A wainscoting eight feet high running around the interior is of Italian marble, and a heavy

carved and polished oak moulding separates this from the upper walls, which are in frescoed rough plaster and stucco work. The color scheme worked out on all the frescoed walls and ceilings of the building is buff and light blue. Immediately opposite the main entrance is the large semi-circular delivery desk of Italian marble, with mahogany top. Back of this is the reference room, 34 x 14 feet in dimensions; on the north side is the stairway to the trustees' room, which is located in the tower; and opening from the lobby on either side are the two large reading rooms for adults and children, respectively, equipped with open shelves and handsome fittings. In the basement is an auditorium, 46 x 33 3/4 feet in dimensions, book receiving room, heating apparatus, etc. The librarian is Miss Ellen Summers Wilson.

Troy (N. Y.) Y. M. A. L. (Rpt., 1901.) Added 11,307; total 42,894. "The operation of several circulating and lending libraries in the city has diminished the number of calls for current fiction, which has inured to the benefit of the library and will enable its funds to be expended more profitably for enduring literature of a character valuable for a public library."

University of Nebraska L., Lincoln. Mr. Wyer, the librarian, has prepared the following comparative statistics, showing the growth of the collection during the past four years:

<i>Accessions:</i>			
year ending March 1,	1899	2426 v.	
" " "	1900	4625 "	
" " "	1901	3900 "	
" " "	1902	6010 "	
<i>Expenditures: Books, binding and periodicals.</i>			
year ending March 1,	1899	\$5605	
" " "	1900	9769	
" " "	1901	5221	
" " "	1902	9940	
<i>Expenditures: Salaries and assistance.</i>			
year ending April 1,	1899	\$3520	
" " "	1900	3835	
" " "	1901	4010	
" " "	1902	4210	
no. vols. now in library, 53,151.			

Wakefield, Mass. Beebe Town L. (Rpt., 1901.) Added 463; total 14,155. Issued, home use 29,556; lib. use 1310. New registration 367.

"As the usual vacation of the librarian was shortened by keeping the library open through the summer and as much extra work has been done by her, especially in connection with the card catalog and the exhibition of the Educational Association, the trustees voted that an extra sum of \$25 be paid her. This amount, however, Mrs. Shepard, as an expression of her interest in the library, has generously returned to the board, to be used in the purchase of such books as may be mutually agreed upon."

Waterbury, Mass. Silas Bronson L. (32d rpt.—year ending Aug. 31, 1901.) Added 1433; total 58,590. Issued, home use 93,913 (fict. .736 %); ref. use 3705. Number of cardholders not given. Receipts \$39,313.27; expenses \$39,445.11.

A careful inventory of the books in the children's department showed a total of 3795 v., which reached a circulation of 40,630 v. (fict. 43 %). The main library is also largely drawn upon by young people, and "with the fact also that 90 teachers are using six cards each, we may say pretty confidently that about half the issues in the library are made to teachers and pupils in the schools." A Saturday "story hour" has been most successful in interesting the children in the standard myths and in foreign countries. Although 84 v. are reported as missing from the children's room, it is thought that most of these are only mislaid. Miss Sperry says: "There is encouragement in the fact that the number of volumes missing this year is 16 less than last, with a circulation more than 16,000 larger; and when one considers that with the system of free access a circulation of over 40,000 volumes has been managed by one assistant working four hours a day, it is evident that the economy in administration more than balances the loss in other ways."

As general free access cannot be given in the main library, the librarian, by way of compromise, opens her office to the public every Saturday, displaying there the new books and magazines of the week. This has proved a popular departure, interesting and useful to the librarian as well as to the public. The attendance has averaged about 100 each Saturday. Sunday attendance for the year was 2476, an average of 51 each Sunday. Unless the new arrangements and improved reading room facilities now under way increase the attendance, it is hardly thought worth while to continue Sunday opening.

Watertown (Mass.) F. P. L. (34th rpt., 1901.) Added 740; total 27,148. Issued, home use 43,321 (fict. and juv. 29,347); lib. use 3058. New cards issued 500; total cards issued 9048. Receipts \$5263.88; expenses \$5259.90.

The circulation shows an increase of 15.8 % over the previous year. The most important event was the completion of the new stack; and the re-classification of the collection is now in process, according to the Expansive classification. New printed catalogs are needed, at an estimated cost of about \$2000 for printing the entire set. Mr. Whitney refers to the possibility of establishing a "pay duplicate" collection of popular books, and a system of house delivery. "I believe a few enterprising experiments in a small way might be safely made, to the increased usefulness of the library." Appended to the report is a classed list of the additions of 1901.

West Hoboken, N. J. The state legislature on March 17 passed the bill introduced by Assemblyman Lutz, permitting the town of West Hoboken to issue bonds and purchase a site for a library building. This will probably ensure a Carnegie gift of \$25,000, for which arrangements are pending.

Wilmington (Del.) Institute F. L. The library has sent out poster announcements regarding its books for schools. The posters contain clearly printed lists of books on "Government and politics," "Geography and travel," "Indians," "Strange peoples," "Animal stories," "Shakespeare," "Nursery tales," "Short stories," and other subjects, and across the bottom in bold type runs the announcement: "All books in this list marked with a check are in your school house. The others will be sent to you at some future time. All of these books, besides hundreds of other good ones, may be had at the central library, corner of Eighth and Market streets, where there is a pleasant room expressly for girls and boys, and librarians who will make you very welcome."

Woonsocket, R. I. On March 6 a proposition was submitted to the city council by the trustees of the Harris Institute Library offering to transfer their property, consisting of the Harris Institute building and the Harris Annex building, to the city forever, for \$68,000, on condition that the city maintain the library. The trustees suggest that if the offer is accepted "the library be managed by the city through three commissioners appointed for three years, the term of one expiring each year, with powers as nearly as may be like those at present enjoyed by the trustees."

Worcester County (Mass.) Law L. (3d rpt.—year ending March 22, 1901.) Added 589; total 20,360. No. readers 1889; books used 9453. The cataloging and classification were completed on April 30, the library having been entirely reorganized within three years. "It has been cataloged and classified, two catalogs, one public and one official, having been made in 15 months' time of one person," and under difficulties of building alteration and construction. Dr. Wire says: "The work of cataloging and classification contrasts very favorably as to time with similar work in other libraries where I have known double the amount of time to be consumed with no better results. But by giving the whole matter my personal oversight, and, in fact, applying the classification largely myself, by revising the rest of the classification and all the cataloging, and by doing away with some unnecessary things, such as full names, dates and cross references, also by cutting titles, I was enabled to attain the result above noted."

Appended to the report is the outline of the scheme of classification, which will appear in full in Cutter's *Expansive classification*, seventh division.

Yale University L. (Rpt.—year ending July 31, 1901.) Additions by purchase 7960; by gift 2220 v., 6525 pm. The total resources of the library are given as 270,000 v., 100,000 pm. and 1000 v. of manuscripts, for the general collection; 22,000 v. for the Linonian and

Brothers Library; and various department and seminary libraries having a collective strength of 59,000 v. The total number of volumes, exclusive of manuscripts and pamphlets, is 351,000; the several library funds amount to \$353,000. The total of additions noted for the year does not include the most important accession of that period, the Count Landberg collection of Arabic manuscripts, purchased at a cost of 80,000 marks, the gift of Morris K. Jesup, of New York. "Gathered by many years of active search throughout the east, supplemented, in the case of some important manuscripts not purchasable, by the employment of careful and skilful copyists, the collection is no less valuable from its character than from its extent. Among the 842 manuscripts composing it the departments best represented are those in which Arabic studies now chiefly center—history, biography, language, poetry and Mohammedan law."

FOREIGN.

Ontario, Canada, Libraries in. (In Rpt. of Minister of Education, province of Ontario, 1901.) For the year ending Dec. 31, 1900, a total of 448 libraries are reported, of which 263 are free, 126 not free, and 43 are libraries which did not report before Dec. 31, 1901. The usual tabulated statistics are given. An important change was the requirement that the official year for library reports be from Jan. 1 to Dec. 31, instead of from May 1 to April 30, as formerly. The state grant of money to libraries was allowed to apply to the purchase of magazines as well as of books, a change that seems to have been appreciated. Dr. S. P. May, library inspector for the province, also visited libraries in the United States—New York, Philadelphia and Buffalo, and his notes regarding them are given in Part 2 of this report. He gives statistics of circulation, cost, and fiction use. In his summing up he states that "280 libraries, viz., 21 libraries, 30 school libraries and 229 travelling libraries issued 3,479,975 books. Total expenditure \$321,127.31." These "280 libraries" consist, however, only of the Aguilar Library, with its four buildings and 26 travelling libraries; the Free Library of Philadelphia, with its 15 branches and 95 travelling libraries, and the Buffalo Public Library, with its 30 class room collections and 108 travelling libraries—being, in fact, simply three city library systems. In contrast with this statement Dr. May points out that in Ontario "371 libraries loaned 2,043,904 volumes." He says: "It is gratifying to state that the public libraries in Ontario are conducted at much less cost than the libraries in the United States. The proportion of fiction issued in the United States is much higher than in Ontario," and of the open shelf system: "This would not be successful in Ontario; it would require too many assistants, and I am pleased to say that in nearly all our libraries the public are not allowed access to the shelves."

Gifts and Bequests.

McGill University L., Montreal. The library has received a gift of \$20,000 from Sir William MacDonald, to buy books required in the regular university course.

Carnegie library gifts.

Albany, N. Y. March 14. \$175,000.

Maintenance fund of \$20,000 annually required. Plans for the acceptance of the gift include a merger of the libraries of the Young Men's Association, the Pruyn Library and the Albany Free Library; the erection of a central building, for \$150,000, and the use of \$25,000 for the equipment of the south end (Albany Free) library as a branch.

Athol, Mass. March 13. \$15,000.

Atlantic, Ia. March 13. \$12,500.

Baraboo, Wis. March 13. \$12,000.

Beatrice, Neb. March 13. \$20,000. Accepted, March 25.

Benton Harbor, Mich. March 13. \$15,000.

Berlin, Ont. March 13. \$15,000.

Blue Island, Ill. March 13. \$15,000.

Bozeman, Mont. March 13. \$15,000. Accepted, March 24.

Brazil, Ind. March 13. \$20,000.

Cedar Falls, Ia. March 13. \$15,000.

Charlotte, Mich. March 13. \$10,000.

Chicago Heights, Ill. March 13. \$10,000.

Danville, Ind. March 13. \$10,000.

Demison, Ia. March 13. \$10,000.

Denver, Colo. March 13. \$200,000.

Maintenance fund of \$30,000 annually required.

Estherville, Ia. March 22. \$10,000.

Fort Scott, Kan. March 22. \$18,000.

Fulton, N. Y. March 13. \$15,000.

Georgetown, Colo. March 7, \$10,000.

Goderich, Ont. March 13. \$10,000.

Greencastle, Ind. March 18. \$5000 additional, making a total of \$15,000.

Greensburg, Md. March 13. \$15,000.

Guthrie, O. T. March 22. \$5000 additional, making a total of \$26,000.

Hampton, Ia. March 13. \$10,000.

Huntington, W. Va. March 22. \$10,000 additional, making a total of \$35,000.

Iowa City, Ia. March 13. \$25,000.

Jacksonville, Fla. Feb. 13. \$50,000. It is planned to transfer the property of the local library association, valued at \$6000, to the new library organization.

Las Vegas, N. M. March 13. \$10,000.

Little Falls, Minn. March 13. \$10,000.

Littleton, N. H. March 13. \$15,000.

London, O. March 13. \$10,000.

Maquoketa, Ia. March 13. \$20,000.

Monroe, Wis. March 19. \$20,000.

Mount Clemens, Mich. March 13. \$15,000.

New Albany, Ind. March 13. \$35,000.

New Brunswick, N. J. March 15. \$50,000. Accepted, March 30.

Newton, Kan. March 13. \$10,000.

Oskaloosa, Ia. March 13. \$20,000.

Paris, Ill. March 13. \$18,000.

Redfield, S. D. March 13. \$10,000.

Reno, Nev. March 13. \$15,000.

St. Joseph, Mich. March 14. \$15,000.

St. Thomas, Ont. March 13. \$15,000.

San Bernardino, N. M. March 13. \$15,000.

Santa Rosa, Cal. March 13. \$20,000.

Saratoga, N. Y. March 13. \$10,000.

Sheboygan, Wis. March 17. \$10,000 additional, making a total of \$35,000. The city council has agreed to appropriate \$3500 yearly for maintenance.

Southbridge, Mass. March 7. \$20,000. The town already appropriates \$2800 yearly for library maintenance.

Tipton, Ind. March 13. \$10,000.

Victoria, B. C. March 13. \$50,000.

Waukesha, Wis. March 13. \$15,000.

Wilmington, O. \$10,000. Accepted, March 3.

Yankton, S. D. March 13. \$10,000.

Librarians.

EDWARDS, Mrs. Jane, for six years librarian of the Missouri State Library, has resigned that office.

HAGGARD-NORÉN. Miss Selma Constance Norén, New York State Library School, 1898-99, and Mr. Ralph Whitledge Haggard were married Feb. 12, 1902, at McCook, Neb.

KING, James L., has been appointed librarian of the Kansas State Library, succeeding Mrs. Annie L. Diggs, whose term expired in March. The librarian's term is for four years. Mr. King has previously held this office, serving from 1894 to 1898. During Mrs. Diggs' incumbency he acted as assistant librarian.

MCCRACKEN, Miss Mary, of Urbana, Ohio, has been appointed librarian of the Mount Vernon (Ohio) Public Library.

MARSH, Miss Grace C., desk assistant of the Webster Free Library, New York, has been granted seven months' leave of absence to completely reorganize the Field Library of Peekskill, N. Y.

NUTTING, George E., formerly assistant librarian of the Fitchburg (Mass.) Public Library, has been appointed librarian of that library, succeeding the late Prescott Curtis Rice. Mr. Nutting is secretary of the Massachusetts Library Club.

STEVENS, Benjamin Franklin, the well-known bibliographer and bookseller, died, on March 5, at his home, "The Sheaves," in Surbiton, Surrey, England. Mr. Stevens was born at Barnet, Vt., Feb. 19, 1833, the son of Henry Stevens, the founder and first president of the Vermont Historical Society. He entered the University of Vermont in 1853, but did not finish the course owing to ill health, and in 1860 joined his brother Henry, the well-known antiquarian bookseller, in London. He married a daughter of Charles Whittingham, of the Chiswick Press, and engaged in business on his own account as purchasing agent for American libraries, his firm being now Stevens & Brown. From his entrance into the book business he devoted a great part of his time to special bibliographical work. Although less famous than his brother for his knowledge of antiquarian books, he possessed a unique knowledge of the manuscript sources of American revolutionary history. For 30 years he was engaged with a staff of assistants in the preparation of a manuscript index of American sources in European archives from 1763 to 1784. His published works include "The campaign in Virginia, 1781," in two volumes; General Sir William Howe's "Orderly book, 1775-76"; and an edition of the Earl of Dartmouth's papers for the Historical Manuscripts Commission. He issued in limited edition a series of 25 volumes, containing facsimiles of more than 2000 historical manuscripts illustrating the American Revolution, with an introduction, notes, and an elaborate index. He also published a facsimile of the Columbus Codex, photographed from the Paris manuscript; and he had for some time been engaged upon an exhaustive report on the American manuscripts in the Royal Institution, for the Historical Manuscripts Commission, and upon an edition of the "Secret service papers of George III." for the Royal Historical Society. For 30 years he was American dispatch agent, through whom was forwarded all the mail for the United States fleet on the Atlantic. In addition to his business and personal literary activities, Mr. Stevens was constantly applied to for special reports on American historical manuscripts in Great Britain to learned societies and libraries in the United States and for the supervision of transcripts and catalogs of such material. He was a fellow of the Society of Antiquaries, a member

of the Council of the Royal Historical Society, and connected with many learned societies in the United States. He was a familiar figure in American society in London, and his facilities for securing the privileges of English archives and libraries were always readily placed at the disposal of American and continental students. The funeral services were held on March 10, in Kensal Green Cemetery, and were attended by Ambassador Choate and the members of the United States Embassy.

Cataloging and Classification.

ANNUAL AMERICAN CATALOGUE, cumulated, 1900-1901: containing a record, under author, title, subject, and series of the books published in the United States, recorded from Jan. 1, 1900, to Dec. 31, 1901, together with a directory of publishers. New York, Office of *The Publishers' Weekly*, 1902. 39+477 p. O.

BIRMINGHAM (Eng.) F. Ls. Occasional lists, no. 2: Books, pamphlets, and magazine articles on British South Africa. Birmingham, 1901, [1902]. 36 p. O.

The five-page general author list of books is followed by a 15-page nonpareil list, two columns to the page, of magazine articles. Lists for the various branches are given separately.

The BOSTON P. L. *Bulletin* for March contains reprints of some interesting manuscripts from the Chamberlain collection, including letters from Andrew Jackson, Fisher Ames, Aaron Burr, and John Quincy Adams.

The CHICAGO P. L. publishes *Special bulletin* no. 3, devoted to books, magazine articles, sermons, poems, essays, etc., relating to Easter.

The CLEVELAND (O.) P. L. publishes an "annual number" of its bulletin, the *Open Shelf*, devoted to a classified record of the accessions of 1901. The list covers 16 pages.

ENGLISH CATALOGUE OF BOOKS for 1901: giving in one alphabet, under name of author and also subject, the size, price, month of publication, and publisher of books issued in the United Kingdom and of the principal books issued in the United States. London, Sampson Low, Marston & Co., Ltd., 1902. 328 p. O.

The NEW YORK LIBRARY ASSOCIATION has issued nos. 3-6 of its co-operative reading lists, devoted to "Stories of delicate workmanship," "Stories that most men like," "Gardens and gardening," and "Botany." The first contains 15 titles, including "Amos Judd," "The

cardinal's snuff-box," "Cranford," "Madame Delphine," etc., the second has 15 entries, comprising "Alice Lorraine," "The day's work," "Foul play," "The gentleman from Indiana," "The Honorable Peter Stirling," "The moonstone," and others, and the last two are excellent selections of both practical and entertaining nature books.

THE NEW YORK P. L. *Bulletin* for March is mainly devoted to the record of material relating to Brooklyn, including works relating to the history of Brooklyn, maps and directories, and reports, etc., relating to cemeteries, public health, parks, fire department, and water supply.

THE SALEM (Mass.) P. L. *Bulletin* for March devotes its four special reading lists to Costume, Needlework, Textile design, and Germany.

SECTIONAL CARD CABINETS. An adaptation of the sectional plan of separate "units" combined in varying arrangements, commonly applied to bookcases, has been made for card catalog cabinets by the firm of Clarke & Baker. These sectional cabinets permit the extension of the card catalog case, according to the increase in the collection, and are especially intended for new libraries or for small branch collections. The card drawers, sliding shelves, and various forms of base are all supplied in "unit" form, to be combined in the arrangement best adapted to the library's needs.

THOMAS CRANE P. L., *Quincy, Mass.* Classified list of new books added during the year 1901. Published by the trustees, 1902. 16 p. O.

TORONTO (*Ontario, Can.*) P. L. List of books, pamphlets and magazine articles on the subjects of temperance, total abstinence, prohibition, Gothenberg and other licensing systems of the liquor traffic, in the library. 12 p.

A compact, classed list.

WISCONSIN F. L. COMMISSION. Suggestive list of books for a small library, recommended by the state library commissions of Wisconsin, Minnesota, Iowa, Nebraska, Idaho, and Delaware, January, 1902. 42 p. O.

A simple, practical classed list of about 1200 titles, followed by an index to publishers, and prefaced by excellent suggestions as to the ordering and selection of books.

CHANGED TITLES.

Thomas Hardy's "Poems of feeling, dream, and deed"; title changed to "Poems of the past and present." (Harper.)

FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress.

Adams, Braman Blanchard, 1851- (The block system of signalling on American railroads . . .);

Ayres, Franklin Herman (Laboratory exercises in elementary physics . . .);

Bass, William Louis (Azucar de cana);

Bedell, Edwin Augustus, 1853- (Digest of opinions of O'Brien, J. in the Court of Appeals of the state of New York, from v. 119-164);

Buffum, Joseph Howard, 1849- (Manual of the essentials of diseases of the eye and ear);

Bullinger, Edwin Wilson, 1841- Bullinger's postal and shippers' guide for the United States and Canada . . .);

Chapman, Mark Boatner (Mounds, monuments and inscriptions illustrating Bible history);

Crew, Henry, and Fatnall, Robert Richardson (A laboratory manual of physics . . .);

Crozier, Hugh Vaughan (Temperance and the Antisaloon league);

Dalton, Charles Test (The role of the unconquered);

De Vore, James William (Somewhat of a liar myself);

Earle, Stephen Carpenter (The Rutland home of Major-General Rufus Putnam);

Esenwein, Joseph Berg (How to attract and hold an audience);

Farson, Charles Thaxter (A commentary on the mechanics' lien law of Illinois);

Firey, Milton Jacob, (Infant salvation);

Granrud, John Evenson (Roman constitutional history);

Hall, Joseph Davis, 1856-, ed. (Biographical history of the manufacturers and business men of Rhode Island . . .);

Loos, Richard Conover (Illustrations published in the interest of those contemplating the erection of buildings, memorials, etc.);

McKnight, Caroline Gertrude Case (Suggestions from our Lord's prayer for the new age);

McLaughlin, James Matthew (Elements and notation of music);

McLellan, James Alexander, and Ames, Albert Flintoft (The public school arithmetic for grammar grades . . .);

Meyers, Robert Cornelius V (Theodore Roosevelt);

Moran, William Joseph, and Brelsford, Charles Henry (The first book of illustrated words and sentences);

Murphy, John Benjamin, ed. (General surgery);

Neihardt, John Gneisenau (The divine enchantment);

Price, William Thomas (Historical sketch of Pocahontas county, West Virginia);

Sanderson, Ezra Dwight (Insects injurious to staple crops).

Bibliography.

ARMENIA. Lynch, H. F. B. *Armenia: travels and studies; with il., maps and plans, a bibliography and a map of Armenia and adjacent countries.* New York, Longmans, Green & Co., 1901. 2 v. O. net, \$15.

"The bibliography of 26 pages is all one could wish for a full study of Armenia, historically, ecclesiastically, politically, or geographically, including even the philological study of the Vannic inscriptions."—*Dial.*

BIBLE. Eys, W. J. van. *Bibliographie des bibles et des nouveaux testaments en langue française des xvme et xixme siècles. Partie II: Nouveaux testaments.* Genève, Henry Kündig, 1902. 269 p. 8°.

The BIBLIOGRAPHICAL SOCIETY OF CHICAGO announces the publication of a limited subscription edition of Augustus de Morgan's paper "On the difficulty of correct description of books," first published in 1853. There will be 300 copies printed, to be ready for distribution before the end of April. Members of the society receive one copy each, free of charge; for remaining copies the price is \$1 each.

CENTRAL AMERICA. Phillips, P. Lee. A list of books, magazine articles, and maps relating to Central America; including the republics of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador, 1800-1900; comp. for the Bureau of American Republics. Washington, Gov. Print. Office, 1902. 109 p. O.

CIM, Albert. *Une bibliothèque: l'art d'acheter les livres, de les classer, de les conserver et de s'en servir.* Paris, Ernest Flammarion, 1902. 8°, 10 fr.

COREA. Courant, Maurice. *Supplément à la bibliographie coréenne.* Paris, Ernest Leroux, 1902. 7.50 fr.

DOUBLEDAY, PAGE & Co. announce that they have decided to issue certain of their new publications in a special library binding, to be sold at an increase of 15 cents over the regular price. This edition is bound in buckram, thoroughly sewed, with trimmed leaves, and is intended especially for public library use, in which books are subjected to heavy wear. In ordering this binding, librarians should specify that the "library edition" is desired. The books so far as issued in this form are "The battleground," by Ellen Glasgow, and "The mystery of the sea," by Bram Stoker.

ENGLISH DRAMA. Schelling, Felix E. *The English chronicle play: a study in the popular historical literature environing Shake-*

peare. New York, Macmillan, 1902. 11+310 p. 12°, net, \$2.

Professor Schelling gives an interesting list of plays (over 200) on English historical subjects. Nearly half of these plays are no longer extant.

IRELAND. Wood-Martin, W. G. *Traces of the elder faiths of Ireland: a folk-lore sketch. A handbook of Irish pre-Christian conditions.* New York, Longmans, Green & Co., 1902. 2 v., il. 20+405; 16+438 p. 8°. \$12.

In volume 2, pages 327-422, there is a classified bibliography—35 classes. The arrangement is alphabetical by author under each class, followed by an index of authors. The author's names are numbered consecutively under all the classes. "Anonymous" is also so numbered and it appears under 21 different classes. In this way an author's name is numbered several times, so that the true number of authors represented in the bibliography is about 400. The number of titles is nearly 3000.

LAW. *Bibliographie générale et complète des livres de droit et de jurisprudence publiés jusqu'au 9 novembre, 1901, classée dans l'ordre des Codes, avec table alphabétique des matières et des noms des auteurs.* Paris, Marchal et Billard, 1902. 8°, 1.50 fr.

NEWARK (N. J.) BIBLIOGRAPHY. The "Bibliography of Newark, N. J.," which was announced last autumn as in preparation by Mr. F. P. Hill, of the Newark Free Public Library, is now in press and will be shortly issued to subscribers. The first permanent printing press at Newark was established in 1791. No effort has been spared to make as complete as possible the present bibliography of books, pamphlets, newspapers, etc., published or printed at Newark up to 1900. The edition is privately printed and limited to 300 copies, of which 100 are already sold. The price is \$3 net. Mr. Hill is assisted in the editing and publication of the work by Mr. V. L. Collins, reference librarian of Princeton University Library, by whom subscriptions will be received.

POOR, The. Munsterberg, E. *Bibliographie des Armenwesens. 1. Nachtrag (Schriften der Centralstelle für Arbeiter-Wohlfahrts-Einrichtungen: Abteilung für Armenpflege und Wohlthätigkeit).* Berlin, Carl Heymanns Verlag, 1902. 11+63 p. 8°, 1.20 m.

STEEL WORKS. Brearley, Harry. *A bibliography of steel works analysis. Pt. 12: Iron. (In Chemical News, Feb., 1902, 85: 101-103; March 7, 1902, 85: 113-114.)*

PLANS OF REPRESENTATIVE BOOK STACKS
MAILED ON RECEIPT OF POSTAGE—10 CTS.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 *net*.

Unmounted, on 24 sheets in portfolio. \$25 *net*.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.
New York Agency, 45 William Street.

EVERY growing library must face sooner or later the problem as to the best manner of extending the card catalogue case. We suggest to the new libraries just starting and to those who are now called upon to solve this problem the adoption of the sectional idea which permits extension either vertically or horizontally and always with harmonious results.

The high-grade cabinets which we are making in this form are equal, if not superior, in design, workmanship, finish and mechanical devices to any ever before presented to the library world.

Should you be interested in investigating further this "new departure" in library work, we will take pleasure in mailing our illustrated circular, and we will send "on approval" whatever you may select.

Manufacturers also of

CARD CABINETS,
LIBRARY CARDS, and
SPECIAL LIBRARY CABINETS.

CLARKE & BAKER,

280 Broadway, New York.

WHAT *Webster's Unabridged* and the *Encyclopedia Britannica* are to general knowledge, so are **Gould's Illustrated Dictionary of Medicine, Biology and Allied Sciences**, and **Gould and Pyle's Cyclopedia of Practical Medicine and Surgery** to medical and scientific knowledge—the highest recognized standards.

So clearly, concisely, and plainly arranged as to render their texts incomparably complete and rich sources of knowledge to **everyone** interested in medicine or its allied sciences, these two **reference works** will find especial favor with **librarians**, upon whose experienced judgment in the selection of that which is best in all branches of literature so many thousands of readers depend.

The Illustrated Dictionary of Medicine, Biology, and Allied Sciences

Being an Exhaustive Lexicon of Medicine and those Sciences Collateral to it: Biology (Zoology and Botany), Chemistry, Dentistry, Pharmacology, Microscopy, etc. Compiled by George M. Gould, A.M., M.D., Editor of "*American Medicine*." Fifth Edition. Large Square Octavo. 1633 Pages. *Full Sheep or Half Dark-Green Leather*, \$10.00; *With Thumb Index*, \$11.00; *Half Russia, Thumb Index*, \$12.00, net.

This magnificent work contains a vast number of new words and definitions brought into use during the past decade of unparalleled scientific activity, including the old as well as the new spelling of certain words, as recommended by the American Association for the Advancement of Science, and other scientific bodies. The phonetic method of pronunciation is used. A large series of comparative tables form a most unique, practical and valuable feature. These tables will be found very useful for purposes of reference and study, bringing together as they do a great amount of useful information usually scattered in a hundred places, and classifying it in such a way that **one reference to "Gould's Illustrated" will show what fifty to any other dictionary will not.**

The Cyclopedia of Practical Medicine and Surgery

A Concise Reference Handbook, Alphabetically Arranged, of Medicine, Surgery, Obstetrics, Materia Medica, Therapeutics, and the various Specialties, with particular Reference to Diagnosis and Treatment. Compiled under the Editorial Supervision of George M. Gould, A.M., M.D., and Walter L. Pyle, A.M., M.D., Assistant Surgeon *Wills Eye Hospital*. Assisted by Seventy-two Special Contributors. Large Square Octavo, to correspond with Gould's Illustrated Dictionary. Fully Illustrated. *Full Sheep or Half Dark-Green Leather*, \$10.00; *With Thumb Index*, \$11.00; *Half Russia, Thumb Index*, \$12.00, net.

This one-volume work contains, in concise and authoritative form, a cyclopedic treatment of every important fact in all branches of medicine and surgery. In addition, the most advanced methods of diagnosis and treatment, augmented with numerous valuable formulas, are given. The various diseases and injuries are classified according to the parts involved, thus making reference to any subject desired exceptionally easy and rapid.

DESCRIPTIVE CIRCULARS OF THESE WORKS SENT GRATIS UPON REQUEST

Our stock of books upon Medicine, Chemistry, Pharmacy, Dentistry, Sanitary Science, and Microscopy is the largest and most complete in America. Correspondence solicited. Catalogues free. Orders promptly executed.

POOLE'S INDEX TO PERIODICAL LITERATURE

ABRIDGED EDITION

Covering 37 Leading Periodicals. 1815-1899

EDITED BY

WILLIAM I. FLETCHER and MARY POOLE

1 volume, royal 8vo, 843 pp., cloth, \$12.00 net ; half morocco, \$16.00 net

IT has long been apparent that there was no greater desideratum in libraries than a condensed or abridged index to periodicals.

For the many small and medium-sized libraries which contain from three to thirty or forty sets of periodicals, a single-volume Index which shall cover them, and not include many disappointing references, is likely to be of more value than a large and elaborate work. At the same time, an Index containing the cream of periodical references in one volume will be welcomed as a ready and handy literary tool, even where the larger Indexes are at hand and necessary for more complete references.

These considerations have led to the preparation of the work now offered. Its plan is simply to cull from the complete Poole's Indexes and supplements, to the end of the year 1899, all the references to thirty-seven sets of periodicals. The sets included are of two kinds; first, the more popular standard magazines and reviews, and secondly, a number of serials representing special fields of knowledge and discussion, as art, bibliography, economics, education, geography and travel, history, industrial science, recreation and theology.

These thirty-seven sets constitute a list which the smaller libraries may at once procure, or at least aspire to complete before long. But the Index will be found indispensable where only three or four sets, especially such as the *Atlantic*, *Century*, *Harpers* and *Living Age* are owned.

WORKS EVERY LIBRARY SHOULD HAVE

A New Volume of Champlin's Young Folks' Cyclopædia.

LITERATURE AND ART. With 270 illustrations. 604 pp., 8vo. \$2.50.

Brief accounts of the great books, buildings, statues, pictures, operas, symphonies, etc.

N. Y. Times Saturday Review: "Every school-boy should have it on his study table. . . . The range is very wide, for besides those items of classical knowledge which constitute the average school encyclopædia, we have brief descriptions given of modern books, poems, inventions, pictures, and persons about which the lad of the period should be acquainted. . . . The pictures are varied and truly illustrative."

A MANUAL OF THE FLORA OF THE NORTHERN STATES AND CANADA. By Director N. L. BRITTON, of the New York Botanical Garden. 1080 pp., 8vo. 2d Impression. \$2.25 net.

Prof. L. M. Underwood of Columbia: "The most complete and reliable work that ever appeared in the form of a flora of this region."

ENGLISH ROMANTICISM. By Professor HENRY A. BEERS. 12mo, gilt top.

XVIII. CENTURY. \$2.00.

XIX. CENTURY. \$1.75 net (postage, 15 cts.)

New York Mail and Express: "Among the few really great contributions to the study of Anglo-Saxon literature yet made by American scholars."

THE LIFE AND WORKS OF SCHILLER. By Prof. CALVIN THOMAS. With portraits in photogravure. 483 pp., 12mo. \$3.25 net (postage, 21 cts.)

Chicago Post: "Worthy to rank with Lewes's 'Life of Goethe,' . . . ample, accurate, discriminating, though generous of praise, and written charmingly . . . the story of the great author's life has never been better told."

THE POEMS OF SCHILLER. Translated by E. P. ARNOLD FORSTER. 360 pp. 12mo.

A new edition of Schiller's poems, exclusive of his dramas, containing twelve more poems and eighty more brief epigrams, etc., than the most popular previous translation, on which one of the highest authorities on German literature in America says it is a great improvement.

AMERICAN POLITICAL HISTORY TO THE DEATH OF LINCOLN. Popularly told. By VIOLA A. CONKLIN. 12mo. \$1.50 net (postage, 14 cts.)

Nation: "The style is interesting, and the volume should prove serviceable."

INDUSTRIAL EVOLUTION. By Prof. KARL BUECHER. Translated by Dr. S. M. WICKETT. 385 pp., 8vo. \$2.25 net.

Outlook: "A work of prime importance to economic students."

Correspondence Solicited.

NEW LIST OF BOOKS FOR SCHOOL LIBRARIES.

In compiling this list a careful selection of books suitable for educational purposes has been made. The collection represents but a small proportion of the publications and importations of CHARLES SCRIBNER'S SONS.

The characteristic of the books is authoritative and latest information regarding a subject, presented in a concise and attractive manner.

In many cases the views and conclusions of the various writers upon a subject are set forth, critically and comparatively estimated in the light of recent research. Bibliographies are also appended.

Such books acquaint the student with the great names of literature, their special treatment of a subject, and lead to intelligent reading in later years.

G. & C. MERRIAM CO., Pubs., Dept.
Springfield, Mass.

A TRANSLATION OF THE FIRST SIX BOOKS OF

VIRGIL'S AENEID

By Harlan H. Ballard, LIBRARIAN AGASSIZ ASSOCIATION, Pittsfield, Mass.

MR. BALLARD has made an excellent metrical translation of the first half of the "Æneid." He has kept the metre of the original, and has given a close and faithful rendering of it. His lines preserve the sonorous charm of the Latin hexameter, and are especially felicitous in keeping also the flowing rhythm which is peculiarly characteristic of the Virgilian verse.

It is a translation which cannot fail to commend itself to students and lovers of the classics. Librarians will find this rendering classic in its treatment and practical in its value.

BRYCE'S STUDIES IN HISTORY AND JURISPRUDENCE

8vo, cloth, \$3.50 net. Postage, 27 cents

"It is no exaggeration to say that no man living is better qualified to write upon these and kindred topics than the author of the 'American Commonwealth.' The essays are all distinguished by that careful, painstaking research, profound learning, and scrupulous fairness and impartiality that have given Mr. Bryce's previous works such remarkable vogue among the learned and cultured of both hemispheres.

"The study entitled 'Hamilton and Tocqueville' will undoubtedly possess peculiar interest for American readers."

NEW YORK: PUBLICATION OFFICE, 298 BROADWAY.

LONDON: SOLD BY KEGAN PAUL, TRENCH, TRÜBNER & CO., PATERNOSTER HOUSE,

CHARING CROSS ROAD.

YEARLY SUBSCRIPTION, \$5.00.

MONTHLY NUMBERS, 50 cts.

Price to Europe, or other countries in the Union, 20s. per annum; single numbers, 2s.

Entered at the Post-Office at New York, N. Y., as second-class matter.

EDWARD G. ALLEN. * HAMILTON MURRAY.

London Agency for American Libraries

28 HENRIETTA ST., COVENT GARDEN, LONDON.

Special Notice to Librarians.

Messrs. E. G. ALLEN & MURRAY desire to lay before you the advantages of this Agency for obtaining English and Foreign Books, Magazines, Periodicals, etc., and for General Library Work in Great Britain.

Early Issues of Catalogues of Second-hand Books from all the Stock-keeping Booksellers in the Kingdom.

Catalogues of Publishers, New Books, Government Publications, Blue Books, Patents, Ordnance Maps, etc.

Advance Auction Catalogues promptly mailed—thus providing early opportunities for securing Good and Choice Books at moderate rates.

All Important Books Collated Before Delivery.

Defects of Rare Books Reproduced in Facsimile.

Continuations of Scientific Serials carefully noted and forwarded promptly on publication.

Should you desire an efficient London Agency of long and extensive experience in exclusively Library Work, Messrs. E. G. ALLEN & MURRAY will be pleased to answer any questions, feeling confident that the thorough equipment of their establishment will enable them to meet every library requirement in a satisfactory manner.

References permitted to first-class Libraries.

Special terms for large orders.

1856—1901.

FIRST CARNEGIE BRANCH BUILDING (YORKVILLE BRANCH) OF THE NEW YORK PUBLIC LIBRARY.

THE LIBRARY JOURNAL

VOL. 27.

MAY, 1902.

No. 5

It is but a few weeks now before the American Library Association meets in Boston and Magnolia for its twenty-fourth annual conference. The program, as outlined in the last number of the JOURNAL, shows again how varied library interests have become and how busy a week is before the delegates. It evokes the familiar criticism that what may be called the "machinery" of the meeting requires each year a greater amount of space and crowds out papers and general discussion. This is true, to a degree; yet it should not be forgotten that most of the formal reports deal with subjects of general importance upon which united action is desirable, while a very large proportion of the program is given to sections and group meetings on special phases of work. One remedy suggested for the overcrowding of the program is the dropping of the practice of calling special conference meetings of state or local library associations. The members of such associations have generally a fair acquaintance with one another and can meet at other times and places with greater effectiveness than amid the distractions of "conference week," and there is certainly fair ground for questioning the wisdom of a practice that limits the too brief opportunities a conference affords of meeting those one cannot meet at other times and broadening personal and local points of view.

EVERYTHING indicates that the Magnolia conference will touch high-water mark in attendance. Coming as it does at the most delightful season of the year, before the intense heat of summer, meeting at one of the most beautiful of the New England coast resorts, and offering special facilities for visiting the libraries of Boston, Cambridge and vicinity, it holds special attractions which have been promptly realized by librarians in all sections of the country. It is worth while to repeat, what has been so often said before, that the librarian who goes to a conference, especially for the first time, with an open mind and an interest in the work, derives from it a fund of encouragement and practical help that in its direct results to the library is

worth many times the money cost. Every year this fact is more fully recognized by trustees, but there are still many librarians—often those who can least afford it—with whom attendance is a matter of personal expense, undertaken at a heavy sacrifice. This is especially the case with the smaller libraries, where the hours are longest, the work most unrelieved, and where the librarian most needs the help and stimulation that come from meeting those interested in like work and seeing different aspects of the same subject. Yet there are few cases where the librarian's attendance could not be assured by trustees in earnest in the matter; or where at least leave of absence with pay could not be granted as a matter of course. There is still time for trustees and librarians to give earnest attention to the ways and means whereby conference attendance may be assured; and it is to be hoped that the Magnolia meeting will set a record in its register of delegates sent as official representatives of the smaller libraries of the country.

THE tragic death of Paul Leicester Ford ends an extraordinary career. Moulded by nature in the giant frame of his father, and inheriting through his mother—a granddaughter of Noah Webster—keen intellectual powers, he was handicapped in life by the misfortune which dwarfed his stature and for many years limited physically his intellectual development. These obstacles his indomitable will conquered, and before he became known as a writer he was known to his friends as a marvellous worker. Brought up in his father's remarkable private library, he, like his brother Worthington, developed strong bibliographical tastes, and his early literary work in this field brought him into relations with the LIBRARY JOURNAL, of which he was one of the editors for three years. His editorial work, parallel with that of his brother Worthington on the writings of the great political leaders of the country, showed exceptional ability. When he ventured upon fiction, an experiment as amusing to himself as to his near friends, it was probably with no thought of making the mark which he did.

His strong individuality was sweetness to his friends, but made bitterness with others. Words cannot reflect the tragedy of the end. The library profession claimed only a part of Paul Ford's time, but in that time he did more than many men who have given a lifetime to the work, and those who knew him as an editor of this journal, and in other relations as a bibliographer, will lay a laurel of admiring appreciation upon his untimely grave.

It is unfortunate that the American Booksellers' Association in dealing with the net question has indulged in a diatribe rather than an argument. Nothing is to be gained on the part of the producers and distributors of books by treating the position of the librarians in this manner, and we trust that the spirit shown in this pronouncement may not be reflected in any action of the library associations or of librarians individually. The librarians of the country, collectively and individually, believe that their position as bookbuyers is distinctive, in their relations with public service, and is entitled to recognition in the prices of books sold for library purposes. At the conference of the American Library Association where the question first came up for discussion nothing could be better, from a fair-minded point of view, whether that of publishers, booksellers, or librarians, than the tone shown—of willingness to participate in a proposed reform which should in the end work out a better and possibly fairer method of book distribution. The publishers, on the whole, have appreciated the tone of the library profession; it is the more unfortunate that the booksellers have not done so.

PRESIDENT ELIOT has faced boldly a question which most librarians have preferred to leave to their successors in the latter part of the 20th century. As Dr. Poole used to emphasize, no librarian can tell which is a "live" book and which is a "dead" book—especially for future generations; but, on the other hand, it will sooner or later become physically impossible—not to say pecuniarily impossible—to put every book that ever was issued at the instant service of every reader. Perhaps the time is not yet when this question can be solved, although the British Museum,

and the Bibliothèque Nationale, as also the Library of Congress, the Harvard library and presently the New York Public Library must have it more and more before them as years and decades pile up volumes by the thousand, hundred thousand and million. If it is too soon to "hazard a wise conclusion," it is not too soon to do a good deal of thinking on this problem of the future, which is so soon to be a difficulty of the present.

Communications.

GIFTS AND BEQUESTS: INFORMATION DESIRED.

LIBRARIANS who have not already reported gifts of over 250 volumes or of \$500, or more, made to their libraries since July 1, 1901, are reminded that such reports must be made at once in order to appear in the report to be presented at the Boston and Magnolia Conference of the American Library Association, in June. Other noteworthy gifts falling below these limitations will be inserted if considered of sufficient importance. All communications should be sent to

GEORGE WATSON COLE,
Graham Court, New York City.

AN ITEM IN LIBRARY ARCHAEOLOGY.

THE report of the Public Library of Malden, Mass., reviewed in your last issue, page 218, seems to resemble the 240th report of the Public Library of Erewhon, which was so long magnificently supervised and controlled by the literary exotic Eviladaed. In one of the cuneiform bricks recovered by the Abstract Society in their exploration at Erewhon, a list was given of some books lost from a room the youthful people of that generation frequented. The missing volumes were subsequently found to have been mislaid on the shelves of a covered cavern in one of the Assyrian deserts. They were not lost and the explorers returned them. The loss to the original library was estimated to be 44 "srallo"; the recovery of them when the expenses of the explorers were duly totalled amounted to 44,392 "srallo." Fortunately the discovered brick contained the names of the children who had mislaid these books. No ground for misdemeanor on their part could be attributed to them. They were nearly all members of the Royal Family of Erewhon. Two of them became rulers and fortunately for posterity, in another brick discovered during the same exploration, an account was given of an image raised to the honor of one of the gods of the country by one of these misdeameaning children in remembrance of his great success in life. He attributed his rise in life to the benefits of the books he had read at the library, from which he was at one time charged with having stolen a book.

A BRICK HUNTER.

READING FOR THE POOR.*

By W. FRANK PERSONS, *Assistant Editor "Charities," New York City.*

Of the poor there are many degrees and classes, with varying environment and opportunity. Within our great cities, they are confronted by conditions the most unfavorable. There the distinction between social classes is drawn sharply and irrevocably, notwithstanding the fact that individuals are constantly crossing the line from one to the other. Each class dwells in a community of its own, seldom visiting, and often scarcely aware of the existence of the other. The poor, and by this term I mean throughout this paper the unskilled laboring class of least earning capacity—the poor hold exclusive possession of whole blocks and often of entire wards. At the best they dwell in an unchanging environment, with a monotony of life which stifles ambition, precludes high ideals, and limits aspirations. At the worst, this unbroken level of unfortunate humanity may sink so low as to become a "folk swamp" in whose unwholesome atmosphere, contaminated by the miasma of vice and ignorance, there is the least possible amount of the oxygen of energizing and uplifting influence.

Museums, libraries, and other places of public interest are not visited by the poor except under the stimulus of personal influence and encouragement. Their limited information of such places, their lack of leisure, and more than all else, the apathy and inertia resulting from the chilling monotony of their daily lives, effectually discourage such pilgrimages. Not long ago I learned of a truck driver who had lived all his life in New York and had never seen Brooklyn Bridge, though his home was not a mile distant. This is by no means an unusual case. It is but typical of the barrenness of life for the poorest people in our great cities.

The fear of want is ever present with great numbers of the poor. It is a fear so very akin to probability, that they have always to take it into account. The unskilled laborer too often fails in his efforts to secure

better material conditions. He passes through a cycle of seasons—is busy, idle, out on strike, and destitute. Black care, uninteresting and ceaseless toil are the lot of many thousands of the poor. Their life is unrelieved by any ready means of wholesome recreation for mind or body.

The eighty thousand tenement houses of the Greater City of New York shelter two and one-half millions of people, and as though the social forces of the community were not unfavorable enough, the tenement apartments in which a large proportion are obliged to live have been so constructed that individual privacy and physical comfort have been made practically impossible. Where there is a lack of pure air and an almost total absence of sunshine, where all the domestic duties must be performed in one small room, it is not surprising that the home is devoid of attractions and refining influences.

Add to the burden of poverty, the depression of a discouraging environment, and the blight of vicious amusements—add to these a cheerless and comfortless home—and the conditions become most unfavorable for the poor to rise in life, or to attain to a degree of education and culture that will insure civic peace and morality. These conditions of life and the inability of many thousands of the foreign born to use English books, account for the fact that the poor do not read, except where intelligent and persistent effort has been made to supply directly to them books suited to their needs. Public libraries are taking up this work to an increased extent. Social settlements early realized the helpful influence of good reading, and nearly all make the use of a library an important feature of their work. These agencies are, however, but oases in a great desert of intellectual privation.

That the poor do not read, and I do not count the scrutiny of the yellow journals as reading, is the testimony of all who have been intimately associated with them in charity, or in social work of other kinds. One of the agents of the Charity Organization Society of New York City has said that

*Read at Bi-State Library Meeting, Atlantic City, N. J., March 15, 1902.

during the past four years, in which time he has visited practically every tenement house on Manhattan Island below the City Hall, he has seen only one person reading a book. Another agent could remember no such instance in an experience of 12 years, save in the case of people who had fallen from a higher station in life.

These statements, it is true, come from those who have had to do mainly with the very poor, those below the level of self-support. Yet their testimony is not unsupported by that of workers in social settlements who reach a class above, and I believe the statements are indicative of the true state of affairs. It must always be borne in mind that for the most part those in need of charitable assistance are but a section of the unskilled laboring class which has fallen temporarily into distress, a condition which a great part of this class may have experienced, and to which all sections of it are more or less liable.

Literature which bears a direct relation to the needs of the poor, if of a readable character, will be read when placed in their hands. The charity agent of whom I first spoke, notwithstanding the discouragement of the observation he had made, distributed among housekeepers in his district 100 copies of a popular treatise on the prevention and cure of tuberculosis. Upon investigation three months later, he found that 65 were still in use, thumb-marked and dog-eared in mute testimony of the practical service they had rendered. The men of all classes of the poor, moreover, when able to read at all, peruse the yellow journals, which with their lurid type, sensational statements and illustrations, gratify their desire for intense emotion.

It is the children of the poor that we find at once the greatest opportunity and the brightest hope for library work. Among the poor it is often only the children who know how to read, and without regard to class, children are the ones in whom the habit of reading may most easily be cultivated. They are the medium through which nearly all that is elevating in life reaches the homes of the poor. The influence which they exert is ever potent. The school, the settlement-club, and the library reveal to them a new and better life than they enjoy. The young

mind thus influenced inevitably raises the standard of the home, and even leaves its mark upon the neighborhood.

Children in the homes of the poor, such as I have described, must depend almost entirely upon what they receive from books for moral and mental stimulus. They have few athletics, few real games, no music, no art. They know little of nature. The changing seasons mean little more to them than the transition from winter's cold to the sweltering heat of summer. Wild flowers never lend a charm to their barren lives. From their teachers in the public schools and from their books they must get all they are to know of the good and the beauty and the opportunities of life.

It is not necessary that I should dwell upon the effects of such mental poverty as results from the lack of acquaintance with good books. The need for the elevating influence of wholesome reading is so evident that we are led at once to consider the best means of supplying it.

The adult poor, of whom I wish to speak first, cannot at once be induced to read books. It is too great a departure from their established habits, and such reading is out of harmony with their usual line of thought. Their progress in reading, as in all else, must be a growth, an extension of present interests, and not a branch grafted on from another root.

Periodical literature, especially the illustrated papers and magazines, and trade journals, can easily be made popular if provided within easy access of the homes of the poor, in attractive reading rooms where the social as well as the intellectual side can be made prominent. If, furthermore, a librarian is in attendance who is in sympathy with the wants and needs of the people, and who may to some extent encourage their discussion of political, social, and industrial questions, and point out readable books upon these various subjects, then a growing interest in such a library can be awakened, which will lead more and more to the carrying away of books to be read at home. The work of the librarian must be largely that of bringing books and readers together. The love of reading, indeed, comes mostly from contact with those who love reading themselves. The highest grade of librarian and attendants should be sent to the poorest districts.

Of course the broader characteristics of the neighborhood, as well as the needs of individuals, must be considered. It is necessary to understand the constructive and destructive forces, the industrial and social conditions, the racial characteristics of the neighborhood when establishing a branch library and selecting the books and attendants for it. For instance, the well equipped library placed in a Jewish district, whose attendants despised Jews and loathed dirty children, was a failure. Another indispensable condition is that the books should be kept on open shelves. The person who casually picks up a book prompted by curiosity will return the second time with more interest as he finds that it contains things which he really desires to know and which he can use.

The poor have a peculiar claim upon the public library. They need its wisest and most special service. They should have books which will reveal to them the courtesy, the polite manners, and the social customs of a modest American family life. The poor, I fear, are not greatly helped by the fiction which takes them into the rich man's parlor and shows only the luxury, the elegance, and leisure of his life. There should be reading which will create ideals by exalting the heroic deeds of common people, such as is beginning to appear in our magazines; literature that will lift them up out of themselves and give them noble ambitions. The poor need books on the trades in which they are engaged; books and papers in the language of their native land; history and biography; books which will give them "glimpses of the great world into which they have been born, some conception of the heritage which they may claim, and of its cost to countless generations in blood and tears, in sorrow and suffering."

Should not the privileges of the public library be quite as accessible as those of the public school if we are to continue to regard it as one of the great educational forces? Where the library does not stand as such, the management should not be content until its influence is felt in every portion of the community in which it is situated. Especially important is it that library privileges should be extended to the children. The most ready and direct way to encourage and direct their

reading is a wise co-operation between the public school and the library. The good public school teacher of to-day is perhaps the strongest outside influence in the poor child's life. The librarian should embrace the same opportunity.

Wherever the circulation of books through the schools has been attempted, the value of the work is recognized. The latest report of the librarian of the Buffalo Public Library says: "I believe that the work in the schools is as valuable, if not the most valuable, that the library does, and its direct influence upon the intellectual and ethical improvement of the city can hardly be overestimated." The work of the Webster Free Circulating Library, maintained by the East Side House Settlement of New York City, is very largely with the schools in the neighborhood. Of the 600 teachers in these schools, 365 use the library in various ways. That its services are appreciated is evident from the collection of 2000 personal letters received by the librarian from these teachers commending the library and its influence upon the children's lives.

Far-reaching and valuable as is the work of libraries through the public schools, it yet fails to reach a large class of tenement house children who do not attend school, who are beyond the teacher's influence, or who are too timid and indifferent to visit the public libraries. For this class of children the travelling libraries which are sent into the homes of the poor by many public libraries and charitable associations are exceedingly helpful. They become so many little home clubs scattered throughout the city, and exert an influence which in many instances is transforming. Signs are constantly seen of their practical value on the everyday life in the families, in increased cleanliness of person and household, a growing pride in better surroundings, and a general uplifting of the whole family life to a higher plane, and what is more encouraging, the keeping it there. That the good influence of such libraries on family life is not without recognition among the poor themselves, is shown by the appeal of a little girl of eleven years, living in one of the most wretched streets of Boston, that such a library might be placed in her home because she thought "it would keep her mother sober."

In establishing such libraries, as in all other social work among the poor, the element of personal interest and friendship is essential. The friendly visitor in charge of the home library must have natural endowments for her task, interest and love for her work, and above all, *training in social service*. For, as has been well said, "she must go into the alleys and byways, the home, the school, and the playgrounds, awakening in the children wherever she can find them a desire for reading, and giving them the means to gratify this desire."

Intelligent and persistent effort to furnish reading to the poor everywhere meets with the most gratifying success. It is clearly evident that the existence of a large non-reading class, even among the very poor, is mainly due to the lack of encouragement and opportunity to read. The libraries of social settlements and the branches of public libraries in the poorer districts of cities when properly managed, are literally swamped by the great inpouring of eager readers. A branch of the New York Public Library, at 22 East Broadway, on the lower East Side of New York City, issued nearly 16,000 (15,831) books to readers during the month of February, 1902. As there were but 3317 active registered readers it will be seen that each patron read an average of five books during that short month. Although this library has not the stimulus of a reading-room, it is unable to meet the rapidly increasing demand. A branch of the Aguilar Free Public Library, in an equally

poor district, (106 Avenue C,) upon a capital of 10,000 volumes, issued during February, 15,403 books to 2269 patrons, or an average of about six per reader. It is unnecessary to multiply instances of this kind, as the same testimony comes from all sides.

With such encouraging testimony of the practicability of interesting the poor in reading, and with a full realization of the great work yet to be accomplished in this field, there should be a great awakening to the opportunity. Branch libraries should be established at the strategic points in the city population, with attractive reading rooms equipped with periodical literature, books and papers in foreign languages, and the open shelf system. Books and attendants should be chosen with careful regard to personal and neighborhood characteristics. The essential element of personal, friendly interest must never be overlooked in carrying on the work. Equally as valuable is the force of social organizations, such as clubs, and the groups whose interest centers about the home libraries.

Withal, literature should be provided which partakes of the heroic in character, which will appeal to the personal characteristics and race sensibilities of the patrons, and which will lend interest and happiness to their lives. The public library should recognize the peculiar claim which the poor have upon its services, for by fulfilling its duty to them, much will have been done to lift them out of the darkness of their poverty.

THE PUBLIC DOCUMENTS OF THE DOMINION OF CANADA AND THE PROVINCE OF ONTARIO.*

By W. GEO. EAKINS, *Librarian of the Law Society of Upper Canada, Osgoode Hall, Toronto.*

PUBLIC indifference to public documents is largely due, no doubt, to the belief that such publications are almost entirely statistical in character; and the system of their distribution probably heightens this effect upon the popular mind, which places little value upon that which is so freely given away. This gratuitous distribution is, however, usually governed to a greater or less extent by regu-

lations designed to check waste and to place the public documents in proper hands, and I shall direct your attention to the measures adopted for this purpose at Ottawa and in the province of Ontario.

A word in passing as to the Parliamentary publications of the old province of Upper Canada. Only those who, while investigating the sources of Canadian history, have studied these early documents can have any idea of the amount of interesting, curious

*Read before Ontario Library Association, Toronto, March 31, 1902.

and valuable information they contain; and only those who have ever attempted to make a collection of them know anything of the difficulties which confront the laborer in this field. The fact is, as many of you know, that no complete collection of the printed public documents of Upper Canada exists; nor can one ever be made. Even though all the imperfect collections in existence were brought together, they would not supply the material for a complete set. For instance, of the journals of the Legislative Assembly of Upper Canada prior to the year 1825 only those of the years 1801, 1802, 1803 and 1821, so far as is known, exist in print. Of the years 1801 and 1802 I know of only three copies—in the Parliamentary Library at Ottawa, the Ontario Legislative Library and the Toronto Public Library; and the Legislative Library possesses the only copy of the journals of 1803 that I have ever heard of. Some fifteen years ago the Ontario Government had six typewritten copies of the journals from 1792 to 1824 made at a cost of about \$1200, and deposited them for safe keeping in several of the largest libraries in the province. Even these, however, are incomplete, as several years are lacking. In like manner, no complete set of the early *Upper Canada Gazette* exists, nor could one be made up from the broken sets to be found in a few libraries. This publication—the first product of the printing press in Upper Canada—combined for some years the office of newspaper with that of official organ, and its columns during that period are filled with information of the greatest interest to the student of our early political and social history. Of the issues for the years 1793 to 1807 the Legislative Library of this province possesses, I believe, the only surviving copy. The early provincial statutes, too, though by no means so rare, are to be found in comparatively few libraries. A volume of the Acts of the years 1792-1804 brought \$71 at auction a few weeks ago. For the rarity of these early printed documents of Upper Canada various causes may be assigned and among them, no doubt, was the destruction by fire of the Parliament buildings in York in 1813 and again in 1824, and of those in Montreal in 1849.

I have mentioned these facts in order that the librarian who may have become fired

with the hope of making a complete collection of the records of our early legislatures may know at the outset the impossibility of the task, and may realize also the difficulties which he will encounter in gathering together even a set of such of the printed documents as have survived.

Coming now to the public documents of the Dominion of Canada and of the province of Ontario, I shall, I think, fulfil the purpose of this paper if I point out briefly what they are, what space they occupy, and how they may be procured.

The chief Parliamentary publications of the Dominion of Canada (other than statutes), up to and including the year 1901, are as follows:

Journals of the House of Commons and the Senate, and Sessional Papers.....	471 vols.
Commons Debates.....	55 vols.
Senate Debates.....	28 vols.
Geological Survey Reports, 1866-98	30 vols.
<i>Canada Gazette</i>	35 vols.
	<hr/> 619 vols.

These 619 volumes fill about 120 feet of shelf space. Complete sets of the several series cannot now be obtained at Ottawa, as many volumes are out of print; and, although miscellaneous broken lots are continually being put upon the market in sales of private libraries, the demand is so small that few booksellers take the trouble to make up sets except upon order. Certain of the series, however, are now being offered for sale in Toronto, and the price asked for them may be of interest to some members of this Association. They are as follows:

Journals, House of Commons, 1867-1900.	\$18 00
Journals, Senate, 1867-1899.....	14 00
Sessional Papers, 1867-1899.....	110 00
Commons Debates, 1870-1900 (complete.)	125 00
Senate Debates, 1876-1900 (complete.)	60 00
	<hr/> \$327 00

Few, I daresay, of our public libraries—except the larger ones—would be willing to expend even this amount on these publications, even if they could afford the space necessary for their accommodation. Some, however, might be glad to receive future issues, if they were put in the way of doing so by being placed on the distribution lists.

For the benefit of any such I shall give a few hints as to the mode of procedure necessary to be adopted in seeking this favor. As a preliminary let me quote the following "notice" issued by the King's Printer at Ottawa:

"In order to remove a prevailing idea that Statutes, Voters Lists, Blue-books and other public documents can be given out from this department free of charge, it would appear necessary to explain that the distribution of all matter whatever from the Printing Bureau is regulated by definite rules—either by Statutes or by Orders in Council. When documents are first printed they are distributed according to lists authorized by the Committee of Parliament having charge of the special matter in view, or by Order-in-Council. After these lists are filled, copies remaining over are sold at prices fixed by authority and the proceeds form part of the casual revenue of the Dominion and are accounted for and paid to the receiver general in the usual way. The prices of Blue-books are in nearly every case printed upon them and are fixed so as to cover only the cost of paper and press work. They may be ordered direct or through any bookseller in the Dominion."

For libraries seeking to be placed upon the distribution lists the procedure varies according to the wants of the applicant. Application for the "Blue-books" must be made to the chairman of the Joint Committee on Printing. Ordinarily, only the paper-covered copies, distributed during the session or immediately preceding it, are sent, and with them the "Bills" and the daily "Votes and Proceedings," as issued. The cloth-bound volumes of "Journals" and "Sessional Papers" (comprising the Proceedings, Blue-books, printed returns, etc.), which are distributed at a later period, are sent only in special cases to such libraries as the Committee may deem worthy to receive them.

For the "Hansards" the application should be to the chairmen of the Debates Committees of the two Houses. The revised edition of the Commons Debates—appearing several days after the original issue—is sent in sheets as issued, title pages and index being supplied after the close of the session. The Senate Debates are distributed only after the session, complete, in sheets sewn and ready for binding. The bound volumes of both are sent, as in the former case, only under special circumstances.

The Geological Survey Reports are under the control of the Department of the Geological Survey.

For the *Gazette* application should be made to the King's Printer.

The Statutes are distributed in accordance with the rules laid down by Order-in-Council. In the list for this province "libraries and colleges" appear among those entitled to receive free copies. Any library worthy of the name will, I believe, be recognized as coming under this heading. In all cases of distribution to libraries the aim of the authorities, it should be understood, is to make the public documents available to the public. It is expected, therefore, not only that they will be preserved, but that suitable shelf-space will be provided for them.

To libraries which may want only occasional Parliamentary publications it may be pointed out that the Department of Public Printing always has in stock the documents of the later years, copies of which may be purchased at very slight cost. A price list of these may be obtained without charge, from the Superintendent of Stationery. As a timely instance of what is to be had in this way I might mention the great report of the Royal Commission on the Liquor Traffic in Canada (1895), the seven bulky volumes of which, in paper covers, are sold for \$3. The report of the Royal Commission on the Relations of Labor and Capital in Canada (1889) is also still in stock, and its five volumes can be had for \$3.75.

The public documents of the province of Ontario are, of course, fewer in number than those of the Dominion, and the method of their distribution is less complex. Of past publications, other than the Statutes, we have the following:

Journals and Sessional Papers,	
1867-1901.	136 vols.
<i>Ontario Gazette</i> (beginning March	
7, 1868).....	34 vols.
170 vols.	

These 170 volumes fill a space of about 68 feet. What I have said with regard to sets of the Dominion documents applies here as well. Most of the volumes of early years are out of print, but odd lots are nearly always to be found in secondhand stocks. The price placed upon a set of the Journals,

1867-1900, now on sale here, is \$12; and for the Sessional Papers, 1870-1899, the sum of \$50 is asked.

The distribution lists are, I believe, regulated by Council, and application for a place on them should be made to the King's Printer, Toronto.

In conclusion, let me say that, while few of our libraries may care to trouble themselves with the whole range of Parliamentary literature, there are certain Government publications which should find a place in every library whose reference department consists of more than an English dictionary. Among them may be mentioned the Statistical Year Book of Canada, the Census returns, the General Elections returns, the Reports of the Ontario Bureau of Industries, etc. In every locality there are persons who from time to time want information which these publications contain, and who, failing to get it in their local libraries, have no other resource than to appeal to the city daily or weekly newspaper for assistance. A trifling library expenditure would render unnecessary this troublesome and unsatisfactory method of procuring information.

Then again, there are other public documents which by reason of their especial historical or educational value should be found on the shelves of every library in the country. Perhaps Lord Durham's famous Report scarcely comes within the scope of this paper, but I take the opportunity of expressing the opinion that it is a document to which every Canadian student should have easy access. I do so the more readily because an edition of the Report, with an introductory historical note, has just been published in England. The volume of the "Parliamentary debates on Confederation," published at Quebec in 1865, is also worthy of a place in every library. Among Ontario publications of like interest and value may be mentioned the "Documentary history of education in Upper Canada," compiled by Dr. George Hodgins for the Education Department. Of this work eight volumes, covering the period 1792-1849, have so far been published. Above all, in every collection should be found the invaluable series of Reports of the Archives Department at Ottawa, with its great wealth of hitherto buried material relating to the early history of our country.

THE DESK ASSISTANT: AN IMAGINARY CONVERSATION.

(*Time: The Present. A Librarian and a Desk Assistant.*)

LIBRARIAN — Miss Gray, I have been considering the work of the delivery desk for some time, and I should like to have a talk with you upon the duties and possibilities of your position.

I trust you will express your opinions very freely, as my sole aim is to establish closer relations between the librarian and his desk assistants.

MISS GRAY — I am very glad that you have broached this subject, as I have often felt that the desk assistant needs just such an opportunity to discuss her work on even terms without running the risk of being misunderstood. I wish you would begin this discussion by declaring your approximate ideal of a good all-around desk assistant.

LIBRARIAN — Very well; and although many of my statements will be axiomatic, still it is a good thing sometimes to state self-evident facts in black and white.

What I am about to say does not refer to

a library school graduate — not that it would be impossible for such a graduate to gain some ideas; but I am talking now only to the average assistant in a public library who has had no previous training.

We will assume, then, that you as applicant for a position as desk assistant are a woman with a high school education, or its equivalent. You must be neat in appearance, dress simply and always be prompt, as nothing is so demoralizing as an assistant scurrying in at the last minute, breathless and apologetic, or coolly indifferent to her tardiness.

At the desk you must be alert, approachable, good-tempered and patient. You must always remember that the general public is not conversant with the latest methods in library economy, and, what is more, has no desire to be, and what is second nature to you has no meaning at all to the patrons of the institution.

Rules are necessary to the proper conduct

of any business, and the library is no exception to this, but let the manner of the enforcement of the rules be as unobtrusive as possible. Be firm and decided, but pleasant.

Always consider that your first duty is to attend to the wants of the public as expeditiously as possible. Don't stop to talk to your friends while there is a single reader waiting to be served. It is annoying to be kept waiting, and as the public cares very little for the librarian whom it seldom sees, but judges the library by the desk assistant, the reputation of the institution is practically in your hands, and what may seem a small matter to you may have a far-reaching effect in making the library popular or unpopular.

Know the books in the library by reading the latest bulletins and catalogs, so that when certain books are asked for your face does not become a blank and you are compelled to refer the applicant to some one else.

Read a newspaper, so that you may know what is going on in the world.

Read some of the literary journals, thus keeping in touch with the new and interesting matters in the field of letters.

Read a journal devoted to library economy, so that you may become familiar not only with the latest thought in your own field, but with the names of the leaders in the work.

When not at the desk do with a vim whatever work may be assigned to you. Be anxious always to learn about everything that is going on in the library, even if not directly connected with your particular duties.

Never grudge working overtime, if occasion requires it. The assistant who cheerfully and without comment stays after hours to finish necessary work always scores a point.

Learn to work without talking very much. One cannot do as well if one's mind is distracted by extraneous matters. Above all, do not discuss your superiors or fellow-workers except in a friendly spirit.

If you have a real grievance go directly to the librarian without discussing it with the members of the staff. Accept his decision in the matter, even if contrary to your own judgment, with as good a grace as possible and let the matter end there, unless you feel it serious enough to bring to the attention of the trustees.

Cultivate a spirit of loyalty, and keep from criticising. It is to be supposed that the librarian has been chosen with care and is conducting the affairs of the library in the best possible manner. Learn to judge matters not only from the personal point of view, but in a broader fashion, remembering always that your interests must be secondary to the welfare of the library.

Now, Miss Gray, I have stated very briefly not my ideal of what a desk assistant should be, but what every library ought to expect from its assistants.

MISS GRAY — I have listened with great interest to your characterization of the desk assistant, and feel that what you have said is very true in the abstract; but I am not prepared to say that with the low salaries now prevailing you ought to expect assistants such as you describe.

Is it possible to get a woman to answer your requirements at so low a salary as \$35 or \$40 per month?

Can you expect the same interest in the work at \$40 per month that you display at \$300?

LIBRARIAN — I agree with you that salaries paid to assistants are too low, but there is a constantly increasing tendency to remedy this.

I feel, however, that I am justified in requiring you to do what you are told faithfully and to the best of your ability. Beyond this I demand nothing, but it is certainly to your advantage to know the things I have suggested.

MISS GRAY — Working seven or eight hours a day, when do you expect me to read the various newspapers and magazines you have suggested? I am tired after my day's work, and may have to help at home in the evening, or I may have to eke out my salary by doing outside work during my leisure time. Much as I should like to do what you suggest, it seems impossible to find the time.

LIBRARIAN — Of course these things are unfortunate, but you can hardly expect the library to take cognizance of your affairs outside of the seven or eight hours for which you were engaged, unless the additional work you are doing affects the quality of your work at the library. In that case it is certainly within the library's province to demand that you give up either your outside work or

your library work, as you have certainly sold your time and strength to the institution.

MISS GRAY—This seems rather a hard doctrine, since I must live and you do not provide me with the proper means of support at a salary of \$35 or \$40 per month.

LIBRARIAN—I think upon reflection you will hardly say that "the library does not provide you with the proper means of support," since you applied for the position knowing the conditions and accepted the salary without coercion.

The alternative would be to find a better position elsewhere.

MISS GRAY—That is more easily said than done.

LIBRARIAN—Exactly, and that is a point usually overlooked by the assistant. Without equipment for any other work, it would seem wiser to devote herself to the business in which she is gaining her livelihood, striving to learn all there is to know, than to spend her time bemoaning her unhappy lot.

MISS GRAY—You remember laying stress upon working overtime when necessary? Of course any right-minded person is willing to stay occasionally after hours to finish special work; but isn't it rather a mistake to take it as a matter of course? When I have worked my seven or eight hours it doesn't seem right to expect me to stay overtime to finish work that in my judgment might just as well be done the next day.

LIBRARIAN—It certainly would be unfair to expect extra work without compensation, and although few libraries could give extra pay, still most of them would gladly give time off to suit the assistant's convenience.

As to the necessity of finishing work, of course it depends very largely upon the individual case, but generally speaking it is a good thing to gather up the loose ends as far as possible each day. Abuses may occur, and the assistant may not be treated fairly in some cases, but I am speaking of libraries where the librarian is a fair-minded man or woman, understanding fully that the library can only be successful if the assistants receive just treatment.

MISS GRAY—If the desk assistant is of so great importance, why is it that a cataloger commands higher salary and better hours, and that when promotion is made the desk assistant's salary is rarely increased in

her own department, but she is transferred to the cataloging or some other department if there is a vacancy?

LIBRARIAN—Until very recently librarians and trustees alike have looked upon desk work as purely mechanical, requiring no very high grade of intelligence and therefore not worth very much in the way of salary.

Cataloging is only in part mechanical, and requires a certain training which cannot be acquired in a few weeks, and thus of necessity the salaries are higher. It is only within a few years that desk work has become of any importance, and that librarians have recognized that it is the chief point of contact with the public, and requires assistants of the sort I have described.

If the librarian has just awakened to this fact, it does not seem strange that the desk assistant so far should have failed to see her opportunity.

Now, however, it lies entirely within her power to convince the trustees that the work demanded of her is no longer mechanical, but as taxing as that of the cataloger or reference assistant.

If this can be demonstrated the salaries paid in this branch of the work would be commensurate with the importance of it.

MISS GRAY—What you have said is interesting, but I cannot quite see how I am going to demonstrate the value of my work to the trustees, even if I follow the plan outlined by you?

LIBRARIAN—What follows if you read what I have indicated? You know what is being done and written, you learn to know the books in your own library, and the public, finding that you really know many things, gets into the habit of asking your help. You no longer refer questions to some one else, because you are fully competent to answer them yourself, and would now feel it rather humiliating not to be able to do so.

You respect yourself more and are becoming more and more valuable to the library. You are not satisfied to do any of your work in a careless, unintelligent way, but are always wanting to learn as much as possible about it and every other department of the library. The librarian either has the matter brought to his attention by your immediate superior or notices the improvement in your work himself (as a rule he sees far more than you give him

credit for), and when the time comes recommends that you be paid a higher salary.

MISS GRAY—Suppose, however, that there is no opportunity for advancement, and that the salary schedule remains the same, what have I gained by my extra exertions?

LIBRARIAN—Your whole horizon has been broadened and your work is no longer mechanical, and there is every opportunity to find a position in some other library where better salaries are paid, as all libraries are looking for just such assistants as you.

Of course there must be privates in the ranks, but there is always room at the top and ability never fails of recognition.

I do not mean to convey the impression that following my advice will result in the immediate recognition of the value of the desk assistant by the trustees, but I do feel that the desk assistant, when fully aroused to the importance of the work and to what she could make of herself could conquer the time-honored prejudice that desk work is purely mechanical and compel proper remuneration by demonstrating the great value of her work.

MISS GRAY—You certainly have shown possibilities in my work that I had never thought of before, as I had always rather looked down upon my desk work, wishing that I might be promoted to some other department where I might really show my ability.

Thanks to your presentation of the facts I now see that I have failed to grasp an opportunity directly under my hand. It is really not exactly my fault as I have never had anyone talk to me about my work in this way, but have simply done it rather mechanically, thinking it a pleasant enough way in which to earn my living. If you are willing to spend the time I would be so glad to discuss this question still further, as I feel the need of discussion on the prospects of the work.

LIBRARIAN—I am very glad that our little talk has aroused greater interest in your work, and I should like to resume our conversation at some future time.

I blame myself, as well as librarians in general, that so little attention has been given to the importance of the desk assistant's work, and I trust the time is not far distant when a good desk assistant will receive the same salary as, if not a better one than, the cataloger.

THE LIBRARIANS' CONVENTION OF 1853.

VERY few libraries contain a copy of *Norton's Literary Register* for 1854, in which are recorded the proceedings and list of "delegates" of the "Librarians' Convention held in New York City, Sept. 15, 16, and 17, 1853." The proceedings are now of merely antiquarian interest and are sufficiently summarized in Mr. E. M. Barton's paper at the Milwaukee conference (L. J. 11: 217). The list of delegates, on the contrary, is a roll of honor which should not be forgotten but should be preserved where it may be easily found.

At the Denver Conference of the A. L. A., on motion of Mr. Nelson, it was voted, "That all surviving members of the Librarians' Convention in New York City in the year 1853 be made honorary members of this association." For some unexplained reason this vote was overlooked at the time and the names in question were never added to our rolls. This having been lately called to my attention, I began an investigation, and find that at least eight of the original 82 members are still living; namely, Prof. D. W. Fiske, President D. C. Gilman, Dr. Edwin H. Grant, Mr. S. Hastings Grant, Rev. Edward Everett Hale, Mr. E. A. Harris, Mr. C. W. Jencks, Dr. A. J. Upson. Of 60 I have approximate date of death, but of 14 I have been unable to secure information. To the many librarians and others who have assisted me I return thanks. If any reader can help in clearing up the list I shall be glad to hear from him and the results will be printed in a later number of the JOURNAL.

In the following list the names and addresses are as given in *Norton's Literary Register* for 1854, but for ease of reference the list is arranged alphabetically instead of geographically and the usual abbreviations are used. Additional information, including date of death or present address, if known, is given within brackets. Names of survivors are in italics.

ABBOTT, Rev. Gorham D., Principal Spingler Institute, New York, N. Y. [Died 1874.]

AKERMAN, Charles, Director Mechanics' L., Providence, R. I. [Died 1879.]

BAILEY, Henry M., Ln. Young Men's Institute, Hartford, Ct. [Died 1895.]

BALLOU, S., Carrington L., R. I. [Killed in Civil war.]

BANVARD, John, New York, N. Y. [Painter and exhibitor of panoramas, etc. Died 1891.]

- BARNARD, *Hon.* Henry, Supt. of the Common Schools, Hartford, Ct. [U. S. Com. of education, 1867-70. Died 1900.]
- BOURNE, William Oland, Asst. Ln. Free Academy, New York, N. Y. [For about forty years clerk of Board of Education of N. Y. City. Died 1901.]
- CHAPIN, *Rev.* E. H., New York, N. Y. [Universalist clergyman. Died 1880.]
- COOPER, William, Hoboken, N. J. [Naturalist; first secretary of Lyceum of Natural History, N. Y. Died 1864.]
- COPPEE, *Capt.* Henry, Ln. U. S. Military Academy, West Point, N. Y. [Pres. Lehigh Univ., 1866-74; prof. same, 1874-95. Died 1895.]
- CROSBY, *Prof.* Howard, Ln. Univ. of the City of New York, N. Y., [Prof. Greek, 1851-63; Presbyterian clergyman, 1861-91; author. Died 1891.]
- CURTIS, W. P., Ln. Mercantile L. Assoc., St. Louis, Mo. [Ln. 1848-59. Died about 1865 or '66.]
- DEETH, S. G., New Brunswick, N. J., and Washington, D. C. [Biblioplist. Died 1858.]
- DE WITT, *Rev.* Thomas, D.D., Vice-Pres. N. Y. Hist. Soc., New York, N. Y. [Collegiate Dutch church of N. Y., 1827-74; pres. N. Y. Hist. Soc., 1872-74. Died 1874.]
- DICKINSON, *Rev.* James T., Durham, Ct. [Died 1884.]
- DISTURNELL, J., Member Amer. Geog. and Statis. Soc., New York, N. Y. [Author and publisher. Died 1877.]
- DODGE, Robert, New York, N. Y. [Life member N. Y. Hist. Soc. Died 1899.]
- DUNBAR, Edward E., Delegate from the Mercantile L. Assoc., San Francisco, Cal.
- FERRIS, *Rev.* Isaac, D.D., Chancellor Univ. of City of N. Y. [1852-70. Died 1873.]
- FIELD, Maunsell B., Record. Sec. N. Y. Hist. Soc., New York, N. Y. [Lawyer. Died 1875.]
- FILER, H. P., Ln. Young Men's Assoc., Troy, N. Y.

- STEBBINS, George H., Principal of Public Schools, Brooklyn, N. Y.
- STEPHENSON, R. H., Ln. Mercantile L. Assoc., Cincinnati, O.
- THAYER, J. S., *Evening Post*, New York, N. Y. [Should be William S., afterwards consul-general of the U. S. for Egypt. Died there, ? date.]
- TORREY, Prof. John, College of Physicians and Surgeons, New York, N. Y. [Prof. chemistry and botany, 1827-55. Author botanical works. Died 1873.]
- Upson, Prof. A. J., Ln. Hamilton College, Clinton, N. Y. [Anson Judd Upson, D.D., LL.D., Chancellor University of the State of New York. Present address, Glens Falls, N. Y.]
- VANDERVOORT, John L., M.D., Ln. New York Hospital, New York, N. Y. [Librarian, 1837-91. Died 1891.]
- VAN NORDEN, William, Representative of Apprentices' L., New York, N. Y. [Ln. Apprentices' L., 1853-71. Died 1871.]
- VINTON, Frederick, St. Louis, Mo. [First asst. Boston P. L., 1856-65; do. L. of Congress, 1865-73; Ln. Princeton College, 1873-90. Died 1890.]
- WALLACE, John William, Ln. Law Assoc., Philadelphia, Pa. [Law reporter, 1842-76; Pres. Penn. Hist. Soc., 1860-84. Died 1884.]
- WILLARD, W. T., Ln. Lyceum of Nat. Hist., Troy, N. Y.
- WILLIAMS, Edwin, of the L. Committee of the American Institute, New York, N. Y. [Sec. American Institute; author. Died 1854.]
- WILLIAMS, Thomas Hale, Ln. Athenæum, Providence, R. I. [First librarian Minneapolis Athenæum, 1859-1880. In August, 1875, suggested the Philadelphia conference. (See "Public libraries in the U. S." 1876. p. xxvii.) Died 1901.]

GARDNER M. JONES, *Librarian,*
Public Library, Salem, Mass.

LIVING BOOKS AND DEAD: PRESIDENT ELIOT'S ADDRESS AT MASSACHUSETTS LIBRARY CLUB.

At the last meeting of the Massachusetts Library Club, held in Boston on April 24, President C. W. Eliot, of Harvard University, spoke on the subject "Living books and dead." He said in opening that he supposed that there was really no such thing as a dead book, but that he meant to talk of the care of books which may possibly be used, but are not in active use.

The real problem of storing books and keeping them accessible is a new one; for it is only within comparatively few years that the flood of new books has taken on such an extraordinary volume. "Within the past 30 years the world has been flooded with books. Four years ago an intelligent accountant of books stated that the annual output of books

in 13 nations of the world amounted to 77,000 different works. In these statistics Russia, Austria, Greece, Spain, Portugal and the whole of South America were left out; and it is consequently reasonable to suppose that the total number of different works produced in the world annually is over 100,000. When we add to this total the enormous number of pamphlets produced yearly, we begin to form some idea of the problems in selection and storing that confront librarians."

It is desirable to study the problem of the storage of books which this flood of new volumes forces upon the attention of librarians. It necessitates, unless possibly it be in the case of great national storehouses of books, a selection in the buying of books. "A library of 100,000 volumes needs two and a third miles of shelving. There has consequently got to be on the part of all libraries, but the very largest, a close selection." Even a library which buys as many as 15,000 volumes a year must make a careful selection; for, beside books which are being freshly published, some books of other years must also be purchased. This annual output of books is going to increase rather than diminish, since the facilities for producing books and manuscripts are constantly on the increase. The low cost of paper and press work compared with years ago, has reduced cost in all branches of printing; and the new facilities for the production of illustrations tend yearly to make the number of books produced in the world greater and greater. Mere mechanical facility in the production of manuscripts is no small factor in the increased production. An author fairly rapid at dictation can produce 300 pages a week; and it is likely, judging from internal evidence, that many of our modern books are actually turned out at some such speed.

"There is another interesting result of this increased production. It is a very unusual specialist who is able nowadays to keep up with the literature in his own department. Harvard has many good specialists in her various departments; and some of them tell me that they cannot keep up with the flood of reading matter in their own lines. About all they can do is to skim the cream, and often they depend on some one else to do the skimming for them.

"As the librarian must select for his library, so the reader must select for his reading; and the more competent he is the more fastidious will he be. Completeness is out of the question. In selection a university has a great advantage over an individual, because it has at command a large force of specialists to make the selection. But notice one of the results of this mode of selection in a university library. It almost invariably results in a library casually developed on several sides, without proportion. A symmetrical selection would be possible if the uni-

versity had always on hand scholars in all the various departments of learning competent to make the wisest selection.

"The mode of selection in the ordinary public library is selection according to the urgency of the demand, which is not a good way from the scholar's point of view, but from the point of view of the general reader is the right way. But what is the result if the selection is made on this basis through many years? There can be no symmetry if popular demand is always the guide.

"It should be laid down as a general principle that no library should retain any book, unless that book be kept accessible. If books cannot be kept accessible, they should be given away or burnt. But what do we mean by accessibility? The present definition of the word as applied to libraries would appear to mean that a book is accessible when it can be procured in from three to five minutes, and is not accessible when it cannot. In some of the libraries of to-day this may be possible; but for the libraries of the future, if their growth is to be commensurate with the increase in the number of books in the world, it will not be possible. In reality a book should be regarded as accessible that is delivered within 24 hours after being called for. The present demand for instant delivery is unreasonable. No man of science expects to find such a ready furnishing of material in any other field of inquiry. If the botanist wants to investigate the life of a plant he watches patiently while the plant grows; and so through every department of the natural sciences the investigator is willing to spend much time in patiently waiting for conditions favorable to his study. But your book student wants his book in three minutes. I don't believe in spending money by the million to satisfy this impatience in readers.

"I would divide books into two general classes, those in use and those not in use. This classification will of course vary in different countries and in different libraries. In the British Museum the line is drawn closely. There a book that has not been called for within three months is put into the unused class. In the Harvard library there are many books that are not called for once a year. I think it will be found in any library that there are classes of books that are seldom called for, such as volumes of sermons, books about science—not books of science—old books about books, and old editions of works of reference.

"How ascertain what books are in use and what are not? It should not be difficult. Many libraries keep a record of all the books given out for reference and for home use. Those books that are found to be little used should then be stored elsewhere than in the main library. In libraries where there are open shelves with the books classified, the student 'browses.' What is gathered by that method is not the most nutritious food and there is little advantage in the habit. At Har-

vard 200 or 300 persons have access to the shelves. For a specialist this is an unscientific method, because the collection is casual and incomplete. Browsing is only permissible as a pastime after working hours are over."

President Eliot then spoke of the present method of storing books in stacks. In an economical stack with narrow passages only 22 per cent. of the cubical space may be occupied by books, *i.e.*, about one-fifth of the building may be occupied by books. Sketch plans have been made for a new building at Harvard, and the proportion occupied by books there is only 19 per cent. It is plain that this is far from being an economical storage, except on the principle that every volume is to be accessible in the light and at once.

"The main library ought not to be too frugally designed. It ought to be spacious and impressive. Prompt accessibility and classification by subject prevent frugal storage. For economy in space the classification should be by size; there should be no allowance for the vacant spaces seen in every classified library. Economic storage is inconsistent with classification.

"The storage library building should be plain, and on cheap ground, and all the books should be sorted by sizes, serially numbered, and arranged in double rows, if need be. Could we then rise above the one-fifth of the cubical space? Yes, and other economies could be made in the passage ways. But we cannot rise above 40 per cent. if accessibility in five hours or even 24 hours is to be attained.

"Consider how the cost of a book mounts up in the course of years. Add simple interest to the original cost of the book and to the \$1 which is the estimated cost of ordering, cataloging and shelving a book, and then keep the book 100 or 500 years always accessible, and is there not reason for shrinking from doing this for a book which is not used? In the cheaper storehouses there should be study rooms for the users of many books. Consider the advantage which will accrue in facilitating the use of the live books. In the university library the aim is to feed the youthful mind, and teach the younger scholars how to grow. Now, such use of a library is very much interfered with, if that library is clogged, and its catalog is clogged by a mass of books not in use. When cards count by the million, it grows harder and harder to use the catalog. The use of the Harvard card catalog would be easier and more general if a million or so cards were taken out of it. Large numbers of the teachers of the university do not go to the card catalog. In spite of the excellence of the facilities, many scholars say that they do not use the classified catalog. This is only one of the directions in which I believe that the use of a library of living books would be greatly facilitated by the exclusion from it of the dead books."

PRESIDENT ELIOT AND DISCRIMINATION IN BOOKS.

No one who reads, in the present issue of the *LIBRARY JOURNAL*, President Eliot's extraordinarily suggestive address at Boston on the 24th of April, before the Massachusetts Library Club, can fail to be struck with the mental grasp displayed in it. And if the reader, moreover, was able to be present and listen to its delivery, he must have felt that one seldom witnesses a more effective use of the pure intellect, in the orderly marshalling of related facts, and in the consequent natural transition of the listener's thought, from one conclusion strongly desired by the speaker, to another conclusion also desired by the speaker.

Stripped of the specific details proposed for the Harvard College Library, President Eliot's "program" is a much needed plea for greater discrimination in regard to books—their purchase, their storage, and their use. Very fortunately also this same principle of discrimination underlies every one of the contributions to the discussion which followed President Eliot's address at Boston. This discussion, participated in by Professor Ripley, of the Massachusetts Institute of Technology, Mr. Brooks Adams, Mr. Lane of the Harvard College Library, Mr. Green, Mr. Cutter, and others, represented widely different points of view, but had the rare distinction of really shedding light, and of really directing attention to several otherwise unconsidered sides of this many-sided question. Taken together with Mr. Lane's article, "Plain facts about the Library," in the *Harvard Graduates' Magazine*, Dec., 1899, v. 8, p. 168; and with the recently printed "Report of a committee appointed by the President and Fellows of Harvard College to study the future needs of the College Library," (March 31, 1902), as well as the reference to this matter by President Eliot himself, in his recent annual report (quoted in the *LIBRARY JOURNAL*, April, 1902, p. 200), there is certainly supplied "food for reflection," of the greatest service to libraries generally.

President Eliot, reasoning from the strikingly impressive figures which tell the story of the overwhelmingly increased output of newly published books in recent years, maintains that, even in a library of the rank of the Harvard College Library, a far more rigid discrimination will be necessary, when making future additions. He maintains also that even in erecting a new library building, such as that proposed at Harvard, not all the books can reasonably be expected to be equally accessible. Some groups of books (as, for instance, "old editions of books of reference"), he maintains, with much show of reason, may even be placed in some other building than the library building proper.

It is perhaps when attempting to decide where to draw the line between "living books"

and "dead books," that the chief divergence from President Eliot's recommendations is likely to arise, but there are several important suggestions which it may be well to correlate, at this point, with his main thought. One of these is the "sifting" policy, so effectively advocated by Mr. Charles Francis Adams in 1893, and since very largely acted on, by libraries generally, in antiquated works of natural science and similar fields. That it ought to be still more fully acted on is plain from the instance cited by Professor Ripley, at this Boston meeting, of occasionally seeing a library reader with a treatise in his hands (for example, on electricity), which, from its antiquated date, is not merely inadequate, but is absolutely misleading.

Correlated with the above also should be the policy of forwarding to the library which makes some otherwise "dead" subject a specialty (as "old school text-books," for instance), those books which accumulate in other libraries on these subjects.

Another necessary correlated principle is that of the exchange of duplicates among libraries. In this connection, the feasibility of a general "clearing-house" has been repeatedly discussed; hitherto without result. With changed conditions it is not impossible that a different face may be put on this matter also.

A principle which is closely allied with the above was touched upon by Mr. Brooks Adams, at the Boston meeting, in connection with the necessity for the fuller development of special collections in libraries. Speaking from his own experience as a specialist in a single department, Mr. Adams maintained that this selective tendency needs to be carried very much further in future, even in the large libraries, to satisfy the demands of the investigator.

Correlated with the recognition of the modern library's inability to overtake the torrent of annual production in any given field of study should be the practice so strongly urged in recent years by Mr. George Iles and others—namely, the systematic evaluation of books by specialists in the various departments.

One more principle which should be correlated with those named above is that of interlibrary loans, by which a needed book is made accessible to a scholar, even when not owned by the library nearest him in his own community. Not only was this practice recalled verbally, by Mr. Green in his remarks at Boston, but its importance is deliberately reasserted at p. 8 of the committee's "Report," already mentioned above.

If there are, moreover, several suggestions in President Eliot's address which do not command so wide acceptance as those cited above, they are named here with a frank recognition of the very real difficulties which he is trying to face, and with the hope that at least equally satisfactory solutions of the

problem may be found elsewhere. President Eliot, for instance, for the purpose of largely increasing the percentage of space in a library building which shall be available for books, would advocate, not a "stack" of the conventional type (as distinguished from the open shelves of a reading room), but an entirely separate building, of the "packing-box" order. This secondary, or "storage" building, he would plan for, not merely as a detached structure, but as one remote (if necessary), from the main library; built, moreover, on land of a distinctly low value, and consequently situated, it may be, in the "undesirable" part of the town; with an interior planned by no means to facilitate the consultation or the study of books on the premises. Its sole purpose is to attain the maximum of compactness in storage, and the arrangement of the books would be solely by size rather than by classification.

The crux of the whole problem apparently lies in the successful choice of a ground of distinction between the books which are to be retained in the main library building, and those in the more or less remote "storage" building. This ground of distinction President Eliot was at first apparently inclined to look for (in his reference to the matter in his annual report), in the total number of books "borrowed from the College Library during the year." (See L. J., April, p. 200.) From these figures, he maintained, the "large mass of unused, or very little used books" might "safely be inferred." And yet, as more than one university librarian has pointed out, nowhere is the "circulation record" (for home use), a more inadequate guide to the total use which the books receive, than in a college library; and the acceptance of these figures in the culling out of a book which may not indeed have left the building for the space of one year, or three years, as the case may be, is almost certain to involve the removal of large numbers of books which are nevertheless in active use. President Eliot's modified program, in his Boston address, would apparently base the culling process on the "record of all books given out both for reference and for reading"; and this represents a distinct gain in his recognition of the situation, yet, it of course still fails to provide for registering the use of books on "open shelves" under the conditions found in many modern libraries.

Unhappily, the "colonizing" of books outside of the main library building (no reference being here made, of course, to distinctly organized "department libraries" in the case of a college library, nor to "branch libraries," in the case of a public library), is by no means an untried experience in various American libraries which have been forced, through overcrowding, to put it into operation during the past ten or fifteen years. And yet the actual experience which has been thus gained has had the very great merit (in discussing

a problem like this), of showing "where the shoe pinches." It is hardly necessary to point out that the "cycle," so to speak, for the recurring use of different groups of books differs widely, and that certain books, though not used on a large scale for a period of several years, are then wanted, and wanted very decidedly (quite as much so as a page in a cyclopædia, which is not turned to as a matter of daily routine, but which cannot be spared from the book on that account). Librarians who have been obliged to send away to some secondary or "storage" building certain groups of books which they consented, after some hesitation, to designate "Books not often wanted," have found, to their sorrow, that scarcely a month would pass before the demand for not a few of them would become very much in evidence. These considerations are, however, cited as showing that the program of "storage" buildings is beset with difficulties of detail, and not in order to antagonize the suggestion itself. On the contrary, the suggestion is one which should receive the best thought of the librarians of the country, and it would be well if a representative committee could prepare a list of groups, or subjects, in which one might be inclined to say that "the presumption is against the book," this list to be canvassed carefully and in detail.

There are, however, a few points in regard to the construction and management of these "storage" libraries, which are not likely to require so long a canvassing by librarians; and among them is President Eliot's recommendation of classification by size alone, in these "storage" buildings. Surely the case must be a serious one if it shall require so thorough an acceptance of mediæval standards; and one is inclined to ask whether, if a true classification must be ruled out, there may not be at least an alphabetical arrangement, as is customary in many libraries in their collection of "duplicates for exchange." The interests of the scholar or investigator seem to demand also that such a "storage" building should contain at least one study-room, for the consultation of its books; and, most of all, a skilled attendant, whose qualifications, owing to the exceptional difficulties which the situation involves, should be by no means inferior to those of the average library attendant, and should indeed be far in advance of the average.

In no particular, however, is the program of President Eliot less likely to commend itself to librarians than in its implied attitude towards the question of those "delays" which all too easily beset the path of the reader or student, even in the most carefully conducted libraries. If President Eliot can view with equanimity a plan which frankly involves a delay for the reader, in obtaining his book, not merely of five minutes, but of five hours, or of "twenty-four hours after being called for," the librarian certainly cannot, and should not. One such instance as that cited by Pro-

fessor Ripley at the Boston meeting should make it plain that if the problem seems at present insoluble except on this condition, the problem must at all hazards be restudied.

It is hardly necessary to say that, while the present discussion has grown largely out of the fact that the problem is a present and practical one at Harvard College, and while the successful solution of the Harvard problem is naturally a matter of deep interest to librarians generally, they are fortunately not obliged to bear the responsibility of solving that particular problem. Theirs is the more general and universal problem, involving conditions which bear more or less fully on the future policy of libraries throughout the country. To President Eliot, as to Mr. Charles Francis Adams nearly ten years ago, a debt of gratitude is due, for bringing forward a question of universal interest, discussed by some one from outside the library ranks, but discussed in such a way as to compel attention. At this stage of the matter, what is needed on the part of libraries in general is chiefly discussion, reflection, and the practical testing of theories. As a help, however, in the detailed canvassing of the subject, it is perhaps not out of place to attempt a formulation of the points already touched upon, in the following list of suggestions, which are here submitted solely as a "text" for further discussion and criticism.

1. Let a limited number of "depository libraries" (or communities containing coördinated libraries), be agreed upon, as the only ones in the United States expecting "to store *any and all books*," (President Eliot suggests "three" only, but others may be thought desirable).

2. Let the other large libraries of the country aim at becoming exhaustively complete only in certain definite specialties (not widely duplicated by each other), rather than in their collections as a whole.

3. Let the still smaller libraries agree to depend even more fully on interlibrary loans, as well as to develop the "discriminating" measures indicated below.

4. Let those libraries which work side by side, in the same community, develop more systematic measures of co-operation, in the purchase of books, and in their cataloging and in their use.

5. Let the "evaluation" of books by specialists in each department be more fully systematized, and let the results be made more widely accessible in printed form.

6. Let all libraries except those agreed on as "depositories" make an increasingly systematic use of rigid discrimination, both in the purchase of books, and in the acceptance of gifts of books.

7. Let the "sifting" processes, which have thus far been fragmentary in many libraries, be systematically embodied in the routine, (a) as applying to duplicate copies of books, or (b) to undesired or antiquated groups of

books; and (c) occurring at regular and specified periods. (Let this include also the omission to replace certain books, discarded through "wear and tear.")

8. Let a definite plan be formulated for disposing of all material thus "sifted" out, whether (a) to branches of the main library; or (b) to other libraries; or (c) in its removal by sale or destruction; or (d) to a secondary or "storage" library building (if found to be unavoidable), as suggested by President Eliot.

9. Let the relief and convenience of the reader or student be increasingly sought, (a) by sifting out books from the shelves, as above; (b) by a corresponding sifting of the catalog; (c) by less delay (rather than more), in supplying the books wanted; (d) by more of an open-shelf equipment (rather than less); (e) by continuing to grant to investigators the opportunity of critical first-hand examination of the books in the stacks; (f) by the arrangement of the books, even in the "storage" buildings, on some other plan than that of size; and (g) by the provision of at least one study-room in connection with every "storage" building.

10. Let a representative committee attack the question of preparing a tentative list of undesired or "dead" books, or groups of books, to be canvassed later, in detail, and in the light of the experience of individual libraries.

W. E. FOSTER,
Librarian Providence Public Library.

HARVARD UNIVERSITY LIBRARY: CONDITIONS AND PROBLEMS.*

AN interesting presentation of the question of a new library building for Harvard University is made in the report of the special committee appointed to consider the subject by the university authorities. Not only are the chief features of the proposed building outlined and explained, but special attention is given to the problems of handling the constantly growing collection, and to the solution offered by President Eliot, of separating "living" books from "dead" ones. In its lucid and thoughtful review of the problems that confront the great university library of to-day, the report commands wide attention.

Harvard, it is demonstrated by means of a comparative table, although leading Yale, Columbia, Princeton, Pennsylvania, and Cornell, in the strength of its collection, is behind these colleges in its equipment for housing and using its books, and the necessity of better facilities in these directions is accepted as a premise. Three points bearing upon the general subject are first considered: 1, the relation of the special reference libraries to the

* Harvard University. Report of a committee appointed by the President and Fellows of Harvard College to study the future needs of the college library; presented March 31, 1902. 22 p. O.

central library and the expediency of maintaining a central library or splitting the collection up into many special libraries; 2, the possibility or desirability of separating "live" from "dead" books; 3, the probable expediency of enlarging or altering the present building, as compared with erecting a new building. On the first point the opinion is practically unanimous that disintegration into scattered special collections would be most undesirable, and that the policy to be followed should be one of centralization. There are now 26 special reference libraries, falling into the three classes of laboratory collections, collections for large elementary courses, and collections for the use of advanced students. The latter, with a few exceptions, it is thought "should properly be placed under the same roof with the central library, each in a separate room or rooms of its own, to which only the advanced students and the instructors in each department would ordinarily have access," for the reason "that students and professors may have the readiest access to the supplementary material which that library contains, namely, the periodical collections, the general comprehensive collections in the stack relating to the same subject and the collections in other related fields. In the case of these departments the library is itself their laboratory, and the workers in these subjects have the same right to expect adequate and convenient facilities for carrying on their work in the library that investigators in scientific fields enjoy in their laboratories."

On the question of the possible division of "live" from "dead" books, there is "a remarkable unanimity of opinion that to attempt such a discrimination is inconsistent with the interests of learning, if it implies the destruction or removal of the so-called dead books, or even the storing of them in such a way that they are not both well classified and directly accessible to scholars." Taking the term "live" books to apply, in a general way, to the volumes in the special reference collections and in the general reading room and many current and new books, and applying the term "dead" books to the books of the stack, the committee has given careful consideration to the question, "because if it should appear either that any considerable proportion of the present library collections could be discarded without injury to the interests of the teaching staff, or that they could be stored in some radically different and more economical way from that now in use, it would have a direct bearing on the plans to be made for the increase of the library." In a library so large and so old as the Harvard Library, built up by gifts as well as by purchases, it is evident that there must be many books of slight value, and many once valuable that have been superseded by later editions or by later and better works on the same subject. Can any large number of such books be either discarded or packed away in some

less accessible fashion? Can this be done, for example, in the case of old editions of scientific text-books; old editions of encyclopædias (bulky works as they often are); old grammars and dictionaries; early school editions of the classics since re-edited in better form; old editions of many standard reference books of which a reader always demands the latest editions; antiquated medical books; hymn-books and psalm-tunes; old guide-books, directories, catalogs, and registers? Such at first sight would be the more likely candidates for exclusion under the policy suggested. Yet there is hardly one of these that would not find earnest defenders, prepared to cite instance after instance of the usefulness of just such books in their own investigations; and it is noticeable that the retention of these books is urged by those who know them best, not by advocates of a mere aimless accumulation. Duplicate collections, however, of such material in the same vicinity do not seem essential, and if another library accessible to residents of Cambridge can be found willing to specialize in these relatively unattractive fields the college library should not hesitate to find what relief it can by judicious transfer or exchange. Inconvenience to inquirers will occasionally occur, but it will not be of a serious nature.

"It is, however, to be remembered that all the above-mentioned books taken together can hardly form a tenth part of the books in the general stack collection. The other nine-tenths of the so-called dead books have a very different claim upon us. They constitute in one way or another the record of human thought, expression, action, condition, or discovery; that is to say, they are the original sources to which students of philosophy, literature, history, economics, and science turn for the material on which they work. A moment's reflection shows that this is true of the host of pamphlets on political and economic questions which form the record of contemporary opinion and discussion, of many long sets of periodicals both literary and scientific, of government documents and records, municipal reports, statistical publications, newspapers, letters and other personal narratives, and of treatises on science, economics, the arts, philosophy, etc., which express the theories and conceptions of the time in which they were written, and mark the steps of progress. And it must be admitted that the greater part of the publications first mentioned often serve a similar purpose, though in a rather more remote and accidental way. All have their use and value, and often prove it in unexpected ways. The ultimate decision as to whether the Harvard library should keep what it has once incorporated in its collections, or may discard or transfer freely to some other library, depends upon the place which the library occupies, and should continue to occupy in the world of learning. Should its final aim be to furnish a com-

pact and strictly limited collection of the books of primary importance, depending upon other larger libraries in Boston, or in other parts of the country, for material occasionally needed, or should it expect to draw in and arrange under its own roof everything that is likely to be of real though remote service in any branch of scholarly investigation, probably few persons would give an unqualified assent to either alternative. The library has already too far outgrown the first conception, wise and appropriate as that is for many smaller libraries. The second conception is so enormous that no library can ever realize it completely. But the committee's opinion is that the policy of the Harvard library must incline strongly and fearlessly in the larger direction, and that it must maintain and administer its collections undiminished (with inconsiderable exceptions) — collections which it has brought together at great pains and expense and with the best expert advice."

As a legitimate means of keeping the collection within reasonable limits co-operation with other libraries is suggested, both in interlibrary loans, and in the avoidance of duplicating expensive and rarely used works, long sets of little-used periodicals, and like works.

The question of the storage of less used books in a more economical manner than the ordinary stack permits is considered. "If the books were packed closely on the shelves and arranged strictly by height, with perhaps double rows on each shelf, a distinct saving in the number of cubic feet occupied by a given number of books would result, and it would still be possible to produce without serious delay any particular book required. But, as we have already pointed out, books of the kind we are considering, must be in most cases accessible to the student personally, and they must moreover be systematically classified, otherwise access to the shelves loses most of its value. Close order on the shelves and division primarily by sizes is not consistent with good classification and is therefore inadmissible.

"The committee, therefore, is unable to recommend any radically different method of storage from that in use at present. For certain classes of books, indeed, now stored in the stack, a more expensive rather than a more economical system is essential to their proper preservation and convenient use. We refer particularly to the collections in fine arts and archæology, where a large proportion of the volumes are heavy quartos and folios, for which special cases and tables should be provided in a room devoted to their use."

The requirements of the proposed building are outlined as: 1, two or more large reading rooms, for general reference books, current periodicals, and reserved books for elementary and some advanced courses; 2, a series

of moderate sized rooms, one or more for each department, giving a separate working reference library for advanced students or opportunity for quiet study to professors and visiting scholars; 3, a stack similar to the present one, large enough to hold the accessions of the next fifteen or twenty years, with possibility of future enlargement; 4, suitable rooms for books in fine arts and archæology, archives, manuscripts, maps, and other special collections; 5, convenient and ample administrative rooms. These general points are considered in detail, with careful estimate as to extent and character of use to be provided for, and tabulations of probable yearly rate of accessions, administrative force required, etc. Some general estimates of cost are made, with suggested total of from \$750,000 to \$787,000. In conclusion the committee urge: "Not only should the new library be as perfect in plan and equipment as a wise and generous expenditure can make it; it should also, avoiding any display of costliness, possess a beauty and dignity of its own both within and without, that it may be a constant source of pleasure and inspiration to all who use it." Suggestions and criticisms of the plans outlined and points referred to in the report are asked for from librarians and others interested.

REPORT ON THE BIBLIOTHÈQUE NATIONALE.*

THE official report recently presented upon the appropriations desired for 1902 by the Bibliothèque Nationale gives an interesting review of the disadvantages under which the administration of the library at present labors, and urges prompt improvement of existing conditions. For administrative expenses the sum of 445,000 francs is assigned, comprising the administrator-general at 15,000 francs; three custodians (*conservateurs*) at 10,000 francs each; one secretary-treasurer-custodian at 10,000 francs; six assistant-custodians (*conservateurs-adjoints*) at 7000 francs each; 18 librarians at from 3600 to 6000 francs each; 26 sub-librarians at from 2400 to 3300 francs each. There are also eight probationers and 16 clerks at a total of 50,020 francs; the sum of 26,000 francs is allotted for overtime and supplementary service; while 77 persons additional are attached to the corps of attendants, with a further salary total of 120,500 francs.

"Among the four departments into which the collections of the Bibliothèque Nationale are distributed, that of printed works continues to be the most overburdened, and it is most desirable that a better distribution of

* Rapport fait au nom de la Commission du Budget chargée d'examiner le projet de loi portant fixation du Budget général de l'exercice, 1902. (Ministère de l'instruction publique et des beaux-arts; service de l'instruction publique); par M. Maurice-Faure, Député.

labor should permit an increase in the number of employes in this department, the state of the finances making additional appointments impracticable. The complaints of the public against the slowness of the service are continual, and it must be admitted that they are often justified. The interval between the demand for a work and its delivery is at least half an hour; oftentimes an hour, and even longer. The extent of the delay depends upon the time when the demand is made, and is especially marked between the hours of two to five in the afternoon, when there are the greatest number of students or visitors. There are days when more than 600 volumes are asked for. In the reference room (*salle de travail*) two or three librarians, two attachés, and eight or nine attendants are especially assigned to this hard task, and they are greatly overdriven. A rearrangement of the *personnel* appears essential, both to facilitate rapidity of service and to save the strength of the employes. This increase of labor is the result of the change, contrary to the aim of the institution, that has taken place in the use made of the library. Formerly open only to scholars and men of letters, it is to-day encumbered by a clientele of readers who come simply to amuse themselves, to the prejudice of serious students. The demand of this special clientele is for new novels, which may be found in all reading rooms, for sporting journals, 'The art of winning on the races,' and like works. The reading room should suffice for such demands, and some regulation to this effect seems necessary.

"The catalog cards, which are for the use of the staff and constitute the manuscript catalog, are not united in a single alphabetical series. They are divided into several series—French history, Medicine, Medical theses, etc., etc. The attendants when asked for works coming under several different classifications are obliged to search in two, three, or four alphabetical series of cards. Thus long delays and annoyance to the reader result. It is only when the manuscript of the 'Catalogue général' is prepared to be sent to the printer that these various series of cards are amalgamated." It is pointed out that another cause of the delay in service is that most of the employes of the department take up in rotation and only for one or two hours a day the work of searching the card records, so that each one serves a slow apprenticeship. No one knows what has been done by his predecessor, and there is no sense of personal responsibility. "More than anywhere else, in this research work and in the central office, the *personnel* should be fixed, thoroughly competent, and charged only with this arduous work, for to do a thing well and quickly it must be understood from top to bottom."

Reference is made to the general demand on the part of students and the press, that the reference room should be open in the evening.

Although that is not feasible until a system of lighting is installed, it is suggested that the hours of opening might be somewhat extended. At present the room is open, according to the season, from 9 to 4, from 9 to 5, or from 9 to 6. "During all the autumn, winter and part of spring it is closed at four o'clock. Now, there are many persons who cannot come until two o'clock; they do not receive the desired volumes until nearly three o'clock, and at 3.50 they must begin to return their books, harassed by the pages, who announce the time of closing." It is urged that four o'clock closing be the rule during December and January only, when it is really dark at that time; for other times the closing hour should be 4.30, or according to the daylight.

Defects in the law regulating copyright deposits at the library are noted. At present but three months are granted in which to make formal demands of printers who have not effected the required deposit. This time is entirely too short. The library often does not learn of the issue of provincial publications until after the expiration of the period, when it can no longer secure them by formal demand, and secures them—if they are secured at all—as a favor only instead of by legal right. Not only is a longer period desirable, but it is important that the official deposit should be required of the publisher and not of the printer, as is the present practice. "It often happens that the plates which accompany a work are neither printed nor executed in France, but abroad—as frequently in the case of medical works and for works of art. The printer then deposits the text only, and the library receives an incomplete work. It may happen also that there is a change of printers during the publication of a work. Each printer deposits—they do not always do that—the part that he has printed, and it is for the library to put the pieces together." The deposit, owing to the ineffectiveness of any penalty for its neglect, is most laxly carried out. "In consequence, the library either finds itself deprived of its principal source of increase, or it is obliged to buy the works that it should have received through deposit. Now, as the value of books constantly increases, this is a serious injustice to a budget, which, considerable as it appears, is not equal to those of the great foreign libraries, notably those of London and Berlin, not to mention the American libraries, which are very rich, thanks to private generosity, and carry off from the book market, by force of bank notes, the rarest editions and most precious bindings.

"Finally, it is necessary that every document issued from the national printing office, particularly those of a secret or special character, should be deposited at the Bibliothèque Nationale—with a prohibition of their use, if desirable, for four or five years. As no such deposit is now made it happens that rare items that, at a given time, could en-

lighten some special fact of history, are conspicuous by their absence."

M. Maurice-Faure closes his report with a strong arraignment of the present method of publication of the great "Catalogue général" of the library. "The publication of the 'Catalogue général' proceeds with a slowness that may well be called discouraging. This publication was begun in 1868, and but seven volumes have actually appeared, which contain only the letter A and a very small part of B. Now, this covers only the first series of the catalog, that by authors. There is to be a second series, for anonymous works; and a third for various publications 'of a special character.' It is evident that the completed catalog will make at least 200 volumes, and according to the present rate it will take at least 120 years to finish it, since in three years there have been published only six of the 200 volumes. What usefulness can there be in a catalog which on the day of its completion (say, at the earliest, the year 2021) will be 120 years out of date? To continue in this fashion is simple waste of money. Undoubtedly more rapid progress is possible. The example of the British Museum proves this. The catalog of that immense library (authors and anonyms) began printing in 1881 and was finished in 1898; in other words, the English had done in 17 years what we shall accomplish in 120 years, if we do not change our methods. It may be said that to make this English catalog there were extraordinary funds available, and that if the French catalog advances slowly it is because the budget provides but 100,000 francs for the making of all the catalogs of the Bibliothèque Nationale. But it is only necessary to compare the two catalogs to see that the English catalog has been made and printed with a view to cheapness, strict economy, large size, compact printing, while the French catalog is published in expensive style, in octavo form. The French catalog is undoubtedly more delightful to the eyes than the English; it is more agreeable to read; perhaps it has other advantages. But the English catalog exists, and for three years has been of service to students; while the French catalog does not yet exist, and, if the present plan is not abandoned, will only exist for a remote posterity. To change the plan, now that publication has been once begun—to change *format*, style of printing and even method of editing, it may be said, will be an inconvenience; it will be annoying to the eye to find the first six volumes of the catalog in octavo, while the others are in quarto form. Small harm, after all. What is necessary is that the catalog should be finished in reasonable time, that is in 15 to 18 years. We urge the Minister of Public Instruction to study the question of ways and means whereby the 'Catalogue général' of the Bibliothèque Nationale may be published complete by a date which should not be later than the

year 1920." Various criticisms are made upon technical features in the catalog, the designation of duplicate copies is recommended, and an annual catalog of accessions is suggested to replace the present unsatisfactory and inadequate monthly bulletins of French and foreign additions. The final criticism touches upon the pamphlets, books and like material gathered in collections not included in the general records. "These pamphlets and books are not represented by an author card in the manuscript catalog, and thus do not appear in the printed catalog. To realize the importance of this elimination it should be understood that certain collections constitute veritable small special libraries. Thus, from 1897 the collection relating to mutual aid societies has grown to occupy 23 meters of shelving and to comprise at least 17,000 items; the collection dealing with railway companies covers 53 meters of shelving and embraces over 22,000 items." The need of making this material readily available to readers and giving it proper record is urged, and the practice of establishing artificial collections of this sort is regarded as most undesirable.

THE NET PRICE QUESTION.

A "MEMORIAL" upon the vexed question of discounts granted to libraries, addressed to the executive committee of the American Publishers' Association, by the executive committee of the American Booksellers' Association, was printed in the *Publishers' Weekly* of April 26. It was inspired by the resolutions passed at the Bi-state Library Meeting at Atlantic City and later endorsed by many other library associations, asking that a new rate of discount up to 25 per cent. on net books be granted to libraries; and it urged with considerable rancor that the request be denied, and that libraries be required to pay full net prices on their books. It said, in part:

"The resolution practically asks that local dealers shall be required to maintain bookstores for the distribution of your books, by the investment of their capital in your books with the constant risk of not being able to sell them and so recover the money invested; that dealers shall be required to pay transportation on your books from your warehouses to every city throughout the country; that dealers shall be required to pay for clerk hire to sell your books to libraries; that dealers shall be required to pay insurance on your books in transit and to store; and that dealers shall be required to sell and deliver your books to libraries at precisely the price which they pay you for your books in your own warehouses, in cities remote from the libraries. And finally you are urged to allow your members to sell their books directly to libraries at 25 per cent. discount, which is precisely the discount that you recommend your members to allow to dealers, in your own warehouses.

"We beg leave to direct your attention to the fact that the average librarian, throughout the country, is absolutely dependent upon the bookseller, to help him make suitable selection for the library. . . . It is the general practice of the average librarian to ask the local bookseller to help him make up his list of purchases, as often as he has an appropriation for the purchase of books. This service is rendered by the local dealer often at the expense of a day, and sometimes several days, of valuable time. When the list is made up the librarian submits it to jobbers and wholesale dealers in other cities, as well as to publishers, and they are asked to bid for the order. When the bids are received the lowest one is the basis upon which the local dealer is told he can have the order, if he is so fortunate as not to be entirely ignored. The price quoted on such orders by jobbers, wholesale dealers and publishers is usually the price at which the local dealer purchases your books, unless they are protected by the net price system. Thus the local dealer, in order to hold his local trade, is compelled to furnish the books to the local library at the same price he pays for them in the warehouses; and he is also compelled to incur the serious loss in handling your books as above described. We submit that since the local dealer does the work and incurs the expense of furnishing books to the local library, he is entitled to a living profit. Surely the laborer is worthy of his hire!

"Certain instances were cited by the librarians, where the prices of books published in series had been increased to the public. It would have been strange indeed, if in the adjustment of their business to the new conditions, some members of the Publishers' Association had not made mistakes in pricing their books. But, if so, where the price has been made too high, or too low, the publisher of the book has to suffer most for his mistake, since he has most invested. This is a matter that should give no one any anxiety, since it will soon adjust itself.

"If you will require public libraries to pay the full net price for all of your publications as is done by English publishers, you will enable dealers to purchase your books liberally, to introduce them thoroughly during the first year after publication, and to push their sale effectively. Then, at the end of the period in which the net-price system is protected, such books as you do not choose to maintain under the net-price system, and thus keep permanently on the market, can be put on our clearance counters and closed out. This will afford public libraries an opportunity to purchase at lower prices; and the limited "appropriations" can be made to go farther in meeting the demands of the patrons of libraries.

"The burden of complaint by the 'professional librarians,' who spoke at the recent meeting, was that they were compelled to pay higher prices than they paid before the net-

price system was adopted. In this connection you will recall that prior to the adoption of the new system, librarians were buying books at the same prices, and often for less than were paid by local dealers. At the same time, the patrons of the libraries, the friends of the librarians, and their friends' friends, were allowed to order books through the libraries, at wholesale prices, and to have them shipped from your stock-room by the use of public funds."

A bitter attack is made upon Mr. Dewey, as "the militant enemy of the book trade in New York state," and the intention is expressed of recommending "an appeal to all labor organizations and to both political parties, to see that, in their nominating conventions, delegates and candidates for the state legislature are pledged to the removal of the present incumbent, and a thorough investigation of all his methods in vogue in the state library."

The JOURNAL has received from Joseph F. Daniels, librarian of the State Agricultural College, Fort Collins, Colo., a communication dealing with the booksellers' memorial. Mr. Daniels says: "In my experience as librarian in four libraries I have never been able to do business with the local bookseller, although I have really tried to place business with him. Only four times in eight years have I ever been obliged to ask a bookseller for lists, and when I did so, the request was sent to McClurg or Stechert, because I hoped that there might be something in stock in a large bookstore. I use a bookseller as subscription agent, and although he asks more for the year's periodicals, I stay with him, because I like him, and because I turn over my 'shorts' and 'pick-ups' to him.

"We buy about \$2000 in books each year, with a tendency to increase — we do increase, year by year, and such has been the strain from each department, such has been the call for new books, and especially scientific books, that we have done everything in our power to buy books for the work of class instruction and laboratory practice. We have neglected to buy many of the books every library should own in bibliography, library science and reference; but we have promised ourselves that, in due time, we should have all these, and now the heads of the departments who have been made acquainted with the conditions of this net-price matter, seem perfectly willing to put all our money into what is best called equipment: books of permanent value. As far as possible we shall avoid the purchase of net-price books, until the matter is settled; that means that we shall buy little outside of the reference books we have needed so long.

"It would be well to have some librarian or bookseller add to the information concerning this controversy by making tables which would classify bookbuyers (libraries) by size and book orders. I suppose that public li-

braries have a little more money than college libraries, but I think that we have a little more money in our library than a public library of the same size (about 20,000 v.) and income for income, the college library spends more money for books.

"Between the publisher and the irate bookseller there is nothing for us to do in this library and other libraries, but to wait for calmer times and more settled conditions. There are a great many things that we shall buy, things we need and would not buy but for this net-price affair. We shall live through this experience and we shall see more reasonable charges for books; then we shall buy books as they come from the press.

"The library and the bookstore are both subject to the same general laws of change and progress. It may be that the library is dependent upon the bookseller, as the memorial asserts, but I am inclined to believe that the library is slowly taking the place of the bookstore. Nobody goes to the local bookseller for information. Or, to put it on personal knowledge, I have more calls for book information than the local bookseller has. The bookseller knows very little about books because he has no tools and has many other lines of trade beside books. The larger city bookstores, less than 50 in America, do have the tools and the information, but they do not have the people so completely. The skilful, enthusiastic librarian of to-day seems to have taken the place of the bookseller with the people who want to know about books.

"I am personally acquainted with more than 500 graduates who have at one time or another used the college or school library and who are now in the world and at work. From the mass of students there is but a faint call for books after graduation, but about once a week, I receive a letter asking for a list on nature study, or manual training, or music, or this or that, and I have been curious enough to find out whether or not these young people (and old people too) have gone to the bookstores for information. Some of them do not live near bookstores, none of them go the second time to the store for information. They all write to the librarian because they prefer his advice in the matter, and because they know that his annotations mean something.

"I do not know just how soon the library will oust the bookseller, but in the present condition of affairs, it will not be long. The librarian is willing to do anything the public asks, and the public will ask for some sort of better service than one can get at most of the bookstores.

"To have Mr. Dewey discharged from the Albany library would settle nothing for the bookseller, and it would give Mr. Dewey a vacation which he has been too busy to take for many years. Booksellers must learn to live (and live they will) without artificial stimuli. This net-price is administered to the

retail trade like a salt cure, an oxygen pump or some other last resort. There is a class of bookselling which must be carried on by booksellers, but they will be different men from the authors of the memorial."

The resolutions passed at the Atlantic City meeting have been formally endorsed by the state library associations of New Hampshire, Illinois and California, and the Cape Cod Library Club. The California association in its preamble states that "the American Publishers' Association, in adopting the net-price system in 1901, declared that it was not the intention of American publishers to raise the cost of books to libraries more than a few cents, but only to protect the bookseller, but that it has been found that "the net rate system works a considerable hardship on all libraries, especially the small ones, and has a tendency to increase the percentage of books bought of foreign publishers as cheaper under the new conditions."

SPECIFICATIONS FOR BINDING USED AT WORCESTER COUNTY LAW LIBRARY.

From the 4th Report of the Librarian.

Books to be sewed as sent down, unless an obvious mistake has been made. In case of doubt, book to be laid aside and library to be notified. Directions on slips with volume to be followed, unless sample back or volume is sent, or a new combination made up. All books to be sewed all along with best Irish linen thread, octavos and smaller on four strings, quartos and folios on a proportionally greater number of strings. All maps and charts to be backed with muslin, all plates to be mounted on muslin hinges and not to be refolded unless necessary. Better way is to cut off the inside and outside margins if any shortening is necessary. Trimming to be done only to match other volumes of set. No bleeding to be done. Where directed only rough trimming to be done and some cases to be trimmed only on top and other edges to be left rough. Covers and advertising matter to be bound as placed either in middle of volume or at end. Tops to be burnished or sprinkled as case may be. All books of one hundred (100) pages or over to be laced in boards on full number of strings. When so stipulated, heights of books to be followed by trimming down or stiling up, as case may be. Books to be covered with full Holliston cloth, morocco, calf, or sheep, as directed, or $\frac{3}{4}$ morocco, calf, or sheep, as directed. Millboards, endpapers, marblepapers and all coverings, to be of best quality. Sample book of leathers, cloth, and paper to be made up. Price list of bindings, as to materials and sizes, also to be made up. Mark Worcester County Law Library, at bottom, in ink, on all law reports.

PAUL LEICESTER FORD—IN MEMORIAM.

PAUL LEICESTER FORD, the well-known bibliographer and novelist, was shot and killed on the morning of Thursday, May 9, at his residence in New York city, by his brother, Malcolm Webster Ford, who then shot and instantly killed himself. The tragedy was the result of long existing dissensions between Malcolm Ford and his brothers and sisters, arising from the disinheritance of the former by his father, Gordon L. Ford, who died in 1891, and who had always opposed his son's absorption by and prominence in athletic sports. The elder Ford's will was not contested, but Malcolm Ford claimed that a verbal agreement had been made between himself and his brothers and sisters, by which they promised to share with him their father's estate, and in 1894 he brought suit to compel the carrying out of this arrangement. As no written proof of the agreement was forthcoming the decision was adverse, and since then the estrangement between Malcolm and the other members of his family had been greatly deepened. It is understood that for some time past his financial affairs had been oppressing him, and he had frequently asked and received assistance from his brother Paul, who, it is supposed, finally refused further aid. The reasons for the tragedy are known only by inference, but in a statement issued by the family it is said that Malcolm had for some time past shown evidence of an unbalanced mind, and that the fatal act was believed to be the result of that condition.

Paul Leicester Ford was born in Brooklyn, N. Y., March 23, 1865. He was one of seven children of Gordon L. Ford, formerly a lawyer but for many years publisher of the *New York Tribune*, and from childhood showed strong bookish tastes which were developed in every way. In infancy a fall from his nurse's arms permanently crippled him. His physical condition prevented him from going to school or to college and he was simply turned loose in his father's fine private library, with a measure of guidance from tutors and instructors. From the first his tastes were for literature and publishing, and at the age of 11 he was an editor and printer, when he and his brother, Worthington Chauncey Ford, "set up" Paul Ford's first work, "Webster genealogy; compiled and printed for presentation by Noah Webster, New Haven, 1836; with notes and corrections by his great-grandson, Paul Leicester Ford, 1876. 99 p. 4 pl. 4°, 250 copies." This was followed by "Websteriana: a catalogue of books by Noah Webster; collated from the library of Gordon L. Ford," 1882. 20 l. 4°, 6 copies. From this beginning the list of his literary work is long and varied. With his father and his brother Worthington, he established the Historical Printing Club, which issued books and pamphlets relating to American history and bibliography and was

maintained until after the father's death. His bibliographical contributions included "Bibliotheca Chaunciana: a list of the writings of Charles Chauncey," 1884; "Bibliotheca Hamiltonia," 1886; "List of editions of the *Federalist*," 1886; "List of the treasury reports and circular issued by A. Hamilton, 1789-95," 1886; "List of members of the Federal conventions of 1787," 1888; "Pamphlets on the constitution of the U. S. published during its discussion by the people, 1787-88," 1888; "Bibliography and reference list of the history and literature relating to the adoption of the constitution of the United States," 1888; "Some materials for a bibliography of the official publication of the Continental Congress, 1774-89," 1888; "Check list of the American magazines printed in the 18th century," 1889; "Check list of bibliographies, catalogues, reference lists, and lists of authorities of American books and subjects," 1889; "Franklin bibliography," 1889; "List of some briefs in appeal cases relating to America tried before the Land Commissioners of Appeal, 1736-58," 1889; "Bibliography and reference list of the history and literature relating to the adoption of the constitution of the United States, 1787-88," 1896. Several of these, with many other bibliographical reviews, reference lists, etc., first appeared in the *LIBRARY JOURNAL*, of which Mr. Ford was associate editor from 1890 to 1892, and to which he was for many years a frequent contributor. Other well-known historical works and *brochures* were his monographs: "Who was the mother of Franklin's son?" 1889; "The true George Washington," 1896; "The New England primer," a reprint with introduction and notes, 1897; "The many-sided Franklin," 1899; "Washington and the theatre," prepared for the Dunlap Society, 1901. Two important undertakings were his editions of the "Writings of Thomas Jefferson," in 10 volumes, and the "Writings of John Dickinson" in three volumes. He had recently completed an edition of the "Journal of Hugh Gaine," the early New York printer, which has just been published by Dodd, Mead & Co.; and he was the founder and editor of *The Bibliographer*, of which the first number appeared in January, 1902.

Mr. Ford early varied his historical and bibliographical work by the writing of short stories and plays, but his entrance into the novelist's field was not made until 1893, when he wrote "The Honorable Peter Stirling," his best novel, which although slow in winning recognition has met with constant and ever-deepening public appreciation. His other well-known works of fiction include "The story of an untold love," "The great K. & A. robbery," "Janice Meredith," and "Tattle tales of Cupid." He married in 1900 Miss Mary Grace Kidder, of Brooklyn, and after travel abroad settled in the beautiful home which, it was understood, represented the immediate results of the sales of a single novel, and in which he came to his tragic death.

THE TYPEWRITER FOR CARD CATALOGS.

Just now many libraries are adding the printed cards of the Library of Congress to their catalogs. This makes the present a most opportune time for adopting the typewriter for cataloging purposes. Moreover, with the typewriter, the subject headings can be written on these cards so neatly and satisfactorily that, to the casual observer, the difference in type will hardly be apparent.

For small libraries that cannot afford to print their catalogs the typewritten cards are unquestionably superior in legibility, uniformity and general appearance to those written by hand. The external appearance and clearness of a catalog have not a little to do with its attractiveness, and hence with the disposition to use it on the part of the readers. Every means which helps to make a catalog clear and simple is worthy the attention of a library seeking to be of the largest possible use to a community. Then, too, the economy in time is another point to be considered in libraries where a few assistants are doing the work of many, a practised operator being able to typewrite about twice as many cards as he can write by hand in the same time.

The fear of fading has heretofore caused many to hesitate in deciding to use the machine for cataloging. Upon this point Mr. W. F. Yust, of the New York State Library, reports some very interesting experiments made by Mr. A. A. Clarke at the Y. M. C. A. Library in Albany, N. Y., in 1900. In that library typewritten cards were subjected to sunlight, rain, heat, and some were even boiled, and in all cases the ink came out untouched. Indeed, it proved to be almost indelible, since it required very strong chemicals to remove it at all.

The tabulation shown on the next page was made at the University of Texas Library from replies to inquiries regarding the use of the typewriter in libraries. These questions were sent to 66 libraries selected at random, 18 of which had had no experience with the typewriter in cataloging, and four did not reply.

After experimenting with several machines, we have decided that the Smith-Premier is superior for card work for various reasons. From the construction of the cardholder, it is impossible for the card to shift its position when the platen is revolved. This absolute uniformity of spacing makes it possible to reinsert a card and strike the writing line without extra care or expert skill in manipulation. The typewriter which least hampers the operator with its mechanism is best adapted to work of this nature. The card is uninjured by being rolled on the platen, and immediately resumes its original form when released, the size of the cylinder preventing the breaking of the fiber.

Various critical or explanatory remarks were made by some of the libraries reporting. The general verdict of all was that in legibility and attractiveness a typewritten catalog was superior to hand work, and that the advantage of greater rapidity in preparation also lay with the former.

The Carnegie Library, of Pittsburgh, reported: "Our catalog is printed. However, we typewrite our shelf-list cards, and also the main author cards, when a book is cataloged. This card, after having been used as copy for the printer, is filed in the catalog room catalog."

The Cleveland Public Library reports: "We have tried in our catalog three machines—the Remington, Smith-Premier, and Hammond. Of these, the Smith-Premier has given us the best satisfaction for all-round work. It is equally good for correspondence, manifolding, and cards. The Hammond keeps the card flat, but the card platen on the Smith holds the card securely for writing and it resumes its shape immediately when it is taken from the machine, apparently uninjured. We have found the typewriter a means of economy in our catalog room, and it gives the entries on the cards in an absolutely uniform manner." The librarian of the Fletcher Memorial Library, Ludlow, Vt., says: "Though this catalog was started only a year and a half ago, already four persons have worked on it; but because of the typewriter it is perfectly uniform." At the Library of the Grand Lodge, F. and A. M., the Hammond is preferred, "because I can have shuttles for all the languages and have the various abbreviations also, which you cannot have on the other machines." The Williams machine is used at the Grosvenor Library, and "if well cared for, the writing is superior to ribbon work."

Indiana University Library reports: "We would not think of returning to written cards. The typewritten catalog is clearer and more simple for users; quicker and less expensive to make. The money saved pays for the machine in a few months. As to red ribbon, we have found it far better to use black ink, but three colors of cards." Osterhout Free Library says: "We think a typewritten catalog is far better than any other, on account of its clearness and uniformity—except the cards now published by the Library of Congress." The Library of the School of Education of the University of Chicago reports: "We could not accomplish one-third as much as we do if we wrote all these cards by hand. We write in the red headings." A preference for written cards is expressed at the University of South Dakota, where it is thought that "written cards are much plainer; then, too, the typewritten ones fade, and the tracing of added entries is not so easy as with the pen."

*Reported by Mr. W. F. Yust.

THE YORKVILLE BRANCH BUILDING OF THE NEW YORK PUBLIC LIBRARY.

THIS building, the first to be erected in Greater New York with Mr. Carnegie's great gift of \$5,200,000, will stand on the south side of East 79th street, between Second and Third avenues. It will be the home of the Yorkville Branch, which since June 10, 1897, has occupied the diagonally opposite corner—the northwest corner of Second avenue and 79th street.

The branch is circulating books, sometimes at the rate of 1000 a day, in most inadequate quarters—a single floor having about 2000 square feet of area. The new building will have on its five floors, including basement and janitor's floor, 14,680 square feet—more than seven times what the branch is getting along with at present. It is not anticipated that this will be a square foot more than is needed.

It must not be supposed that the new building is regarded by those who have planned it as ideal for its purposes. A library in a crowded city street must make the best of adverse conditions. To make use of the type that is coming to be preferred for the small library—the type somewhat picturesquely named "the butterfly" by Mr. Eastman, in allusion to its central body flanked by its equal wings—a considerable plot of ground is necessary, not less than 100 feet front. This the price of land makes prohibitive over a large part of Manhattan Island. The typical branch building in the crowded parts of the city will have to stand on two city lots—say from 40 to 50 feet front—and its departments, instead of being spread out as much as possible on one floor, must be piled one above the other. In other words, we must not look to the butterfly for our model, but to the caterpillar—the caterpillar standing erect on its tail.

Experience in branch work in New York City indicates that the necessary departments in a New York branch are the general open-shelf room for adults, with circulating-desk and some reading-tables; the children's department; and the newspaper and periodical reading room. The best place for each of these is obviously the ground floor. Equally obvious, however, is the fact that in a building such as we have indicated only one of them can be so located, and that the other two must struggle even for second place. There are arguments in favor of every possible arrangement; it is not even likely that the same will be adopted in all of the future Carnegie buildings. In the one under consideration the adults have been placed on the ground floor, the children on the second floor, and the readers on the third, under the large skylight. In the basement are the heating apparatus (direct-indirect hot-water system), the receiving and packing room and space for storage. The janitor's apartment is placed in a half-story, above the third, situated in the

rear and opening out on the roof. It is invisible from the street. The small collection of reference books is placed in the rear of the ground floor, separated from the general adult department only by a railing. The children's department will have a study room, but unless there is absolute necessity this will not be wholly partitioned off. On the third floor the staff room has been placed and there will be space here not only for the general reading-room but for such other departments as future experience may suggest. The light here is chiefly from above (the small front windows serving only for ventilation) and the walls will be suitable for exhibitions of pictures, etc. The whole building will be lighted by electricity and there will be two small elevators—one for books, which will be operated by electricity, and the other a hand dumb-waiter for janitor's supplies.

The architectural features of the building are not due to a single hand. The general or typical arrangement of the front was fixed upon, after several conferences, by a commission of New York architectural firms appointed by the library trustees. These firms, Messrs. Carrere & Hastings; McKim, Mead & White; and Babb, Cook & Willard, decided on the general type of building, and to this type the plans of the Yorkville branch, which were prepared by Mr. James Brown Lord, conform. To this type also, future plans must conform, except where the conditions are rural rather than urban. This does not mean that the buildings will all look alike, for plenty of room for individual taste has been left. It means, in the words of one of the architects, that the Carnegie buildings "will all tell the same story, but will tell it in different words." The three arches on the ground floor, for instance, which are one feature of the type, may be treated in a great variety of ways. In the case of the Yorkville building the entrance has been placed in one of the side arches, opposite the stairway—an arrangement which, although a departure from symmetry, is not only more convenient but, according to some authorities, is more sound from an architectural standpoint, as it indicates from the exterior the structural arrangement of the inside.

Summing up such of the distinctive features of the building as are dependent on its position in a closely built-up block in a crowded portion of a city, it may be described as a branch library in which the different departments are located one above the other, on different floors, each floor being kept, as far as possible, free from partitions, and in which stress is laid on the circulation of books on the open-shelf system, the principal use of the building itself for reading purposes being in connection with children's work and with the general use of current periodicals and newspapers.

A. E. BOSTWICK,
*Chief Circulation Department,
New York Public Library.*

THE ONTARIO LIBRARY ASSOCIATION, TORONTO, MARCH 31,
APRIL 1, 1902.

THE second annual meeting of the Ontario Library Association was held in Toronto, on Monday and Tuesday, March 31 and April 1, 1902. Sessions were held in Castle Memorial Hall, McMaster University, the president, James Bain, in the chair. The attendance was excellently representative of the library interests of the province, and the meeting proved a most satisfactory one. Steps were taken toward securing a provincial library commission, modelled upon the state library commissions of the United States, and the extension of the system of travelling libraries of Ontario was considered. Library buildings also received special attention in a report from a committee of the association and in an illustrated lecture by W. R. Eastman, state inspector of libraries for New York.

The first session was opened at 2.30 on the afternoon of March 31. After the usual presentation of previous minutes, appointment of committees and announcement of the A. L. A. conference to be held in Boston and Magnolia next June, reports of the various standing and special committees were submitted.

A. B. Macallum, of the Canadian Institute, Toronto, reported upon "Travelling libraries." Material progress in the development of a system of travelling libraries had been made since the last meeting, and a government grant of \$1200 for the work had been secured. Mr. Macallum thought, however, that the selection of books was not satisfactory. Standard authors were not well represented, and the proportion of light fiction was too large. A fair proportion of good fiction was, of course, necessary, but the conditions of the different localities to which the books were to be sent should be studied. What would be suitable for lumbering and mining camps might not be suitable for the settled though small agricultural communities in other districts, where a better class of reading was required. It was thought that a library commission should be appointed to deal with the whole question. E. A. Hardy, of Lindsay, a member of the committee, dissented from the views expressed in the report regarding the proportion of fiction. He thought that at least 50 per cent. of fiction was desirable. Alfred Fitzpatrick, secretary and agent of the movement to establish reading camps in the lumbering regions, agreed that fiction and light reading were most wanted in the lumber camps.

A report upon "Lists of books" was presented by James Bain; and H. H. Langton, of the University of Toronto, submitted the report of the committee on library buildings. This dealt with general principles in the planning of library buildings. Three points were

particularly insisted on as necessary in every well-arranged building: (1) complete separation of the reading room and reference department from the main entrance and also from the lending library, (2) ample space for books, providing liberally for expansion, and (3) a special room for the librarian, to be placed midway between circulating department and reading room, so as to afford easy access to either. A short discussion followed, especially upon the question of free access and its advisability. W. R. Eastman stated that access to the shelves is granted in many of the libraries of the United States, large and small, and that the expense and loss of books entailed thereby were greatly overestimated by those unfamiliar with the system. The final report submitted was upon "Classification," given verbally by E. A. Hardy, and a committee was appointed to draft a resolution protesting against the present system as authorized by the government.

"The value of public libraries to the community" was the subject of a layman's paper, by J. Davis Barnett, of Stratford. Mr. Barnett touched upon the moral value of the book selection as made by a public library board, in its influence upon the community and the publishing trade at large; the national welding effect of libraries, justifying government help; their stimulation of private gifts for the common good, without pauperizing effect; and the usefulness of books as working tools of modern civilization and in helping industrial design. Even novels were improving in their effect upon manners, living, and ideals; but the highest value of the library would not be reached until public library shelves are free to all.

"Some difficulties I have met with in library work" were outlined in a short paper by Miss V. Scott, of Owen Sound. These proved to be four in number: the difficulty of securing a simple and effective charging system; lack of adequate room and proper accommodations for the library's work; "the difficulty of making directors understand that 'a stitch in time saves nine'"; and the difficulty of inducing library members to read anything but fiction.

W. George Eakins, of the Law Society of Upper Canada, closed the session with a paper on "Public documents of the Dominion of Canada and of the Province of Ontario," which is printed elsewhere. (*See p. 248.*)

An evening session was held, devoted to the president's address and Mr. Eastman's illustrated lecture on "Library buildings." Mr. Bain, in his address, dwelt especially upon the increased growth of libraries in Ontario and the increased duties and responsibilities thus entailed upon the librarians of the province. He noted the gifts made to Ontario by Mr. Carnegie. Twelve cities or towns (Collingwood, Ottawa, Pembroke, Stratford, Windsor, Lindsay, Guelph, St. Catharines, Cornwall, Sarnia, Smith's Falls, Chatham, St.

Thomas) had already accepted the conditions and proposed building immediately. The sums granted ranged from \$100,000 (to Ottawa) to \$7000, reaching a total of \$264,500. Mr. Eastman's lecture was well attended, and was illustrated by over 60 stereopticon views.

On Tuesday morning the delegates visited the libraries of Toronto and Victoria universities. The general session was opened at 10.30, with a paper by Miss Carnochan, of Niagara, on "Vicissitudes of a library during fifty years." This was a sketch of the Public Library of Niagara from its formation in 1848, gleaned from the documents in existence, particularly showing how its history and that of the country touched in many places and referring to the different acts relating to libraries and the part taken by the Niagara library respecting these. At the jubilee held in 1898 the interesting fact was mentioned that the president (Mr. Kirby) had held his position for 25 years and had been a member for 49 years, and the treasurer (Mr. Pafford) had occupied that post for 33 years. Reference was also made to the distinguished public men whose names are found in connection with this library. At its close the paper criticised two features of the present regulations, and asked that action should be taken by the libraries unitedly to ask for improvements in this direction. First, that the government grant should be increased so that the full sum earned by each library should be given without the pro rata reduction of 20 per cent., as last year; second, that the present orders respecting classification should be rescinded, "as the result is misleading and dishonest, and leads to confusion in the arrangement of books."

Miss C. A. Rowe, of the Brockville Public Library, outlined "Some useful methods in a small public library," touching particularly upon the card catalog, the usefulness of the indicator, charging systems, selection and buying of books; encouraging the reading of the better class of literature by attractive bulletins, good book reviews, display of new books, lists of best books, etc. Open access to the shelves was advocated if proper supervision could be given to the shelves and readers.

The final session opened at 2 p.m., the first paper being upon "The training of librarians in this province," by E. A. Hardy. After pointing out the desirability of trained librarians, Mr. Hardy inquired as to the financial possibilities of the libraries of Ontario to pay for such service. Twenty libraries are now paying \$200 per year and over for salaries, but at the close of the year at least 100 libraries would be in a position to pay \$100 a year and upwards. A librarian's work falls into two parts, mechanical service and trained service; the mechanical work has to do with the care of the rooms and the books, the issuing of the books, collection of fines, care of the daily papers and magazines, etc. The trained

service includes selection of books and periodicals, purchasing of same, acquisition of donations, accessioning, classification and cataloging of new books, influence on circulation of books, as to character and volume, co-operation with the school, with the study-club, and the studious patron, and with the local historical society. To secure such trained librarians various methods are possible: county institutes, attendance at Toronto, Hamilton, or London public libraries, attendance at a library school or summer library school, a correspondence course, or the creation of a summer library school in Toronto. Mr. Hardy advocated the government's taking hold of the matter, instituting a library course, drafting a syllabus, providing instructors and granting certificates, and suggested that libraries employing such certificated librarians should be financially recognized by the government. Failing government action, the association was urged to draft out a course of instruction and give its own certificate to those who did the work.

"Canadian literature" was treated in two papers. The first, by Lawrence J. Burpee, dealt with "Canadian fiction." It was an interesting and suggestive sketch of the early history of fiction in Canada, with which are associated the names of Haliburton ("Sam Slick"), James DeMille, Major John Richardson, William Kirby, Mrs. Moodie, and her sister, Mrs. Traill, and several others; and among French-Canadians, De Gaspe, Chauveau, Marmette, and Saint Maurice. The work of Canadian novelists of the present day—Gilbert Parker, C. D. G. Roberts, Robert Barr, Lily Dougall, and others—was also noted, and an earnest plea was made for a more hearty and rational encouragement of native talent than exists at the present time. An interesting chronological bibliography was appended to Mr. Burpee's paper. The second branch of the subject was "Canadian periodicals," treated by John A. Cooper, editor of the *Canadian Magazine*, who advocated more protection for the Canadian printer and publisher, and thought that people were too complacent with regard to the inroads of American literature. The final paper, on "How to secure the passing of a free public library by-law," was by Dr. S. P. May, Superintendent of Public Libraries for Ontario. After sketching the later history of the library movement in Ontario, Dr. May pointed out the clauses in the statutes directly bearing on the procedure to be adopted in organizing a free library. His practice was to call a joint meeting of the library boards (*i.e.*, of libraries not free) and the town council and discuss the matter of free library, pointing out the advantages of a free library and the legal procedure. There are 443 public libraries, *i.e.*, libraries working under the statute and receiving government aid in the province; 129 of these are free and 265 are supported wholly

or in part by the municipality. The library association can be of great value in holding meetings in local centers to awaken interest and guide public opinion in obtaining a free library.

At the close of the papers and discussions several resolutions were passed. It was resolved that the association request the Lieutenant-Governor-in-Council to appoint a commission to examine into and report on the whole question of the library system of the province.

It was also resolved that the association express its pleasure at the progress made in the establishment of reading camps and also its deep gratification at the liberality shown by the employers in the lumbering and mining camps.

Another resolution was passed that the association, while regretting, yet recognizing the necessity of the action of the Provincial Board of Health, in restricting the operation of travelling libraries, would urge that all latitude possible be given them.

The committee on classification recommended that the Education Department be requested to revise the present classification of books in public libraries, as great dissatisfaction prevailed throughout the province among librarians and those interested in library management with the existing system. Attention was also called to the present misleading practice of classifying works of fiction pure and simple under the headings of history, literature, religion and biography.

The following officers were elected: President, H. H. Langton, University of Toronto Library; 1st vice-president, R. J. Blackwell, Public Library, London; 2d vice-president, W. Tytler, Guelph Public Library; secretary, E. A. Hardy, Public Library, Lindsay; treasurer, A. B. Macallum, Canadian Institute, Toronto; councillors, James Bain, W. J. Robertson, H. A. Lavell, T. Scullard, Henry Robertson.

American Library Association.

President: Dr. J. S. Billings, New York Public Library.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

24th annual meeting: Boston and Magnolia, Mass., June 14-20, 1902.

CONFERENCE NOTES.

State Library Associations Round Table: Miss Beatrice Winsor, assistant librarian of the Newark (N. J.) Free Public Library, has accepted the chairmanship of this round table meeting.

REPRESENTATIVE AT N. E. A. MEETING.

Anderson H. Hopkins, of the John Crerar Library, has been appointed official representative of the American Library Association

at the meeting of the Library Section of the National Educational Association, to be held at Minneapolis, in July.

State Library Commissions.

DELAWARE STATE LIBRARY COMMISSION: Cornelius Freear, secretary; Miss Florence Bayard Kane, organizer, State House, Dover.

The commission has just issued a compact and useful "Handbook," prepared by Miss Kane, which is practically an elementary library manual for the state. It contains the text of the library commission law, a summary of the state library act, and a variety of short practical articles and extracts dealing with the work and methods of small public libraries. Suggestions are given for the establishment of public libraries, and among the practical subjects treated are the librarian, reading room and periodicals, library management, regulations for readers, rooms and fittings, book selection, etc. The travelling library system maintained by the state is described, and there are full directions and suggestions for its use. While especially useful to those interested in Delaware libraries, the little handbook should be of service outside of state limits. There are more typographical errors than should appear—probably owing to adverse circumstances of compilation—but the arrangement is good, and the pamphlet is neatly printed. (88 p. D.)

NEW JERSEY PUBLIC LIBRARY COMMISSION: H. C. Buchanan, secretary, state librarian, Trenton.

A meeting of the commission was held on April 24, when W. C. Kimball, of Passaic, was re-elected chairman, and H. C. Buchanan, secretary. An interview with the governor followed, when it was urged that the system of travelling libraries, now conducted as part of the state library, be placed under the management of the commission.

State Library Associations.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: T. H. Clark, custodian of the Law Library.

Secretary: R. K. Shaw, Library of Congress.

Treasurer: F. E. Woodward, 11th and F Streets, N. W.

The April meeting of the District of Columbia Library Association was held on the 9th inst. at the Columbia University, the president, Mr. Thomas H. Clark, being in the chair, and 32 members attending.

The first topic for discussion was "Current events and notable books of the month." Mr. Martel, the first speaker, referred to the "Selected essays and papers of Richard Cop-

ley Christie," telling of Mr. Christie's valuable and exhaustive studies in relation to a group of Renaissance writers, including the Scaligers, Vanini and others, and showing the interest which this volume has for the bibliographer and cataloger. In mentioning also the list of chemical societies of the nineteenth century, compiled by Dr. Bolton, he referred especially to "Société d'Arcueil," founded by Berthollet in 1807, and numbering among its few members the most eminent chemists of the day.

Mr. Thompson spoke of the work of the Royal Society in compiling a subject index for the great catalog of scientific papers, 1800-1883, filling the gap existing from 1883-1901; and publishing both author and subject indexes from 1901 annually. Mr. Woodward made mention of the almost unprecedented edition of 100,000 copies of Miss Johnston's "Audrey" and of Conan Doyle's "The hound of the Baskervilles."

A short discussion of Mr. Carnegie's recent remarks regarding the restriction on admitting new fiction to public libraries was opened by Miss Gibson, who outlined the general subject, inclining to the belief that restriction so radical as the three-year plan suggested by Mr. Carnegie could not be maintained in a public library. Mr. Hutcheson suggested that the class of fiction should not be discriminated against, but since standard fiction has always been of such high and enduring value, both as education and recreation, quite as much care should be exercised in excluding inferior works on history, travel, or theology.

As the principal speaker of the evening, Mr. Charles K. Wead, of the Patent Office, entertained the association with "Notes on musical libraries and the literature of music." The members were invited to look at the subject neither from the standpoint of a musician nor of a bibliographer, but as cultivated men and women to survey the printed records of man's activity in one wide field.

Approaching his subject from the point of view of his own studies, Mr. Wead told how he had been attracted to the splendid collection of instruments in the National Museum at Washington and what facilities he had enjoyed for studying them. Of the eight classes of books on music the speaker mentioned first museum catalogs, that of the South Kensington collection of instruments standing at the head. Many others, both in this country and abroad, were referred to and compared. The division of the subject relating to the musical instruments and musical theories of various countries has an abundant literature, much of which must be gleaned from books of travel and musical periodicals.

The association voted its thanks to Mr. Wead for his instructive and entertaining paper, and adjourned at half-past 9 o'clock.

R. K. SHAW, *Secretary*.

ILLINOIS STATE LIBRARY ASSOCIATION.

President: Anderson H. Hopkins, John Crerar Library, Chicago.

Secretary: Miss Eleanor Roper, John Crerar Library, Chicago.

Treasurer: Miss Florence Beck, Normal School Library, Charleston.

The seventh annual meeting of the Illinois State Library Association was held at Quincy, April 30 and May 1, 1902. The cordiality and hospitality extended to the association by the people of Quincy have been unsurpassed in the history of the association and were most deeply appreciated by all.

The addresses of welcome were delivered by Dr. Dana, representing Mr. C. H. Bull, president of the library board, and Mayor Steinbach, who extended greetings, in behalf of the citizens, to the association.

President Anderson H. Hopkins responded, and after expressing the appreciation of the association for the welcome extended, delivered his annual address. This was devoted to a presentation of a plan for the incorporation of the association, under a revised constitution, with the purpose of making it a more effective means for the library development of the state. He spoke of the great public school organization of the country, with its central bureau at the seat of federal government—exerting a powerful influence, even though without executive authority—and its system of subsidiary central bureaus for state, county, and township, from which run threads to each individual school reaching directly to the community. In contrast with this system was the public library—"an inorganic educational thing. Few indeed are they who have conceived what its power might be if it were erected into an organic institution which would meet its own needs with even such approximation as are those of the public school met by its organization. It is not even a headless body, not even a torso; it is inorganic. No puzzled librarian can turn to his official superior for guidance, because that official has no existence, unless the American Library Association may be supposed to furnish this element for the few libraries (not librarians) which have taken up the opportunity offered them, as institutions, to become members." A beginning toward system has been made in the formation of state library commissions, to be centers of influence and helpfulness within state limits. "A few commissions have been conspicuously successful; the others have been more inconspicuously successful. In its present state the success of the library commission depends upon the consecration to its interests of some individual rather than upon its own inherent qualities." Following the argument thus outlined, Mr. Hopkins presented concisely the plan for the reorganization of the state association. He said: "Almost from its birth the Illinois State Library Association has striven

to effect the formation of a library commission. It has sought legislation through the ordinary political channels, and each time the bill has failed of enactment. Perhaps there is another way in which the same end may be attained and possibly with both less difficulty and greater effectiveness. If this association will so change its constitution as to give its working policies a sufficient continuity properly safeguarded, and will erect itself into a corporate body under the laws of the state so that it may become a property-holder, it may then seek the financial aid necessary with a reasonable hope of success. The association will have transformed itself into a commission no whit less effective than that proposed in the bills which have failed of enactment." Four steps were necessary: "First, proceed to incorporate; second, change the constitution to meet the changed needs of the association; third, secure funds; fourth, begin the real work to which the preceding three steps have been preliminary." As to the funds necessary, "it is certain that no one will give funds to an unincorporate body having no continuity of policy, and such a body has little chance of earning or in any way accumulating them; whereas someone may be willing to give to a well organized and businesslike body funds for the prosecution of work manifestly for the good of all the people."

At the close of Mr. Hopkins' address there was a short recess for registration. This was followed by a business session. There were many new and important changes in the organization of the association to be presented and that they might be settled at once, the larger part of the opening session was devoted to them.

The annual report of the secretary and the treasurer were read and accepted.

A report from Mrs. Trimble, chairman of the library extension committee of the state federation of women's clubs was read on the travelling libraries sent out by the women's clubs of Illinois. She said the demand for the libraries was increasing so rapidly that the necessary risk connected with them was becoming too great, that a central office and systematic work under the control of some one person who would devote all his time to the work was needed. That on this account if for no other reason they stood ready to support any measure which might be proposed for the formation or creation of a state library commission, and she desired suggestions as to the best methods of influencing legislation. This was referred to the executive committee for action.

The committee on the preservation of records and the committee on statistics both reported progress.

When the committee on legislation was called upon to report Mr. Hopkins stated that no such committee had been appointed, as the

proposal set forth in his opening address, if carried out, would make such a committee unnecessary, but that in appointing a committee on by-laws he had requested it to act as a committee on legislation as far as necessary. He felt that the association would be much stronger as an incorporated body and would be more apt to receive recognition if its voice had some authority in the state.

It was asked, if the association pledged itself to incorporation, whether it would try for a commission. Mr. Hopkins replied that this was for the association to say, but that another legislature did not convene for over a year. This plan could be tried, and if it failed, or was found impracticable, a bill could then be prepared and presented at Springfield.

It was explained that in order to incorporate the laws of the state required that three directors should be elected annually in the manner specified in the articles of incorporation. For this the new constitution had provided. The proposed revised constitution was then read. It was modelled upon that of the A. L. A. with the changes necessary for the different conditions of the two associations. There was to be an executive board which must consist of five members: a president, a vice-president, a secretary, and a treasurer, and the president of the preceding term. In addition there were to be elected by the association six councillors, two to hold office for one year, two for two years, and two for three years, and at their first meeting ballots were to be cast for length of office. Each year thereafter two councillors were to be elected for a term of three years by the association. These six councillors and the executive board were to form the council. After much discussion, revision and amendment it was decided that the secretary be instructed to take the necessary legal steps for incorporating the association and that the constitution be adopted as amended.

In the evening the women's literary clubs of Quincy gave a most delightful reception in the parlors of the Newcomb Hotel to the visiting librarians.

Thursday morning's session was opened with a paper on "Realizing the ideal library," by Henry F. Woods, of East St. Louis.

Miss M. E. Ahern followed with a paper on "The librarian in relation to the library, hours, salaries; vacations," from the standpoint of the librarian. Under the subject of hours she advocated that time be allowed for social duties, recreation and self-culture as well as for the proper care of one's personal self and belongings, saying that a rested and restful librarian was worth more to the library than the time given which allowed her to become such. One-half day each week was not too much to allow in order that the librarian might keep up with the world of men as well as with the world of letters. She

urged that the librarian should not be expected to take her own time to keep up with the current literature, that her time should be her own and should allow her to develop other sides of her nature besides the literary one, but on the other hand the previous education and training should be such that she would not profit at the expense of the library.

Six and one-half to seven hours a day were suggested as the proper hours for service, and while hours were necessary for the staff the librarian should not feel bound down, but should feel at liberty to go and come as the needs required.

Salaries depended upon the preparation and training of the librarian and upon the duties imposed. If the giving out and taking in of books were the only essentials required the recompense could very justly be small, but on the other hand, one who had had college and library school training should not be expected to compete with one having had no such preparation. The librarian's salary should rank with that of the teachers of the public schools, the salary of the librarian equalling that of the principal and the assistants' corresponding with those of the grade teachers.

Vacations, Miss Ahern thought, should range from a minimum of two weeks in small libraries up to the vacation of the school teacher. The greater the strain the longer the vacation. Leave of absence to attend library conventions should not count against the librarian. In extracts which Miss Ahern read from letters received from different librarians on this subject the feeling seemed to prevail that there was room for improvement, that vacations were too short, hours too long and salaries not commensurate with work required.

Miss Anna E. Felt, a trustee of the Helena Public Library, then presented the subject from the standpoint of the trustee. She said in part: "In the selection of librarians and assistants, the trustees will soon learn that cheap labor is not profitable and will pay adequate salaries to trained and trustworthy employees. The better the material selected, the more satisfactory will be the administration of the institution.

"In small libraries it is desirable and necessary that each member of the staff should learn all departments of library work, cataloging, supplying books and information, preparing books for the shelves, etc. This will enable each assistant to take the place of another in case of absence and will also help to qualify the more expert for promotion.

"The average daily service appears to be about eight hours. This average is obtained by including a few librarians who report only five hours' service and quite a number whose time extends to eight and ten hours per day. No account is taken of library work done outside of office hours. If this be considered it would be found that nearly every librarian having the interests of his institution at

heart, puts nearly all his waking hours into the work. Generally speaking, the smaller the library the longer the hours of service.

"Librarians should not be engaged for a specified time, for this interferes seriously with the continuity of the work planned.

"One of the important duties of the librarian should be to attend the annual meetings of library associations and also to visit other libraries. Much enthusiasm is thereby received which oftentimes turns a library crisis from defeat into victory. This time should not be taken from vacation time nor should the expenses be borne by the library workers but by the trustees, from the city library funds, for in no way can money bring larger returns.

"A fair average for vacation is four weeks which can be taken at different times of the year if desirable. The only satisfactory vacation is entire absence from the sight or thought of books, library work or library subjects."

In opening the discussion Miss Mary E. Hawley said that it had been her fortune to be in a reference library and that the problems there were somewhat different. She thought length of hours were relative to some other conditions. In a small town one could break in the day's work by going home for lunch and perhaps have an opportunity for a rest, while in a larger city it was necessary to leave home a little after eight in the morning and not return until after six in the evening in which case seven and one-half hours of work each day seemed longer than in the smaller library. She advocated allowance of time for study and self-culture and thought librarians and assistants might be able to specialize more than was at present possible.

Miss Sharp disapproved of allowing vacations to accumulate or allowing people to work overtime and add the extra days to their summer outing. Mr. Wright asked why it was that more consideration was shown to men librarians than to women librarians in these respects, which Miss Milner attributed to the fact that "men would fight for a point and women would rather give in than make a fuss."

Mr. Waters followed with a paper on the "New method of pricing books," in which he reviewed the status of the net price system.

The morning session was closed by Mr. Roden who read a paper on "The public library, whence and whither." Among other things he suggested that sand-piles, pails and shovels were of more importance to children than children's reading-rooms; that in many cases the children's room had degenerated into a kindergarten, or a children's club. These remarks brought out much criticism, Miss Hassler, especially, making a strong plea for the children's room.

Miss Sharp, as official representative of the A. L. A., urged a large attendance at the Magnolia conference, giving the latest infor-

mation in regard to the meetings and the post-conference trips.

Miss Stearns, of the Wisconsin commission, then extended a cordial invitation to the association to attend the library meeting at Madison, Aug. 28-30, the subject of the meeting being "The books."

The afternoon session was devoted to a round table on "The relation between the schools and the libraries," conducted by Miss Ange. V. Milner. All the schools of Quincy were closed that the teachers might avail themselves of the opportunity for hearing what the librarians had to say and in return tell the librarians how best they could help the school teacher. The opinion was universal that co-operation there must be. The question was how best to secure it. The librarians complained because the teachers did not let them know when certain books would be in demand and that when the children came with a rush for certain books they were all out. Timely warning would have prevented this. A teacher bewailed the fact that the books for children were so many and various and advocated many copies of a few good books instead of so many different ones. She also thought a children's room kept a child from reading many of the older books with which he ought to become familiar.

Miss Florence Beck, of Charleston, spoke on "School libraries in rural communities."

The association then adjourned to enjoy a drive extended to the delegates by the people of Quincy.

The evening session was held in the Congregational Church and was opened with an organ recital by Mr. Chadwick, following which Mr. E. G. Swem spoke on the "Duty of the community to the library." Miss Tyler, of the Iowa Commission, then spoke of the work of the commission in that state and Mr. Purd B. Wright, of St. Joseph, Mo., in a paper on "Some notes on library progress" gave a historical sketch of the public library from the earliest times to the present day.

In a few closing words Mr. Hopkins spoke of the end of the meeting being practically the beginning, that the association was passing from the old to the new with a totally changed organization. He also spoke of the success with which the program had been carried out, it not being necessary to change the order or the names except in one instance and he expressed his appreciation and that of the outgoing executive committee for the interest and loyalty of all. The meeting then adjourned sine die.

The following officers were elected for the coming year: President, Anderson H. Hopkins; vice-president, Miss Anna E. Felt, Galena; secretary, Miss Eleanor Roper; treasurer, Miss Florence Beck, Charleston. Counsellors: E. S. Willcox, C. B. Roden, Miss Elizabeth B. Wales, Miss Katharine L. Sharp, Miss Mary Fileen Ahern, Mrs. J. H. Resor.

ELEANOR ROPER, *Secretary*.

MASSACHUSETTS LIBRARY CLUB.

President: H. C. Wellman, City Library, Springfield.

Secretary: G. E. Nutting, Public Library, Fitchburg.

Treasurer: Miss Theodosia Macurdy, Public Library, Boston.

The spring meeting of the Massachusetts Library Club was held in the lecture hall of the Boston Public Library, on Thursday, April 24, the president, Mr. Hiller C. Wellman, presiding. Owing to the absence of Mr. Faxon, Mr. Jones reported upon the A. L. A. conference, followed by reports from the secretary of the local committee, Mr. Bolton.

The most important business item of the session was the report of Mr. W. L. R. Gifford, chairman of the club committee, relating to prices of books. He told of the letter which Mr. Charles Scribner, president of the American Publishers' Association, had written relative to the cost of books under the net price system (*see* L. J., Feb., p. 77), and of the reply which the committee had made (*see* L. J., April, p. 203). After a brief statement of the bearings of the situation he offered a resolution which was adopted:

Resolved, That the Massachusetts Library Club indorses the action of the library associations of New Jersey and Pennsylvania in requesting the American Publishers' Association to permit dealers and publishers to give to libraries a discount up to 25 per cent. on net books.

Mr. Gifford's report was followed by a most interesting paper on "Rare books," by Mr. Charles E. Goodspeed.

Edmund H. Garrett began his paper on the "Illustration of books" by quoting the old saw "You can lead a horse to water," etc., and rewording it "I can bring you to the library but I cannot make you think." A book called the "Ballads of New England," Ticknor, 1866, illustrated by Harry Fenn, marked, he said, an era in the illustration of books by showing the capabilities of wood engraving. He explained the process of wood engraving and showed how the artist was at the mercy of the engraver. He showed how photography made it possible for the artist to draw his picture in any medium he liked and of any size, since it could be reduced by that to the size required by the block of wood. The engraver, too, by this method always could have the original before him. He described the two schools of illustration—the pictorial and the decorative—and explained his meaning by reference to the Abbey and Puvis de Chavanne pictures in the Public Library.

The afternoon session was wholly given to President Eliot's address upon "Living books and dead," a summary of which is given elsewhere (*see* p. 256).

President Eliot was followed by a general discussion by Mr. Ballard of the Pittsfield Athenæum, Mr. Green, of the Worcester Public Library, Prof. W. Z. Ripley, of Harvard, Brooks Adams, of Boston, W. C. Lane, and Mr. Cutter, of Northampton.

Library Clubs.

CHICAGO LIBRARY CLUB.

President: A. G. S. Josephson, John Crerar Library.

Secretary: Chesley R. Perry, Public Library.

Treasurer: C. A. Torrey, University of Chicago.

A regular meeting was held at the Public Library, March 13, President Josephson in the chair.

The executive committee reported that 23 copies of the "List of periodicals" had been sold by the club; that a report had been received from the committee on future work suggesting a union list of bibliographies, but this was not thought feasible, and selected reading lists were suggested instead; that an annual appropriation of \$5 for the use of the jail library committee was recommended; and that it was the sense of the committee that the club should arrange for a public meeting on library extension.

For the committee on future work, Mr. Roden said the committee recommended the preparation of the special reading lists, and he moved that the matter be taken from the hands of this committee and referred to the executive committee. This was carried.

Letters from the Chicago School Extension Committee were read by the secretary, and the sum of \$5 was voted for membership dues in that organization.

The report of the committee on relations between libraries and schools was read by Mr. Hopkins. Preceding the report was a summary of the symposium of letters printed in the March number of *Public Libraries*, showing what is being done in other cities. As to Chicago "the committee finds that the Public Library is willing, able and prepared to furnish such books as will be likely to be required for the various school libraries, but that the library is unable and can hardly be expected to be able to transport them to and from the schools. We find that the conditions in the public schools are ripe for the introduction of travelling libraries. In many of these schools there are teachers and advanced pupils who are capable and willing to take charge of these travelling libraries and be responsible for their care and proper distribution until returned to the cases furnished by the public library. The teachers are pressed by readers and by the methods of their instruction to call for such libraries. The committee recommends that the Chicago Library Club formally request the Board of Education to make ample provision for prompt transportation of the books for such travelling libraries to and from such schools as may make requisition for the same. The committee is not prepared to report on the proposed plan of permanent branch libraries to be placed in the public schools." This report was left to the executive committee for action.

For the home libraries committee, Miss Dickey reported that she has 144 books and four cases, the latter in poor condition. Three of these libraries were kept going all last year. The manual training department of the Chicago Normal School has promised to make for this work 10 new and attractive cases for the cost of the material, about \$6. It is believed that a number of the Normal School students can be interested to become visitors. The cost of transportation will have to be met by the club. The plan followed by Albany is advocated rather than that of Carnegie, Pittsburgh, as being less expensive.

A free public meeting for the people of Chicago was provided by the Chicago Library Club on Wednesday evening, April 2. Over 2000 invitations were sent out to representative professional and business men, but only a corporal's guard of them appeared at the meeting. The feature of the evening was a lecture by Professor Charles Zeublin, of the University of Chicago, on "The modern library movement." One hundred stereopticon slides were used, showing various phases of library work and library architecture. The speaker both instructed and entertained his audience. A brief discussion followed the lecture. Prominent among those present were Miss Katherine Sharp and her senior class from the University of Illinois Library School. Prior to the meeting at Handel Hall the library club joined the Illinois alumnae and the visiting senior class in dinner at a downtown restaurant, where a very delightful hour was spent.

A regular meeting was held at the Public Library on April 10, President Josephson in the chair. The executive committee reported one meeting held during the past month, at which \$25 was appropriated for the expenses of the public meeting at Handel Hall. It was voted to recommend the appointment of an editing committee of three to prepare one or two sample lists and to outline a plan for the preparation of other special reading lists, as suggested by the committee on future work (this editing committee to report at the meeting in October, 1902). Miss Ahern thought it unwise to appoint an editing committee for the special reading lists, or to take any other hasty action in reference to them at this time. At her motion the subject was made a special order for the next meeting. Miss Dickey reported progress and plans of the committee on home libraries. Miss Harriot E. Hassler, of the John Crerar Library, then read a paper on home libraries work, which was replete with interesting personal experiences undergone while engaged in this work in Pittsburgh, Albany, and other places. After its conclusion she answered many queries propounded by members of the club.

The annual election of officers will occur at the next meeting; nominating committee, Mr. C. W. Andrews, Miss M. B. Lindsay and Miss L. E. W. Benedict.

CHESLEY R. PERRY, *Secretary.*

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

President: Camillo von Klenze, University of Chicago.

Secretary: A. G. S. Josephson, John Crerar Library.

Treasurer: C. B. Roden, Public Library.

The third annual meeting was held in the John Crerar Library, Friday, April 25, 1902.

The following new members were elected: Wm. Muss-Arnolt, Chicago, T. F. Currier, Cambridge, Mass., Kendall Banning, Hanover, N. H., K. D. Jessen, Cambridge, Mass., J. T. Gerould, Columbia, Mo., C. A. Nelson, New York, J. S. Nollen, Grinnell, Ia., W. H. Tillinghast, Cambridge, Mass., Miss M. W. Plummer, Brooklyn, Miss May Simonds, St. Louis.

The secretary read the following annual report of the council:

Third Annual Report of Council of the Bibliographical Society of Chicago.

"The council has met nine times during the year. To fill the vacancy caused by Mrs. Wilmarth's resignation as vice-president, Mr. J. W. Thompson was elected vice-president and Mr. W. S. Merrill member of the council. The committee on publications has issued the second year-book of the society with similar contents as the first, and has now in press a special publication, a reprint of Augustus De Morgan's paper "On the difficulty of correct description of books," originally printed in the "Companion to the almanac," London, 1853. The year-book has been and the other publications will be sent to members of the society free of charge.

"The work of indexing bibliographical serials, mentioned in the last report, has been delayed on account of the slowness with which subscriptions were received, which made it doubtful whether the Publishing Board of the American Library Association would be able to print the cards. The publication is now secured, however, and the first lot of copy has been sent to the board. At a special meeting of resident and non-resident members of the society in connection with the annual conference of the American Library Association, at Waukesha, Wisconsin, July 4, 1901, a paper, by Mr. John Thomson, Philadelphia, entitled 'A bibliographical society of America,' was read and gave rise to a discussion on the desirability of the formation of such a society. The matter was left in the hands of a committee who should investigate the sentiment in regard to this proposition and report at a similar meeting to be held in connection with this year's conference of the American Library Association, which is to be held at Magnolia, near Boston, in June of this year. The committee, which consists of Messrs. W. S. Merrill, J. W. Thompson, and C. W. Perley, has corresponded with interested persons in and outside the society, and has already presented to the society a preliminary report. According to information lately given to the secretary by the chairman of the com-

mittee the results have so far been as follows:

33 members and 38 non-members have responded favorably to the idea of an American Bibliographical Society, and of these five members and 15 non-members have expressed their preference for the immediate formation of such a society, while the remainder either expressly stated that they would prefer to see the Chicago society develop more slowly into an American society, or did not express any preference either way. Two members and four non-members answered unfavorably, and of these one member and the four non-members suggested affiliation with the American Library Association. Three members and six non-members acknowledged the receipt of the committee's letter, but for one reason or another did not commit themselves to the plan at all.

"At the first regular meeting of the society during the past year a memorial was adopted to be sent to the Louisiana Purchase Exposition Company, suggesting that a Commissioner of Bibliography be appointed for the St. Louis Exposition. Copies of this memorial were sent also to a number of scientific societies and other institutions in the country, with request for their endorsement. The secretary has had some correspondence in the matter with the authorities of the Exposition Company, and it is understood that the matter will be determined in a near future; the company has received endorsements of the plan from a number of societies, including the American Historical Association and the American Association for the Advancement of Science.

"20 new members have joined the society during the past year; one has resigned, and 11 have, by non-payment of the second year's dues, signified their withdrawal. The society has now 107 members of whom 41 are non-resident."

The treasurer's report showed balance from previous year, \$104.12; receipts during the year, \$234.50; total receipts, \$338.62; expenditures, \$199.91; balance on hand, \$138.61. Publications on hand: Year-book, 1899-1900, 57 copies; Year-book, 1900-1901, 95 copies; Contributions to bibliography no. 1, 132 copies.

Professor Francis W. Shepardson then read a paper on "The work of the Public Archives Commission," a summary of which will be printed in the forthcoming Year-book for 1901-1902.

The chairman of the nomination committee, Anderson H. Hopkins, reported that the committee, in view of the plans to broaden the society's field of work, unanimously recommended the re-election of the present council. This report was accepted.

The members of the council for the year 1902-3, therefore, are as follows: Camillo von Klenze, president; James W. Thompson, vice-president; Aksel G. S. Josephson, secretary; Carl B. Roden, treasurer; Clement W. Andrews, Mabel McIlvaine, William S. Merrill.

AKSEL G. S. JOSEPHSON, *Secretary.*

EASTERN MAINE LIBRARY CLUB.

President: R. K. Jones, University of Maine, Orono.

Secretary-Treasurer: J. H. Winchester, Stewart Memorial Library, Corinna.

The spring meeting of the Eastern Maine Library Club was held at the library of the University of Maine, on Friday, April 11. The first subject, "The collection and preservation of local history material," was presented by E. W. Hall, of Colby University, and the discussion resulting filled the entire morning session. Luncheon was served by the Orono hosts.

In the afternoon the net price question was discussed, and resolutions were passed endorsing the request for a discount up to 25 per cent., made at the Atlantic City library meeting in March. Other subjects presented were "Catalogs for small libraries," opened by Rev. D. A. Boatwright, of Bangor; "Historic reading for the young," by Dr. Fellows of the state university; "Educational value of fiction," by H. M. Estabrooke; and "What can be done to interest librarians in our library work?" by J. H. Winchester. An urgent appeal was made to all Maine librarians to attend the A. L. A. conference in Boston and Magnolia, in June.

LONG ISLAND LIBRARY CLUB.

President: F. P. Hill, Brooklyn Public Library.

Secretary: Miss F. B. Hawley, Brooklyn Public Library.

Treasurer: Miss Mabel Farr, Adelphi College Library.

The second annual meeting of the Long Island Library Club was held in the large lecture room, Young Men's Christian Association Building, April 17, 1902, at three o'clock. 80 persons were present.

The committee on districting Long Island for library purposes presented a report signed by the chairman, Miss Plummer. The circular which was sanctioned by the club was printed and sent about March 22 to 141 libraries and branches in Brooklyn and Long Island. Replies had been received from 34 libraries only; of these 14 were from Brooklyn libraries, including the Brooklyn Public and eight branches, and four subscription or institutional libraries. From libraries outside of Brooklyn, reports were received from nine school libraries, and 11 public libraries including the Queens Borough Library of Long Island City. Replies from the school libraries were generally very brief, being mainly answers to the questions as to the name and character of the library. From the public libraries outside of Brooklyn came many inquiries as to whether arrangements had been completed for the May meeting. Five libraries ask to have notices of the regular meetings of the club sent them. No one asks directly for assistance, but two librarians state that they will avail themselves of the opportunity offered as needs require. Brook-

lyn librarians expressed interest and approval of the plan proposed. It was voted that the report of the committee should be accepted and the committee continued.

The names of 22 new members were proposed and accepted. Action was taken on an amendment to the constitution, so that hereafter regular meetings will be held on the third Thursday of each October, February, April, and May, and the first Thursday in December. A nominating committee was appointed by the chair to prepare two tickets to be voted on by ballot.

The resolutions passed by the Pennsylvania Library Club and the New Jersey Library Association asking "that the American Publishers' Association be requested to consent that dealers and publishers give to libraries a discount up to 25 per cent. on net books" were then read by the secretary. It was moved by Mr. Bishop "that the Long Island Library Club adopt these resolutions as its own, and convey the facts to the proper authorities." The motion was carried.

The following program was then presented:

Subject: "The care of maps." Paper by Mr. Thomas Letts, of the American Geographical Society; followed by discussion by Dr. A. G. Mayer and Miss Mary L. Davis.

Subject: "The treatment and use of pamphlets." Paper by Miss Eleanor B. Woodruff, Pratt Institute Free Library; discussion by Miss Mabel Farr, Mr. F. P. Hill, and Miss Charlotte Martins, of Princeton University.

MIRIAM S. DRAPER, *Acting Secretary.*

Library Schools and Training Classes.

DREXEL INSTITUTE LIBRARY SCHOOL.

On April 11, Mr. John Cotton Dana gave an interesting talk to the library school on the question of the hour: fiction in public libraries, after which the students asked questions on various phases of the subject.

Mr. George F. Bowerman, librarian of the Wilmington Institute Free Library, spoke to the class on the subject of buying books at auction and second-hand and gave many practical suggestions for purchasing with a limited income.

Miss Florence B. Kane, class of '98, now library organizer for the Delaware State Library Commission, visited the school in April, and talked informally to the class on her experiences in sending out travelling libraries and in visiting the small towns of Delaware in order to create an interest in public libraries.

Miss Mary Fornance, class of '91, also addressed the school on her experiences in organizing libraries.

Miss M. Louise Hunt, class of '01, has been engaged as cataloger in the Public Library of Paterson, N. J.

Miss Beulah S. White, class of '00, has been appointed departmental librarian in the Library of the University of Pennsylvania.

NEW YORK STATE LIBRARY SCHOOL.

Mr. S. S. Green, of Worcester, visited the school in April as a member of the A. L. A. committee on library schools, and from the vantage ground of his long experience gave the students exceedingly good counsel.

The library institute, held in Albany, May 7 and 8, will give the school an excellent opportunity to study this important new development. Mr. A. L. Peck will be conductor. Dr. James H. Canfield will give the principal evening address. A large exhibit of Civil War posters, arranged by Mr. D. V. R. Johnson, is being shown in the State Library.

SALOME CUTLER FAIRCHILD.

PRATT INSTITUTE LIBRARY SCHOOL.

LIBRARY VISIT, 1902.

The class made its annual trip during the Easter vacation, March 27-April 5, the libraries visited this year being those of Washington and Baltimore. The trip was made by 13 of the students, under the direction of Miss Davis. It was a disappointment to all the party that, owing to illness on the staff, Miss Plummer was unable to be of the company.

On arrival in Washington, Thursday evening, the party were welcomed by Mr. Clark of the Law Library and several former Pratt students who are now in the Library of Congress, and under their guidance paid a visit to the National Observatory. Naturally, the Library of Congress was the central point of interest in Washington, and the first day was devoted to it. In the absence of Mr. Putnam, Mr. Spofford welcomed the party in the luxurious reading-room, after which the class was taken through the building. In this first day the strictly library side was so much to the fore, that the architectural and decorative beauties of the building made but fleeting impressions. However, all of the party found free evenings and spare hours later in which to enjoy that side, and to feel glad that the building is worthy of whatever the National Library may become. After seeing the Library of Congress, it was most interesting to visit some of the specialized libraries, the Law Library, the libraries of the Department of Agriculture and the Smithsonian Institution, the Patent Office Library, and the collection of the Surgeon-General's Office. An inspection of the Documents Division of the Government Printing Office showed how much the government is doing to catalog and make its publications available for use. Two libraries visited on the same day were the Washington Public Library and the Riggs Memorial Library of Georgetown University. In the former, Mr. Flint showed the library as it is, and then gave the class a suggestion of what it is to be, taking us to see the handsome building, still in process of construction, given by Mr. Carnegie. At Georgetown, Father Shandelle entertained the party delightfully at luncheon,

followed by an inspection of the college buildings, and an hour or more in the library, where he showed the old Bibles and other rare books.

On Wednesday, the party left Washington and arrived in Baltimore in time to spend the afternoon in the Walters Gallery. That evening was spent at the Library of the Medical and Chirurgical Society; and the next morning, the libraries of Johns Hopkins and the Peabody Institute were visited. The afternoon was devoted to the Enoch Pratt Free Library, and on Friday the party returned to Brooklyn, leaving at Philadelphia a few of its members who proposed to study the libraries there until Monday. The trip was a pleasure in many ways, and particularly in the impression received of the cordiality existing among members of the library profession.

AGNES COWING.

Reviews.

OFFICE OF DOCUMENTS. Tables of and annotated index to the congressional series of United States public documents; prepared in the office of the Superintendent of Documents, Government Printing Office. Washington, Government Printing Office, 1902. 769 p. l. Q.

This volume, a quarto of 769 pages, comprises the second part of the forthcoming checklist. The first part is to be devoted to the documents of the first 14 congresses, and the third part will be a checklist of the departmental publications. The part under consideration is divided into three sections, the first being a revised edition of the congressional tables, first tabulated by Dr. Ames, then extended under Mr. Crandall, and now revised under Mr. Ferrell. In Mr. Crandall's extended version these tables occupy 79 pages, in Mr. Ferrell's revised version they occupy 93 pages, although the earlier edition included the 53d congress, while the later tables end with the 52d congress, for reasons explained in the preface. There are some changes in the serial numbers indicated on page seven of the present publication, which librarians will do well to consider, but the chief growth of the revision is due to the tabulation of special sessions, the publications of which are, as a rule, bound up with those of the succeeding regular session, and to the revision of the column called "Title," etc., in the old edition, and "Notes" in the new.

The second section of this part, covering pages 111-753, is the index proper, and is followed, pages 755-769, by "Appendixes," and the third division, composed of various tables. The first table, showing the number of documents bound up in the volumes from the 15th to the close of the 52d congress, is interesting because in it is accurately stated for the first

time a statistical fact in regard to the bulk of these issues, which may be of value when plans for cataloging them are under consideration. Of equal interest is the second table, in which we have for the first time a schedule of the printers of the national Senate and House, respectively, from 1817 to 1852, the date of the establishment of the government printing office. A most interesting contribution to the history of American official literature might be built up from this table of printers. The contract system antedating the government printing office, and the private printer system antedating the contract system, were both provocative of much antagonism and argument among able men, and I have no doubt many of the quirks and queeresses about which we write papers and hold discussions to-day might be traceable to personal animosity among printers.

The index proper is, of course, the main feature of the book, and as such should receive the lion's share of this notice. Of those forms of technical publication, with which the librarian is concerned, *viz.*, bibliographies, calendars, catalogs, checklists and indexes, the place of the index and its possibilities is perhaps least comprehended. It is admitted in the preface that "this work [an index] has long been recognized as the chief bibliographical need of American historians, publicists and legislators, but it was a work so formidable that those who were most competent to undertake it, and who were therefore most familiar with its magnitude and difficulties, have shrunk from the task. Poore's ponderous 'Descriptive Catalogue of U. S. Publications,' 1881, was indeed undertaken and carried through, but it is only a costly and almost useless monument to misguided industry and zeal. At last, however, the work has been taken up with the purpose of carrying it through upon lines laid down by the accumulated experience of librarians and bibliographers. . . . It has been constructed, with but few exceptions, from the headings of the various documents, no attempt having been made to analyze any but the annual reports of the executive departments. . . . A catalog of this vast series, which would require the undivided efforts of several trained catalogers for several years, will now be practically unnecessary. . . ."

While appreciating to the fullest extent the amount of work involved in its preparation, one cannot lose sight of the place which this index occupies and that which it aspires to occupy, and there is reason for a protest against these quoted statements. Poore's ponderosity may be admitted, for the sake of the alliteration, his industry and zeal will be granted, but his uselessness should be questioned. To affirm it would only be heaping the historical odium of inconsequence upon the pioneer. Doubtless his technique might be improved to-day, but in the absence of Poore's

industry, zeal and, we may add, courage, in 1881, it would have gone rather hard with the rest of us.

If, as is intimated, it is supposed that this work meets the needs of American historians, publicists, etc., it is, to say the least, unwise to admit that it is constructed from the headings only of the documents, and that no attempt has been made to analyze their contents. The class of person referred to is more often concerned with the cause and effect of the relations of political policies, the great undercurrents of our national life, when using these documents, than with finalities. How infinitely more complex an index would need to be to meet these requirements it is hard to realize. H. doc. 351, 25 cong., 2d sess., 23+821 pp., entitled "United States and Mexico," has, in the index, one entry, *viz.*, Mexico, Diplomatic affairs. The document deals with a period when our national life was in an extremely agitated state, and not only are our complications with Mexico exploited, but the relations of Mexico with Texas, of Texas with the United States, interstate relations with Texas, etc., are dealt with. There are seizures and claims innumerable, declarations of embargo and blockade, denials of the right of declaration, questions of consular jurisdiction, port and customs regulations, frontier hostilities, and all the various difficulties in which an aggressive and a pertinacious administration may become involved. In the index to U. S. documents relating only to foreign affairs, now in course of preparation by the New York Public Library, between 500 and 600 cards have been made for this document.

The unsatisfactory results attending the selection of document headings for index entries may be illustrated in the case of Kansas and the documents relating to her various constitutions. There are seven entries under constitution, one of which relates to the Topeka, or antislavery, constitution; three relate to the Leecompton, or proslavery, constitution; one relates to the Leavenworth constitution, and two relate to the Wyandotte constitution. There is no distinction in the entries as used, the word "same" being repeated six times, each repetition occupying a line which might have been given over to a brief descriptive entry of the document. In addition to these seven entries there are six other entries under words other than "constitution" which, if the rule to enter by headings had not been followed, would have appeared here. They are "Committee report on President Pierce's message" (836:34), being the message of Jan. 24, 1856, and relating to the Topeka constitution; "Admission into the Union, etc." (835:32), which is a memorial of the citizens of Leavenworth praying immediate admission of the territory under the Topeka constitution; another under "Admission, etc." (837:198), which is the report of a minority on framing a constitution; another under "Reorganize

territory of" (837; 82), which is Stephen Douglas' famous report recommending admission under vote of the people, and lastly (912:173) under "Admission, etc.," again, is Galusha Grow's report recommending admission under the Topeka constitution. All these documents are constitutional history and specifically of the Topeka constitution. Of the three belonging to the Lecompton constitution, two are properly entered under constitution, the third is entered under "Votes taken in election of October, 1856," the substance being the votes cast upon the question of calling a convention to frame a constitution.

Of the lesser points of style affecting only the technical appraisement are the excessive use of the preposition and the comma, as shown in the following entry: "Hampton, Va. National cemetery at, extension of, 1889," where both prepositions and at least the second comma are superfluous. In making the most condensed sort of an index entry it is always desirable that some indication be given of the nature of the reference. This rule is most admirably observed in the sessional index issued by the Superintendent of Documents, while in the index under consideration, where the line is longer than in the sessional index, the simple word "same" is found repeated, without any modifying phrase, often six and seven times.

The volume will be of particular service in those libraries where the duplication of the department reports is found to be impracticable, the reference of these reports to the congressional set having been carried out with care. The use of the wide margin for annotation, instead of interleaving the volume, is to be commended, for nothing so disqualifies a volume for ready reference as does the insertion in it of blank leaves. The adoption of the serial number for reference to the congressional set, while not new, having been used for several years in the excellent sessional indexes prepared by the Superintendent of Documents, demonstrates again the practical utility of this plan where the entire book is confined to these documents, as in the case of the monthly catalog and the sessional index. In connection with other literature, as, for instance, the regional bibliographies issued by the Library of Congress, one is not so ready to accept its utility. The work on this part of the checklist was done by Mr. William L. Post, to whose energy the realization of this tripartite checklist is largely due. Mr. Post is to be congratulated upon the completion of the most difficult portion of this work. The three volumes, together with the annual catalogs, sessional indexes and the monthly catalog will have made the technical publications of this office which have been issued since its establishment in 1895, assume not only most imposing proportions, but a distinctly valuable and useful character as well.

A. R. HASSE.

Library Economy and History.

GENERAL.

The Library opens its third volume with a belated January number, which contains, among other bibliographical papers, a review of "Early pestblätter;" "Humphrey Wanley and the Harleian Library," by G. F. Barwick; "Bacon's biliteral cipher and its applications," by Walter W. Greg; and "English book illustration of to-day," by R. E. D. Sketchley. The department of "American notes" is mainly devoted to Melvil Dewey's forecast of the methods and possibilities of "Library institutes." In the April number A. W. Pollard has a description of "The Franks collection of armorial book plates," with numerous reproductions; there is an article on various manuscripts and editions of "Les matinées du Roi de Prusse," by Lionel Giles; a classed list of "Sale prices of incunabula, 1900-1901"; and the second installment of Sketchley's "English book illustration of to-day," with many illustrations.

The NEW YORK LIBRARY CLUB has just issued its handbook of "Libraries of Greater New York," being a "manual and historical sketch of the New York Library Club" (4+ 185 p. D). The feature of the volume that gives it special value to libraries and literary workers is the full descriptive record (99 p.) of "libraries of the city of New York," to which is appended a most useful "index to special collections" in the libraries recorded. The manual is sold by the secretary of the club, S. H. Bery, Y. M. C. A. Library, 317 W. 56th street, New York, at 25 c. in paper, and 50 c. in cloth, to members; and 50 c. paper, 75 c. cloth, to others; postage 10 c. additional.

LOCAL.

Anna Ticknor L. Assoc. Boston. The association announces that the circulation of books and photographs will cease after June 1, 1902. The library has been supported since the fall of 1897 chiefly by the gifts of friends who wished to carry on, in some measure, the work of the Society to Encourage Studies at Home. "The increased number of correspondence societies and public libraries has been such as to diminish the demand for our books, and the expenses have so far exceeded the receipts that it seems best to discontinue our work. At the meeting of the association held Feb. 8, 1902, it was voted to give the photographs and other illustrations, with some books on art, to the Carnegie Public Library in Fort Worth, Texas. It will be known as the Anna Ticknor collection. It was voted to give the remaining books and all other material to the Boston Public Library, in which Miss Ticknor had a keen and inherited interest, for use in the public

schools, study clubs, institutions, etc. It will be known as the Anna Ticknor collection, and the book plate of the association will be retained. The library will also act as custodian for our records."

Atlanta, Ga. Carnegie L. (3d rpt.—year ending Dec. 31, 1901.) Added, 6831; total, 19,481. The report is devoted to record of cataloging and organizing work, preparatory to removal to the new building. Three card catalogs have been completed, one for reference room and official use, one for the children's room, and one typewritten for public use in the open shelf and delivery room—representing a total cost of \$3933.66. "The first year when we were using apprentice labor our books cost us 15 c. a volume to catalog. The second year the cost was 30 c. per volume, making an average of 20 c. per volume." The use of the reference room, prior to removal to the new building on Oct 1, was unusually large. "The circulating department of the library remained open until October 1, when the lease having expired on the old building, the trustees were forced to move the books, etc., into the unfinished new building. The 20,000 volumes were packed in 75-pound packages, wrapped in heavy manila paper with inner padding, and labeled with classification number. These packages were stored in one room and will not be unpacked until the building is accepted." Circulation was confined to members of the former Young Men's Association Library, until the opening of the new building.

There were numerous gifts during the year, most notable being Mr. Carnegie's further gift of \$20,000 for furniture and stack.

The librarian's report for the month of March gives interesting data regarding the opening of the library in the basement of the new building on March 4. "The registration was immediate and reached the unprecedented figure of 6096 persons at the close of March 31," an average of 264 borrower's cards issued per day. The circulation for the month was 10,704, of which 3218 was of juvenile books. "The staff has had its hands full simply in handling the public. It has been next to impossible to do any reference work or even to aid the public in the selection of books. The circulation for the last month has been equal to that in old and established libraries, employing from 30 to 50 assistants. The fact that we were only to open a part of the building at first has been favorable to us, as it has clearly demonstrated the fact that it will be impossible to open the whole building on our present appropriation." More books are greatly needed, especially in the children's department, where there are nearly as many children registered as there are juvenile volumes on the shelves. Miss Wallace adds: "The testing of the system we believe to have been most severe, and will hard-

ly be reached again. While we have much to congratulate ourselves upon, there are many glaring deficiencies in our book supply. Our need of books on the useful arts and sciences, mechanical drawing, engineering, hydraulics, and kindred subjects, is greatly to be deplored, and together with the urgent need of children's books deserves the attention of the board."

Baylor University, Waco, Tex. The cornerstone of the Carroll Library building, the gift of Frank L. Carroll to the university, was laid on March 3, 1902, and the addresses and exercises of the occasion are recorded in a special "cornerstone edition" of the quarterly *Baylor Bulletin*.

The building will be known as the Frank L. Carroll Chapel and Library.

Belfast (Me.) F. L. (14th rpt.—year ending March 3, 1902.) Added 722; total 10,385. Issued, home use 23,665; school use 350 (fict. 13,155; juv. 3943). New registration 250; total registration 1757.

For 12 Sunday afternoons during the winter the library was open, but the attendance proved so limited that the experiment was discontinued.

Brockton (Mass.) P. L. (Rpt.—year ending Nov. 30, 1901.) Added 3475; total 37,078. Issued, home and school use 123,270. New cards issued 1639; total cardholders, 15,262. Receipts \$10,120.81.

There has been an increase of 5431 in circulation, the result of delivery of books from the library to the schools; "all that is now needed is a large supply of duplicates of the books now in demand for this special purpose. As yet the percentage of fiction has not decreased to any considerable extent.

There have been alterations in the interior arrangements that have greatly improved facilities of use. More shelf room in the main stack is greatly needed, as is a separate children's room.

Brooklyn (N. Y.) P. L. Opposition to the act consolidating the Brooklyn Library with the Public Library has not yet ceased, although the measure became a law by the governor's approval on April 15. On April 25 the committee of fifty, which has been the most active antagonist of the bill, held a meeting and discussed the advisability of bringing a taxpayers' suit to test its constitutionality; it was hoped to secure a fund of \$1000 to carry on the contest. The executive committee of the Citizens' Union, at a meeting on May 5, also passed resolutions of disapproval of the law, expressing the belief that "the principles involved in this measure embody a serious injustice to the citizenship of the Borough of Brooklyn, which has heretofore directly and with marked success conducted its public library"; and requesting the Board of Estimate and Appor-

tionment "to refrain from making any permanent contract with the corporation constituted by said law."

Further opposition has been based upon religious grounds. At a meeting held on April 30, under the auspices of the Brooklyn Catholic Historical Society, J. W. Devoy, treasurer of the Public Library, spoke upon "Public libraries," and complained that Catholic interests were unlikely to have sufficient representation upon the new library board. He said that "this discrimination and un-American action was clearly and explicitly submitted to the mayor by a representative number of Catholic men, animated with the sole desire of protecting their rights as citizens, who also were accompanied by a personal representative of the bishop of this diocese."

The members of the new board have not yet been appointed.

One hundred copies of the Buffalo list of "Classroom libraries for public schools" were ordered printed for the Brooklyn Public Library, and have been distributed to the principals of the public schools of the city.

An entrance examination for admission to the apprentice class of the library was held on April 1, under the direction of Miss Hawley. The subjects covered were general literature and general history, including contemporary literature and current events in all countries. The examination was planned to require a high school education or its equivalent on the part of the applicant, and to show how closely she was in touch with the world of books and the meaning of history, rather than how many text-books she had memorized. The questions were about as difficult as those given by the Cleveland, Detroit, Minneapolis, Pittsburgh and San Francisco libraries, as reported in the *LIBRARY JOURNAL* of June, 1901. About 70 people who had applied for admittance to the class during the preceding six months were notified of the examination, and it was advertised in the local papers. Only 18 reported for the examination, of whom 15 handed in papers and five passed, with averages ranging from 95.5 per cent. to 78 per cent. Of these five, two had several years' experience in libraries and one had taken the full library course at the Columbian University, Washington. This class was entered for the six months' apprenticeship on May 1. A final examination was given the outgoing apprentices on April 29. Twenty questions were asked, covering all the elementary branches of library science. On May 1 the New York City Civil Service Commission held an examination for the position of expert cataloger in the Brooklyn Public Library.

Buffalo (N. Y.) P. L. In recognition of 50 years' faithful and efficient service, the directors of the Public Library gave a reception on the evening of April 10 to William

Ives, librarian of the institution. About 200 guests were present. Superintendent Henry L. Elmendorf spoke highly of Mr. Ives' long services, and introduced Hon. J. O. Putnam and J. W. Larned, both of whom made addresses. Mr. Ives spoke interestingly of the early days of the library, when it was a small proprietary institution.

Carnegie, Pa. Andrew Carnegie L. The Carnegie library building was dedicated on the evening of April 22, in the presence of Mr. Carnegie and a large audience. It is, in a measure, an institute building, containing beside the library rooms, a music hall and a fine gymnasium, and it represents the gift of \$210,000 from Mr. Carnegie, of which \$100,000 was for the building, \$100,000 for endowment, and \$10,000 for books. In addition, the site provided by the borough cost \$10,000. The library contains 6229 v. and is used by 1689 people, or one-eighth of the population.

Chicago (Ill.) P. L. At a meeting of the directors on April 29, measures were taken by which operating expenses were cut down \$6897 per month. The working force was reduced by 50 employes, number of book deliveries were reduced by half, and the hours of circulation shortened. No increases of salary will be granted, and all employes will be required to take 30 days' vacation without pay. The library will now be open from 9 a. m. until 6 p. m., and at the branch libraries the evening service was reduced one hour and the morning service was entirely cut off. The action is the result of a communication from the city controller, directing the board to reduce expenses.

Detroit (Mich.) P. L. (37th rpt., 1901.) Added 12,525; total 174,425. Issued, home use 511,921, of which 354,247 were issued from central library (fict. 58.15 %; juv. fict. 17.42 %); lib. use 654,293 v., 252,237 periodicals. The school circulation amounted to 97,308, with an enrollment of 16,118 pupils. New cards issued 6857; total cards in use 32,341. Receipts \$93,773.91; expenses \$52,794.09, leaving \$9500 in library building fund and \$31,479.82 in general fund.

The report of the president of the board, C. H. Leonard, is a summary of the work done, based upon the resolutions presented in the board, during the years 1896-1901. He gives a resumé of the various negotiations regarding the Carnegie library gift of \$750,000 for a central building and branches. The postponement of the next general election until the autumn of 1902 has deferred until that time the vote upon the question of issuing bonds for the purchase of sites. In the meantime arrangements have been carried through for the construction of one Carnegie branch.

The total use of books, home and reference,

was 1,116,214, as against 1,057,412 the previous year, an increase of over 10 per cent. In May free access was given to the shelves in two alcoves of English fiction. These alcoves hold over 3000 v. and are kept constantly filled with the more recent novels, including one copy of all the best advertised ones. The plan has proved generally popular. "About 60 per cent. of the fiction circulated came from the two open alcoves. The regret now is that while we were about it we did not throw open all the fiction shelves, foreign as well as English, though there are some difficulties connected with the arrangement of the building which appear almost insurmountable. The open alcoves are frequently overcrowded and sometimes may be said to be jammed. That people sometimes put books into their pockets or conceal them under cloaks and walk off with them without taking the trouble to notify the assistants we positively know. Probably the losses do not amount to much, so far as money value is concerned."

The reserve post card plan is also largely used. "In the case of *fad* novels, of which we do not usually buy more than 40 or 50 copies, this appears to be the common way of securing the reading of them while they are in vogue." Delivery of books at home or office is made when desired on payment of a fee of 10 cents to cover carfare of messenger; "but the fact that the fees collected during the past year amounted only to \$1.20 indicates that there is no general call for book delivery." Mr. Utley adds: "I do not believe the Public Library should put itself in competition with the Booklovers' Library, but rather welcome that agency as relieving it from the purchase of an inordinate quantity of ephemeral literature to meet the hysterical demand for the latest popular novel."

The medical department has been actively developed: "The matter of the very limited use of the books by the medical profession of the city was brought to their attention through the medical societies. An energetic committee was appointed, which investigated the subject, and upon their recommendation the library appropriated \$500 to buy recent books, and \$75 to be expended in periodical subscriptions. Through the active efforts of this committee some 45 of the leading physicians of the city were induced to pledge themselves to subscribe for one each of the best class of medical periodicals, not already on the library subscription list. These periodicals were to be sent for the first use of the doctor subscribing, and after three months were to be collected by the library and placed on file on its shelves. A case to hold 120 periodicals was constructed across the room in such manner as to shut in the medical department completely and at the same time afford to those who use the department free and convenient access to all the unbound periodicals, as well as the medical books of reference. All the books in the medical department were reclassified and rearranged to meet the wishes

of the committee, who claimed that they would be thereby much more easily found and conveniently consulted. The card catalog was also thoroughly overhauled and revised in accordance with the ideas of the committee. A telephone was put into the department at the expense of the Detroit Medical Society to enable physicians to communicate readily with their offices or patrons. Thus it appears that the society, its committee and the library itself have done everything which could be thought of or suggested to promote the usefulness of the department to the medical profession of the city.

"In view of all these things it is interesting to note that the use of the department does not show an increase. The new books were bought and the department reorganized at the opening of the year. The medical books consulted in 1901 amounted to 3.75 per cent. of the total reference use of books, as against 3.71 per cent in the previous year. The number of books used in 1901 was actually less than in 1900. The chief value of the department still appears to be to the students in the medical colleges."

Lancaster (Mass.) Town L. (30th rpt.—1901-2.) Added 968 (by purchase 396); total 31,181. Issued, home use 13,840 (fict. 57%), of which 2112 were issued through schools and home libraries. New registration 149; total registration 1018. Receipts \$1927.11; expenses \$1924.11.

A dictionary list of accessions for the year is appended to the report. 16 art exhibitions were held, of which eight were from the Library Art Club.

Los Angeles (Cal.) P. L. (13th rpt.—year ending Nov. 30, 1901.) Added 10,549; total 67,354. Issued, home use 472,543 (fict. 216,086; juv. fict. 68,770; magazines 40,526); total circulation (home and lib. use) 663,839. New registration 7177; total registration 22,015. Receipts \$45,507.46; expenses \$34,073.64.

The reports of both directors and librarian lay special emphasis upon the cramped and crowded quarters, and the urgent need of improved facilities for the work of the library.

During the year a careful inventory of the collection was made, showing a total of 1524 volumes as missing during the 13 years of the library history. Two changes in administration included the issue of non-fiction cards, of which 13,000 have been called for; and the adoption of a new system of records, by which the original guarantor's cards and reader's applications are filed, instead of copies as formerly, thus reducing the clerical work of the department.

There has been an increase in the number of books bound and rebound, 5168 having been bound at a cost of \$2628.21, or an average of 46.79c. per v., as against 4673 v. at 31.94 c. approximately each in the year preceding. "The difference in the average price is due to a slight increase in the binding rate,

and especially to the fact that a greater number of books have been bound in the more expensive materials, it being the present policy to bind all reference books in half morocco."

In circulation there has been a gain of about 20,000 v., or five per cent. over the previous year. This is mainly attributable to the use of non-fiction cards. In the children's department the 9766 v. (564 reference) reached a circulation of 94,612, of which 63,988 was home use. "Much help has come to the library from the opportunity afforded the librarian to address various Child Study Circles in the city on the subject of children's books and reading. Twenty circles have thus been visited and the effect upon the children's reading is noticeable. Much of the important work with children is accomplished at the branches."

There are now three branches and five delivery stations, including one to fire houses.

Maryland Diocesan L., Baltimore. The April number of the *Maryland Churchman* contains (p. 54) a third article on "Rare books of the Diocesan Library," by G. M. Utley, librarian of the collection. It is devoted especially to examples of early printing, of which the library contains 42 examples, printed before the year 1500. Among those described by Mr. Utley are a folio Lactantius (fourth edition), printed in 1471; an undated copy of the "Institutiones" of Justinian, printed by Jenson between 1474 and 1477; and Leonardus de Utino's "Sermones," printed at Ulm by Johann Zainer, 1478. The bindings and details of printing of other rare and interesting volumes are described.

Medford (Mass.) P. L. (Rpt. — year ending Jan. 31, 1902.) Added, by purchase 1441; total 24,585. Iseud, home use 89,838 (fict. 69 per cent.; juv. fict. 54 per cent.); no record of ref. use is kept. Receipts \$8974.40; expenses \$8974.09.

"With a population of 18,244 the library has distributed books at the rate of 4.96 to each person." There are now five delivery stations in operation.

The library reaches directly 69 school-rooms, to each of which 12 v. are sent every six weeks, making 828 books in constant use by the children.

"We have with us three pupil assistants who desire to obtain a practical knowledge of library work. Our policy now is to accept for such apprentices only those who are college graduates, or who can answer satisfactorily 80 per cent. of the questions which we consider essential. We take none for less than a year's service, and without pay, requiring a three months' preliminary trial to ascertain their adaptability for the work."

Newark (N. J.) F. P. L. (13th rpt., 1901.) Added 3274; total 78,798. Issued, home use 314,874 (fict. 61.2%; juv. 20.1%); lost 140; visitors to reference dept. 13,939. New regis-

tration 6775; total registration 87,542. Receipts \$64,051.61; expenses \$63,051.61, of which \$18,000 was transferred to new building account for equipment.

During seven months of the year, from the resignation of the librarian, F. P. Hill, in May, the library was under the charge of Miss Beatrice Winsor, assistant librarian.

Of the home circulation 21 per cent. was through the nine delivery stations (two in schools); and 165 v. were sent out to the fire stations. A comparative table shows the record of books lost since the opening of the library in 1889. The total is 579 v., the yearly average from 1889-1898 being from 25 to 40. For the last three years the record is 56, 86, and 140—an increase probably due to the greater freedom of access given. Miss Winsor says: "The total value of books lost during the year is \$139. When one considers the freedom of access to the books in all departments, the value of books lost seems a small one." In the newspaper room "the loss by theft and mutilation has been much larger than when the periodicals and newspapers were kept together under the supervision of an assistant. This, however, was to be expected, and the loss has not been large enough to offset the salary of an assistant."

Closer relations with the public schools have been developed through the efforts of Miss Hunt, the children's librarian, and by the end of the school year, 1901, every grammar school had had the use of a travelling library at least once. Miss Hunt submits a most interesting report of the work of the children's department, begun with the opening of the new library building in March, 1901. In addition to the children who flocked to the department, singly and in beives, 38 public school classes, representing 17 schools, were brought by their teachers. "While coming usually for a general visit, occasionally a class notifies us of a subject they wish to study, when books, pictures, maps and any other illustrative material the library owns is collected in the children's room. We hope to see this become a regular institution with the higher grammar classes at least. Evidences of the inspiring influences of the attractive room and good books come to us. One teacher reported that she read aloud to her class of rough night-school boys a short story of one of our young American heroes, and its effect on her pupils' behavior was so marked that she since relies upon good stories as her best help in discipline." Miss Hunt adds: "The untiring devotion of the public school teachers to their pupils is constantly shown. A vice-principal having endorsed applications for all her class was asked when the class graduated from her oversight, if she did not wish to recall the cards; but she replied she would rather risk paying for a book now and then than to take away a privilege which might do her boys and girls so much good."

Circular announcement has been made of the proposed establishment of a "duplicate pay collection" of popular books, to be issued on payment of a cent a day for each volume. The plan is submitted for the approval of borrowers.

Niagara Falls (N. Y.) P. L. During March the library reached its highwater mark in circulation, the total issue for home use reaching 8108 v.

Norfolk, Va. Carnegie L. A site for the Carnegie Library building has been given to the city by the children of the late Dr. William Selden, as a memorial to their father, who was the first president of the Library Association. It is in a central location, and is valued at about \$15,000.

Oklahoma Territorial L. Rev. John W. Foose, of Medford, O. T., has been appointed librarian of the Oklahoma Territorial Library. A local paper says: "Mr. Foose has a war record that will compare favorably with that of any of the illustrious heroes. Many of his acquaintances remember his patriotic utterances and his friendship for the boys in blue, but few of his most intimate acquaintances know that he is the identical "Jack F." of Andersonville history, or that he was a prisoner in Andersonville, Libby and Belle Isle, and was under fire of the union gunboats at Charleston, S. C., and was in the celebrated Wilson raid from Gravel Springs to Selma, Ala. He is and always has been an enthusiastic Republican."

Philadelphia City Institute L. (50th rpt. —year ending March 31, 1902.) Added 1055; total 26,247. Issued, home use 48,324; no record of ref. use is kept. No. visitors 86,280. Receipts \$7662.19; expenses \$4360.92.

"The attendance of readers, with our limited supply and facilities, shows that our library could occupy a much larger field of usefulness, in addition to that covered by the Free Library and its numerous branches."

Philadelphia Mercantile L. The new president of the library, John F. Lewis, has issued a circular to the shareholders explaining the intentions of the directors and the recently elected officers. The declaration is made at the outset that "the management is unalterably opposed to turning your valuable property over to the Free Library of Philadelphia or to any other person, natural or artificial." The intention is "to operate the library for the benefit of the stockholders." The property is to be improved and the library put in good condition, and only stockholders and members, or those holding stockholders' privileges, will be admitted within the gates. The Mercantile is thus to resume its former place as a distinctly proprietary library, and effort will be made to increase the value of the stock.

Plainfield (N. J.) P. L. The last of the

library's series of monthly exhibits was held on Saturday, April 15. The subject was "Nature," and the exhibit covered animal books, bird books, butterflies, flowers, nature books, trees. Each table was in charge of a person specially interested in that branch of the subject. A collection of animal drawings was lent by Charles Scribner's Sons, and C. P. Everitt, of Doubleday, Page & Co., gave a talk, in the afternoon and evening, on three-color process work. Book lists on the subjects covered were distributed.

Quincy, Mass. Thomas Crane P. L. (Rpt. —year ending Dec. 31, 1901.) Added 2237; total not given. Issued, home and school use 89,508 (fict. 38.9%; juv. fict. 21.2%); lib. use 8500. New registration 1050.

"Our circulation is gradually approaching its maximum. It has increased very rapidly in the last eight years, and while an increase may be looked for in the future, it must take place much more slowly unless there should be some large accession to the reading public, or unless there should be an extension of our means of distribution." To this end the establishment of branch libraries in outlying portions of the city is regarded as "a real necessity."

Richmond, Va. Carnegie L. No steps have been taken by the city council to make provision either for a site or for maintenance of the proposed Carnegie Library, and the whole matter has been left in abeyance since the appointment of the directors.

San Diego, Cal. Carnegie L. The library was opened to the public on April 23. The arrangements permitting free access to the shelves are not yet fully completed.

Southbridge, Mass. Mr. Carnegie's offer of \$20,000 for a library building, made on March 7, was declined by a vote on April 25. The action was due to the later offer of Jacob Edwards, of Boston, a former resident of Southbridge, to give to the town a library building and site, to cost \$50,000.

Worcester (Mass.) County Law L. (4th rpt. —year ending March 12, 1902.) Added 593; total 21,953. No. readers 2092; v. issued 12,848. Good progress has been made toward rounding out the library's collection of reports and state laws. "American, Canadian, English, Irish, and Scotch reports are practically complete. As to session laws, we have sets of New England states and New York state running back as a general thing to 1850. Of our own state, Massachusetts, we have a complete set. This work must of necessity extend over several years, as the books come on sale infrequently. Our price for these session laws has averaged \$1.50 a volume, which is very satisfactory."

Appended is an interesting "Report on binding of law books," which includes the specifications drawn up by Dr. Wire for the library's binding work.

FOREIGN.

German Library Association. The annual conference of the German Library Association will be held at Jena, May 22 and 23, 1902. The "Yearbook of the German librarians," prepared under the direction of the association, will be published in July by Otto Harrassowitz, 14 Queersstr., Leipzig.

Halifax, N. S. The offer from Andrew Carnegie of \$75,000 for a public library building was accepted by the common council on April 7, when a resolution was passed guaranteeing to provide a site and support the library, when erected, to the extent of \$7000 a year.

Havana. Biblioteca Nacional. The library was founded on Oct. 18, 1901, by order of the military governor, Gen. Leonard Wood. It began its existence with nearly 3000 volumes, the gift of its director, Domingo Figarola-Caneda, of Havana, bibliographer and official delegate from Cuba at the international congress of bibliography and librarianship, held in Paris in 1900, and a member of the Library Association of the United Kingdom. The number of books has slowly increased, thanks to gifts and the purchase by the government of a few important private collections. The library is temporarily established in the Castillo de la Fuerza, Plaza de Armas.

Gifts and Bequests.

Milwaukee (Wis.) P. L. A pair of beautiful bronze electroliers, the gift to the library of Judge J. M. Pereles, retiring president of the library board, were unveiled with appropriate exercises on April 26. The electroliers are placed in the rotunda of the building.

San Francisco (Cal.) P. L. On April 10 A. B. McCreery, of San Francisco, in a letter to the mayor, made an unconditional gift of \$25,000 for the establishment of a branch library "in such a locality, at such time, and in such manner" as may be determined by the library authorities. Mr. McCreery's gift is made in the belief that the usefulness of the library "can be greatly enhanced by the establishment of additional branch libraries, thus bringing the benefits to be derived more closely home to the great mass of the people."

Vassar College. Poughkeepsie, N. Y. At the celebration of Founder's day, on May 2, announcement was made by President Taylor that a fund for a new library building had been given to the college by a friend whose name is withheld. It was stated that no limit was set to the sum available for the purpose, as it was desired to provide a building that should meet all future needs of the college.

Carnegie library gifts.

Albert Lea, Minn. April 16. \$12,000.

Bedford, Ind. April 10. \$5000 additional, making a total of \$20,000.

Binghamton, N. Y. April 28. \$75,000.

Bryan, Tex. April 16. \$10,000.

Cincinnati (O.) P. L. April 9. \$180,000, for six branch libraries.

The library board, in accepting the gift, passed a resolution "That the legislature be requested to pass the necessary law to authorize this board to provide the sum of \$250,000 for library purposes, to enable this board to accept the gift of Mr. Carnegie and to comply with its conditions; and that a committee, consisting of Messrs. Wulsin, Porter and Librarian Hodges be appointed to present this matter to the General Assembly."

Columbus, Ga. April 28. \$25,000.

Dover, N. H. May 1. \$30,000.

Eagle Grove, Ia. May 1. \$10,000.

Emporia, Kan. May 2. \$20,000.

Escanaba, Mich. May 1. \$20,000.

Galion, O. April 15. \$15,000.

Galt, Ontario, Can. April 17. \$17,500.

Greensboro, N. C. May 3. \$30,000.

Jerseyville, Ill. April 14. \$10,000.

Hutchinson, Kan. April 8. \$15,000.

Logansport, Ind. April 26. \$25,000.

Manchester, Ia. April 19. \$10,000.

Marlboro, Mass. April 29. \$30,000.

Marshalltown, Ia. April 28. \$5000 additional, making a total of \$30,000.

Mount Vernon, N. Y. April 9. \$15,000 additional, making a total of \$50,000.

Pittsfield, Mass. May 2. \$15,000.

Ripon, Wis. April 15. \$10,000.

Rockland, Me. April 16. \$20,000.

Sandy Hill, N. Y. May 2. \$10,000.

Santa Cruz, Cal. April 15. \$5000 additional, making a total of \$20,000.

Stratford-on-Avon, Eng. April 17. Amount not stated; site required.

Thorold, Canada. May 1. \$10,000.

Wabash, Ind. April 30. \$5000 additional, making a total of \$10,000.

Waterloo, Ia. April 16. \$30,000.

Waterville, Me. April 28. \$20,000.

Librarians.

BOGGAN, Miss Mary, of the circulating department of the New York Public Library, has been appointed librarian of the Johnson Public Library, Hackensack, N. J. Miss Jennie Labagh is assistant librarian.

BULLARD, Miss Martha A., for 25 years librarian of the Seymour Library, Auburn, N. Y., has resigned that position. In her letter of resignation Miss Bullard, who has had charge of the library since its organization, says: "The time is near at hand when the Seymour Library will be removed to the Case Memorial Building. The tremendous impulse which is being given to the administration of libraries all over the world must affect every institution, however small, especially if it is to be kept in touch with this new order of things. This means expansion, new experiments to be tried, the adoption of many new features which have been successful in other libraries, various schemes for arousing public interest in our own institution, which are attempts in the right direction, but which will bring with them increasing care and responsibilities, which your librarian must assume. In May of this year my labors in the library have extended over a period of 25 years. I have served my day and generation here, and the time has arrived when younger and stronger hands than mine should continue the work and carry it on to a fuller completion."

BROWN, Miss Edna A., Pratt Institute Library School, class of 1900, succeeds Miss Mary Titus as cataloger at the Lafayette College Library, Easton, Pa.

CLARKE, A. A., for a number of years librarian at the Y. M. C. A., Albany, N. Y., has been engaged to take charge of the 23d street department of the New York Y. M. C. A. Library.

COWING, Miss Agnes, Pratt Institute Library School, class of 1902, has been engaged as assistant by the Pratt Institute Free Library.

DOWNEY, Miss Mary E., assistant librarian at the Field Columbian Museum, Chicago, has been appointed librarian of the Ottumwa (Ia.) Public Library. Miss Dorothy Schmidt, of the senior class in library science at the University of Chicago, succeeds Miss Downey at the museum library.

EXSIGN, Miss Katherine W., who is just finishing her course in library science at the University of Chicago, has been appointed children's librarian of the Duluth (Minn.) Public Library.

EUSTIS, Miss Harriet Sigourney, assistant at the Forbes Library, Northampton, Mass., and later classifier at the Watertown (Mass.) Public Library, has been engaged as cataloger at the Public Library, Washington, D. C.

FORD, Worthington Chauncey, head of the department of statistics of the Boston Public Library, has been appointed by Mayor Low, of New York City, to devise and put into effect a comprehensive and business-like system of keeping the municipal accounts of New York. Mr. Ford, who was formerly head of the United States Bureau of Statistics, is recognized as one of the leading statisticians of the day. His present appointment is the result of action taken by the Committee on City Accounts of the Merchants' Association of New York.

FREEMAN, Miss Marilla Waite, has resigned her position as librarian of the Michigan City (Ind.) Public Library, to become librarian of the new Davenport (Ia.) Public Library, which is being built with a Carnegie gift of \$75,000. Her resignation will take effect Sept. 1. Miss Freeman was for two years upon the staff of the Newberry Library, Chicago, and was for three years in the library of the University of Chicago, during her residence as a student in the university. Directly after her graduation from the University of Chicago in the class of '97, she organized and became librarian of the Michigan City Library, which has been effectively developed in its relations with the schools and with the community at large. Miss Freeman is a member of the American Library Association, and was last year president of the Indiana Library Association.

HOOVER, Miss Louisa M., assistant librarian of the Brookline (Mass.) Public Library, has been appointed librarian of that library, succeeding Hiller C. Wellman, resigned. Miss Hoover, who was born in Boston, has been a resident of Brookline for nine years, and entered the service of the Brookline Library as desk assistant, in 1895. She became assistant librarian in December, 1897. Miss Hoover has proved her executive ability in her relations with the library, and has won many friends among Brookline readers, and her promotion has been received with general satisfaction.

HOWARD, Miss Lucy E., Pratt Institute Free Library, class of '94, has been engaged as cataloger by the library of the American Institute of Mining Engineers, New York City.

McILVAINE, Miss Caroline M., head cataloger at the Newberry Library, was appointed librarian of the Chicago Historical Society, Nov. 26, 1901, to succeed Mr. Charles Evans. Miss McIlvaine began library work at the Newberry Library under Dr. Poole.

RAY, Miss Elizabeth C., of the Forbes Library, Northampton, Mass., a graduate of Drexel Institute Library School, has been appointed first assistant in the new Public Library at Holyoke, Mass.

SMITH, Miss Bessie Sargeant, graduate of the New York State Library School, class of '97, has been appointed librarian of the Carnegie-Stout Free Public Library, Dubuque, Ia.

VAN HORN, Miss Harriet, for the past nine years librarian of the Lockport (N. Y.) Public Library, has resigned that position.

WAIT, Miss Marie F., librarian of the New Jersey Historical Society, has resigned that position. Miss Wait, who was previously on the staff of the New York Public Library, had reclassified the collection of the Historical Society, and partly reorganized it in its new quarters in the former building of the Newark Free Public Library. She has been succeeded by Miss Maud E. Johnson, of Pratt Institute Library School, class of '99.

Cataloging and Classification.

BISHOPSGATE INSTITUTE, *London*. Descriptive catalogue of books contained in the lending library; comp. by C. W. F. Goss, librarian. London, 1901. 6+639 p. O. bds.

An elaborate and interesting catalog, best described, perhaps, as an annotated dictionary finding list. Entries are, when possible, kept within one line, and are limited to title and number of volumes. Periods covered, in historical and like works, are indicated in brackets. The annotations are the special feature of the list. They have been prepared especially for books whose titles are "obscure and perplexing," and they are on the whole admirable for brevity, lucidity and presentation of essentials. There are many analyticals and cross references. An idiosyncrasy noted is the use of the phrase "Look under" for the familiar "See."

The BOSTON BOOK CO. *Bulletin of Bibliography* for April contains a good annotated reference list of books and articles on Alfred the Great, by Miss Mary Medlicott, of the Springfield (Mass.) City Library; a further instalment of Cole's "Bermuda in periodical literature" and a record of the "Best editions of Robert Louis Stevenson," compiled by Miss Isabel Ely Lord.

CINCINNATI (O.) P. L. Annual list of books added, 1901: being also quarterly bulletin no. 150. Cincinnati, 1902. 6+96 p. l. O.

Includes nearly 300 titles of books and music for the blind.

CINCINNATI (O.) P. L. Finding list of English prose fiction. Part 1: Authors; Part 2: Titles. Cincinnati, published by the trustees, 1902. 184 p. Q.

A well-printed title-a-line list. Full names are carefully given, but entries are made under pseudonyms when well known.

DETROIT (Mich.) P. L. Bulletin no. 13, of books added, 1901. Detroit, 1902. 262 p. O.

ENOCH PRATT F. L., *Baltimore, Md.* Finding list: branch libraries. 8th ed., April, 1902.

Baltimore, published by the library. 12+268 p. O.

A condensed classed list of all books contained in the branch libraries. Appended to each entry is an indication of the number of the branch or branches in which the book listed is to be found.

The KANSAS CITY (Mo.) P. L. *Quarterly* for April contains a 10-page list of the works on philosophy contained in the library.

McCURDY, J. H., M.D., and BOWNE, J. T.

Classification for physical training; with a complete index; for the use primarily of physical directors and others engaged in the study or practice of this subject. 2d edition, rev. and enl. Springfield, Mass., 1902. 19 p. D.

The first edition was noted in L. J., April, 1900, p. 195. To be obtained of the librarian Y. M. C. A. Training School, Springfield, Mass.

The NEW YORK P. L. *Bulletin* for April is mainly devoted to a classed list of works relating to prices. The arrangement is chronological, under broad class headings, the second division being devoted to prices of various articles, arranged alphabetically under the name of article. The works listed are almost all contained in the Astor building.

The NEWARK (N. J.) F. P. L. publishes in the March-April number of its *Library News* a partial list of the books shelved in its children's room.

The SALEM (Mass.) P. L. *Bulletin* for April contains half a dozen short special reading lists, on Engraving, Book illustration, Bookbinding, Book-plates, Victor Hugo, Edward Everett Hale.

The STIKEMAN METALLIC BOOKSTACKS are now supplied by the firm of Clarke & Baker, New York, with which George Stikeman, owner and patentee of the bookstacks, will hereafter be associated, having severed his former connection with A. B. & W. T. Westervelt.

Bibliography.

CRIME. Hall, Arthur Cleveland. Crime in its relations to social progress (Columbia University studies in history, economics and public law, v. 15). New York, Columbia University Press, 1902. 17+427 p. 8°.

Contains a nine-page bibliography.

DOMESTIC SCIENCE. The *Pratt Institute Monthly* for March is a "Domestic science number," devoted to the annual report of that department of the institute. It contains (p. 139-146) a classed bibliography of the subject, including bacteriology, chemistry, and education, as well as cookery and household economic topics.

IVORY. Cust, A. M. The ivory workers of the Middle Ages. New York, Macmillan, 1902. 19+170 p. 12°, (Handbooks of the great craftsmen.) \$2.

The references in the three-page bibliography are nearly all to works in the French and German languages.

JOHNS HOPKINS UNIVERSITY. Department of History, Politics and Economics. Herbert B. Adams; tributes of friends, with a bibliography of the Department of History, Politics and Economics of the Johns Hopkins University, 1876-1901. (Johns Hopkins University Studies in Historical and Political Science, series 20. Extra number, April, 1902.) 67+160 p. 8°.

The bibliography (160 p.) is a record of the publications of the graduates and contributing members of the Department of History, Politics and Economics during 25 years of its existence, terminating with the academic year ending June, 1901. It covers the whole period of Professor Adams's active connection with the university, and represents the intellectual activity of the men who grew up with him and under him. The bibliography is arranged alphabetically by author. It suggests in a most striking way the influence on American life of a single department of a single university.

LASTEYRIE, Robert de. Bibliographie générale des travaux historiques et archéologiques par les sociétés savantes de la France, dressée sous les auspices du ministère de l'instruction publique. Tome 3, livraison 4: Seine. Première partie, no. 40067 à 61847. Paris, Leroux, 1902. 4°, 4 fr.

LINCOLN, C. H. Manuscripts in the Library of Congress. (*In Annals of the American Academy of Political and Social Science*, March, 1902. 19:102-105.)

Gives an account of some of the valuable manuscripts in the library.

"THE LITERATURE OF AMERICAN HISTORY," edited by J. N. Larned for the American Library Association is to be published by Houghton, Mifflin & Co., on June 14, in time for the Magnolia meeting. In preparing this "Guide," which comprises more than 4000 titles, Mr. Larned was aided by 40 specialists drawn from the leading universities, from the veteran critics of the most trustworthy journals of America. Each contributor chose the works within his own field, and has said about each of them just the word of description and criticism that a reader or student should hear. Mr. Larned has remembered that in many cases a reader, a student, a purchasing committee may be embarrassed by the riches set

forth in this big book. He has, therefore, asked Prof. Channing, of Harvard, to select from all the titles three lists of very great value: the first for a school library, the second for a town library, the third for a good working library.

TRUSTS. Library of Congress, *Division of Bibliography*. A list of books (with references to periodicals) relating to trusts, by A. P. C. Griffin, chief of Division of Bibliography. 2d ed., with additions. Washington, Gov. Print. Office, 1902. 42 p. O.

VIRGINIA NEWSPAPERS. Virginia newspapers in public libraries: annotated list of Virginia newspapers in the library of the Virginia Historical Society, *continued*. (*In Virginia Magazine of History and Biography*, January, 1902. 9:289-297.)

This instalment deals with Richmond newspapers.

WESTMINSTER CONFESSION. Warfield, Benjamin B. The printing of the Westminster confession, III: In translation. (*In Presbyterian and Reformed Review*, April, 1902. 13:254-276.)

The translations into 15 different languages of the Westminster confession are here described and annotated. At the present time only seven or eight versions are in circulation.

INDEXES.

The SUPERINTENDENT OF DOCUMENTS, Washington, D. C., has issued the "Document index" (consolidated index") for the second session of the 56th Congress, covering the (236 p. O.)

TITLE-PAGES AND INDEXES.—The American Library Association committee on title-pages and indexes to periodicals has issued a circular letter to publishers, urging improvements in the form and method of issue of these publications. The recommendations presented are as follows: 1, title-pages and tables of contents should always accompany the number completing a volume, and not the first number of a new volume; 2, title-pages and contents should be furnished with every copy of the issue of a completing number; 3, they should be printed on a two, four, or eight-leaved section, separate from other printed matter, either advertising or reading; 4, it is highly important that the section comprising title-page and contents (or index) should be secured by pasting or stitching to the number which it accompanies and not be sent laid in loose; 5, publishers are requested to have all advertising sections printed on separate sections if possible.

The recommendations are accompanied by a careful statement of the reasons that make them desirable, and a review of the special faults of the present diversity of practice.

Boston-Magnolia Meeting

A. L. A.

MEMBERS of the A. L. A., visiting the Boston-Magnolia Meeting, are cordially invited to visit the offices of our Boston Branch, located in the Tremont Building at the Corner of Beacon and Tremont Streets. Those interested in the purchase of equipments for libraries will find this a convenient opportunity to inspect samples and secure prices or information of our lines.

The beautiful State House Library, the Congregational House Library on Beacon Street, the Boston Medical Association Library, and the Massachusetts Historical Library, both at Boylston Street and Fenway, all contain interesting examples of our "all steel" stack work. The modern stack rooms in Boston have been *exclusively* equipped with our product.

We shall also have at Magnolia an attractive and representative exhibit of our METALLIC LIBRARY FURNISHINGS to which the attention of visiting librarians is respectfully directed.

ART METAL CONSTRUCTION CO.,

Jamestown, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK.

LIBRARY FURNITURE ANDINTERIOR EQUIPMENTS . .**LIBRARY DEPARTMENT****280 Broadway****Stewart Building****New York**

WE ARE pleased to announce to our friends, Trustees of Libraries, Librarians, Architects, and others interested in the library world, that we have associated our interests in the complete equipment of the modern library.

Our combined experience in this direction, with increased facilities, enables us to plan and arrange the details for the administration part of the library, from the storing of books to the necessary adjuncts for their proper distribution, including the furniture for the various departments.

Consultation is particularly requested when the preliminaries are being arranged for new buildings, so that we can give our assistance by making practical suggestions to bring about the best results.

Our business connection is the outcome of demands for the working equipment of the library in a complete condition under one contract.

We make gratified acknowledgment to our friends for past favors and trust to merit their future patronage.

Respectfully,

**CLARKE & BAKER, INC.
GEORGE STIKEMAN**

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 net.

Unmounted, on 24 sheets in portfolio. \$25 net.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

NOW READY

The Annual Literary Index, 1901

Including Periodicals, American and English; Essays, Book-Chapters, etc.; with Author-Index, Bibliographies, Necrology, and Index to Dates of Principal Events. Edited by W. I. FLETCHER and R. R. BOWKER, with the co-operation of members of the American Library Association and of the *Library Journal* staff.

THE ANNUAL LITERARY INDEX contains: (1) The index to periodical literature for the year 1901, making the fifth annual supplement to "Poole's Index to Periodical Literature," 1892-1896; (2) An index to essays and book-chapters in composite books of 1901, making the first annual supplement to the new edition of Fletcher's "A. L. A. Index to General Literature," published in 1901; (3) An author-index, both to periodical articles and to book-chapters; (4) A list of bibliographies issued in 1901; (5) A necrology of authors for 1901, extremely useful to catalogers; (6) An index of dates of events in 1901, furnishing a useful guide to the daily press.

One vol., cloth, similar to "Poole's Index" and the "A. L. A. Index," \$3.50, net

Magazines.

I will undertake to supply any magazine or review published, at a price per copy depending upon its market value, or the cost of finding same, if not on hand. I have considerably over 500,000 magazines in stock, and the assortment is as varied as the production of the periodical press for the last one hundred years. A Business-like query with list of wants will be met by a prompt and business-like reply.

A rare chance for Librarians!

C. F. Händel's sämtliche Werke, herausgegeben von Fr. Chrysander, 96 v., bound, cheap.

Boyveau et Chevillet, 22 Rue de la Banque, Paris.

Specifications of Patents (London), run from 1876 to date, forming 2161 vols., of which 1556 are bound. What offers?

SPECIAL NOTICE.

CLASS IN HAND BOOKBINDING.—Miss Elizabeth Griscom Marot will take three or four pupils in hand bookbinding during the summer, at Chappaqua, New York. Chappaqua is beautifully situated thirty miles north of New York City. Miss Marot is a pupil of Cobden-Sanderson of London. Before going abroad she studied a year in this country. She was also an art student for a number of years at the Philadelphia Academy of Fine Arts. Anyone wishing further information in regard to the class should apply to Miss MARY S. MAROT, 1230 Amsterdam Avenue, New York City.

SITUATIONS WANTED.

A YOUNG LADY with degree of A.B., and a student of two years in the Albany Library School, with seven years' subsequent experience, would like a position. Letters and references. Address D., care of LIBRARY JOURNAL.

A LIBRARIAN having had the training of the New York State Library School and six years of experience, desires a position. Address N. Y., care of LIBRARY JOURNAL.

LIBRARY DEPARTMENT

We have sold books to librarians for fifty years.

We have the largest stock in the largest book market of the country.

We fill orders promptly, completely, and intelligently.

We have classified our stock of books and knowledge, FOR YOUR CONVENIENCE, into

- (1) A Standard Library Catalogue of 2500 Books—a model library.
 - (2) Semi-Annual Clearance Catalogues of Book Bargains.
- We Make a Specialty of Pricing Lists.

33-37 East 17th Street, Union Square, North, New York

HENRY MALKAN,

Library Department.

FOR several months past we have been telling librarians through the columns of *The Library Journal* how well we can fill orders, and at what very low prices we can furnish books. The result has surpassed even our most sanguine expectations and we don't mind saying that we feel very much flattered by the hearty responses which we have received. In the beginning it was rather uphill work, as some of the librarians—who are now very good customers—informed us that they thought it rather presumptuous on the part of a new house to make such claims, but a trial order convinced them that we could do as we stated and subsequent orders have strengthened the conviction that we give the most prompt service and the lowest prices. There are several very good reasons why we are able to maintain this enviable position, and a personal examination of our stock and quotations on some will prove conclusively that we brook no competition. We mention a few sets which are not usually found in book-stores, as the majority of them are sold by subscription only.

THERE is much of interest and encouragement in the reports made by various libraries, and summarized elsewhere, upon the use of the printed catalog cards issued by the Library of Congress. It is, of course, too soon to secure full data of their use, to analyze the various elements of their cost, and to draw conclusions as to the actual results of the enterprise; but it is evident that the libraries using the cards are practically unanimous in approval of the service rendered. Greater promptness in delivery of cards is urged by several, but on the other hand many state that cards constantly accumulate before the books for which they were ordered have been received. There are some minor criticisms of form, but on the whole the cards are regarded as excellent, and these criticisms are likely to be obviated as the system is perfected and developed. Certainly in time these printed cards should represent the highest attainable standard of bibliographical skill and accuracy, for they are necessarily subjected to the scrutiny of expert catalogers all over the country, and upon indication of error the Library of Congress has adopted the rule of reprinting and supplying a corrected card without charge. It is difficult to determine as yet how far the use of the cards reduces cataloging cost to subscribing libraries. In some libraries, when the clerical work of ordering, checking and otherwise handling the cards is allowed for, the saving is regarded as practically nothing; in others, while there has been no reduction in cataloging force, the catalogers have been able to accomplish other needed work that under ordinary circumstances could not have been undertaken. On the whole it seems evident that there is a margin of economy in the use of the printed cards; and even where this is not demonstrable their superior attractiveness counts strongly in their favor.

DESPITE the fact that the issue of the printed catalog cards marks a long step forward in co-operation and uniform methods, one good result of their use has been to lessen the power of the fetish of uniformity. Librarians are gradually coming to see that if their

card catalog is up to date and conveys its information with clearness and accuracy, it is of little moment whether all the cards are in vertical handwriting or in disjoined handwriting, or whether some cards are written and some are printed, or whether all cards are unvarying in their use of commas, semicolons and size symbols. The willingness to use printed cards so far as possible and to accept variations from individual methods of cataloging is a sign that red tape formalism is giving way to a broader and more practical point of view. Uniformity is a very good thing in catalogs as in many other lines of work; but when it sacrifices essentials to details, the product to the machinery, it becomes an incubus and a hindrance. The Library of Congress has been untiring in its efforts to adapt this central card system to many and varying requirements, and librarians have shown a gratifying willingness to waive personal preferences for the common advantage. With this desire manifest on either side, the future of the enterprise is a most encouraging one.

Co-OPERATION in bibliographical work is again in evidence in the long-awaited "Guide to the literature of American history," edited by Mr. J. N. Larned and issued by the publishing board of the American Library Association through the generous aid of Mr. George Iles. The volume, which is now in press, will be ready for presentation at the Magnolia meeting, and will undoubtedly take rank as one of the most notable bibliographic publications of the year. It exemplifies in a striking manner the principles of the "evaluation" of literature, of which Mr. Iles has been so long a champion, and it is an elaborate extension of the kind of work done in the previous "List of books for girls and women" and "Bibliography of fine art." The immense field of American historical literature is here covered by a corps of annotators, themselves historians or experienced in historical work, whose aim has been to note, briefly and emphatically, the values, defects, and special features of this mass of material. In its scope the work is meant to be com-

prehensive, ranging from the literature essential to the writer of an historical monograph, to the best text books for a grammar school teacher. To its preparation Mr. Larned has made the free gift of his services as editor, and Mr. Iles has contributed time and money in most generous proportions. Of the merits of the work it is as yet too early to speak. No enterprise of this character is likely to be free from defects or inconsistencies; but on the other hand such work as this stands for cannot fail of a wide, practical usefulness. In the meantime we can bespeak in advance a cordial recognition on the part of librarians for the disinterested services to bibliography of which this volume is an evidence and an expression.

As this number of the JOURNAL leaves the press, the American Library Association opens its twenty-fourth annual meeting. Its members have before them a week crowded with business, and likely to bring forth results of interest and importance in various fields of library activity. To the library workers gathered at Magnolia the JOURNAL extends cordial greetings, and best wishes for a pleasant and successful conference.

Communications.

BOOKS FOR THE BLIND: INFORMATION DESIRED.

THE Library of Congress is desirous of obtaining from the libraries throughout the country information regarding the books for the blind, showing the total number of books, music and magazines in different systems, the number and class called for most frequently, and the number of blind using the library, also whether readings are given, and the attendance.

All information will be appreciated, as a representative of the Library of Congress will attend the International Congress for the Amelioration of the Condition of the Blind, at Brussels, August, 1902.

ETTA JOSSELYN GIFFIN,

In charge of Reading Room for the Blind.

LIBRARY OF CONGRESS,
Washington, D. C. }

INDEX TO A. L. A. PROCEEDINGS.

WE librarians are persistent in disciplining publishers who fail to provide good indexes for their books, some even holding that copyright should be withheld from such books, but our own proceedings are issued year after

year unindexed. When our membership was 100 we had some excuse; when it is over 1000 we certainly should provide a thoroughly good index to the proceedings and not compel people to depend on the annual index of the LIBRARY JOURNAL. Many of our members do not take the JOURNAL, and those that do would find the volume of proceedings vastly more useful if it were thoroughly indexed. None of the work would be lost, as it would be all done for the JOURNAL index, and the only expense would be typesetting and presswork of a few pages. The executive board ought to order at its next meeting that the proceedings hereafter shall be fully indexed and make the small needed appropriation. MELVIL DEWEY.

LIBRARY LEGISLATION IN GEORGIA.

GEORGIA has passed a law allowing any municipality to raise money by tax and permanent appropriations for library purposes. "Any such sum or sums of money so appropriated shall be expended under the direction of the board of trustees of the public schools of said city, or the board of education, or the body controlling public schools in said city." The public library is put entirely in the hands of the school authorities.

This plan was tried in New York state for 50 years and found wanting. In a paper read before the State Teachers' Association at Syracuse in 1895, W. R. Eastman, state library inspector, gave the following reasons in favor of a separate management: (1) to hold public attention; (2) to secure the best management; (3) to secure outside help. When they are combined the library inevitably becomes subordinate to the school and suffers for want of attention from both the board of control and the public. This is bound to be the result, even where a school board has the best interests of the library at heart. With a separate organization the library has trustees chosen for its special service, who are specially and aggressively interested in its welfare. The library thus has an individual character with greater power to develop and enlist the sympathies of public spirited people in its behalf. The school as well as the community at large reaps the benefit of this independent growth and larger development of the library.

The public school and the public library are both essential factors in a complete system of popular education and as such they should work together in perfect harmony. But the best results have been secured where they are maintained as two distinct institutions. The experiment of combining them was a costly one in New York state. Georgia has not made a state appropriation for this purpose and the funds locally raised may be most carefully expended. But her law is open to the same objection and there is danger that the result will be equally unsatisfactory.

WILLIAM F. YUST.

STATE LIBRARY,
Albany, N. Y. }

THE LIBRARIAN: REQUIREMENTS AND DUTIES.*

BY SAMUEL GARDINER AYRES, *Librarian of Drew Theological Seminary, Madison, N. J.*

IN the first place we must *be* in order to become first-class librarians. I do not mean to be in the sense of existing but in the ethical sense. The first postulate of right being anywhere is character. Character determines conduct; determines choice, even of books. Character also determines culture in the truest and best sense. One cannot grow a real genuine culture upon an ugly character. Morals and culture go hand in hand. Something akin to culture may be manifest in persons of no culture; but it is fictitious and in the end will so prove itself. All are endowed with memory, with power to think, and with opportunity to act, but the memory may be filled with the offscourings of the world, and the thought with the refuse of the street. Culture implies right companionship. Companionship begets likeness. The books of power beget power. A Virgil dreams of emulating Homer and writes his *Æneid*; a Lincoln lives in thought with a Washington and copies some of his great qualities. Many another person of less fame has added another cubit to his stature by dwelling in the presence of the great and good. So Lowell is absolutely correct when he says that "a man's mind is known by the company it keeps."

Culture is the prime requisite for the librarian. One may pass through all the schools and universities of the world and still be uncultured. But undoubtedly the best road to culture lies in that direction. Nevertheless, it seems to me that there is something wrong in our system of education, when a man can go through a long course of training and not meet the great masters at all, or if at all only in a purely scholastic way. We study too much *about* things, and do not study enough the things themselves. It has been my lot for years to study men from many of the colleges of the United States. I regret to say, that too often they appear to be totally

ignorant of the world's greatest masters. In the present clamor for the specialist we have gone too far and neglected the fundamentals. Every year we have to acknowledge that there is a vast difference between knowledge and culture. One may be master of all the languages, art and science of the universe and yet be totally devoid of culture. Ruskin has said it in a better way: "You do not educate a man by telling him what he knew not, but by making him what he was not."

Next after culture I would say that the librarian in order to be successful must have a love for this work. This is necessary in any calling. It marks the difference between the mechanical and the real librarian. If you cannot muster this love at the beginning of your career, you had better leave this work for something else. But if you will stay in the work after you have found this out, it were better for you if you had never been born. The endless details, trying at best, will deteriorate into absolute drudgery. Even if we do love the work, how the details do grind at times into our very fiber! The remembrance of "our public" and the service we may render them enables us to complete what we have undertaken and we go to the next task with unabated vigor.

It is a proverb that poets are born and not made. It is largely true of the librarian that there must be natural aptitude for the work. Indomitable will can overcome almost any difficulties. One can make oneself like distasteful work. Yet the fact remains that the best work is done from love of the work and not of necessity. So again we must say with Lowell:

"No man is born into the world whose work
Is not born with him; there is always work
And tools to work withal, for those who will."

The next requisite necessary for the librarian is *helpfulness*. Woe be to that librarian who has not that requisite. One might as well retire into a nunnery and tie red tape

* President's address, New Jersey Library Association; read at Bi-state Library Meeting, Atlantic City, N. J., March 15, 1902.

forever, if lacking this characteristic. Just here let me say a word in regard to our attitude to the public. Should we aid in research or should we tell the reader to be content with what can be found in the catalog? Not long since a student came to our library to look up some point of interest suggested in the classroom. I spent an hour or more in helping him find what he needed and what would perhaps taken him three hours to find. A new assistant suggested after the young man had gone, "You should not have spent so much time with that man. You should have spent a little time in showing him how." I think we were both right. The reader in general is not as well acquainted with the inter-relation of subjects as the librarian gets to be, so that we really have the key to the solution of many a difficulty. The main thing for us to do is to make our libraries available to the reader. On this will in large measure depend the usefulness of our library.

The word *co-operation* is much used in these days. It has invaded the library world. The librarian must co-operate in every undertaking that involves library use in the town where located. The public school, debating club, women's club, doctor, lawyer, teacher, preacher, parent, child, all will come to the public library for ministration, inspiration, help. The library is more than a place of amusement. The public library has come to be the headquarters of the largest graduate and undergraduate body of students in the world. A large majority of the people get their education outside of the schools. Some of the greatest scholars we have ever had were not educated by the school but by the library. The presence of a young workman in the British Museum every noon at the lunch hour did not excite remark. No one thought of him as likely to be of note. But George Smith the Assyriologist and finder of the famous flood tablet was worthy of attention. His work holds all his successors under lasting obligation.

I say not with lament that the library has changed its position and work in the community. It is a trite remark that the library of other days was a mausoleum of books. Sometimes it seems to me that the modern library is a hospital and that the patients all

have the same disease—an attack of fiction. With some the disease is chronic, and how to cure it may be a desirable task for the librarian—and one that some have not been slow to undertake. But seriously the librarian has a great work to do in introducing charming friends to the lifelong acquaintance of young people, and here comes one real joy of our work. There is a joy in work for work's sake, but there is a greater joy in work for others' sake.

There is another requisite for the success of the librarian. There must be genuine *business ability*. This involves a knowledge of how and where to buy our books. This knowledge comes largely from experience. Fifteen years' experience and an average increase of 4000 vols. per year, I think give me the right to speak on this subject. In that time the library under my care has increased from 12,000 vols. to over 72,000. At the beginning of my buying I wrote to several of the leading librarians as to the method of purchase. I found that for books published in this country there was no uniformity of practice. So I began to study the subject for myself. I will give you the results in a few *don'ts*.

1. Do not buy all of your books in one place.

2. Do not as a rule purchase from the publisher directly. An old book dealer once said to me "every publishing house has a back door as well as a front door." I did not quite know what he meant then, but I do now. It is perfectly legitimate, too. I will give you an instance. At a certain publisher's I could get only 33 1-3 off, but after awhile I found that I could get 40 off on the same books next door. How did it happen? In making various deals they had exchanged books. I admit it was not quite fair to the publisher, but the discount was given in view of a somewhat larger purchase of this publisher's own stock.

3. Do not fail to connect yourself with some good dealer in second-hand books. He has more time and understands the general field better than any publisher. He is also more apt to be without bias toward authors and books and will be a real help in securing the best on subjects with which you are least familiar. The dealer will serve you in ways you little expect. He will have editorial copies, books sent out for review purposes

and after review sold. They are thus second-hand books, but exactly as good as new. These you can buy at much less than the publishers can afford to sell, for they were bought by the yard. Then the dealer frequently has remainders of first-class books at very low prices, and books you ought to have. Sometimes you may have to wait a little to secure what you want. For instance by waiting a couple of months I was able to secure "Who's who in America," the new edition, at less than half price, viz.: \$1.25, and this is a common experience. Of course there are of necessity some books that you must have as soon as published, or else lose the circulation of them. But these are few. Then, too, there are some books published in limited editions that you cannot afford to pass by. I thought that this was the case with the "Jesuit relations," and after waiting as long as I dared, secured number 625 out of the 750 sets published. More than once since have sets been offered for at least \$75 less than the publisher's price. Again, the dealer will do for you what the publisher cannot. Almost every library has one or more special collections, and it is desired to make the collection as complete as possible. The dealer can help you very much in your collecting. I can best illustrate what I mean by another leaf from the note book of my experience. Of course in a theological library one of our distinctive aims is to secure all we can bearing on the history of the various religions and denominations of the world. On a certain day I found that a dealer had secured a collection of some size relating to the Friends or Quakers. Much of this I secured for a small sum. I was interested some two years since to have two leading Friends from York, England, tell me that they thought I had some rarities not possessed by the Friends' Library at York, a collection which is, I believe, considered quite complete. Many similar instances have occurred in my experience.

The days are not long enough for the librarian; something must be left undone. What shall it be? That is a question largely determined by the personal character of the librarian. One library rule not found in any of the manuals I know, is worth embossing on the memory. "Do the duty that lies nearest

you." If you do this you will avoid many a conflict. Again I would say that the simplest duties must be done first, the more complex after. Availability of material must come before scientific method. If it is best found through the scientific method well and good. If not and some other way suggests itself, there must be enough courage to take that way. The truest science is the simplest. The complex may or may not be science; sometimes we find it is pedantry. But that which will produce the greatest results in the shortest time is in most cases the best. For my part I do not consider library science as finally formulated. Our work is yet in its inception. The tendency of the time is beginning to be to centralize around local centers. In the old days the buyer for the firm was an important factor. He had to go to the nearest large city to do his buying. Now it is no longer necessary. The travelling man comes to him and he is as well served as formerly. What is true of commercial life is true of other kinds of life. I believe that in time every library will have its wagons, corps of messengers and deliverymen, who will not only deliver books, but solicit orders for them in a systematic way. In fact, if the people won't come to us we must go to them, and do as everyone is doing in the business world. Home delivery has already come to stay in some quarters, and the work will grow.

There is a readjustment of life now taking place. In this readjustment the library should be the center of the community. It will be so if we make it so, for after all the library will be just what we make it. Here all creeds and possibly all classes and race distinctions are ignored. If we remain the servants of all and forever keep in the background the idea that the library is ours, we shall have some measure of success. Our public must take precedence of our work. A library successfully managed can raise the tone of a whole community. Our real success will not be measured by our scientific knowledge of our work, by the size and value of our library, nor by the statistics of our attendance and circulation, but by our ability to transmute character into character, and this implies what I said in the beginning—we must *be* in order to *do*.

INTRICACIES OF BINDING.

By CHARLOTTE MARTINS, *Princeton University Library.*

PERSONS not accustomed to preparing material for the binder consider this an easy task, and may lightly dismiss it with the remark, "Oh anyone can do that." Not so. Your magazine must first be collated, and not unfrequently a signature is wanting, or leaves have been cut out, or a whole number is missing, and if it is a foreign magazine weeks may elapse before the missing part is replaced, and sometimes it is out of print, and you can never get it. English and American magazines can generally be obtained more easily, but sometimes they too are out of print and your set is spoiled.

If your volume is complete a pattern volume is found, a binder's slip made out, and then copied in the binder's book. If the slip is not exactly like the pattern, and the binder follows the slip as explicitly directed your volume is lettered wrongly, and it has to be returned and corrected or uniformity is destroyed.

It is astonishing how many mistakes can be made even when copying from a pattern.

Some libraries send a pattern with each volume to be bound, some depend on rubbings, but there is more risk with the latter, for even if the size of the letters and panels are correct the margins may be cut too much or too little, and then the volumes are too long or too short for the rest of the set. It is harder also to keep the colors uniform, for dark green may be a shade darker or lighter than the rest of the set, red is especially difficult, dark brown admits of a number of different shades, and even in duck and canvas the shades vary.

Another intricacy is in the matter of the choice of material. One's first choice is almost always for morocco. A library with all the books bound in half morocco would be a dream of beauty and utility, but unfortunately most libraries have to consider the question of expense, and few can afford this luxury for all the books, nor would it be worth while. Few novels, for instance, are worth rebinding in half morocco, the paper would wear out long before the binding. Sheep wears well for a time, and one can

hardly imagine law books in any other binding, but with age the leather pulverizes into a fine dust, and finally peels and breaks. One of the most durable bindings is the ugly duck which is said never to wear out, and therefore like the "ugly duckling" of fable has for those who have eyes to see, the highest beauty, in this case the beauty of usefulness.

A little more attractive are the plain and art canvases which wear nearly as well as the duck.

Care must be taken that sheep is not palmed off on you for goat, and that you do not pay for morocco and get roan or cowskin or even cloth. Cowskin is a fairly durable leather both as to looks and wear, provided that it is cowskin, the outside of the hide, and not skiver, the inside.

Let us note a few specific cases of the intricacies of binding, especially of the foreign periodicals which may be considered as types.

The Germans carry their love of hard work even into the making up of their periodicals. Take the *Jahresbericht über die Fortschritte der Classiker Alterthumswissenschaft*, sometimes better known as Bursian's *Jahresbericht*. It is divided into five abtheilungen; the "Griechische klassiker," the "Lateinische klassiker," the "Alterthumswissenschaft," the "Bibliotheca philologica classica," and the "Biographisches Jahrbuch." Every one of the twelve numbers has a few pages for each part, and as the pages of one part often overlap the pages of the next, care has to be exercised when the volume is prepared for the binder, lest the parts be mixed, and confusion be the result.

Another, though not so intricate as the first, is the "Neue Jahrbuch für Philologie und Paedagogik."

This has but two abtheilungen, and if a person exercises ordinary intelligence, it is prepared without much trouble. Our next example is the "Jahresberichte für neuere Deutsche Literaturgeschichte," which needs even more care than Bursian's *Jahresberichte*, for there is nothing on the covers to indicate that it is not the most innocent of

periodicals. The only indications are i, 9, iv, 6, ii, 2, iii, 1 at the top of the several pages, and iv, 6 may start the volume. The parts must be carefully collated or your volume is veritable "pi." The French periodical types are *Bulletin des Sciences Mathématiques* and the *Revue des Bibliothèques*, the first is in two parts, but this is easily discovered in any library where the magazines are collated. The *Revue des Bibliothèques* publishes special catalogs with separate paginations which sometimes run through two years.

English and American periodicals are seldom printed with more than one part, the *Journal of Anatomy and Physiology*, and the *Journal of the Geological Society of London*, being the only exceptions that I now recall, and in these the pages are numbered for the two parts in Arabic and Roman figures so that it is easy to tell to which part they belong. The greatest trouble with the English and American periodicals is the too frequent change of name. Our last example is the "Publications" of the Palaeontographical Society of London. This society issues one volume each year, which comes bound in board covers and contains parts of four or five monographs. This binding must be cut off, and as the several monographs are concluded, bound in separate volumes. A title-page, table of contents, index, and directions for the binder come with the concluding portion of the article, so that if a little care is exercised the work is not difficult, the trying part of it is the length of time taken to complete the monographs. We have parts waiting for completion which were begun in 1856, 1863, 1867, and so on down to date.

Having prepared our periodicals, what shall we do with our theses, dissertations, and the miscellaneous pamphlets which most libraries have by the thousands? Shall we bind them separately, or make a volume of pamphlets on kindred subjects, or keep in pamphlet boxes? Something must be done with them. Mr. Spofford in his "Book for all readers," has treated this subject so fully that I will only say that our preference is to bind monographs, however thin, separately in a neat half cloth binding which costs only 8 cents each, unlettered, but to put consecutive series chronologically arranged, such as college catalogs, or booksellers' catalogs, in annual or

five year groups actually bound, or in self binders.

In the case of a very thin book the question arises as to lettering, whether lengthwise of the back, on the side, or the book padded and then lettered in the usual way? Generally the padding is preferable, if the book is valuable, but in this case you must watch your binder and not let him place the blank leaves both front and back of the text, so that the text is wellnigh lost, as a generally intelligent dealer recently had done for us. Blank leaves should of course be at the back.

When rare or expensive books are to be bound explicit directions must be given lest your binder cut down the wide margins dear to a bibliophile and so ruin the value of the book. Some binders have no conscience, or rather no education, in this matter.

Again a question arises, how many times shall a book or periodical be rebound? In the case of an ordinary in print book twice is all it is worth, for by that time the margins at the back are so narrow that the book cannot be sewed in such way that it can be opened conveniently. In the case of an out of print book, the value of the work, and the demand for its use, may make it necessary to rebind as long as there is any margin at the back left to sew.

When the boxes are at length packed and sent to the binder, the librarian can breathe freely, and be thankful until the first box is returned, then troubles again begin. A sample is perhaps returned in this box but no newly bound volume, or *vice versa*. If it is the custom to compare the two and check up in the binder's book, it must either be put aside until its fellow comes or the items checked twice. Or perhaps, if there were a number of volumes of the same periodical, half are kept back, and the samples with them, and each of these samples is wanted by at least three persons.

This is one point, by the way, against sending samples instead of rubbings. Finally it may happen that in spite of all our care one or two are wrongly lettered. If one is fortunate enough to have his library located in a large city, and the binding is done in that city, some of the annoyances may be avoided, but for the unfortunate majority who live in small towns, where the binding all has to be sent away, the intricacies deepen.

THE PRINTED CATALOG CARDS OF THE LIBRARY OF CONGRESS: COMPARISONS OF USE.

THE issue of printed catalog cards from the Library of Congress to subscribing libraries having had some six months' practical trial, it has seemed that it might be both interesting and useful to present such information regarding the methods and advantages of the system as could be furnished from the experience of subscribing libraries. Necessarily this must be a preliminary and inadequate report, for the system is still in a process of adjustment on both sides—to the needs of the public libraries, on the side of the Library of Congress; and, on the side of the public libraries, to the requirements of uniformity and formality imposed by the exigencies of a great central cataloging organization—but it is hoped that it may be later supplemented and extended.

It is desirable first to re-state briefly the outline of the scheme as developed by the Library of Congress. Beginning with November, 1901, the catalog cards printed by the library for its own use—covering current copyrighted books; miscellaneous accessions, current and non-current; and books already in the collection in process of reclassification—were printed in quantities sufficient to supply copies, at cost and ten per cent. additional, to libraries desiring them. Author cards only are furnished, with indication of subject headings for certain groups. Orders are sent in on special order blanks furnished by the Library of Congress, or by checked copies of the *Copyright Bulletin*, *Publishers' Weekly*, or advance galley strips of card entries supplied by the Library of Congress; or in type-written lists. All order slips are checked by the Library of Congress and returned with indication when the cards required can be furnished.

Reports have been received from 20 libraries that have used the cards for from two to six months, and that range from large reference libraries such as Harvard and the John Crerar, to public libraries like those of Hartford, Utica, Salem, and the larger cities. The opinion is practically unanimous that it is as yet too early to judge the practical benefits of the scheme—in saving of expense or

of labor—or to criticise the delays or formalities inseparable from the initiation of such an enterprise. On the whole the verdict of subscribers is strongly favorable, the service is regarded as prompt, and the cards as most satisfactory.

Harvard College Library reports that the Library of Congress cards have been received since November last. Up to April 14, 565 titles were ordered and 2156 cards received, at a cost of \$19.45. Mr. Tillinghast says: "We order: 1, for all copyrighted books of 1900 and later; 2, for other accessions if we find from L. C. proof that cards can be had; 3, occasionally to substitute for cards in our catalog, but soiled or not as satisfactory as L. C. cards (*e.g.*, if L. C. gives contents and our cards do not).

"As books are picked out for L. C. order they are sent to the stenographer, who typewrites the order on special slips. He makes a carbon copy of each, which is filed at the delivery desk until cards are actually in the public catalog. The catalogers take up the books, fill out the order-slip for our official catalog, except that if the author's name needs to be looked up or filled out, it is left untouched. The books are then checked as cataloged and sent to the shelves. When the cards from L. C. come the shelf-marks and subject headings are put on, and if necessary the author's name on the order-slip is made to agree with the L. C. card. (I mention the common case; of course it sometimes happens that we change the L. C. cards to agree with a previous entry in our catalog.)

"We do not compare the books with the L. C. cards.

"We save, therefore, searching for authors' names, and writing out the copy for our printer, keeping the copy, sending it, reading proof. Just how much of this gain is offset by processes which the L. C. cards require. I have not tried to ascertain. It is clear that we gain materially in time, apart from the large gain in cost over the charge of our own printer.

"We order exactly the number of cards required for each title.

"We have received cards (since the service was fully established) within from five to six days from the time of ordering. It often happens that the cards arrive before the book is taken up by the catalogers. Occasionally we get them in two days.

"We have had no serious trouble from disagreement of the cards with our customs. though in a few cases we have discarded the L. C. cards after we had received them. If the difference is vital we change the cards. If it is of small importance we do not.

"We have noted a few errors in the cards and sometimes omissions which we regret, but I consider these as entirely unimportant when compared with the advantages and excellencies of the L. C. cards.

"The Library of Congress supplies forms for notifying them of errors in the cards, and I have made use of these; it then reprints the cards, and, in the case of errors, supply a new set without charge; in case of additional information, it charges for the new cards.

"I think the Library of Congress is doing all that it can to make the work satisfactory, and as its staff becomes more used to the work and acquires precedents, the work will undoubtedly improve in detail. I expect, too, that libraries purchasing the cards will gradually bring their own rules into agreement with those of the Library of Congress."

At Columbia University Library cards for 185 books have been received,* at a cost of \$6.50, exclusive of the clerical or other work done on the cards at the library. The ordering conditions vary somewhat from those of other libraries. Dr. Canfield says: "We receive from the publishers, every two weeks, copies of all recent publications which they think will be of interest to this library. In this way we often secure an American book, and have it cataloged and on the shelves, before the proof slips from Washington reach us. Considering the comparatively small number of current American books which this library purchases—in which respect it is, of course, not at all like a public library, being built up along the lines of the work of the departments of the university—and the further fact that we are so immediately in touch with the great publishing houses of this city, we have decided that it is not profitable

for us to wait for the proof-slips from Washington and then to examine and clip and classify these. Hereafter, therefore, we shall simply make a slip of the title of any American book which we order and send this directly to Washington, receiving the cards in return. This makes it possible for us to catalog our American books at no greater expense than the small amount of time given by one of the subordinate members of the staff in preparing this memorandum slip."

At Amherst cards for 195 books have been received. Three copies of all cards are ordered, thus keeping up two complete author catalogs and one subject catalog. "Most of the cards have reached us within five days of ordering, and we notice an improvement in promptness of service recently. We generally order cards at the same time as the books, and the cards are apt to reach us first. So far as we can tell, we do not make a money saving over our former methods of cataloging, which were perforce very economical and somewhat inadequate, but we value the cards very much for their great superiority to those we were making.

"The two leading points in their favor in this comparison are: 1, their greater fullness (full names, notes, contents, etc.); 2, the immense superiority of print over either handwriting or typewriting for use in a card catalog."

For the University of Nebraska Library, J. I. Wyer reports: "We have used only 64 sets of the Library of Congress printed cards, the total number of cards being 173. Our principal impressions resulting from their use are:

"First. Their cheapness. Even with the time spent in making out order lists for them, verifying, etc., we feel that they are still cheaper than the old method of cataloging by hand, though it is hard to say just what balance there is in their favor on this score. As we duplicate our card catalog for all books sent to departmental libraries, the saving is of course considerable in all such cases. We get regularly the daily proof sheets from the Library of Congress, and use them to a considerable extent in ordering our catalog cards, merely cutting out the item from the proof sheet and sending it to Washington.

"Second. Promptness of service. We

* Reports from the various libraries represented are made up to April 30, 1902.

almost always have the cards before the books, and in the case of foreign books, English especially, we have the cards waiting for weeks. The reason we have used no more of these cards, is because we commenced very late, and have preferred to order only books for which they could surely supply cards. Even if the cost was very nearly as much as cataloging by hand I should still think that the appearance of the printed cards would turn the scale."

At Bryn Mawr College Library the cards are used for two purposes—cataloging new books and revising the catalog. Cards for new books are ordered by making a type-written carbon copy of the order slip. This receives the library stamp and is franked to Washington. The order slip marked with "L. of C." is left in the book on arrival and notifies the cataloger to wait for cards. As a rule the cards are received before the books and the service has been in every respect prompt and accurate. For the revision of the catalog the processes are necessarily more complicated, necessitating frequent comparison with the books, or replacement of the old (32) card by the new.

For the John Crerar Library, Mr. Andrews reports: "From Jan. 1 to April 1 the John Crerar Library submitted 1641 titles on triplicates of its order sheets to the Library of Congress. Beginning with Jan. 28, these triplicates were definite orders to send 21 cards for every title which the Library of Congress could supply. 1165 orders for titles were thus given and 312 titles were received in immediate response to these orders. The triplicate sheets were returned to us later, notifying us that certain titles would be supplied later if desired. In most cases these were reordered on instructions to supply, if possible, within three months, they being mostly for foreign books. During these months 164 titles were so ordered, of which about 100 probably belong to the lists from January 28 to March 31. This would make a total of over 400 titles for which we received, or will receive, Library of Congress cards, out of 1165 works ordered by our agents, or approximately 40 per cent. In addition to these we ordered during the three months 269 titles for analytical entries for books ordered previously to Jan. 28, and

already cataloged by us. We could not give the number of analyticals without an actual examination of the titles. Of the total 745 orders, 587 had been received before the middle of April, and by far the greater part of the 158 outstanding are for foreign books which the Library of Congress will receive at the same time that we do, or earlier.

"On April 4, four books were in the library awaiting Library of Congress cards; three sets of cards were found not to be available, and three more will not be used at present. On the other hand, 278 sets of cards are awaiting the receipt of books by us.

"Our best estimate is that the use of Library of Congress catalog slips and cards have enabled us to order American books about a week earlier than when we depended upon the *Publishers' Weekly*, and to secure a considerably larger percentage of odd titles. The net saving in time and money is about 10 cents per title; the actual cost of obtaining 21 copies of a title in this way is about 16 cents as against 26 cents in our regular way. Of course this is exclusive of the work of classification, shelf-listing, etc., which are essentially the same by either system. As we estimate the cost of this other work at 25 cents, the economy obtained by the use of the Library of Congress cards is one-fifth of 40 per cent., or 8 per cent of the actual cost of the cataloging. This estimate makes no allowance for analyticals, and to it must be added again the very important item of the saving of time in the treatment of current work. We have never before been able to make American and English books available to the public so promptly.

"We have no fault to find with the accuracy and style of the cards, especially as the Library of Congress furnishes new cards at its own expense in the rare cases of serious errors. So far as we have gone, the results are very satisfactory."

Pratt Institute Free Library reports cards received for 299 works, at a cost of \$10.14. Three cards are ordered for fiction and four cards for other works, with an additional card for every subject heading mentioned on the printed card.

"The advantages found by the cataloging department are these: 1, that we have only to collate the headings with our own catalog, and do not have to spend time

in looking up the author's name. We save time also, usually, in having only to write the title and whatever analytical cards we make; for subject cards we simply put on the subject heading. These, and the call numbers, are all that we add to the card. One set of cards we cut down to index-size for filing, first for printer's copy and afterward to use as a class catalog. The greatest saving of labor seems to be in revision. We do not attempt to make the details of the imprint uniform with our own usage. That would make a great addition to the work."

For the Forbes Library, Mr. Cutter says: "We have no catalog. The Library of Congress cards offer us a chance of cataloging slowly but well a library holding at present 87,000 volumes and growing at the rate of six or seven thousand a year. So far, since we resolved to catalog in this way, we have been largely occupied in certain preliminary work and have ordered only about 5000 cards, of which we have not been able to incorporate in our catalog as yet more than half. This is barely keeping up with current additions; but we see that when we have finished all the preliminary work we shall be able to make an effective attack upon the 87,000 volumes, the accumulations of the past seven years.

"The cards are very accurate. We have found only two errors, I believe. The style is excellent, and will be improved. The service is remarkably prompt, and there is an evident desire on the part of the Librarian of Congress and his assistants in this department to accommodate the libraries of the country as far as possible."

At the Hartford (Ct.) Public Library cards for 276 titles were ordered since Jan. 1, and including duplicates, 866 cards have been received, at a cost of \$8.58, or about four cents per title. "We do not receive the cards as promptly as the books, but, on the other hand, as the books do not have to be held back for cataloging, we can place them before the public by making dummy cards, which are held until the printed cards come."

The Utica Public Library has received 1063 cards for 248 books (385 ordered), at a cost of \$9.47. Cards for 147 books, at an average of from three to four cards per title, cost the Detroit Public Library \$4.21.

The New York Mercantile Library reports cards received for 722 books, at a cost of \$21.48. Los Angeles Public Library has had 990 cards (for 421 books) out of 1469 (721 books) ordered, at a cost of \$10.45; while Medford Public Library reports cards received for 19 books, at a cost of 58 cents; "75 cents more would cover the cost for detail work (order lists, etc.), making the total cost to us for the 19 books \$1.33, or seven cents per book."

For the Salem Public Library, Mr. Jones reports: "Cards ordered for 370 books. Received 271, not received 99; of those not received 16 are copyright books. Of cards ordered Dec. 14 to March 14, for which limit has expired, full records have been kept of date of receipt. 198 titles were ordered, and 129 received; of these 83 were received in first week, 23 in second, 12 in third, 5 in fourth, 5 later. The time limit thus varies from 4 to 6 weeks, and it appears that three weeks is about the proper limit, unless the library is in no hurry and can wait from two to three weeks for titles of foreign books. For the 370 titles, 1360 cards were ordered, an average of 3.2-3 cards per title. Cards are ordered for one dictionary card catalog, two for ordinary fiction and biography, two to three or more for other books. Duplicates are ordered freely for analyticals and other added entries. Cards are perfectly satisfactory in form, etc., except for analyticals. When the title, contents, etc., run over to a second or third card, analytical entries are very embarrassing. Service is improving in promptness, and of my last order for 32 titles, 22 were received in four days, and six more in 11 days. Of the four not yet received, one only is copyright, and one book has not yet been received. Of course, promptness in receiving cards is, to a certain extent, in inverse ratio to promptness in receiving books and ordering cards. Service would be more prompt if publishers were more careful in making early deposit of copyright books. In many cases it would appear that deposit has not been made until some time after publication."

On the question of actual saving made, there is little definite information. In several cases it is stated that while the cataloging force has not been reduced, it has been

enabled to do work that would otherwise have been left undone until extra help had been secured. One librarian says: "So far as my library is concerned, there is no real saving. I am not able to do away with my cataloger or any other help. Not so much time is spent in writing cards, but the machinery of ordering, special lists that must be kept, verification, etc., take nearly as much time. There must always be a certain verification of headings, author and subject, in a library that already has a card catalog. Books are placed on the open shelves more promptly, as they do not have to be held back for cataloging, but there is great delay in cataloging books for which cards arrive late or not at all. If a book happens to be in the hands of a reader it may be two or three weeks before the cataloger can get hold of it. It is often two or three months before all the books of a lot are cataloged. The cataloger complains that she has to carry books so long on memorandum that she never knows when a lot is finished. Meanwhile the cards are not in the card catalog, and readers often think we have not received a book which has been sometime on our shelves. It also causes delay in printing titles in the monthly bulletin."

Criticisms deal mainly with delays, as noted in the foregoing report, or with minor points of detail. One cataloger complains that the use of the cards takes away the most interesting part of cataloging work, leaving only the drudgery. One librarian regrets that the cards are not printed on heavier stock; another finds them unavailable for the full analytical work that enters so largely into the cataloging of small libraries, although another states that "more analytical work has been done with less expenditure of time, because any number of cards desired may be ordered and the time spent in putting on subject-headings is slight compared with the usual time required for analytical work." One suggested criticism is that the A. L. A. list of subject-headings is not followed.

These points are noted as suggestions rather than as criticism. On the whole it is apparent that, so far as these reports represent library opinion and experience, the printed cards are regarded as satisfactory in form and appearance and as a practical and effective step forward in library co-operation.

THE TRUE NATIONAL LIBRARY.

UNDER this caption the London *Times* recently printed a communication from a correspondent, who signs himself "Zenodotus," contrasting the present methods of the Library of Congress with those of the Library of the British Museum. He opens with the citation of President Roosevelt's salient reference to the Library of Congress, in his Message of December 3 last. "This pronouncement," it is said, "is a compliment to the Library of Congress and to other public libraries of the United States. It is also an appreciation, I might almost say fulfilment, of the hopes and aspirations of Mr. Herbert Putnam, Librarian of Congress, as expressed at the recent conference of the American Library Association at Waukesha. It is a pronouncement which crystallizes the difference existing between the National Library at Washington and our British Museum, and for that reason should not pass unnoticed in this country. The Library of Congress is endeavoring to constitute itself the National Library, the head and front of all public library practice in America. Its first step in this direction was the compilation and distribution of many valuable bibliographical works. . . .

"The second step of the Library of Congress has but recently been taken. It is now issuing, to all libraries in the United States that care to subscribe, printed catalog entries on cards of the publications it receives under the copyright act. This is a scheme of paramount importance. If adequately supported and found successful, the public libraries of the United States will be able to dispense with the services of hundreds of expert catalogers now being employed at high salaries. Books are not like other commodities; each copy of a work is an exact replica of the others, and a clear and adequate description of it with useful annotations will serve for any library. Besides economical advantages there is the advantage of a uniform system of cataloging. We should not see, as we do in this country, such extremes as slipshod, title-a-liner catalogs, and others containing some of the best work in this line to be seen anywhere. This is a question for the public at large as well as for librarians. The public is entitled not only to see that the National Library is doing all that a National Library should do, but that it is getting the full value of the numerous town libraries it supports by their economical and effective administration. Yet neither in the United States (at present) nor in England are public libraries gaining by co-operation, or by discarding a system which entails exactly the same work in hundreds of libraries instead of doing it once for all at a center of administration.

"But the Library of Congress has its eyes fixed on the future also. The time is at hand when it will lend books to other libraries. 'The volume is in the National Library,' said Mr. Putnam. 'It is not at the moment in use

at Washington. . . . If the National Library is to be the national library—if there be any citizen who thinks that it should never lend a book to another library in aid of the higher research, when the book can be spared from Washington, and is not a book within the proper duty of the local library to supply—if there be any citizen who thinks that for the National Library to lend under these circumstances would be a misuse of its resources and, therefore, an abuse of trust, he had better speak quickly, or he may be too late. Precedents may be created which it would be awkward to ignore. These words are explicit. They still further indicate the attitude of the Library of Congress. It will be, sooner or later, the center whence all library work will operate.

"The attitude of the British Museum is its attitude of 20 years ago. It is unchanged, apparently unchangeable. It receives books, and in the course of a long time catalogs them. Little bibliographical work is done; it catalogs for itself alone; and there is small hope for many a year to come of its systematically loaning books to university or other libraries. It makes no practical efforts to assist its smaller co-workers throughout the country, although the need for it is patent, and the possibilities of good results enormous. Who or what is to blame for this apathy I do not profess to be able to say. We may be told that all that can be done with the funds at the disposal of the Museum authorities is being done. If we are also told that special efforts have been made, and good reasons shown, to secure a largely increased annual appropriation, then this would certainly be an excuse. But unless the British Museum authorities show these good reasons and formulate a progressive scheme, they cannot expect the appropriation to be increased to the necessary extent. Or we may be also told that the unwieldiness of the collection is a hindrance to the performance of work similar to that now being done by the Library of Congress. This I decline to believe, because with adequate finances and staffing the elephantiasis vanishes. However, with ways and means there is no concern here. The whole point is the difference in the attitudes of the Library of Congress and our National Library, and consequently the great difference in the value of the work they are accomplishing.

"The time must come when the National Library shall formulate legislation relating to books, discuss all methods of public library service, classify, catalog, and annotate for the country at large all books as published, and compile those topical bibliographies and lists which would aid in the solution of national difficulties, and advance scholarship. Then, and not till then, may we hope to see all our public libraries in a healthy and energetic state."

FOR INTERNATIONAL PRINTED CATALOG CARDS.

THE first five pages of the April number of the *Rivista delle Biblioteche* are given over to the plan for the sale of printed catalog cards elaborated and put into operation by the Library of Congress. Dr. Guido Biagi, the editor of the *Rivista*, writes a very full account of Mr. Putnam's memorandum and circulars, and prints facsimiles of three cards. The comment is not only favorable, but enthusiastic.

Dr. Biagi also prints part of a letter written to him by Dr. Richardson, of Princeton University, who urges in a most convincing manner the feasibility of international co-operation along this same line. He proposes three fundamental points for such "international" printed cards: 1, uniform size, 12.5 x 7.5 cm.; 2, uniform rules of cataloging; 3, uniform subject headings.

Dr. Richardson ends his letter by stating that American librarians earnestly desire to secure some means by which the (printed) cards of European libraries can be bought here, and ours can be bought abroad, while they shall be of a nature to be perfectly comprehensible to all users.

Dr. Biagi heartily seconds these propositions, and begs for serious consideration of them on the part of the Italian librarians and the Ministry of Public Instruction.

W: W. B.

TRANSPORTATION OF BOOKS FOR THE BLIND.

THERE is now pending in Congress a bill that is of special interest to libraries that have undertaken or are planning to supply books for the blind. The measure is entitled "A bill to promote the circulation of reading matter among the blind," and it provides "that books, pamphlets, and other reading matter in raised characters for the use of the blind, whether prepared by hand or printed, in single volumes or in packages, unsealed and not exceeding four pounds in weight, when sent by public institutions for the blind as a loan to blind readers, or when returned by the latter to such institutions, shall be transmitted in the United States mails free of postage."

As first drawn the bill provided for eight pounds weight limit, but this was cut to four pounds. It will probably be changed to eight pounds, however, as most of the books in blind type weigh over five pounds. The free carriage is granted only for books sent out by libraries or institutions. The bill has been referred to the Postmaster General for report. Free carriage of books for the blind, up to seven pounds in weight, has been granted in Canada for the past four years, with satisfactory results.

RARE BOOKS.*

It would be well if we could agree upon some practical definition of the term "rare" as applied to a book. I am inclined to think that any approach to a scientific definition of the term would not fully meet the conditions of its application in this connection.

The adjective rare is a comparative one; I am reminded of an exhibition of engravings held two years ago in New York by one of our famous book clubs. In looking over the catalog of this exhibition I find the following notes appended to various titles: rare, very rare, extremely rare, excessively rare, most rare, and unique. The compiler of this catalog evidently chose these terms to indicate with a nicety of distinction the various degrees of rarity which in his opinion should be attached to each print. I give this instance to show what I mean by the difficulty of arriving at any standard in describing the term rare. Henry Stevens says that one of our old-time Boston book collectors was wont to refer to a certain book as "not so unique as my other volume." Now, although often thus carelessly used in a comparative way, the word "unique" can rightly mean but one thing. But "rare," as you have seen in the present instance, may be modified so as to have nearly half a dozen meanings.

Is it possible then to find a practical definition of the term, a rare book? It ought to be, and if I were called upon to give such a definition in a useful sense I should say that a rare book is one which is much desired and hard to get. Not a scientific definition, but, I believe, a practical one. This definition, when accepted, raises a point which seems a difficult one to a great many people. The point is this. A book which is rare is not necessarily valuable. Who among us has not had experience with the owner of some 17th century theological treatise or historical tract! And who does not remember how vain were our efforts to convince the distrustful owner that the magic figures at the foot of the title-page showing that his book was printed in the year sixteen hundred and something did not stand as title deeds to an immense bibliographical value. One of the most useful books which I have owned was a 17th century English folio Bible in its original oak covers nearly one-half inch thick. Many times that volume, with its plainly marked price \$2.50, has served to convince the doubting visitor of the fact that age of a book does not necessarily establish its great value. I might have taken for similar illustration a little volume of sermons which I once owned. It was printed a few years ago by some obscure clergyman, who limited the edition to 25 copies, and it brought me when sold the same number of cents. This

would have served as good evidence that a rare book is not necessarily valuable on account of its rarity.

If, then, rarity alone does not give value to a book, it is none the less true that rarity when attached to a book otherwise desirable is indeed the cause of value. If a book is for any cause of more than usual interest, a moderate degree of rarity may be sufficient to increase its value to an almost fabulous amount. For example the "Commemoration ode" of Lowell in its original form was a thin octavo volume bound in stiff board covers, printed by Lowell for circulation among his friends and each one of the 50 copies was numbered, inscribed and signed by him. Who can fail to see that this book possesses cardinal points of interest? It was written by an author of reputation and popularity, from a somewhat personal standpoint upon a subject intimately connected with events which shook the country to its foundation. Added to the element of rarity in this case is the interesting feature of the author's presentation inscription in every copy, carrying with it directly something of personal contact and association with the giver. I think you will agree with me that the "Commemoration ode," born of a noble passion, in tune with the deepest public feeling of the time, and bearing the poet's message with so fine a personal touch, will always be desired by the seeker of rarities in American literature.

The causes of rarity in books are, of course, numerous, but among the more prominent may be mentioned these: small editions; this accounts for the rarity of the 16th, 17th and 18th volumes of the "New England historic genealogical register"; lack of popular appreciation, by reason of which the books do not circulate but get into the junk stores (especially in the old times when paper stock was dear); too great popularity, through which volumes are literally "read to death," as in the case of the early editions of the New England Primer. There is no known copy of the New England Primer extant bearing an earlier date than 37 years after its first publication. It frequently happens that portions of the edition of a book are destroyed by fire. It is thought that this accounts for the superlative rarity of Poe's first book, the famous "Tamerlane." Sometimes the author, in a fit of repentance for having written the book, destroys all the copies which he can find, especially if the volume happens to be a juvenile production of which his maturer judgment fails to approve. Whittier is said to have indulged himself in this way by destroying all of the copies of "Moll Pitcher" on which he could lay his hands. Whether or not he would do so to-day, with a market price of \$200 on the little pamphlet, is quite a question. Among all of these causes of rarity, however, I call your especial attention to one, the modern practice of limiting editions. I call it a modern practice because it seems to be followed

*Address by C. E. Goodspeed, before Massachusetts Library Club, Boston, April 24.

to-day more largely than it has ever been before. There is a growing tendency upon the part of publishers of works appealing to a particular class of readers to print but a definitely limited edition, and to distribute the total amount which they expect for the book over that edition. I am not here to cry out against or to defend this practice. I only mention it as being a factor in the question of rarity which is sure to be felt in coming years.

Touching the possibilities of the book markets to-day, it is a fair question to ask if there is still a chance of picking up rare books as a "discoverer" at bargain prices. Perhaps we ought not to expect too much in this line. Collectors are keen, our literary and trade journals are disseminating as never before popular information concerning what our English friends of the book trade term *desiderata*. At the same time I see no reason why a well-informed bookman should not find his prize to-day as he has found it in the past. The books which we are likely to find are those which we are not looking for, and often in places where it would seem least probable that they should appear. We must expect to find the unexpected. One of the rarest books which I have found was a volume of poems, a first edition of Henry Vaughan, the poet. This little prize came to me from a Chicago law firm. Their cataloged price was \$3, from which they made me a small reduction, owing to some imperfections. It turned out, I believe, that but two other copies of the book were known. This was an excessive rarity, and certainly not of the class which we should expect to find in this country. We are much more likely to run across early Mather tracts, New England Primers, Revolutionary broadsides, or desirable First Editions. A year ago, in a Boston bookshop, while tossing over a nickel box of children's books, a little book published by the American Sunday-school Union, without date, attracted me. Its title was "A visit to the celestial city," and it contained some odd lithographic illustrations. The title caught my eye on account of its resemblance to Hawthorne's story, "The celestial railroad," and upon investigation I found that it was actually Hawthorne's work brought out in this form for the Sunday-school. The value of this book is about \$25.

It is less than a month ago that in this city, at a public sale, a box of books was sold for a few dollars in which the purchaser discovered the very rare Aitken Bible, Philadelphia, 1782, which O'Callaghan describes as the first complete Bible printed in English in this country, and bearing an American imprint. Unfortunately it had been bound in two volumes—very interesting contemporary tooled morocco the binding was—and only the first half could be found.

Pertinent to this subject is the inquiry as to where these rare volumes may be found.

If you can have access to any good miscellaneous collection of books which has been undisturbed for the last forty years you are almost sure to find something of interest. In our old Massachusetts towns many such collections exist to-day, and their shelves will some day bring good prizes to sagacious book-hunters. Occasionally, but not now so often, an undisturbed farm-house garret yields fine returns, and in a general way the constantly moving tide of books, travelling from their owners through the shops to new purchasers, will still reward the keener-eyed hunters.

While we are delving in our neighbors' fields, however, we must not neglect our own. Who knows but that our own shelves are entertaining "angels unaware." Of this I had an amusing personal experience recently. A little anonymous juvenile, printed in New York in 1829, bearing the title "Tales from American history," was purchased from me by a gentleman collecting books relating to Columbus. A little later he transferred his interest from Columbus to Washington, and returned the book. It lay upon the shelf unregarded until one day, in trying to relieve the crowded shelves I transferred it to the 25 cent section. Almost the next day the original purchaser discovered its new resting place. With a smile on his face he inquired, "Do you know what this book brought last year at Bangs's? I had to confess my ignorance, and he replied, "Ten dollars." I was entirely willing to believe that my little book had a value of which I had not known, but I am yet in the dark as to the reason for its value. There are doubtless many books, more especially those coming under the general heading of Americana, or American First Editions, reposing on the shelves of our libraries to-day, the value of which is hardly known or appreciated by the owners. The value of the class of books to which belong Longfellow's French grammar, printed in Brunswick, Me., 1830, the early Hawthorne juveniles, Lowell's "Class poem" (1838), and Emerson's "Nature" (1836) is becoming familiar to everyone; out-of-the-way books on American history in its more local forms are known to have value, and yet when "A brief history of Cambridgeport and East Cambridge; a Christmas and birthday gift, by S. S. S." printed in Boston in 1859, is counted as worth \$12.50 in the auction room, or the "Memoirs of Abigail Bailey, by Ethan Smith, minister of the Gospel in Hopkinton, N. H., and published by Samuel T. Armstrong, theological printer and book seller, No. 50 Cornhill, 1815," is thought worth \$20, a natural surprise may be pardoned. In each of these two instances some curious details of local interest, not elsewhere recorded, added to a rarity due probably to accidental causes, were sufficient to create a premium of 20 times the published price.

The whole subject of the value of books is interesting if not entirely instructive. Some-

times, indeed, the results are quite mystifying to anyone seeking to explain them. Reverting for a moment to Lowell's "Commemoration ode," of which I have spoken in another connection; there were two copies of this book sold at auction last year, the date of the first sale being Jan. 30, and the second April 23. At the first sale it brought \$220, at the second sale \$410. What are we to infer from this? Is it possible that the book had actually doubled in value in three months? I hardly think this true. Both the Arnold and French sales were notable for their richness in certain lines and attracted unusual audiences, and received unusual prices. I believe that at such sales no true criterion of value is likely to be established. To duplicate the prices obtained, it would be necessary to assemble an audience of a similar character and only a collection of remarkable value would accomplish this. When buyers of unlimited means compete with each other for a coveted volume there is apt to be a reckless smashing of records. Once the appetite of these buyers is satisfied, or their ardor cooled by reflection, prices are apt to resume their normal condition. If a volume appears in auction sales with a reasonable frequency, however, we may safely trust to an average of the prices obtained as representing approximately its value. In the reference which I have just made to the "Commemoration ode" I do not mean to say that either the price at the Arnold sale was too low or at the French sale too high; what I do claim, however, is that the prices at such sales are apt to be regulated by the momentary fancies of two or three wealthy buyers. There have been to my knowledge two sales of this book at private hands since the auctions referred to, and in each case the book sold almost half way between the two auction sales, or at about \$300.

I have said that the prices of rarities are apt to be surprising. The first edition of the first book by R. H. Stoddard for example is very rare, and in fact it is claimed that but six copies are known. The last auction sale of a copy brought \$66. Bayard Taylor's "Ximena," Philadelphia, 1844, brought last year at auction \$50. In both cases the prices appear high, considering that neither of the authors are very largely read at the present time. I say it *seems* as though the prices were high. The collector would tell you, however, that he was justified in paying these prices because the books were not only rare, but also in each case they were the author's first publication. I will leave it to you to reflect upon this phase of the mania for collecting First Editions.

I did not mean to go into the subject of collecting, but it is difficult to talk about rare books without taking the collector into account. His hobbies and their gratification have a very definite bearing upon values, in

fact in this special line of modern First Editions he has entirely created and sustained the market.

Thirty years ago First Editions could be purchased for fewer cents than they now command in dollars, and for the present state of prices the collector is responsible. The discriminating collector of to-day demands First Editions of the earliest works of the most esteemed authors in immaculate condition. At the same time it is only fair to say that he is usually willing to pay what might look like extravagant prices to gratify his wants. Broadly speaking, the first among the classes of rare books which are in particular demand are what the French term *provenances*, or books which have acquired special interest from association; either volumes bearing presentation inscriptions from authors of prominence or books from their own libraries containing their autographs, and perhaps bearing their annotations.

You will remember how Lamb, after bitterly pouring out his soul against book borrowers who return not, burst into praise of his friend Coleridge; Coleridge who returned the borrowed volumes "with usury, enriched with annotations tripling their value." The collector of this age is keenly alive to such interesting features. How did it happen that my friend Dr. C., after buying a shabby little volume in Boston for a few cents could sell it in New York for some hundreds of dollars? Simply because he possessed the collector's instinct which told him that the name written inside the cover—"John Robinson"—might be (as it was) the autograph of the beloved pastor of the Pilgrim Band. Why did I, myself, once pay a round sum for the 1727 (London) edition of Weston's Shorthand—certainly not a rare volume? Only because the words "Nathan Hale's book," neatly written across the top of a page, bore evidence that it once belonged to the martyr spy of the Revolution. This book was originally purchased from a Boston dealer for \$1.50, the buyer, himself, not knowing at the time what a prize he had secured. In a New Bedford store I once found an old "History of America," bearing the autograph and book-plate of Josiah Quincy, the first mayor of Boston. It also contained his note, certifying that he bought the volume in Philadelphia at the sale of Franklin's library and that the annotations in red were "probably in Franklin's hand." The annotations referred to marked the passages of the book which Franklin, himself, had contributed to the work, it having been published anonymously.

Of modern books of this nature which have passed through my hands I might cite a copy of Emerson's "Nature" (first edition, Boston, 1836), a presentation copy from Henry Thoreau to a class-mate at the time of their graduation, in 1837, bearing a whole page of pencilled inscription, including a quotation

from Burns; also a presentation copy from Thoreau to his sister of the first edition of "A week on the Concord and Merrimack rivers"; and Thoreau's own copy of "Walden" (Boston, 1854), with his autograph and pencilled notes. I mention these experiences of my own; other dealers of course have similar good fortune. One dealer here recently sold a little volume bearing an inscription to the owner "From the Church at Plimouth, 1623." The owner was one of the *Anne's* passengers. Surely a book with such a history has found a fitting resting place in the Plymouth Library of the Pilgrim Society.

Perhaps the most prominent class of book rarities in demand among collectors at the present time is First Editions of early works in belles lettres. Mr. Arnold's successful career as a collector of these books has lately drawn especial attention to their value, and has considerably stimulated the growing tendency to purchase books in this line.

We may group together books relating to genealogy and American history, especially in its more local forms, as interesting to still another class of buyers. Out-of-the-way books on this subject are eagerly sought for and are not likely to decrease in value.

Besides these leading subjects there are numberless rare books which are demanded to meet the wants of collectors in special lines. The tendency of the day towards specialization is plainly seen in the book world. We have collectors of books on the Navy, Printing, Transportation, Cooking, Hawaii, Fishing, Juveniles, Gift books, Local imprints, Washington, Franklin, Lincoln and an immense variety of other subjects. The book market is constantly being drained of its treasures to feed these special collections. The subject of these special collections would furnish material for a very interesting talk. Many of them are made primarily for the pleasure of the owners in the process of assembling the material, but with more or less definite intention to finally incorporate them in some public collection.

The buyer of rare books must constantly be upon his guard against imperfect copies. The temptation to purchase them is great but he had better withstand it. The chances are that he will only do so after expensive experiences. The great difference of value between a book that is perfect and in choice condition and one that is incomplete or in poor state is a hard lesson for him to learn. Perhaps he may be as fortunate as Mr. —, who once bought of me for a trifle a fragment of Sanders' "History of the Indian wars" (Montpelier, 1812), after having discovered in the hands of another dealer a second imperfect copy, making a perfect copy of the two. He got a book which would have been cheap at \$50, for less than one-fifth that amount, but not many will have such good fortune. I spoke a few moments ago of the Aitken Bible, of which one-half

was found in this city recently. If it was complete I suppose the owner could sell it for \$200. Although half of it is here in good condition it is certainly not worth half that amount.

Leaving out of account the buyer of books for the purpose of general reading, the sale of rare books may be said to divide itself between collectors and public libraries. The term collector, now in such common use, requires a little definition. By a collector I understand anyone who purchases books with the special idea of illustrating a certain subject by assembling all available material bearing upon that line. I do not concern myself with the ulterior design of the collector. He may gather his books for historical research or he may spend his money lavishly on the most expensive bindings to gratify his artistic taste. I only exclude from the term those who purchase in a miscellaneous way, for the building of a library, or for the purpose of general reading. I shall not undertake to explain to you the purchasing standpoint of the Public Library, for that is your own field. It will be sufficient for me to call your attention to the very remarkable increase in the number of collectors, the variety of their interests (to which I have already referred) and to the fact that it is their purchases which largely sustain the business of a dealer in rare books. The motto of the collector to-day is completeness; whatever his hobby may be his aim is to make his collection complete within its limits. Often an insignificant book or pamphlet obtains importance in his eyes because its lack means a gap in his collection. I have long, and as yet vainly, sought for a little pamphlet, a "Memoir of Dr. George B. Doane," privately printed in 1843. I have not the slightest interest in the subject of the pamphlet, but it contains an engraving of Dr. Doane's monument in Mount Auburn, by that prince of American engravers, John Cheney. As a specimen of Cheney's art the print is worthless, but my collection will not be complete without it and so I live in hopes that in some odd lot of pamphlet literature the missing print may one day appear.

If what I have said appears to be a very common-place view of the situation, I would remind you that there are few dealers who are constantly handling and not many buyers who are purchasing such books as Browning's "Pauline," Ruskin's "Poems, 1850," or similar excessive rarities. I am sometimes asked this question: "How can I tell if a book is rare and desirable should I happen to find it?" To this I can only reply that the knowledge of rarities may come by experience, but to know what is desirable must come by intuition; either one has, or has not the book sense. If it is not natural to him he may attain a certain degree of proficiency, but he can never become an adept in the noble sport of book hunting.

LIBRARY METHODS FOR PHOTO-GRAPHS.

It is becoming constantly more and more noticeable that the results of the experience of the librarian are adaptable to other requirements than those of the library. The most conspicuous evidence of this fact is perhaps the rapid substitution of the card system for the ledger, for the records of bankers, insurance agents, lawyers, doctors and others. But aside from the adaptability of the merely mechanical appliances of the librarian, his methods are applicable to other purposes than the handling of books.

In the case under consideration it was desired to arrange a large collection of photographs, belonging to the United States Bureau of Forestry, so that as a whole they would illustrate the timbered areas of the country, and at the same time each individual photograph would be available to illustrate the particular subject which it represented. The first of these aims was to be accomplished by the classification, the second by the cataloging. All efforts to find a record of a similar piece of work, which would furnish a precedent, were fruitless, and since the system decided upon has proved satisfactory, this short statement is made with the thought that it may offer a suggestion to a fellow worker.

When the work was undertaken, the collection numbered probably less than 2000, but a system was required that would provide for constant additions. Means for the identification of the photographs had already been provided by the use of notebooks containing serially numbered blanks, for the descriptions of the photographs. At the time of printing, the photographs were numbered to correspond with the numbered blanks, and the photographic mounts had on the back similar blanks for descriptions. The notebooks in which the call numbers were to be entered in the course of time, were filed to serve as accession books.

The first step to be decided on was the classification. The only practicable suggestion was that of a geographical arrangement, for while a large proportion of the photographs represent species of forest trees, the range of subjects illustrated is not narrowly limited, and includes for example effects of fire, lumbering and grazing, which may in some cases cause total deforestation. One of the most important ideas in connection with the geographical distribution of the forested areas, is that the timber follows the line of the watersheds. For this reason as well as for the purpose of showing the effects of denuding the headwaters of streams and rivers, the watershed was made the basis of the geographical classification. A map was prepared, showing 146 irregular sections, each representing the watershed of an important river,

lake or bay. This idea was abandoned in the case of foreign countries, to which numbers were assigned arbitrarily, with a view however to logical sequence.

In making up a call number, the number of the watershed in which the place in question lies, is found on the map. To this is added the initial and Cutter number of the place, followed by the initial of the photographer. If only one picture was taken in a given place, the number is then complete. If there are two or more pictures in a set, the general call number is given to each, followed by the figures 1, 2, 3, etc. In this way each photograph in the collection has an individual number, and those in a set are filed permanently in the exact order in which they were taken. When the pictures are filed, cards are made for the shelf list.

The cataloging was not undertaken until a large number of photographs had been classified and filed, so that suggestions might be gained in handling them. It was decided almost from the outset that it would be necessary to have three catalogs, a geographical catalog and one each for species and general subjects. The geographical catalog is the main one, in which every photograph in the collection is represented, and all the tracing is done on the cards in this catalog. The name of the photographer is used as the author on these cards, while in the other two catalogs, a geographical sub-arrangement is secured by the use of the place and state reversed, in place of the author. In the species catalog, the trees represented are roughly classified by the use of such sub-topics as Bark, Group, Individual, etc. In the case of a single photograph, the cataloging is comparatively simple. A card is made for the geographical catalog and for one or both of the others as required. It is only when a large set of photographs represent a variety of subjects that the matter becomes complicated. Each group is cataloged as a whole, and the sets vary from two to over 500. As in the case of a single photograph, the card for the geographical catalog represents the whole set, and the pictures fall into sub-groups for the other catalogs and for the minor geographical headings. In making the cards for these sub-groups it is impossible to copy the titles exactly, but a general title has often to be devised. On such cards the general call number for the set is placed at the top followed by the figures for the individual photographs represented in the group.

A supplementary feature of the system was required to include a collection of lantern slides which correspond to the photographs. The slides are numbered and filed in the same order as the pictures of which they are duplicates. In order to avoid duplicating the catalog, the word "slide" is stamped on the cards representing the photograph of which the slide is a counterpart. Should the card

represent other photographs than the one for which there is a slide, the individual number is written under the word "slide" to indicate which particular photograph has a slide corresponding to it.

The photographs and slides are in almost constant demand for use in publications and lectures, and the time required to find illustrations of any subject, has, it is thought, been reduced to a minimum.

AIMÉE GUGGENHEIMER,
Librarian U. S. Bureau of Forestry.

THE TYPEWRITER IN SMALL LIBRARIES.

IN the LIBRARY JOURNAL for May, the article "The typewriter for card catalogs" is of particular interest to small libraries, where only one person is in charge and has all the various duties and detail work to look after.

I have been using the typewriter for cataloging for about a year, but had not considered it worthy of any special notice. Although I knew that the majority of libraries either wrote their cards by hand or used the printed cards, yet I always supposed it was the rule for all libraries to make the most of what they had to work with, and if any one is unable to print or buy the printed cards, the next best thing should be substituted, and in this case it is the typewritten card.

In using the typewriter for card cataloging purposes, I have found that I can do the work on an average of a third or a quarter of the time that it takes to do it by hand, and that the general satisfaction expressed by readers in regard to the uniformity and clearness of the cards was a sufficient guarantee that the experiment was a success.

One advantage that especially recommended itself to me was that when I wrote cards by hand the many interruptions had some effect on my writing. The necessity of continually leaving the desk to exchange books had a tendency to make my hand unsteady, thus making it practically impossible to write a uniform hand. The typewriter did away with all this unevenness and the interruptions prove to be more of a relief than a hindrance.

In using the L.B. 32v card with a Remington machine it is not possible to print below the second line from the bottom, so the place and date of publishing, copyright date, and what is generally written on the lower lines has to be written in by hand. This small amount of writing, however, is quickly done, and it in no way detracts from the clearness of the card as the title, author, subject, and even the numbering and underlining is done on the machine, and these are the facts that patrons want to see most clearly—the rest is not essential to them.

Another use for the typewriter is in making

finding lists, or catalogs. A great many of the small libraries—and by small libraries I mean those numbering up to 10,000 volumes—do not have printed catalogs. With the typewriter one can make very presentable catalogs at a great saving of time and material. It is not necessary for one to have a special training in order to master one of these machines, the location of the keys is simply a matter of practice, and with a month's practice one can readily accomplish more on the machine than could be done by hand.

As I have said, this should be of special interest to librarians of the small libraries, as it is with them that the card catalog is a constant nightmare. If the library is situated in a particularly active community, and a fair proportion of books are being added from time to time, the cataloging is very apt to get behind, and my experience has been that, once behind, it is very difficult to catch up again.

If there is any way to lessen the time it takes to do the necessary work, it seems to me that the "single-handed man" is the one who should be the first to hear about it.

HERBERT W. FISON.

Narragansett Library Assn., Peace Dale, R. I.

FICTION AT THE PROVIDENCE PUBLIC LIBRARY.

W. E. Foster, in Providence Journal.

THE annual report of the Providence Public Library for the year 1901, recently presented to the trustees, shows a circulation of 120,604, as compared with 106,452 in 1900.

It also shows a still further decrease in the percentage of fiction used, namely, 56+. The highest percentage of fiction (by which is meant both adult and juvenile fiction), which has ever been reached in the 24 years' use of the library was 73+, in its second year (1879-80). Once before this past year, namely, in 1889, the fiction percentage dropped to 56+. The seven successive years, beginning with 1883 and ending with 1889, showed an uninterrupted decline, as follows: 70+, 66+, 62+, 61+, 58+, 57+, 56+.

The question whether a still further reduction usually can be looked for in a public library, to which new readers of fiction are all the time coming, to begin their use of books, is an interesting one. The probability is that it cannot be permanently maintained, and for a physical reason.

The part that fiction plays in the statistics of circulation is amusingly out of all proportion to the time that is spent on it. For instance, to take a work of fiction by Sir Walter Besant, "Children of Gibeon," which has 459 pages, and a work of non-fiction by the same author, "The French humorists," with vir-

tually the same number of pages (455 pages), the average reader may perhaps be conceived of as spending about twice as much time in completing the latter as in the case of the former. With the best intentions in the world, any given reader who should devote himself to the non-fiction continuously, for one year, could never by any possibility reach so great a record of "books read," as the same reader in some other year, if devoting himself continuously to fiction.

But even more significant is the fact that fiction plays so small a proportional part in the purchases made by a library (or, at least some libraries); and in the number of hours required, in the various departments of the library service. In the Providence Public Library, for instance, the number of separate titles of "current" fiction added during one year (currently published during that year, and purchased during a twelvemonth), was for the year 1900, only 17. For the year 1901 it was larger (since the total expenditure for books was larger); but in both years the purchases of fiction have been quite as largely of non-current fiction as of that which is current—thus, to a certain extent following the principle underlying Mr. Herbert Putnam's injunction.

In the same library, also, the amount of time consumed in the various departments of reference work, cataloging, etc., stands for a number of hours in each week, many times as great as the number of hours consumed in handing out volumes of fiction at the delivery desk.

One of the most interesting suggestions in connection with library administration which has been made for a long time is that of Mr. Herbert Putnam, the Librarian of Congress, to the effect that the public libraries should "buy no current work of fiction until at least one year after date of publication." Mr. Putnam's pregnant suggestion carries great weight, from his long connection with the work of public libraries (during a part of the time at the head of the Boston Public Library), and from its very obvious reflection of Ralph Waldo Emerson's well-known dictum.

Mr. Putnam's suggestion in regard to fiction "one year old" has been spoken of as a reflection of Emerson's suggestion; and yet it is to be remembered that, as stated by Emerson ("Never read any book that is not a year old"), the injunction is not confined to fiction as a class, but applies to all classes of books (within the field of the "literature of power"), using the single test—"ephemeral or not?" This perhaps is the more judicial and justifiable view of the matter. It is one which lies at the basis of the "standard library" feature of the Providence Public Library, which has become so widely known. In other words, the Providence Public Library seeks, by placing before its readers this

collection of the most vital part of literature, to emphasize that which is "standard" and "permanent" in literature, as against the ephemeral.

Biography is one of the classes of reading other than fiction, in which there has not only been an attempt on the part of the Providence Public Library to furnish as adequate a supply as possible, but also a noteworthy demand for it on the part of the public. As an evidence of this may be mentioned the fact that a printed list of "good recent biographies," prepared a few years ago, was in exceptional demand by readers. Within a few weeks a list of about 100 specially selected biographies, published chiefly within the last 10 years, though prepared at another library, has been posted at this library, with the call numbers added on the margin, by which to apply for the book. In this case also the demand is found to be a lively one; and it is in such ways as this, rather than in the way of discouraging the use of other forms of literature, that this library finds it most feasible to work.

FICTION READING AT THE HOMESTEAD CARNEGIE LIBRARY.

HOMESTEAD, Pa., is a town of 15000, population and has a library of 13,000 volumes. The public schools have five buildings, 50 teachers and 3000 scholars. It was soon discovered that the readers of the future in Homestead were the children of to-day. Arrangements were made with the school authorities to bring the school children and the library into practical relations. This was done first, by furnishing the teachers with professional reading both in books and periodicals. Over 200 volumes of this class of reading were furnished for this purpose. Second, the teachers each selected at the library from 25 to 70 volumes relating to the subjects being taught in their respective rooms. The part of the public school curriculum relating to literature is very strong. This enabled the teachers to draw heavily upon the better classes of books. When "Richard III." was being studied in the High School 20 copies of Rolfe's "Richard III." was furnished for that school. In other departments of the schools the subject of geography was supplemented by five copies each of "The world and its people" series, which include a dozen or more titles. In some cases there is no effort on the part of the teachers to supplement studies, but to furnish general reading advisedly. The teacher knows the scholar personally, at least better than the librarian, and is in a position to recommend the most desirable books.

The third phase of this co-operation with the schools is in furnishing supplementary reading. Thirty-seven volumes of 25 copies

each are furnished for this purpose. This privilege is also granted to several villages in the immediate vicinity of Homestead.

Three study clubs contribute their share toward the demand for non-fiction.

It is expected, when the books are returned from the schools that many of them will be loaned to the Sunday-schools during the summer months. This is the secret of increasing the circulation from 4000 last September to 10,500 in January, 1902, and during the same time reducing the percentage of fiction from 75 to 49.5.

W. F. STEVENS, *Librarian,*
Carnegie Library, Homestead, Pa.

THE CARNEGIE PUBLIC LIBRARY OF CHEYENNE, WYOMING.

THE Carnegie Public Library of Cheyenne, Wyoming, has issued a "memorial volume," devoted to "a history of its organization and construction, with some ideas on the general scope and usefulness of the new building, and other interesting data," edited by Robert C. Morris, secretary of the building committee. The "volume" is a pamphlet of some 90 pages, with many illustrations of interior and exterior and plans of the building, several of which are shown elsewhere.

The present building was erected from a gift of \$50,000, offered by Andrew Carnegie on Dec. 27, 1899, on condition that a proper site be furnished, and a yearly maintenance fund guaranteed of not less than \$3000. The correspondence with Mr. Carnegie was conducted by Robert C. Morris, who suggested the Laramie County Free Library—the only free circulating library of the city—as the nucleus for an adequate institution. At that time the library was housed in cramped quarters in the basement of the Central School building, in a room about 20 x 30 feet, low ceiled, poorly furnished with cheap pine shelving, a few old tables and chairs, containing between 3500 and 3000 volumes, heated by a single stove, and accommodating only five or six readers at a time. Mr. Morris said: "What we want is an up-to-date library building, with separate apartments for the comfort of all persons who visit there; reading rooms for adults as well as for children; room for periodicals and newspapers; quiet places for reading, as well as a place for holding meetings. Unfortunately some persons seem to think that any old place is good enough for a library; that all that is needed for a free public library are a few cheap pine shelves for books, a rickety old table, and a half dozen or more wooden chairs."

Mr. Carnegie's offer was accepted on Jan. 6, 1900, by the county commissioners of Laramie county, who voted to levy an annual library tax of one-half mill on all assessed property in the county "for the maintenance of a public library to be located at the county

seat." The site was secured by public subscription from interested citizens, and a building committee was organized on March 5, 1900. Work was begun upon the building later in 1900, and the structure was complete and opened to the public early in the present year. As an aid in the development of the library the Laramie County Auxiliary Association was organized in December, 1899, and succeeded in raising a substantial sum for the equipment of the new organization. The receipts for maintenance for 1901 were \$3195.06, of which \$2831.08 were from county taxes; expenses \$557.22 (librarian's salary \$325). For 1902 the appropriation from taxes was \$3023, which, with the balance of \$2637.84, gives a total of \$5660 for the first year's work in the new building.

The building has cost in all \$55,232. It is Greek in type, built of gray pressed brick upon a basement of white sandstone, with trimmings of white sandstone and terra cotta. There are three stories and a basement, each of the three floors forming a separate department, and making the whole building a "people's palace" or Carnegie institute, as well as a library. The first or main floor is entirely devoted to library purposes. In its center is the main hall or delivery room, from which the attendant can command the entire floor. At the north end is the general reading room for adults, 32 x 26, overlooking the city park, and at the south end is the children's reading room. The stack room opens from the rear of the delivery counter, having a capacity of 50,000 volumes.

The librarian's office is in the extreme rear, opening from the stack, and a small reception room opens from the delivery room at one side of the entrance hall.

In the basement, directly under the stack room, is a semicircular auditorium, seating nearly 300 persons. It contains also a men's newspaper and smoking room, 26 x 22, unpacking and repair room, janitor's room, and boiler room, lavatories, etc. The third floor has a central art gallery, corresponding to the delivery room below, two handsome club rooms for men and women, corresponding to the adults' and children's reading rooms, and an attractive trustees' room.

The decoration and finishing of the building have been carefully executed. There are fine carved mantels of wood, with mosaic hearths and Mexican onyx tiling. In the delivery room is a handsome bronze and marble drinking fountain. In the color schemes the aim throughout has been to secure harmony and artistic effect. The delivery room is in sienna and yellow, the reading rooms in sage green and sienna cove, the stack room deep green and brown cove. The men's smoking room is finished in rich leather tints, and the auditorium is especially cheerful, with apple-green walls, terra cotta dado and cream colored ceiling.

THE INSTITUTES CONDUCTED BY THE NEW YORK LIBRARY ASSOCIATION.

As has been before recorded in the *JOURNAL* the New York Library Association appointed, during Library Week, 1901, a special committee on library institutes, and authorized this committee to hold during the year not more than ten institutes in different parts of the state.

This committee (J. H. Canfield, chairman; W. R. Eastman, A. L. Peck, and, *ex-officio*, the secretary of the association) has therefore held, as instructed, eight institutes, as summarized in the following table:

Date. 1902.	Place.	Libraries represented.	Persons present.		Conductors.	Secretaries, 1902, 3.
			Session.	Public meeting.		
April 15, 16.....	Cortland.....	15	50	125	W. R. Eastman.	E. W. Mundy, Syracuse.
" 16, 17.....	Binghamton..	8	25	80	F. B. Hawley.	Mrs. J. W. Clonney, Binghamton.
" 18, 19.....	Olcan.....	15	30	75	M. E. Hazeltine.	Miss E. W. Greer, Jamestown.
" 22, 23.....	Rochester....	12	25	32	H. L. Elmdorf.	Miss C. F. Webster, Genesee.
" 25, 26.....	Ogdensburg..	12	22	100	W. R. Eastman.	F. Van Dusen, Ogdensburg.
May 6, 7.....	Ilion.....	18	75	200	S. C. Fairchild.	J. E. Brandegee, Utica.
" 7, 8.....	Albany.....	15	50	100	A. L. Peck.	B. A. Whittemore, Albany.
" 9, 10.....	Newburgh....	13	22	25	E. G. Thorne.	Miss E. G. Thorne, Port Jervis.

The committee held one meeting in February at Albany, when it appointed local secretaries for each district, arranged dates and places of institutes, and outlined and ordered printed a general program, which was sent out by the local secretaries, and followed, more or less closely, at all the institutes. This program was as follows:

Public session. Evening.

Addresses to stimulate public interest in the public library.

First instructional session (three hours).

1. Place and power of public library.
(Introductory: 10 minutes.)
2. Book selection.
3. Book ordering.
4. The accession books.
5. Book classification and arrangement.

Second instructional session (three hours).

1. Round table.
(One hour. Answers to question box and viva voce questions.)
2. Catalogs, good and bad.
3. Principles of a charging system.
4. Necessary records and reports.
(If time permits.)
5. Relation of library to schools, clubs, etc.
6. How to increase one's efficiency as a librarian.

All the rest of the work of the committee has been done by correspondence, except as Mr. Eastman, in his professional journeys, has been able to see each member of the committee occasionally. At each institute at least two members of the committee were present. The local secretaries, as given in the table, are those originally appointed by the committee,

now elected by members of institutes, except in the Rochester and Ogdensburg districts, which had no secretaries up to the time of the institutes.

In advance of the detailed report to be made by the chairman to the association during Library Week, 1902, it is perhaps hardly proper to sum up at any length, but probably every member of the committee would be willing to say: first, that he has learned much in the work; second, that the institutes are needed; third, that they are practicable; fourth, that, necessary expenses provided for, they may be developed into a very important instrument for library purposes.

THERESA WEST ELMENDORF.

LIBRARY ASSOCIATION OF AUSTRALASIA.

THE Library Association of Australasia held its fourth general meeting in Melbourne, April 2-4, 1902. The proposal made at the last meeting, to meet annually instead of biennially, proved impracticable, on account of the difficulty in securing attendance, and it is now even doubted if biennial meetings can be held, owing to the great distances that must be travelled. The first session opened at the Public Library, on Wednesday, April 2, with the president, Edward Langton, in the chair. There were present, for the first time, delegates from each of the six states of the commonwealth of Australia, and the attendance was thoroughly representative. The president's address dealt with the development of the library association movement in the United States, England and Australia, with a sketch of the history of the Victoria Public Library. H. C. L. Anderson, of the Public Library of New South Wales, followed with an address on "Libraries and government subsidy," advocating more careful distribution of state aid and more judicious selection of books.

At the afternoon session, held in the Melbourne town hall, there were papers on "Management and maintenance of small public libraries," by A. J. Taylor, of the Tasmania Public Library; "Library classification," by W. H. Ifould, of the Public Library of South Australia; and "A few words on binding," by Rev. Dr. Bevan. In the evening a conversation was held at the National Gallery, where was displayed a most interesting loan collection of books, manuscripts, and objects of historical and bibliographical interest.

Thursday morning's session opened with a paper "Should libraries be municipalized, and if so, why?" by J. L. Robertson, who urged the value of municipal maintenance. W. L. Faerlands, librarian of the Sydney School of Art, spoke on "Educative influences of public libraries"; Miss Margaret Windeyer, of the Public Library of New South Wales, discussed the use and influence of "Library bulletins"; and Talbot Smith read a paper on the modern librarian as contrasted with the ideal librarian. Other papers, read at the afternoon session, dealt with "The Benedictine Library at Monte Cassino," by James Smith; "Mutilation of books in public libraries," by W. J. Sowden; "Fiction in local libraries," by F. G. A. Barnard; and "The proposed federation library of the Commonwealth," by E. L. Armstrong, who outlined the possibilities before a national library of Australia. In the evening an address on "The disposition of Shakespeare as reflected in his works," was delivered by Hon. P. McM. Glynn.

On Friday a morning session was held, at which papers were read as follows: "The club side of institutes," by George Allen, librarian of the Newcastle School of Arts; "The meaning of the library movement in Australia and its importance to the Commonwealth," by A. W. Brazier, sub-librarian of the Public Library of Victoria; "The Library of the Royal Society of Victoria," by T. S. Hall; and "A plea for a national museum," by A. T. Woodward. In the afternoon the delegates paid an enjoyable visit to Parliament House and the Library of Parliament.

A general business meeting was held in the evening, when the possibility of continuing the association was debated. The secretary spoke of the uncertain support it had received, of the lack of general co-operation and of the tendency to magnify personal and individual prejudices or opinions. After discussion, it was decided that the present officers be continued, and decide, in consultation with the librarians of the several state libraries, where the next general meeting should be held. It was resolved that if possible the *Library Record* be continued. Lack of funds, however, is likely to make this impracticable, and it is stated that the *Record* may not be carried through the remainder of the year.

LIBRARY SECTION OF N. E. A., AND MINNESOTA LIBRARY MEETING.

THE Library Section of the National Educational Association will hold its annual meeting in the reading room of the University of Minnesota, Minneapolis, on the afternoons of July 10 and 11, 1902. Arrangements are being made to hold the 10th annual meeting of the Minnesota Library Association on the morning and evening of the same days, and to make these joint meetings the occasion of a general "library rally" for the state. It is pointed out that there have never been more than 18 Minnesota libraries represented at the state association meetings, although there are

now 60 free public libraries, 13 subscription libraries, and 32 college and institution libraries in the state. The program is given in outline as follows: Thursday, July 10, afternoon, Library Section N. E. A. 1st session; evening, reception at Minneapolis Public Library. Friday, July 11, morning, general session, with papers on library training, net prices of books, and library legislation for Minnesota; afternoon, Library Section of N. E. A. 2d session; evening, excursion. Saturday, July 12, morning, business session. Full announcements may be obtained of Miss Clara Baldwin, librarian Minnesota State Library Commission, 514 Masonic Temple, Minneapolis.

The program for the N. E. A. Library Section meeting includes an address by Dr. W. W. Folwell; "The library as an education," by W. A. Millis; "Libraries and schools," by Emma J. Fordyce; "Greeting from the American Library Association," by Anderson H. Hopkins; "What may the school properly demand from the library?" by J. M. Greenwood; "School libraries in rural districts," by Agnes Robertson. The president of the Section is Dr. James H. Canfield; the secretary is Miss Mary Eileen Ahern.

WISCONSIN LIBRARY MEETING.

A LIBRARY meeting will be held at Madison, Wis., on Aug. 28, 29, and 30, 1902. Among the speakers in attendance will be F. N. Doubleday, of New York City, who will talk on the relation of the publisher to the public as it is largely affected by librarians. Miss Adelaide R. Hasse will speak on the vexed problem of the public document, while other matters of interest will be discussed. It is hoped that many librarians will make this meeting a part of their summer outing, as opportunity will be given for rest and recreation in connection with the sessions.

Further particulars may be had by addressing Miss L. E. Stearns, Madison, Wis.

MR. CARNEGIE'S "INVESTMENTS."

At a reception tendered to Andrew Carnegie in May by the Plumbers' Company, of London, Mr. Carnegie spoke of his efforts to distribute his wealth for the advancement of public welfare. Any satisfaction which he had derived from his gifts arose, he said, from what he had induced individuals and communities to give.

"I think it will be found," he added, "that far from being a philanthropist, I am engaged in making the best bargains of my life. For instance, when New York had been given over a million pounds for 72 libraries, I succeeded in getting a pledge from her that she would furnish sites and maintain those libraries forever. Her investment is greater than mine. That is not philanthropy. It is a clever stroke of business. I am open to propositions of a similar character from cities in any part of the English-speaking world."

State Library Commissions.

DELAWARE STATE LIBRARY COMMISSION: Cornelius Frear, secretary; Miss Florence Bayard Kane, organizer, State House, Dover.

The commission held its last meeting of the season on May 13. It was decided to retain the services of Miss Kane, the library organizer, for another month, at which time the funds in the hands of the commission will be practically exhausted. In spite of the fact that several municipalities failed to vote in favor of a free library at the spring elections, the results accomplished were regarded as distinctly favorable. That one town, Dover, should have voted in favor of a free library was regarded to be of itself sufficient to justify the efforts of the commission and its organizer.

In addition to these tangible results, it was felt that through the sending out of travelling libraries to numerous places, by the circulation of the handbook and other literature, and by the discussion of the library idea, even though present results were in some cases directly hostile, yet taken all in all there had been a distinct advance. The public library idea is no longer an unknown one in many parts of the state, and the way has been paved for its practical development.

It is hoped that the results accomplished will induce the next legislature to make an appropriation for the continuance of this work, which has so far been carried on through private gifts and subscriptions.

MAINE LIBRARY COMMISSION: G. T. Little, secretary, Bowdoin College Library, Brunswick.

The commission has issued its second annual report, for the year ending December 1, 1901. Four meetings were held during the year, and 17 new travelling libraries, of 50 v. each, have been added to the 42 purchased last year. The circulation of the travelling libraries was 8823 v. and there were 1780 registered readers. "In four town the presence of a travelling library has been the apparent occasion of earnest agitation for the establishment of a free public library." Six towns (Fairfield, Hiram, Jonesport, Norridgewock, Sanford, Stetson) have established public libraries and received the state donation of books.

Appended to the report is a careful statistical and descriptive report upon the libraries of Maine, arranged alphabetically by towns. This is the fullest record of the kind since the government report of 1876, when a total of 85 so-called public libraries containing over 300 volumes were registered; of these 33 belonged to educational or state institutions, eight were county law libraries, 41 were subscription libraries, and only three were entirely free. There are now 72 free public libraries and 107 subscription libraries, the great majority being in towns of less than 4000 inhabitants. The commissioners state

that the ideal before them "is to secure for every citizen of Maine, whether he live in a city of 10,000, or a village of 100 inhabitants, the opportunity to borrow without expense to himself as many instructive and entertaining books as he can read with profit. This not only calls for the maintenance of travelling libraries for an indefinite period, but also for wise co-operation between adjacent towns and villages."

State Library Associations.

CONNECTICUT LIBRARY ASSOCIATION.

President: H. M. Whitney, Blackstone Library, Branford.

Secretary: Miss Anna Hadley, Ansonia Library.

Treasurer: Miss J. P. Peck, Bronson Library, Waterbury.

The spring meeting of the Connecticut Library Association was held Wednesday, May 14, in the Young Men's Institute, New Haven, President Henry M. Whitney in the chair. W. A. Borden welcomed the members and gave a short sketch of the history of the institute, its aims and methods.

A vote was passed protesting against the action of the American Publishers' Association in demanding net prices for books sold to libraries, the following resolution being adopted:

"The Connecticut Library Association regrets that the Publishers' Association has not as yet made concessions to what we believe to be the just representations of the libraries of the country. We repeat the expression of our belief that the cost of so-called 'net-books' has been advanced much beyond what is reasonable. We believe that the publishers should either materially lower the list-price of books, or give the libraries a discount of at least twenty-five per cent."

Miss Anna G. Rockwell of the New Britain Institute read a paper on "Fiction again; where shall we draw the line of exclusion?" following which Mr. Charles P. Everitt, of Doubleday, Page & Co., gave a history of color-printing and described in detail the process of electrotyping and making half-tone plates.

The morning session closed with explanations regarding the different systems of charging books at the institute, Mr. Borden giving a detailed description.

At two o'clock Prof. Albert S. Cook, of Yale, made an address comparing the modern librarian to a feudal chief with an armory of weapons for all occasions, while Prof. Wilbur F. Cross, also of Yale University, spoke of the development of the historical novel.

It had been the hope of those in charge of the program that Donald G. Mitchell might be present to say a few words, but his health would not permit of his attendance. A resolution expressing the regret of the association was passed.

After a vote of thanks to the Young Men's Institute, the meeting adjourned.

ANNA HADLEY, *Secretary.*

TEXAS LIBRARY ASSOCIATION.

A meeting for the organization of a state library association for Texas was held on Monday, June 9, at the library of the University of Texas. The call for the meeting was issued by C. W. Raines, the state librarian; Mrs. P. Pennepacker, president of the Texas Federation of Women's Clubs; Miss Rosa Leeper, librarian of the Dallas Public Library; Mrs. Henry Exall, Dallas; Mrs. Scheuber, librarian of the Carnegie Library, Fort Worth; Judge T. Austin, trustee of Rosenberg Library, Galveston; Mrs. A. F. Ring, Houston; and Benjamin Wyche, librarian of the University of Texas. The objects set before the proposed library association are given as: stimulating and aiding the library and other educational interests of the state; furthering the scope and usefulness of the state library; securing legislation necessary for the establishment of a library commission or central bureau; acting in the capacity of such a commission or bureau until the necessary legislation is secured for its organization. It is added: "There are very few libraries in Texas, as yet, consequently the field of usefulness of an association of this kind is large, uniting, as it should, in its membership, librarians, trustees, teachers, and others interested in the cause, and especially the women's clubs."

Library Clubs.

LONG ISLAND LIBRARY CLUB.

President: Frank P. Hill, Brooklyn Public Library.

Secretary: Miss Irene Hackett, Y. M. C. A. Library.

Treasurer: Miss Mabel Farr, Adelphi College Library.

The Long Island Library Club held its May meeting on Wednesday, the 21st, at Richmond Hill, Long Island. The meeting, which was preceded by an informal luncheon in the Richmond Hill Club House, was held in the library building. It was called to order at half-past two o'clock by the president, Mr. Frank P. Hill, who said that as this was the first gathering in the building since the library moved in, it might be considered a house-warming. He introduced the Rev. William F. Evans, who made a cordial address of welcome, and was followed by Mr. Jacob A. Riis.

Mr. Riis told how his book, "The ten years' war," happened to be so named, and how it would be incorporated into the second part of "How the other half lives" under the title of "The battle of the strong." He said his two favorite books were the Bible—a model of English from the reporter's standpoint—and "John Halifax, gentleman." Mr. Riis spoke enthusiastically of his work for the people of the slums, and of the Jacob A. Riis House. He maintained that whereas he reached these people through improving their

homes, the librarians had a hold upon them through their ideals, by giving them "biographies of men who have done something." He illustrated his belief in heredity as well as environment, but said that back of all was our "heredity from God."

The topic of the meeting was "Library institutes," and the discussion of how Long Island communities may benefit by them was opened by Miss Hume, librarian of the Queens Borough Library. She called attention to the fact that in Far Rockaway there are 40 or 50 men who cannot read.

Miss Hitchler, of the Brooklyn Public Library, reported upon the institute held at White Plains, N. Y., under the auspices of the New York Literary Club. She suggested that instead of sending typewritten circulars, personal visits should be made in the neighborhood where interest was to be aroused, or at least a personal correspondence carried on. The question box was a most important feature of the institute, and many questions were answered. Samples of picture bulletins and of charging systems were much appreciated.

Miss Baldwin, of the Brooklyn Public Library, reported on the institute held at Binghamton, N. Y. There are eight counties in the state without a library of prominence. Miss Baldwin also emphasized the importance of a question box, and the necessity of choosing a local secretary well adapted for the work.

The discussion for Long Island was taken up by Miss Bragaw, of the Richmond Hill Library, who compared library with other institutes; Miss Macmillan, of the Brooklyn Public Library, who thought most was to be gained by personal work, and that the questions to be answered should be asked for in advance; and by Miss Haines, of the LIBRARY JOURNAL. Miss Haines gave a review of the library institute idea as adopted in Indianapolis, Wisconsin, and Western Massachusetts, and the eight institutes held in New York state. She emphasized particularly the things to be avoided—too much theorizing, over-elaboration of technical details, a large attendance of trained librarians dominating the local attendance, and a conductor given to lengthy speeches, or not personally adapted to inspire interest. She thought that the aim of the institutes could not be to give technical training, but to waken interest and impart vitality.

Miss Plummer, as chairman of the committee on districting the island, suggested that the question of an institute in the fall be considered. It was moved and carried that one be held.

The resignation of the secretary, Miss Frances B. Hawley, was accepted, and Miss Irene A. Hackett was elected in her stead.

A vote of thanks was tendered to Mr. Evans and Mr. Riis for their addresses.

IRENE A. HACKETT, *Secretary*.

NEW YORK LIBRARY CLUB.

President: Frank B. Bigelow, Society Library.

Secretary: S. H. Berry, Y. M. C. A. Library, 317 W. 56th st.

Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.

A meeting of the New York Library Club was held at the Library of the American Museum of Natural History, Central Park, west, on Thursday, May 8, at 3 p.m.

Four new members were elected and on motion of Mr. Nelson, Frederick Saunders, A.M., was elected an honorary member, being the first American honorary member. Mr. Saunders is soon to pass his 95th birthday.

The treasurer's report was presented showing a balance of \$252.75 to the credit of club, which will be more than used up by the cost of issuing and distributing the handbook.

A nominating committee composed of Mr. Eames, Mr. Cole, and Miss Rathbone, appointed by the president in advance to nominate officers for the ensuing year, were called upon to report and recommended the following: for president, Frank B. Bigelow; 1st vice-president, E. W. Gaillard; 2d vice-president, Miss Emma F. Cragin; secretary, Silas H. Berry; treasurer, Miss Theresa Hitchler.

It was voted that the chairman be instructed to cast one ballot for the entire ticket.

Dr. Leipziger, the retiring president, made a brief address congratulating the club on its growth and success.

In the absence of Mr. H. C. Bumpus, of the Museum of Natural History, who was to have given an address on "The relation of the library to the museum," Mr. Hovey spoke briefly on behalf of the museum management. He said that a museum of natural history is very much like a library in that they both record the works of nature, the difference being that the museum shows the record in nature's own handwriting; while again library methods are very largely employed in arranging and indexing the museum collections.

Mr. George Watson Cole in his "Report on the hand-book" set forth fully the history of this club's undertaking, and made clear why it had been so long in preparation and why the result was a volume so much larger than was expected when the undertaking was launched. A motion was carried extending the thanks and congratulations of the club to the hand-book committee for the excellent work accomplished.

Mr. Anthony Woodward, librarian of the museum library, then spoke on "The literature of natural history," calling attention to some of the rare and valuable books in various departments of science, many of which are in the museum collection. He gave a sketch of the library's history, showing how it had been started in 1859 with a gift of one book and had grown by the addition of various private

collections and by other means until the present collection numbers above 54,000 volumes.

The meeting adjourned early, that members might have an opportunity of visiting the library and museum.

PENNSYLVANIA LIBRARY CLUB.

President: Dr. I. Minis Hays, 266 South 21st street, Philadelphia.

Secretary: Miss Edith Gawthrop, University of Pennsylvania Library, Philadelphia.

Treasurer: Miss M. Z. Cruice, American Philosophical Society, Philadelphia.

A meeting of the club was held in the lecture room of the Apprentices' Library, Broad and Brandywine streets, Philadelphia, on Monday evening, May 12. Dr. Morris Jastrow, jr., presided, and introduced as the speaker of the evening, J. Levering Jones, Esq., a prominent member of the Philadelphia bar. Mr. Jones made an address which was interesting throughout. He reviewed the life of Thaddeus Stevens at length. He recalled how Stevens, in 1835, stood up in the State House of Representatives against an overwhelming adverse majority and by a speech of wonderful eloquence convinced the members that the common schools lately introduced should be maintained and improved. Schools dotted Pennsylvania; but they were private or church schools. The American common school in Pennsylvania will ever cherish the memory of Thaddeus Stevens. The later political career of Stevens was traced by Mr. Jones with great clearness, and the prominent part that he played in the civil struggle and during the period of reconstruction was set forth in detail. Mr. Jones's careful and profound study of his important theme was thoroughly enjoyed, and proved highly instructive to those present.

Mr. Thomas L. Montgomery, of the Wagner Institute, reported on the union list of periodicals. This list is to contain detailed information of all the sets of periodicals, current or otherwise, to be found at the various libraries in Philadelphia as well as in some adjacent parts, so far as these libraries can be induced to report; and printed copies will be supplied to all libraries contributing so that each can tell what the others possess.

Mr. Montgomery also reported that Miss Randall, Mr. Bowerman and himself, together with Mr. J. C. Dana, representing the Pennsylvania and New Jersey library clubs, had an interview with Messrs. Scribner and Dodd, representing the American Publishers' Association. They were accorded a favorable reception, and every reason exists to anticipate a substantial reduction of rates to libraries.

The year which closes with this meeting was a most successful one. Addresses were delivered by Judge Samuel W. Pennypacker on "The early press of Pennsylvania"; by Miss Mary H. Upton on "The art and craft of bookbinding"; by Mr. John Thomson on

"The Master of the Rolls series"; and by Mr. J. Levering Jones on Thaddeus Stevens. The policy of supplying invitation cards to members was introduced, and while the policy is at present in the experimental stage, it appears to have been a wise measure. The membership roll has been carefully revised; provision made for the publication of a hand-book, containing a history of the club; and the union list of periodicals has been made, one may almost say, a certainty. The expense of printing "Occasional papers" has proved a great strain on the treasury, and possibly this feature cannot longer be sustained. The retiring president, Dr. Jastrow, and the members of the club, have every reason to feel pleased and encouraged by the year's work.

The following officers were elected for the new year: President, Dr. I. Minis Hays; vice-presidents, Robert P. Bliss, Miss Jean Y. Middleton; secretary, Miss Edith Gawthrop; treasurer, Miss Mary Z. Cruice.

The incoming president announced the following members who with the officers will constitute the executive committee: Dr. Morris Jastrow, jr., Miss Isabel E. Lord, John Thomson, Miss Alice B. Kroeger.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: George Stockwell, Westfield Athenæum.

Secretary: Miss Ida Farrar, City Library, Springfield.

Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburg.

One of the most interesting library institutes yet held under the auspices of the Western Massachusetts Library Club occurred May 24, in Bernardston. Representatives of the club were present from Westfield, Holyoke, Amherst, Sunderland, Mount Hermon, Wendell, Colerain, Lancaster and Springfield. In preparation for this institute the secretary spent two days in Bernardston and vicinity several weeks before, meeting librarians, trustees and school superintendents, and becoming acquainted with the library conditions in the towns. The speakers who led the discussions endeavored to adapt their remarks to these conditions. The morning session opened with a paper on "The farmer and the library," by Miss Julia Kavana, librarian at Wendell. Miss Kavana resolved her subject into four heads: Do all read? Would all read, were conditions favorable? How to procure and interest readers? What should be the proper conditions? To all these questions she gave the answers of practical experience. People do not all read, even when the public library is next door to them. In one country town there was opposition even to the thought of a public library, people fearing the books might get lost or that there would be nothing in it but novels. She had tried all sorts of plans to secure readers, preparing lists, talking to the teachers, calling from house to house

and inviting the people to take books, and arranging to leave books at places convenient of access. Her best plan had been to discover some point along which a person was interested, seek to meet that interest, and lead on from that. She emphasized the place the library should have in the community in the making of good citizens.

The second paper was given by Miss L. I. Thayer, of the Highland school, Holyoke, on "Children and books." She made very clear the close relation of teacher and librarian in their effort to implant a love of good literature in the minds of children, admiration for the best in character of those people in books who are heroes to them, and lessons of moral courage and virtue. No part of school work, she said, brings more pleasure and profit than these little branch libraries, reaching the child's individual needs and preferences, and instituting a love for the best at just the right period of the child's life.

Mr. W. I. Fletcher, of Amherst College, followed with a paper on "Common sense in library buildings." A warm discussion ensued, centering about the subject of the school and the library. F. P. Davison, of Turner's Falls, said: The libraries exist for the schools; in discussing the library we are discussing one phase of education; the center from which education must radiate is the school. The librarian would inculcate a love of reading, if he could; the church a love of morals, if it could. Home would teach the proper environment, the industries of life, good citizenship, if it could, but the whole of teaching must center in the child. Reading is the foundation of all school work. There must be good literature in the school room—the masterpieces themselves, not a dilution of them. The teacher should read to the child, should insist on his memorizing much that is good, but, above all, should see that he reads good books at home. Some of the librarians present had found difficulty in interesting teachers; it was suggested that the school superintendent be made the special center of communication.

After dinner, served in the town hall, the visitors strolled about the beautiful little village for a short time, visiting Powers Institute and the Cushman Library, which already has a large number of well-chosen books, to which constant additions are being made.

At the opening of the afternoon session the discussion of the morning was resumed. In these days, when there is free rural delivery of mail, when groceries are delivered to farmers on the hills, is there not a demand for the delivery of books from house to house? Could this not be done by the carriers? People who live farthest from the center are most anxious for books. Farmers do not read agricultural books, saying they are not practical. They do not like books of the "David Harum" type, preferring something different from their ordinary life.

Rev. E. P. Pressey, of Montague, gave a thoughtful address on the topic, "Why every citizen should value the library."

Miss C. M. Hewins, of Hartford, was the last speaker, taking as her topic, "What it means to be a librarian." She spoke of the general type of country library, not cataloged, with odd volumes, many duplicates, and kept in all sorts of odd places, with the librarian's salary varying from \$5 to \$100 a year. The talk was very suggestive and practical, and took the form of "the woman who did." This woman classified her books roughly, had shelves arranged at comfortable height for reaching from the floor, and, since the library funds were too low to admit of buying Poole's index, made a rough index herself in odd minutes to such magazines as she had. She made the acquaintance of the teachers, visited their schools, and suggested illustrated books in the line of study. She made the acquaintance of the children, as well as the teachers, and having invited a little party out to walk with her, pointed out common birds and flowers and told them of interesting books on the subject. In all these ways and others the librarian may come into touch with the social life of the community, and influence by personal contact as in no other way.

Library Schools and Training Classes.

ILLINOIS STATE LIBRARY SCHOOL.

INSTRUCTION IN REFERENCE WORK.

The purpose of the courses in elementary and advanced reference work at the University of Illinois, stated briefly, is to familiarize students with the general aims and methods of reference work, to give them a working knowledge of the principal reference books, to develop the power of research and the ability to follow a clue quickly from book to book for more difficult questions, to cultivate rapid thought and quick answers for simpler questions and to test and increase general information. The purpose is accomplished in two ways, by class instruction and recitation and by independent practical work not directly connected with any class exercises.

Instruction.

Instruction in reference work is given continuously throughout the two years of the course. In the junior year the ordinary reference books are studied in groups according to form and subject. In the senior year the work is divided equally between the course in public documents, given by Miss Mann, and the course in advanced reference. In the latter are studied college and society publications, which are of special reference value, advanced reference books, particularly those in foreign languages, and reference books useful for very special or difficult subjects. In both years instruction is given by means of

lectures, problems and weekly quizzes. For each lesson a problem requiring about four hours' work is assigned. This problem contains from 15 to 25 questions of more than average difficulty, and, as the greater value of practical over theoretical questions is fully appreciated, these are, with a few exceptions, questions which have actually been asked at the reference desk in the university library. All problems are revised carefully and returned to the student with the necessary corrections and suggestions. A statement of the amount of time spent upon these problems is required, and, as work is graded for both accuracy and speed, rapid work is encouraged. These problems test the students' ability to investigate difficult subjects. To enable them to acquire facility in answering easy questions off-hand, short quizzes are given at the end of each lecture. Questions are read to the class by the instructor, and in answering these, students are allowed only the time necessary to write out the answer, generally less than one minute for each question. A sample quiz of this sort is given below.

Practical work.

The problems assigned in connection with the courses in reference depend to a certain extent upon the lectures given in the course, and in solving these the students naturally receive aid and suggestions from this class instruction. To give the student practice in carrying out more independent pieces of work, practical work in the university library and the Champaign Public Library is assigned. This may be divided roughly into desk work and work on reference lists.

Desk.

To the senior students is given entire charge of the reference room and reference desk during the evening hours, from 6.30 to 9 p.m. The student in charge answers all questions which may be asked and maintains order. Work is quite independent, except that the student reports questions of special difficulty or interest to the reference librarian, tells how he solved them and receives criticism and suggestions. Assignments are made for periods of two weeks, so that each member of the class has consecutive work of this sort. While at the desk the student has practice in keeping up the various indexes and records. These consist of the collection of reference lists, a card index for all difficult or frequently repeated questions and statistics sheets for the lists and the index.

Senior students also take entire charge each afternoon of the children's room and branch library of the Champaign Public Library. In this way a great variety of reference work is secured and the same student may obtain at different times practice in answering such reference questions as are asked in a university library, a children's library and a branch of a public library, and at the same time become accustomed to practical library routine.

Reference lists.

For the sake of providing practical reference work of a public library type for the students, the library school has undertaken the preparation of the reference lists for the programs of the various women's clubs of Champaign and Urbana. Reference lists for university classes, debates, etc., are also prepared. The more difficult subjects are assigned to seniors, the easier ones to juniors. Such suggestions as are absolutely necessary are given to the students, but the constant aim is to render this work as independent as possible. The distinction between club list and college list is kept carefully in mind, and the student is taught that while the former should be short and popular and should include only carefully selected references, the latter should receive a much more thorough and exhaustive treatment, and should include more special and scholarly material. During the college year 1900-1901 the students prepared 125 club lists and a smaller number of lists for university work. All lists are carefully revised for both form and substance.

In addition to the students who are assigned each week for desk or list work, other students are assigned to help the reference librarian in such miscellaneous reference work as can well be given them. The total assignment usually consists of four juniors and four seniors.

General information.

The need and value of wide general information as a preparation for library work is of course felt most strongly in reference work. To help the students to acquire this information and to impress upon them the necessity of keeping abreast of the times, work in current events is combined with the course in advanced reference. Last year this was done by means of a formal report given by each student in turn, but this year a different plan has been followed. At the beginning of the lecture 10 or 15 minutes are devoted to an informal discussion by the class, of the principal events of the week, particularly such as are likely to affect the work of the reference department. Events of the past week are mentioned, their causes or previous stages discussed; earlier, similar or related events, which might perhaps be brought to notice again through their connection with recent occurrences are spoken of, and for each topic or subject mentioned the students are asked to state the authorities which they would consult for information on that subject. In this way the student not only keeps up with events of the day, but notices their connection with and influence upon ordinary reference work.

Sample quiz given in elementary reference work. Time allowed, five minutes:

Mention authors and titles of books in which you would expect to find information on the following questions:

1. Where find good biographical sketch of Cardinal Wolsey?

2. What was the Ostend manifesto?
3. Who is president of Ohio State University?
4. What is the national debt of Russia?
5. Who is editor of the *Atlantic Monthly*?
6. Where find good account of the Court of Star Chamber?
7. Where find a synopsis of "Bleak House."

ISADORE GILBERT MUDGE,
Reference Librarian and Assistant Professor.

ALUMNI LECTURE.

At a meeting of the Illinois Library School Association, held in Waukesha last year, it was decided to institute an annual alumni lecture to be given before the students of the Illinois State Library School.

It was the desire of the association that these lectures should be of a high quality, given by prominent librarians who were in sympathy with the modern library movement.

The first lecture was given on May 20 at the University of Illinois by Mr. Anderson H. Hopkins, assistant librarian of the John Crerar Library, who by this lecture established a most gratifying standard of excellence.

Mr. Hopkins chose as his subject "The library, the museum and the new education." It was a pleasure to be led by the speaker from the merely technical consideration of libraries to the broader subject of education, including its three most potent factors, the school, the library and the museum. The speaker showed *what* might be accomplished by the study, not of books alone, but by the study of things illustrated by these books. He would bring about a closer co-operation between the three agencies at work in education and supplement the work of each by introducing into the administration of each those elements which are common to all three.

The museum has its articles labelled, the library has its books cataloged, the teacher has his illustrative material. These are all catalogs and all of use to the student, but why should each stand alone? Mr. Hopkins' idea is to supplement the label in the museum by adding references to the books in the library relating to the specimen and at the same time add to the library catalog references to the specimen which illustrates the book.

The museum may grow by addition, but a wide-awake person is needed to discover things of importance which may be of interest and value. The teacher is the most fitting person for this, and by co-operation with his students may collect much material.

The plea was made not so much for large museums as for the small collections which are within the reach of all.

Binding the library, the museum and the school into one group would form a union of great value, not only mutually, but also to the community at large.

MARGARET MANN.

IOWA SUMMER SCHOOL.

The second annual session of the Iowa Summer School for Library Training will be held at the state university, Iowa City, June 16 to July 26, under the direction of Miss Alice S. Tyler, secretary of the commission. The instructors include, for classification and cataloging, Miss Esther Crawford, of Western Reserve University; for work with children, Miss Annie Carroll Moore, of Pratt Institute Free Library; for reference work, Miss Harriet A. Wood, of the University of Iowa Library; and lectures will be delivered by members of the state university faculty and by visiting librarians. The cataloging instruction will be extended over two summer sessions, "thus reducing the 'cramming' process and its consequent evils. The first year's course of 26 lessons will cover the elementary principles of author and title entry, and will extend through the first four and a half weeks of the session. The second year's course of 18 lessons will cover the elements of subject and analytic cataloging, and will extend through the last three weeks of the session." No student may take both courses in the same session.

Instruction in library work for children will be made a special feature of the course. During the last two weeks of the session (July 14-26) instruction will be given on this subject, and students will be admitted for it alone. Miss Moore's course will include three series of lectures, covering children's books, important features of the work of a children's department and general topics; and there will be three kindergarten conferences conducted by Miss Virginia E. Graeff, supervisor of kindergartens in the Cleveland (O.) public schools. Tuition for this special course alone is \$2.50. Circulars, application blanks, etc., may be had by addressing Miss Alice S. Tyler, Iowa Library Commission, Des Moines, Ia.

NEW YORK STATE LIBRARY SCHOOL.

SUMMER COURSE.

The following students began a six weeks' course of study June 3:

- Bogert, Julia T., New York City; B. A. Evelyn College, Princeton, 1897; assistant St. Agnes' branch, N. Y. Public Library.
 Boss, Helen, Albany, N. Y.; assistant Young Men's Association Library, Albany.
 Brown, Ralph M., Ithaca, N. Y.; B.A. Cornell University, 1901; librarian Flower Memorial Library, Veterinary College, Cornell University.
 Clark, Sarah M., Warrensburgh, N. Y.; assistant Richards Library, Warrensburgh.
 Cochran, Jennie O., Louisville, Ky.; Hampton College; assistant librarian Polytechnic Library, Louisville.
 Davis, Mary, Cleveland, O.; assistant circulating department Cleveland Public Library.
 Deevey, Edward, Albany, N. Y.; N. Y. State Normal College, 1901; assistant Albany Free Library.

- Doolittle, Hattie A., Beaver Dam, Wis.; Wayland University, 1882; librarian Williams Free Library, Beaver Dam.
 Forbes, Mary L., Jamestown, N. Y.; assistant Jamestown High School Library.
 Greene, Ethel M., Herkimer, N. Y.; substitute assistant Herkimer Free Library.
 Harper, William, New York City; B.A. Albion College, 1870; Univ. of Munich, 1872-75; librarian Poppenhusen Institute Library.
 Kelley, Mrs. Pearl W., Nashville, Tenn.; B.A. Huntsville Female College, 1889; assistant Vanderbilt University Library.
 Langdon, Amelia E., Yonkers, N. Y.; cataloger's assistant, circulation department, New York Public Library.
 Langdon, Grace T., Yonkers, N. Y.; assistant Muhlenberg branch, New York Public Library.
 Mastin, Alice, Millbrook, N. Y.; librarian Millbrook Free Library.
 Morrell, Mary, Aurora, N. Y., Wells College, 1868-70; librarian Aurora Public Library.
 Munger, Alice D., Herkimer, N. Y.; assistant Herkimer Free Library.
 Penfield, Augusta E., Jamestown, N. Y.; assistant Jamestown High School Library.
 Perkins, Ellen F., New York City; cataloger's assistant, circulation department, New York Public Library.
 Povey, Grace E., New London, Ct.; assistant New London Public Library.
 Rosen, Anna H., New York City; librarian Young Men's Hebrew Association.
 Schaub, Emma, Columbus, O.; cataloger Columbus Public School Library.
 Slater, Alice, New York City; assistant Bond St. branch, New York Public Library.
 Snyder, Elvira L. F., Elmhurst, L. I.; assistant Bond St. branch, New York Public Library.
 Stonehouse, Mary E., Albany, N. Y.; assistant Young Men's Association Library, Albany.
 Surratt, John E., Waco, Texas; Baylor University, 1899-1902; assistant Baylor University Library.
 Surratt, Odo, Waco, Texas; Baylor University 1899-1902; assistant Baylor University Library.
 Tompkins, Josephine, Tarrytown, N. Y.; assistant St. Agnes' branch N. Y. Public Library.
 Townsend, Adelaide M., Brooklyn, N. Y.; assistant Brooklyn Public Library.
 Van Zandt, Ethel J., Albany, N. Y., assistant Pruyn Library, Albany.
 Walker, Evelyn H., Chicago, Ill., librarian All Souls' Library, Chicago.
 Whitaker, Mabel H., Fulton, N. Y., assistant Fulton Public Library.

IMPORTANT LECTURES.

Mr. Frank P. Hill, librarian of the Brooklyn Public Library, gave three lectures on general administrative topics May 15 and 16. Mr. Arthur E. Bostwick, superintendent of

circulation, New York Public Library, spoke May 22 on branch libraries.

Mr. Clement W. Andrews, librarian of the John Crerar Library, Chicago, gave the fifth course in the alumni lectureship June 2, 3 and 4. His subject was the bibliography of science. Miss Mary E. Robbins, '95, second vice-president of the Alumni Association, was present, as well as Miss Woodworth, chairman of the executive committee. Mr. Andrews' extremely valuable lectures will appear in printed form.

BOSTON AND MAGNOLIA.

The school will spend June 12-16 in visiting the following libraries: Springfield City, Boston Public, Harvard University, Medford Public, Providence Athenæum, Public, Brown University, Boston Athenæum and Massachusetts State. They will attend the annual meeting of the American Library Association at Magnolia June 16-20, school closing for the year June 20.

SALOME CUTLER FAIRCHILD.

FIFTEENTH REPORT.

The 15th report of the Library School is just issued as New York State Library, Bulletin 71 (Library School 10). The class reported upon (1900-01), numbered 49, of whom 44 held college degrees, and representing 13 states, New York leading with 17. The decision to require college degrees from all future applicants is noted, and it is stated that "maintenance of this standard will now work no hardship, as the other library schools afford opportunity for instruction of those unable to meet the higher requirements of the parent school." The annual library visit for this year to New York is reviewed, and the various bibliographies and theses compiled by students during the year are recorded. Dr. E. C. Richardson's report on library schools, submitted at the 1901 meeting of the American Library Association, is reprinted, and the activities of the alumni association and the summer course are noted. Full record of lecturers and students are given, and there is an interesting schedule of positions filled by school students in 1901.

PRATT INSTITUTE LIBRARY SCHOOL.

NOTES ON CLASS WORK.

The lectures of the past month have been by Miss Florence Cragg, a former pupil of Miss Nancy Bailey, of London, on "Indexing," preliminary to the course in indexing; by Mr. W. W. Bishop, of the Polytechnic Institute, on the "Bibliography of education" and the "Bibliography of the classics"; by Mr. Frank P. Hill, of the Brooklyn Public Library, on "Some phases of branch work in public libraries"; by Mr. George H. Baker,

of New York, the first of his annual series on "Bookbuying." Owing to the illness of Miss Rathbone, the head instructor in the school, from which, however, she is now recovering, the course of lessons on the Cutter classification is being given by Miss Abby Sargent, of Medford, Mass., who is familiar with both the Decimal and the Cutter systems and uses the latter in the Medford library. Miss Sargent will set the examination and go over the students' papers and work at the end of the course. With the exception of Mr. Baker's course, and one other lecture, there will be no further lectures from visiting librarians. The visits to local libraries began May 9, this year, under the director's guidance. These, with the practical work now being done by students in all parts of the library, fill the measure of time required. Several students are taking a part of their practical work in the Brooklyn Public Library.

More than half of the class will attend the A. L. A. Conference at Magnolia, returning to Brooklyn for the Institute commencement, the evening of June 19.

MARY W. PLUMMER, *Director*.

GRADUATES' ASSOCIATION.

The Graduates' Association has just issued its report for the year ending Jan. 30, 1902, in neat pamphlet form (33p. T.). It contains, in place of the usual report of the secretary, the "Report of the Library School to the Graduates' Association," made by Miss Plummer at the annual meeting in January, 1902. This report is based upon the answers received to the circular of questions previously sent out to graduates, and is an informing and suggestive review of the aims and methods of the library school, and the changes made in the course in recent years. This is followed by the constitution, by-laws, and full, revised membership list.

Reviews.

CHRISTIE, Richard Copley. *Selected essays and papers*; ed., with a memoir, by William A. Shaw. New York, Longmans, Green & Co., 1902. 72+393 p. por. il. O.

The name of Richard Copley Christie has long been a distinguished one in the bibliographical field, and this collection of his representative writings is most welcome. It is practically a memorial volume, admirably illustrative of Mr. Christie's scholarly attainments and literary powers. Many of the papers originally appeared in the *Library Chronicle*, transactions of the Bibliographical Society, various quarterlies, *Spectator*, *Notes and Queries*, and kindred periodicals, and while in the main purely bibliographical in

theme they cover a wide range of topics. The prefatory memoir is a sympathetic portrayal of a man who in a life of wide professional and public activity was at heart always a scholar and a lover of books.

Richard Copley Christie was born at Lenton, Nottingham, on July 22, 1830. Entering Oxford in 1849, he came directly under the influence of Mark Pattison, whose personality and methods had strong effect upon his character, and with whom he formed an enduring friendship. He was graduated first class in 1849, and in the same year was elected to the chair of history and the Faulkner chair of political economy and commercial science in Owens College, Manchester. In this field Christie found his life-work. It was largely through his devotion, clear-sightedness and high standards that Owens College was raised from the position of practically a day and evening continuation school to its present rank among English colleges, and although in 1869 he gave up his connection with its teaching faculty to carry on his constantly increasing practice at the bar, he was until his death one of the most active and influential of its governors. In 1871 he was appointed chancellor of the Diocese of Manchester, and in that capacity became one of the recognized authorities on canon law. He retired from the chancellorship in December, 1893, after 22 years of service, and his death occurred on his estate of Ribsdon, Surrey, on Jan. 9, 1901. His enduring memorial in Owens College is his gift of the Christie Library building, completed in June, 1898, to which he bequeathed his own fine private collection of books. "The total cost of the building of the Christie Library was £21,077. As to the value of the collection of his own books, also thus bequeathed, it is not possible to give any estimate. Many of them are works of extreme rarity in themselves, as well as of beauty in the binding. They represent the outcome of a lifetime's careful and vigilant searching, and it may be safely asserted that it would never again be possible to get together such a collection." In library affairs Mr. Christie was always interested. He was a member of the committee of the London Library from 1888 to 1897. He assisted in the creation and was one of the earliest vice-presidents of the Bibliographical Society, and he was vice-president and later fellow of the Library Association of the United Kingdom, serving also as president of the annual conference held in London in 1880.

The papers here presented number 24 in all, of which five are reviews from *The Spectator*, and two are chancellor's addresses upon ecclesiastical law. Among them is the careful comparative essay upon "Bibliographical dictionaries," and the review of the "Chronology of the early Aldines." "The forgeries of the Abbé Fourmont," "The Scaligers," "Cat-

alogue of the library of the Duc de la Vallière" and "Elzevir bibliography" are other subjects, treated with erudition and much literary charm. A bibliography of Mr. Christie's writings is given in chronological record, and Mr. John Cree contributes interesting descriptive "Notes on Mr. Christie's collection of books." The volume contains two portraits and several illustrations, and a good index. In mechanical details it is most satisfactory.

*CLARK, John Willis. The care of books: an essay on the development of libraries and their fittings, from the earliest times to the end of the eighteenth century. New York, Macmillan, 1901. 18+330 p. il. 4° (Cambridge University Press ser.) net, \$5.

The number of pages in this most interesting volume does not give an adequate conception of its size. Of the 156 illustrations at least 46 are on separate leaves, not paged, and these latter are always accompanied with an extra leaf of heavy tissue paper to protect them. The illustrations truly illustrate. An examination of them alone will teach one much of the way books were cared for in ancient and mediæval times, both in public and private libraries.

Mr. Clark, in the opening paragraph of the first chapter, tells what his book includes and what it excludes: "I propose, in the following essay, to trace the methods adopted by man in different ages and countries to preserve, to use, and to make accessible to others, those objects, of whatever material, on which he has recorded his thoughts. In this investigation I shall include the position, the size, and the arrangement, of the rooms in which these treasures were deposited, with the progressive development of fittings, catalogs, and other appliances, whether defensive, or to facilitate use. But, though I shall have to trace out these matters in some detail, I shall try to eschew mere antiquarianism, and to impart human interest, so far as possible, to a research which might otherwise exhaust the patience of my readers. Bibliography, it must be understood, will be wholly excluded. From my special point of view books are simply things to be taken care of; even their external features concern me only so far as they modify the methods adopted for arrangement and preservation. I must dismiss the subject-matter of the volumes which filled the libraries of former days with a brevity of which I deeply regret the necessity. I shall point out the pains taken to sort the books under various comprehensive heads; but I shall not enumerate the authors which fall under this or that division."

The volume is divided into nine chapters, in which are traced the evolution of libraries during 25 centuries. Its whole treatment

shows evidence of scholarship and the greatest amount of care and labor on the part of the author. Scores of libraries, in monasteries, in cathedrals, in universities, both in England and on the Continent, were visited, measured in detail—both buildings and fittings—and photographed by Mr. Clark. The book is so full of references and quotations in Greek, Latin, French, and Italian, that one is almost tempted to try to make a list of the librarians in America who have the scholarship and the inclination to do such work in the same field. And there is room for much work in this field, for Mr. Clark's volume is only an essay—"an attempt to deal, in a summary fashion with an extremely wide and interesting subject." A mere reading of the table of contents shows at a glance that only a part of the field is here covered. There is no reference to the libraries of Chaldea, of China, of India, of Egypt before the time of Alexander the Great, or of the Arabians; and the mediæval libraries of a large part of Europe are as yet an undiscovered country.

The first library described by Mr. Clark is the record-room of Assur-bani-pal, king of Nineveh, about 700 B.C. Then follow brief descriptions of libraries before the Christian era in Greece, Alexandria, Pergamon and Rome. The chapter closes with a description of the Vatican library of Pope Sixtus V., which, in its general conception, is Roman.

The second chapter discusses the Christian libraries connected with churches, and the libraries of the monastic orders—the public libraries of the middle ages. As early as the 13th century these libraries received bequests of books on the express condition that they should be lent, and "one abbey was continually lending to another"—interlibrary loans.

In the third chapter the increase of the monastic collections and the growth of the libraries in cathedrals are traced. In the fourth chapter the monastic and collegiate libraries are compared and with them their fittings, which were probably identical. In the monasteries the erection of a library proper was an afterthought; and so it was at the older colleges of Oxford and Cambridge, some of them not beginning libraries for more than a century after their foundation. In this chapter the beginning of the lectern system of shelving books is traced, together with the methods of chaining them.

The invention of the "stall-system"—similar to the modern stack system—is discussed in the fifth chapter. The evolution of the "stall" from the "lectern" system is well shown by Mr. Clark. As the number of volumes increased shelves were gradually added above and below the desk to which the books were chained, the chains still retained in many instances; and finally we have our modern stack. To the librarian of to-day perhaps the most interesting part of the whole book is the

latter part of this chapter where is given the translations of the introductions to several catalogs of these old libraries.

The lectern-system in Italy, with a full description of the Vatican library of Sixtus IV. and an account of the Medicean library, Florence, are the chief subjects of the sixth chapter. The account books of Bartolommeo Platina, librarian of the Vatican library from 1475 to 1481, enable one to trace the growth of this library in a most satisfactory way. Mr. Clark's general conclusion respecting the libraries of this period is that "all mediæval libraries were practically public. Elaborate catalogs enabled readers to find what they wanted in the shortest possible time, and globes, maps, and astronomical instruments provided them with further assistance in their studies. Moreover, in some places the library served the purpose of a museum, and curiosities of various kinds were stored up in it."

The contrast between the 15th and 16th centuries is the subject of the seventh chapter, in which are shown some of the harmful influences of the reformation on libraries. "The 15th century was emphatically the library era throughout Europe. Monasteries, cathedrals, universities, and secular institutions in general vied with each other in erecting libraries, in stocking them with books, and in framing liberal regulations for making them useful to the public." Between 1536 and 1539 upwards of 800 monasteries with their libraries were destroyed in England.

The "wall-system"—the building of shelves against the walls of the room instead of at right angles to them—is a later development than the "lectern" and "stall," and is discussed in the eighth chapter. This idea was first used in the library at the Escorial, begun by Philip II. of Spain in 1563 and completed in 1584. The Ambrosian library in Milan, the library of Cardinal Mazarin, in Paris, and the Bodleian library at Oxford, are some of the examples of the "wall-system" described.

The subject of the final chapter—private libraries—is one of the most interesting of the volume. This chapter of 28 pages contains no less than 23 illustrations, revolving screw book-cases and desks, the ancient scholar at work in his study with his tools around him, etc., etc. On these illustrations one loves to linger. Of the mediæval man of letters Mr. Clark says: "We sometimes call the ages dark in which he lived, but the mechanical ingenuity displayed in the devices by which his studies were assisted might put to shame the cabinet makers of our own day."

The whole volume is a mine of most interesting facts, gathered from widely scattered sources, but notwithstanding the scholarship displayed by the author and in spite of one's interest in the subject, his style makes the book in many places heavy reading. The volume closes with a good index. S: H. R.

GREENWOOD, T: Edward Edwards: the chief pioneer of municipal public libraries. London, Scott, Greenwood & Co., 1902. 12+ 246 p. D. net, 2s. 6d.

Edward Edwards who devoted fifty years — the better part of his life time — to creating and developing the public library system of England, and who, in the end, died forgotten, in loneliness and with despair in his heart, and was spared the disgrace of a pauper's grave only through the kindness of a few of his neighbors, is at last reaping his reward — posthumous fame! First, the unmarked grave in the churchyard at Niton, the quaint and beautiful old-fashioned village situated a few miles west of Ventnor, in the Isle of Wight, was marked with a noble granite monument, dedicated with appropriate ceremonies, early in February of this year; and now, a painstaking biographer has gathered up all that is worth preserving concerning his life and work. The notice of the dedication of the monument previously given in these columns included a brief outline of Mr. Edwards's life. Little more can be added, for less could scarcely be known of anyone who had filled an important place in a great public movement. For this, the modest retiring nature of the man was no doubt partly responsible, though it is doubtful if there is a parallel instance on record of the chief pioneer of a large and widespread public improvement being so generally unrecognized, even within the circle of his own profession.

The idea of a public library in its modern conception, as a democratic institution freely accessible to all, had hardly emerged from the cloud of speculation with which the question was surrounded when Edwards first gave his attention to the subject. In these later times, there is a curious interest in some of the arguments for and against making libraries accessible to readers. When Edwards was a comparatively young man, the controversy raged round the question of admitting the public to library buildings as a privilege, and all thought of libraries being centers of light and leading, to which students and readers could resort as a simple matter of right, was still in a vague, unformed condition. So far from readers being considered entitled to handle and examine books, it was a moot point in England about the middle of the 19th century, whether or not the rough democracy should be permitted, even with the most stringent precautions and regulations, to invade the sacred precincts of a library building. The work of Edward Edwards, ably seconded by that of William Ewart and Joseph Brotherton — all three men of the people — wrought a revolution in this condition, to which fact the many hundreds of public libraries throughout Great Britain, notably the great municipal collections of Manchester, Liverpool, Birmingham, Leeds, Sheffield and London, bear eloquent tribute. Fifty years ago, there was not one of these. It would be impossible, within the limits of this notice, to even give

an outline how this work was accomplished. Mr. Edwards's chief reward was the underpaid post of the first important free library established under the act, the library at Manchester. His seven years' service at Manchester, though full of useful work and highly honorable to him in many respects, terminated in his enforced resignation, because he had not learned to "harmoniously co-operate with superior authority." From this time he devoted himself to literature, and to the cataloging and indexing of special collections. For many years he supported himself in fair comfort. When his library services were no longer required, and the field of authorship was invaded by younger men, he had nothing to rely upon but a pitiful pittance of a pension, and was confronted by the dread of want and the actual presence of debt. In 1882 he removed from Manningtree, where his mother and sisters, partly dependent upon him, had lived for years, to Niton, where he died on Feb. 6, 1886. From the day of his interment, Feb. 10, 1886, until quite recently, Edward Edwards had almost no public recognition, worthy of his services to the library cause. It is a satisfaction that this reproach is now removed, and that his name has received a meed of recognition. **

HASSE, Adelaide R. United States government publications: a handbook for the cataloger. Part 1: The government at large; the constitution, statutes, treaties. Boston, Library Bureau, 1902. 46 p. O. \$1.

Here is a first step toward a consummation devoutly to be wished — the formulation of a practical uniform method for the cataloging of the great mass of literature embraced in the term "public documents." No one could be better fitted than Miss Hasse, by her thorough and varied experience, to undertake this task, and one regrets only that her useful manual could not have been issued in its complete form, instead of in four instalments. This first part deals only with the publications of the government as a whole — the constitution and statutes (national, state, municipal), and treaties. There remain to be considered, the legislative body — Congress, the Senate and the House; the executive body — the President, the executive departments; the judiciary, government institutions, government serials — each of these three classes to be treated in a separate part.

As Miss Hasse points out, existing cataloging rules have been framed to meet the requirements of general literature, "a literature in volumes, a literature on a given subject"; they cannot be always successfully applied to official literature, "a literature as a rule authorless, so far as personal names are concerned, a literature having whimsical relationship in its parts and volumes and series, a literature alienated, so far as convenience of treatment according to accepted forms is concerned, entirely from the ordinary type of literature."

The modifications and exceptions required to make the cataloging of public documents at once practical and systematic are cogently set forth, both in text and in the series of excellent facsimile cards illustrating different forms of entry. Especially useful is the attention given to making clear the historical and political relations between the various publications and the bodies responsible to them, for it is lack of understanding of the relationship between government documents and government authors—the nation, the national body; the state, the state officer or bureau—that is mainly responsible for the inaccuracy and “blind” work in this field. The subjects treated in this first part are, perhaps, the simplest, most free from perplexing ramifications; and the sections dealing with the executive departments and the government institutions and government serials will be especially welcome. The arrangement is compact and the divisions of each subject clearly indicated. Following each main division are references to the literature of the subject. The manual is first of all, as its title states, a handbook for the cataloger; but its careful, pithy presentation of the characteristics and uses of public documents make it no less useful to the reference worker or the student investigator than to the cataloger. Miss Hasse has added a much needed tool to the librarian’s working equipment.

NEW YORK LIBRARY CLUB. Libraries of Greater New York; manual and historical sketch of the New York Library Club. New York, 1902. 4+185 p. D.

This useful and interesting manual has been in preparation for the past eighteen months by a committee consisting of George Watson Cole, Charles Alex. Nelson, and Arthur E. Bostwick, and was presented in its completed form at the recent May meeting of the club. Its inception dates from the second meeting of the club, held Jan. 14, 1886, when a committee was appointed “to collect statistics and ascertain the specialties of the various libraries of New York and vicinity,” but no effective work toward carrying out this idea was undertaken until about a year and a half ago.

The handbook is, as its title indicates, practically a manual of the libraries of Greater New York. One hundred and four pages are devoted to an alphabetical list of these libraries, 298 in all, numbered serially. Street address, and name of librarian are given, and then follow, under the caption *History*, data as to when founded, how supported, and annual income; under *Regulations* are noted the hours of opening, kind of library, and privileges granted; under *Resources* are stated the number of volumes, and the special features or collections in each library. As the branches of the New York Public Library, Brooklyn Public Library, and others having branches, are entered under the name

of the main library, and are not given serial numbers, the actual number of recorded libraries is 350. The list is extremely interesting, in its presentation of New York’s varied and cosmopolitan library equipment, and the information given stands for an immense amount of investigation on the part of the committee. About 1000 circulars of inquiry were sent out, but despite all efforts a small percentage of the institutions addressed failed to respond, and data regarding them is given on second-hand authority. The list of libraries is supplemented by a most useful “index to special collections” noted therein, covering 256 different topics. This is the special feature of the list that makes it of practical value outside the club membership, for it shows at once the material available in New York City for the study of special subjects. And in some cases there is so much incongruity between the library and its special collection that few persons would think of connecting them—as is the case with the Cooper Institute Library and its fine collection of ballads and poetry, and the American Museum of Natural History, with its special collection of 3000 volumes upon foreign missions.

The “manual and historical sketch” of the club makes up the latter part (nearly half) of the volume. It includes record of officers for 1901-02, officers and executive committees from the organization to the present time, constitution, publications, references to proceedings as reported in the *LIBRARY JOURNAL*, list of papers read and topics discussed from the beginning of the club, a good historical sketch, by Charles Alexander Nelson, covering 40 pages, and a list of members, revised and brought up to date. The whole gives a compact and interesting review of the club’s activities, but there is one point where criticism is unavoidable. The record of “papers read and topics discussed” affords examples of clumsy and careless index entry that are regrettable, especially as coming from such a source. Such entries as “Catalogs. What, shall we print?” “Dime novel habit. What can be done to help a boy after he has fallen into the?” “Library, public, on maintaining the, by endowment”—to cite only a few—are as amateurish as they are absurd, while a still worse example is the entry, “Librarians should read, What?” also given under “What” with the illuminating reference “(see also Librarians, above).” The manual is an attractive piece of book making, well printed and neatly bound in paper or in cloth—though as to the latter a protest must be lodged against the choice of pale blue and white (the club colors) with gold stamp and lettering, for the binding of a book of reference. It is sold by the secretary of the club, Silas H. Berry, Y. M. C. A. Library, 317 W. 56th street, New York, at 25 c. paper and 50 c. cloth to club members; 50 c. paper, 75 c. cloth to non-members; 10 c. extra for postage.

Library Economy and History.

GENERAL.

The *Bulletin* of the Association of Medical Librarians makes its first appearance with a double quarterly issue for January-April, 1902 (v. 1, no. 1-2). It contains the minutes of the fourth annual meeting of the society (May, 1901), constitution and membership lists, reports on the exchange system, which is the main feature of the association's work, interesting papers on "A visit to the Hunterian Library at Glasgow," by William Osler, and "The library of a colonial physician," by Eugene F. Cordell, and a department of brief news items and reports from medical libraries. The *Bulletin* is well printed and most creditable in contents and form.

The *Library Record of Australasia* for March opens with a sympathetic memorial sketch of the late Professor Edward Ellis Morris, of Melbourne University, who had served as trustee of the Public Library of Victoria from 1879 to his death, and had been one of those first interested in the organization of the general library association. Announcement and preliminary program are given of the general meeting of the library association, which was held in Melbourne, April 2-4. It is stated that "the proposal to hold an annual meeting was found impracticable, owing to the difficulty experienced in getting a representative attendance. Indeed, it is a question as to whether the association will be able to continue to meet even biennially, owing to the great distances that representatives must travel in order to be present." There are interesting news notes from the several Australasian states, and the papers include "Hints for country libraries," by Margaret Windeyer; "The librarian as a historian," by Hugh Wright; and "The use of new books," by N. MacMunn.

PLUMMER, Mary Wright. Hints to small libraries. 3d ed., rev. and enl. Brooklyn, N. Y., The author, 1902. 68 p. D. net, 50 c.

This new edition of Miss Plummer's useful little manual is welcome. The changes made are slight, consisting mainly of bringing up to date the record of bibliographical aids and tools.

THE READING PUBLIC as I know it; by three librarians. (In *Outlook*, May 24, 1902. p. 248-253.)

Short papers, by Dr. J. H. Canfield, J. C. Dana, and Miss M. E. Hazeltine, dealing respectively with the reading public of a college library, of a large city public library, and of the public library in a smaller town. In each the opportunity of the library to mould public taste and promote educational influences is emphasized.

LOCAL.

Albany, N. Y. Andrew Carnegie's offer to provide a \$150,000 library building, on condition that the city guarantee a yearly maintenance fund of \$10,000 and furnish a site, was declined by the city council on May 19. The offer was refused by a party vote of 10 to 9; acceptance required an affirmative vote of 15. The reason suggested for the refusal was the opposition of the labor element.

Bradford, Pa. Carnegie P. L. (2d rpt.—year ending March 2, 1902.) As the library was opened to the public July 1, 1901, this report covers but eight months of active work, during which time the circulating department was open 200 days. The issue of books for home use was 57,869 (fict. 64%; juv. fict., 18%). Total registration in force 4136. There are now 7297 v. in the collection, the year's accessions having been 3087. In the children's room 13,705 v., or almost 24 per cent. of the total circulation, have been drawn. "With a better and more abundant selection of books, the work done here should constitute one of the most important phases of the library's activity. The room is already proving itself inadequate in size, being greatly overcrowded during busy hours."

Free access has been provided for since the library opened. Mr. Fletcher says, "It was not adopted as an experiment, but was really forced on us by the smallness of the staff. It would have been utterly impossible to circulate 660 books in a single day if the attendants had to go back and get each book." He makes a strong plea for better hours for the staff. It is regrettable to learn that at present the working hours "total 5134 each week, while in addition to this the assistants each work three hours on alternate Sundays. Three days in the week they must be in attendance from 8.45 in the morning till 9 at night. The work is constantly growing more arduous, the demands on tact and patience and endurance steadily increasing." He adds: "I feel assured that the work of the staff would be benefited by a reduction of the hours, more than enough to repay the library for the expense involved in making the change." The report as a whole is interesting, and shows energetic and effective work.

Brooklyn (N. Y.) P. L. (4th rpt.—year ending Dec. 31, 1901.) Added 28,419; total 144,954, distributed among the 17 branches in operation. Issued, home use 944,128 (fict. 47%; juv. fict. 25%). New registration 24,788; a new registration was begun Jan. 1, 1902. Expenses \$99,900.06.

An extremely interesting and suggestive report, in its clear outline of progressive work toward organization, development, and utilization of present resources. It covers the first seven months of Mr. Frank P. Hill's

administration of the library, and is necessarily a record of organization rather than of extension—organization having “for its aim and end the establishment of a library having branches in every section of the city, stored with all that is good, helpful and entertaining in literature; a library conducted with liberality toward the people, with equity toward the employees, and with satisfaction to the directors.” Mr. Hill says: “Looking back upon the short history of the library, it is wonderful to note the rapid growth of the system. It is not surprising that some things were left undone for the moment simply for lack of time to do them. Naturally at the start each branch developed according to its surroundings, and independent of the others. Gradually we are working up to the higher ideal of a splendid co-ordinate system.”

“During the year efforts have been put forth toward placing the library upon a sound business basis; systematizing the work; unifying the interests of the different branches; getting in closer touch with the libraries of the country; giving apprentices regular and continuous instruction under a competent teacher; supplying as rapidly as possible the incessant demand of all branches for more books; using the foundation at the Bedford branch as a nucleus for a splendid reference library and central reservoir from which books can be drawn to supply the different branches; and centralizing the work where possible, yet leaving the individual librarian to work out the local problems.”

The need of more books (despite the large number of accessions recorded for the year) is constant and urgent. “No branch should be started with less than 5000 volumes, and yet nearly every one was opened with from 1800 to 3000, and those not fully cataloged.” The report of Miss Hitchler for the cataloging department shows a large volume of work accomplished under difficult conditions and with an inadequate force. All the more important cataloging processes are prepared at the main department, leaving for the branch staff only the shelf-listing, cataloging (according to the marking of the main department), stamping, pasting, etc. “Books for 17 branches are sent out from this department at the rate of from 3000 to 4000 volumes each month,” and there are still large arrears of back cataloging to be made up. There is “pressing need for two extra assistants, whose duty it shall be to go from branch to branch, bringing the cataloging in each up to date, and thus making each collection more valuable and more available to the public.”

There are two most interesting reports from Miss Frances B. Hawley, instructor of apprentices and superintendent of branches. The apprentice system has been reorganized and systematized since July 1, 1901. Three classes have been admitted during the six months since that time; the first two have received instruction in library training, the last being composed of trained applicants,

gives six months of apprentice service without formal instruction. Apprentices are transferred to different branches about once a month, to give familiarity with the different fields of work, and to judge of their tastes and fitness. “An estimate is constantly being formed of the work and personal qualifications of each apprentice, based on observation and on the reports which are continually being received from the librarians-in-charge. All defects of personality, character or work which interfere with her usefulness to the library are promptly and frankly pointed out to her, and if she fail to improve she is dropped at once from the class, instead of being permitted to serve her full six months without pay only to be dropped at the end of the time. An apprentice is dropped only when her work has been unfavorably reported from at least three branches, in order that there may be no possibility of personal prejudice interfering with her chances of acceptance.”

Miss Hawley's report upon the branches shows effective work toward a unity of system and co-operation in aims and methods. It is planned to visit every branch at least twice a month, “to meet and study with the assistants, and to co-operate with the librarians-in-charge in increasing the use of the branches among all classes of people.”

The report of the travelling libraries department, submitted by Mrs. Mary Craigie, shows a stock of 6840 v., which have had a circulation of 39,713 among schools, police and fire stations, hospitals, Sunday schools and missions.

For the children's department work a supervisor is needed, whose duties should comprise “assistance to the librarian-in-charge in maintaining discipline, selection of juvenile books, and visits to the schools of the city for the purpose of interesting teachers and principals.” Appended to the librarian's report are reports from the librarians-in-charge of the different branches, nearly all of which are excellent in conciseness, tone and expression.

At a special meeting of directors, held May 28, it was decided that a special examination be held under the Civil Service Commission, for a superintendent of children's department work, at a salary of \$1500 a year, to be engaged from Sept. 1 next. A department of branches and apprentices was established under direction of Miss Frances B. Hawley, whose salary was increased from \$900 to \$1500, to take effect from July 1. A department of supplies was established under direction of George A. Scoville, formerly stenographer and chief clerk, whose salary was increased from \$1300 to \$1800, to take effect from July 1.

Buffalo, N. Y. Grosvenor L. An attack upon the management of the library was made on April 25, by Lawrence Irwell, of Buffalo, before the common council at its meeting to consider the library estimates for

the coming fiscal year. The amount requested by the library board was \$17,500, and when it was introduced Mr. Irwell rose to protest against its acceptance. He said that of this \$17,500 a little more than \$9000 was for salaries and the remaining \$8500 for books. He claimed that the library was very badly managed. The number of attendants was larger than necessary, and the hours of service were too short. On Sundays the library was open from 1 to 6 p.m., and the attendant on duty for that period had the following Saturday free. He had been unable to secure definite information as to how many of the attendants were high school graduates, or as to the exact disposition of the money appropriated for books.

Reply to Mr. Irwell's charges was made informally by Ganson Depew, of the board of trustees, who stated that Mr. Irwell had made himself "exceedingly obnoxious in the library because he could not run it in his own interests and for his own purposes." He added: "Mr. Irwell charges that the library on Sunday is open from 1 until 6 o'clock, and the attendant on duty that day has the following Saturday off. I think any fair-minded person would agree that no attendant should be asked to work seven days in the week, and that this rule is quite reasonable. The library is open weekdays from 9 o'clock in the morning until 10 at night, which hours are longer than in most of the libraries of the country."

The appropriation was tabled by the common council, pending fuller investigation.

Cedar Rapids (Ia.) F. P. L. (5th rpt., 1901.) Added 1148; total 6980. Issued, home use 33,642 (fict. 25,379), of which 13,382 were juvenile; issued from schools 693. Receipts \$6284.26; expenses \$6239.65.

"Greatest emphasis has been laid upon the public school problem, how to make the library more helpful to teachers and pupils. Strenuous efforts have been made to have personal attention and careful research compensate for the lack of a large collection of books. More time has been given to study by the staff and apprentices, and more systematic instruction has been given in all branches of library economy." Collections of books, changed at intervals, have been sent to clubs, fire engine stations, and the Young Women's Christian Association rest room for use during the noon hour. "Jan. 31 we instituted what we hope may become an annual fête. 'Library day' is planned to give the citizens of Cedar Rapids an opportunity to study the methods of administration of their Public Library, and as far as possible to show how it can become affiliated with all the interests of our community. This year the program was general. Next, we shall make the schools our theme; later, art, music, science, etc., as the time seems propitious. We hope our program will attract librarians and trustees of other libraries in the state."

Instruction in the use of books is given by the librarian to the pupils in the public schools, and a normal course in the subject has been arranged for teachers. In the children's room every Wednesday evening is given to a "story hour," after which "there is a general search for other material on the same subject." At close of vacation, in the fall, blanks were sent to all the schools for answer to questions regarding the course of studies, text-books and supplementary reading required, and the replies proved of great assistance in supplying the needs of teachers. A series of excellent suggestions are given, for future development, in the proposed Carnegie library building.

Chattanooga, Tenn. Carnegie L. A meeting of the recently appointed Carnegie Library directors was held on April 15, when A. N. Sloan was elected president, Gen. R. W. Healy vice-president, and Z. W. Wheland secretary.

The sites committee of the library board reported on May 19 to the city council in favor of a site on the southeast corner of Georgia avenue and East Eighth street, to cost \$15,000.

Cincinnati (O.) P. L. On Tuesday, May 6, the general assembly of Ohio passed a bill authorizing the trustees of the Public Library to issue \$180,000 in bonds to provide funds for the purchase of sites for the six Carnegie branch libraries and for the equipment of the branches.

Concord (Mass.) F. P. L. (29th rpt.—year ending Feb. 1, 1902.) Added 1008; total 32,875. Issued, home use 29,790. Registration not given. Receipts \$1020.25; expenses \$956.12.

A collection of 29 fine photographs has been added to the library by the gift of \$100 for the purpose from W. M. Prichard, and 12 photographs were also received from Miss H. S. Tolman.

Council Bluffs (Ia.) F. P. L. (20th rpt.—year ending Dec. 31, 1901.) Added 516; total 23,923. Issued, home use 54,420. No visitors 70,257. Receipts \$6406.05; expenses \$4246.42.

There has been a notable decrease in circulation, but this decrease "has been in fiction alone, as in the other classes there has been a marked increase." The duplicate pay collection of new fiction has proved on the whole satisfactory to borrowers, and has enabled the library to pay for nearly all the fiction purchased, "thus leaving the small amount we have to expend for a better class of books." The new feature of the year was the establishment of a children's room. This library was "the first free public library organized in a city of the first class in the state." The report contains a brief historical sketch of its development since the organization of its precursor, the Young Men's Library Association, in March, 1866.

Fairhaven, Mass. Millicent L. (Rpt.; in Annual rpt. of town officers, year ending Feb. 10, 1902, p. 77-). Added 879; total (estimated) 16,770. Issued, home use 45,669. New registration 279; total registration 4019; It is hoped shortly to have a general reregistration, as the present series of cards have been in use since the opening of the library, nine years ago, and include much "dead wood."

"The rotation of the library by the exhibition of a small all-round selection, was begun in December on the arrival of the bookcase ordered for the purpose. 200 volumes on all subjects, whose backs and covers were as attractive in appearance as their contents were interesting and trustworthy, were placed in the case, a comfortable cushioned chair put before it, and a strong light above the chair; a notice was posted and also printed in the *Star*, explaining the idea. The chair has seldom been without an occupant during afternoon and evening, and sufficient interest has been roused for 64 of the 200 volumes to be carried home; all works that would hardly have been found in the stacks. The degree, however, to which the main purpose of this rotation case is realized is to be gauged, not so much by the number of volumes circulated from it, as by the intangible suggestions and impulses received by those who spend half an hour browsing among the pages of some heretofore unknown and undiscovered book."

Georgia libraries. The April number of *The Southern Woman*, the official organ of the Georgia Federation of Women's Clubs, is a "special library edition," almost entirely devoted to reports and descriptions of the libraries of the state. Among those represented are the Georgia State Federation Library, in charge of Miss Alice Moore, of Dalton, from which sets of books on given subjects are sent to women's clubs throughout the state, to be kept for three months or longer; the state library, at Atlanta; the libraries of Georgia Normal and Industrial School, Lucy Cobb Institute, Emory College, North Georgia Agricultural College, St. Joseph's Convent, and various club libraries.

Gloversville (N. Y.) F. L. (Rpt.—year ending Dec. 31, 1901.) Added 1231; total 20,263. Issued, home use 60,180; lib. use 5756. New registration 492. The purchases of the year included duplicate complete sets "of the very best editions of American and English classics containing biographical sketches and critical notes, which will be the nucleus of a new department that may be called a standard library of the world's best books."

Appended to the report is the usual classed list of accessions of the year.

Grinnell, Ia. Stewart F. P. L. The handsome library given to Grinnell by Hon. Joel Stewart was dedicated on the evening of May 9. The exercises were held in the Congregational church, before an overflowing audience. President George E. MacLean, of

the state university, delivered an invocation. Miss Alice Tyler, secretary of the state library commission, extended congratulations on behalf of the commission, and the dedicatory address was delivered by Governor Cummins. The keys of the building were presented to the president of the board of trustees by Mrs. Stewart, wife of the giver of the building. Mr. Stewart did not attend the ceremonies, owing to dislike of the probable demonstration to be accorded him. A general reception was later held in the library building.

The building is a beautiful structure 63½ feet front by 32 deep in the main, with an annex 21 x 32. It is built of Omaha gray pressed brick with stone trimmings. The basement is divided into two rooms for the industrial school. The main floor contains the general reading room on the south side, reference room and children's room on the north side, and stack room on the east. These rooms have tile floors, the inside finish is oak throughout, the whole presenting an attractive appearance. Upstairs is the trustees' and librarian's room, finished in cypress. The building cost \$14,000, and a second stack room is arranged for, to be finished when needed, which will make the total cost \$15,000. The stack room now provided will hold 10,000 volumes, and the second one will also hold 10,000. The library now contains 5800 volumes, about 1400 having been added since July 1. The decimal classification system has been adopted, as has the Browne charging system. Miss Mary Wheelock is librarian and Miss Lila E. Stagg, assistant.

Jersey City (N. J.) P. L. (11th rpt.—year ending Nov. 30, 1901.) Added 4505; total 75,053. Issued, home use 421,779 (fict. 46.93 %; juv. fict. 20.42 %). Reading room attendance 78,856; Sunday attendance 6980. New registration 5431; total re-registration 18,237. Receipts \$47,292.01; expenses, \$41,990.53.

The notable event of the year was the establishment of the library in its new building, in January, 1901.

"The gain in circulation has been entirely at the main library, the percentage of books drawn through the stations being less than that of last year."

Reference work with the pupils of the grammar and high schools has been largely developed. A special "young people's reference room" is established on the third floor, which was used during the year by 13,507 students. The total reference attendance, adult and juvenile, was 20,541, with a record of 69,534 v. consulted. The open shelf room, containing 2100 v., is very popular.

Library of Congress, Washington, D. C. A scheme based upon the unauthorized use of the name of the library was made public recently in a letter addressed to Mr. Putnam by one of the intended victims of the fraud, who says:

"An agent calling himself F. E. Stewart, of the Library of Congress, came to me the other day with a project for a travelling library—a branch of your library at Washington. For \$2 a year one book a week would be sent free to any address, same book to be returned at the end of the week. Is this a legitimate arrangement?"

Mr. Putnam has made this letter public in order to call attention to the attempted fraud. In explanation, he states that during the past few years there have been various attempts upon the part of publishers and book agents to promote their enterprises by the allegation, direct or implied, that their publications emanate from the Library of Congress or are issued in some way under its authority. He adds: "Here appears to be an imposture of a different sort. The Library of Congress is, of course, a free library. It is not a circulating library. And there is no F. E. Stewart on its rolls, nor, so far as I am aware, any person of such a name employed in any way to represent it."

Louisville, Ky. Plans for the acceptance of Andrew Carnegie's offer of \$250,000 for a library building, long pending, have been materially advanced within the past few weeks. The offer, which was made over a year ago, was never accepted, owing to the conditions of provision of site and maintenance and to difficulties in the proposed transfer of the library of the Polytechnic Society to the city. An enabling act permitting the establishment of public libraries by cities of the first class was passed by the last legislature and a copy was transmitted to Mr. Carnegie, whose secretary replied on March 27, saying: "We are without resolution of council accepting and pledging maintenance of free libraries in Louisville. The matter of site has to be settled by the community. The only stipulation Mr. Carnegie makes is that it should be satisfactory to the community and large enough to give light around the building. When necessary resolution has been received and you have title to site arrangements for payments on building will be made." The resolutions required were passed unanimously by the council on April 1. They provide that the city accepts Mr. Carnegie's donation of \$250,000 for a free public library building; "that it will furnish a suitable site for said building, and will maintain a free public library in said building when erected, at a cost of not less than \$25,000 a year;" and "that an annual levy shall hereafter be made upon the taxable property of said city, sufficient in amount to comply with the above requirements."

The mayor's appointments of trustees for the library were made public on April 12. They are: John Stiles, Rev. E. L. Powell, R. W. Brown, A. G. Langham, Paul Caine, Arthur Rutledge, Owen Tyler, R. P. Halleck, Col. Bennett H. Young, Dr. John A. Ouchterlong, and Rt. Rev. T. U. Dudley, bishop of the diocese.

Consolidation of the Polytechnic Society Library with the new Public Library was discussed at a meeting of the society on April 21, and the measure was referred to the executive committee for investigation and report. The consolidation is favored by a majority of the directors.

Michigan City (Ind.) P. L. (5th rpt.—year ending April 30, 1902). Added 801; total 9574. Issued, home use 35,146 (fict. 48½%; juv. 35%). New registration 509; cards in force 1916.

Effort has been made to reach directly all the public schools. During the school year the library class room has been occupied 45 afternoons by the different grades in their visits, representing a total of 1797 students in attendance. For vacation reading for school children the library and the schools adopted the list compiled by J. C. Dana, of "things which children should know." The list was printed at the expense of the schools as a four-page leaflet, with a note that "at the public library you will find a list of all the books in the library that tell about these things."

"A little explanatory talk was given by the librarian in each grade school room in the city, and copies of the leaflet given to all the children. During the first half of the summer the little leaflets were diligently used and often no copies of any books on the more popular items of the list could be found on the shelves. Later the novelty of the thing wore away somewhat and the list settled down to its steady, normal use by those children who were permanently interested and who were getting real value from it. There were enough of these to prove the experiment well worth while."

The annual library exhibition was this year devoted to book and magazine posters; it was attended by nearly 2000 people. Monday, Dec. 23, was observed as a special "library day" for the boys and girls. The most notable gift of the year was that of \$2500 from Mrs. F. C. Austin, of Chicago, for cancelling the existing indebtedness on the library; in addition it provided about \$500 for the purchase of books.

New Jersey Historical Society L., Newark. A systematic filing of newspaper clippings of state and local interest was developed by the former librarian, Miss Marie Wait, and is now being carried on. Clippings are mounted on perforated manila sheets, 8 x 10, which can then be bound together, for allied material, thus making practically booklets on different subjects. For New Jersey there are booklets for each county, and the Newark sheets are arranged in numerous classifications. New Jersey biography furnishes a series of booklets that are frequently consulted.

New York, General Soc. of Mechanics and Tradesmen L. (Rpt.; in 116th rpt. of society, 1901.) Added 3078; total 105,831 (ref. 14,642; ref. architectural section 748). Issued 104,354; ref. use 5772. New registration 5402.

The reclassification and recataloging of the library on cards has been nearly completed. "The more recent policy with reference to fiction has been continued, only the higher class being put upon our shelves. Especial attention is being given to the purchase of standard works, and particularly those of a scientific character. The circulation has not increased greatly over that of 1900, nor is it likely to; but, in view of the curtailment of the purchases of fiction within certain lines, it is a source of congratulation that the patronage of the library is not decreased."

New York P. L. The recent unveiling of the Rochambeau statue gives special interest to a fine album presented to the print department of the library, not long ago, by Mr. W. F. Havemeyer. It consists of 126 portraits of French personages, both civil and military, who actively or sympathetically contributed to the success of the war against England for American independence. This unique collection was formed by a Parisian amateur interested in Americana, and demonstrates the enthusiasm which was evinced for American liberty by different classes of French society. The prints are carefully mounted, and each one is accompanied by a biographical note in manuscript, giving the reasons for its presence in the album. Many of the portraits are contemporary engravings, some are lithographs. Special mention should be made of the allegories on the declaration of war and the defeat of the English; the portraits of Louis XVI., Suffren, Menou and Necker printed in colors; a proof before letters of Choffard's portrait of Admiral Rosel; a first state of Vangelisti's "Du Couédic," with *Reims* instead of *Reims*, and some very rare physionotrace portraits. The table of contents shows a remarkable list of names of Frenchmen connected with our War for Independence.

New York State L., Albany. (Rpt. — year ending Sept. 30, 1901.) Added 24,007, of which 7544 were bought; total 461,740, of which 260,859 are in the state library proper, 59,999 are in travelling libraries, and 140,882 are duplicates. "Few realize the extent of the gifts which are each year enriching the state library." The most important gift of the year was the Duncan Campbell memorial collection of 3295 v., 899 pamphlets, 493 engravings, 19 bound v. of manuscripts, and 30 other manuscripts. From the duplicate collection 1395 v. and 1537 pamphlets were withdrawn for exchange or sale. The estimated reference use of the library was 169,762, an increase of 33,376 v. over 1900. During the 266 evenings the library was open there were 11,730 readers, using 36,531 v.

"Though this is a reference library, the total books lent in this and other states, aside from the travelling libraries, were 30,667 (22,092 from the state library and 8575 from the capitol library) or 5105 more than in 1900.

There were more than 14 times as many loans as in 1890, the total for 1901 being the largest in the history of the library. Of the 22,092 loans, not including those from the capitol library, 12 % were books classed in sociology, 33.3% in literature and 25.09% in history, showing a slight decrease in the percentage of books used in sociology and history and an increase in literature as compared with 1900." 1512 borrowers have drawn books, an increase of 130 over last year. From outside Albany 288 institutions and individuals borrowed 2238 v. Full details of the resources and activities of the various departments are given, and full statistical tables are appended. As usual this report abounds in interest, and bears evidence to the ever increasing activity of the library.

Pawtucket (R. I.) F. P. L. (Rpt. — year ending Sept. 30, 1901.) Added 712; total 19,762. Issued, home use 50,234 (fict. 80.7 %; magazines 5.9 %). New registration 996; total registration 9364. Receipts and expenses \$7182.20.

"We have made an important change in our circulation of the Perry pictures. We still use the envelope system, but we also have albums which hold 50 pictures or more. We make the pictures in each book illustrate one subject as far as possible. We have already books illustrating the Revolution, authors and their homes, events in American history, Madonnas, architecture of the world, sculpture, warships and their commanders, crowned heads of Europe, artists and their famous paintings, with one book illustrating and describing fruits, and another of trees."

Rhode Island State L., Providence. An act was passed by the last legislature which will be an important aid in the development of the library. It empowers the state librarian to "exchange with such nations, states, municipalities, institutions and persons outside the state as may confer a corresponding benefit, copies of the laws, law reports, reports of departments and institutions, and all other books and pamphlets published by the state, and to distribute such publications to such other nations, states, municipalities, institutions and persons outside the state as may by law be entitled to receive them." State officers are directed "upon requisition of the state librarian to supply the state library with a sufficient number of each publication issued from his department to enable him to carry into effect the provisions of this act. The state library had never had a librarian whose time was solely given to its care, until the appointment in May, 1901, of Frank Greene Bates. Under Mr. Bates' direction the library has been installed in rooms in the new state house. It has been accessioned and arranged under the decimal classification. The work of cataloging will be begun as soon as practicable.

The report of the state librarian has just appeared, for the year ending March, 1902.

Mr. Bates says: "Until the present year there was, properly speaking, no state library. The collection of books owned by the state was in the custody of the secretary of state as *ex-officio* state librarian. Some years since, the state law library was established at the court house, and the law books of the state's collection removed to that place. Owing to the total insufficiency of room at the old state house, the books remaining there were practically inaccessible. The library room had overflowed, and the books were stored in all corners of the building. Upon the erection of the new state house beautiful quarters were provided for the library. Unfortunately, insufficient room was provided for the books already on hand, so that it became necessary to store several thousand volumes in a dark room in the sub-basement, where they are inaccessible for use. The practical solution of the matter will be the erection of steel stacks, of appropriate and artistic design, in the library at no distant date. The need of these will soon be imperative." The character of the collection (which numbers approximately 15,000 v.) is reviewed and recommendations are made for rounding out broken sets, strengthening the relations with other libraries, and in other ways developing the scope and activity of the state library.

St. Louis (Mo.) F. P. L. A site for the proposed Carnegie building was secured on May 7, when the property of the St. Louis Exposition and Music Hall Association was sold to the library board for \$280,000. The purchase fund was raised by public subscription, headed by Daniel Catlin with \$25,000; the officers and directors of the St. Louis Union Trust Co. contributed \$205,000. The property is to remain intact until after the world's fair of 1903.

Savannah, Ga. The effort to secure a Carnegie library building has been dropped, owing to the condition of a 10 per cent, annual maintenance fund. Mr. Carnegie was requested to waive this condition in the case of Savannah, but his secretary in reply stated that "in justice to the other cities to which Mr. Carnegie has given, or will give, public library buildings, Savannah cannot be considered upon any other than a 10 per cent basis."

Seattle, Wash. The proposition authorizing the city to issue bonds for \$100,000 for a site for the Carnegie building was carried at a special election on May 17, by a majority of 919 votes out of total of 2217. The site in view covers an entire block at Madison and Spring streets and Fourth and Fifth avenues.

Somerville (Mass.) P. L. (29th rpt., 1901.) Added 5019; total 52,157. Issued, home use 264,227 (fict. 73½ %), of which 88,040 were drawn from the children's room. Visitors to ref. dept. 16,762. Receipts \$17,391.01; expenses \$17,169.42.

The most important incident of the year was the completion of the new stack room, which permits the adoption of "the experiment of free access." Mr. Foss says: "This cannot be done without serious embarrassments. The whole routine of the library will be revolutionized, and it is probable that many vexatious incidents will attend the new departure. But the new régime will be of incalculable benefit to the public, and I feel that no other action ever taken by the library, with the possible exception of the removal of the age limit and the opening of the children's room, can have been more productive in salutary results than this new action is sure to be."

It is urged that the library apply itself with greater persistency to pushing the circulation of its books. The house-to-house delivery of books is now carried on by 15 boys, assigned to 15 different sections of the city. "The patrons of these boys are largely people who have not used the library hitherto. Many of them had never visited the library, some of them did not know its location, and some were ignorant of the existence of the library at all. It will take time to establish this system on a good basis. The whole difficulty of the problem is to find the right boys. Our delivery boys are as good as the nature of boys will permit them to be; but it is expected that the right boy will not always be discovered the first time. It will be a series of experiments, and the fittest will survive."

The school department is constantly extending its scope, and it is suggested that the night school should be added to its list for school libraries. There were 5171 v. circulated through the schools in 1901, and the 100 special libraries sent to the schools had a circulation of 52,200 v. On noting the work of the children's room, Mr. Foss says:

"The children's room is a most salutary influence as long as children remain children. But to retain children in the children's room after they have come to desire mature works is repressing nature and stunting and distorting intellect. We should try to advance our children from the children's department to the adult department as we try to advance them from the grammar school to the high school. They should not only be allowed to use the mature books of the library, but should be encouraged in every legitimate way to do so."

Spokane (Wash.) City L. At a meeting of the library commission, on April 1, Mrs. Emma D. Wheatley was voted out of her position as librarian, her term of office to expire as soon as her successor should be appointed and confirmed. On the evening of the same day Mayor Byrne appointed as her successor Mrs. Estella Deffenbaugh, whose name was promptly confirmed by the city council. Mrs. Deffenbaugh assumed charge of the library on April 3, after a protest from Mrs. Wheatley, who stated that the change was purely political, and made by the mayor "because of a

pledge which he had made to some of his political friends." On April 4 Mrs. Wheatley entered suit against Mrs. Deffenbaugh, on the charge that she had been wrongly and unlawfully ousted from her position, and that she had never been removed from the office. She claims that the mayor and two others are not and never have been regularly appointed members of the library commission, and have no authority to act in that capacity.

Taunton (Mass.) P. L. (36th rpt.—year ending Nov. 30, 1901.) Added 1697; total not given. Issued 86,981 (fict. 48,077; juv. 24,194). New registration 753, of whom 212 were children under 12 years of age, introduced by their teachers.

The home circulation was 14,049 in excess of the previous year's record, largely due to the greatly increased use of the library by the pupils of the public schools. Large purchases of juvenile books, for replacements or duplicates, have been made, and the bindery work has been much increased. The typewritten card catalog has been completed for all fiction, adult and juvenile.

Traverse City, Mich. Mr. Carnegie's offer of \$20,000 for a new library building was accepted by the city council on May 19, when a resolution was passed guaranteeing the provision of a site and a yearly maintenance fund of \$2000. The city library already possesses about 6000 v. and had a circulation of 27,500 in 1901. An excellent site has been arranged for.

Trenton (N. J.) F. P. L. The library has been made the beneficiary of the Skelton library fund, amounting to about \$9000 in cash and an annual income of about \$900, derived from real estate property. Mr. Charles Skelton died in 1879, and left this fund to be devoted after the death of one or two of his cousins named in the will to the founding of a library for the use of the teachers and pupils of the public schools, apprentices, and mechanics. One of the restrictions of the will is that none of the funds shall be used for the purchase of books of fiction. The commissioners of public instruction have had charge of this fund for the last seven years, but have found it impossible to properly discharge the trust, as the fund was not large enough to provide for a library building or proper custodian. The board of trustees of the Public Library was organized in 1900, and instituted a friendly suit in the Court of Chancery against the commissioners of public instruction, with the result stated above.

The library expects to take possession of its new building during the month of June. It has issued in pamphlet form the rules and regulations for the government of the library, adopted Jan. 16, 1902.

Westfield (Mass.) Athenæum. (Rpt.—year ending Feb. 1, 1902.) Added 591 (369

bought); total 18,800. Issued, home use 36,149, an average of 11.4 v. for each cardholder. New registration 470; total cardholders 3189.

Of the books issued "25 per cent. have been fiction, 36 per cent. unclassified (about three-quarters fiction), 20 per cent. juvenile," etc. "The circulation has fallen here, as in many libraries. There has been a phenomenal demand for fiction within the last few years. This demand reached its height in 1901. A reaction has set in, but the influences of this reaction may not be very appreciable for some time." Mr. Stockwell recommends the issue of two books on a card, provided one is non-fiction. Books have been borrowed from Springfield, Northampton and Boston during the year, the borrower paying expenses of transportation. No new delivery stations have been opened, but the station at Wyben has become a branch library. From July, 1900, to July, 1901, a monthly bulletin was published, which proved a financial failure. Most of the loss involved by its publication was borne by the librarian. Special lists and library news are now presented, so far as possible, by the local papers, without charge, "but we still need a printed bulletin, periodically published."

The library held 13 picture exhibitions during the year, of which nine were sent out by the Library Art Club. A library training class was started, Nov. 1, with five members. "There are many things which this library should do. It should do more reference, more juvenile, more school and more club work; it should have more deliveries; a bibliography of Westfield should be compiled; there should be more newspaper indexing and more book analyzing; there is valuable material in the library that cannot be utilized, and it should be put in condition for use; the manuscripts should be cared for. This work cannot be done without help, and we have this help from the class who are receiving instruction.

"The library has been administered in an economical manner. Many people would call it a parsimonious manner. About 4000 books have been repaired at a saving of fully \$500. The use of a mimeograph has saved a large printing bill. Every scrap of paper is saved until it has been used on both sides. Home-made paste is used, and many other economies have been practiced. An account of this library's economical administration was printed by the New Hampshire Library Commission, without mentioning this library."

Weymouth, Mass. Tufts L. (23d rpt., 1901.) Added 743; total 21,395. Issued, home use 57,514, of which 27,287 were drawn through the six delivery stations, the Fogg Library and the high school (fict. incl. juv. 746). New registration 348; total registration 4150.

Good progress has been made in making the library available through its printed catalogs. Class list no. 2, covering biography, history

and travel, has been completed, and class list no. 3, dealing with art, literature, etc., is well advanced. "The three class lists will form the foundation of all the catalogs of the library, the new books being cataloged in annual supplements or bulletins. In a growing library the only complete catalog must necessarily be the card catalog."

FOREIGN.

Bibliothèque Nationale. On May 6 the numerous friends and admirers of M. Léopold Delisle celebrated the *cinquantenaire* of that well-known librarian by presenting him with photographs of a complete ms. of the 12th century preserved in the archives of the Vatican (of which only 100 examples have been done), and also of a ms. in the Turin Library, which at one time belonged to the Duc de Berry, brother of Charles v. The donation took place in the presence of a representative gathering of distinguished Frenchmen—the Prince de Broglie, the Duc d'Audiffret-Pasquier, the Comte Delaborde, the Comte Durieu, and the Duc de la Trémoille—and a graceful little speech was made by M. Himly. M. Delisle, who was born in 1826, has been the librarian-in-chief of the Bibliothèque Nationale since 1874, into the management of which he has introduced many improvements. —*Athenæum*, May 10.

Bodleian L. Oxford, Eng. The library will celebrate its tercentenary next October. It was on Nov. 8, 1602, that, by the munificence of Sir Thomas Bodley, the present foundation was thrown open to the public. It can hardly be said to have arisen from the ashes of its predecessor, for hardly even ashes of the former library were left to rise from. That earlier library, founded by Humfrey, Duke of Gloucester, about 1450, had been completely broken up and dispersed after an existence of about a century, and the university either could or would do nothing to repair the loss. It was at his own expense that Sir Thomas undertook to refit the bare walls of Duke Humfrey's library, to stock it with books and to endow it with funds. He spent a fortune upon it, and had the foresight to secure to the library the right to receive from the Stationers' Company a copy of every book published in England. This right is shared by the British Museum and the public libraries at Cambridge, Edinburgh and Dublin, and is now embodied in the copyright act. The Bodleian Library contains 600,000 bound volumes, among which are 30,000 volumes of manuscripts and literary treasures.

Jerusalem. Plans for a Jewish National Library are being formed by Dr. Joseph Chasanowitzsj. It will be housed in a building to be erected at a cost of \$18,000 in Consul street, Jerusalem.

Montreal, Can. The finance committee of the city council has reported in favor of the acceptance of Andrew Carnegie's offer of

\$150,000 for a public library building. The report stipulates that "the city shall have the management of the said library, and shall provide for the appointment of a special committee to control the choice of the books which will compose the library, so as to ensure the usefulness and moral character thereof."

It is intended, "to prevent difficulties which may arise over the choice of books," that the library shall be "chiefly a reference and consultation library, comprising volumes bearing upon the subjects mentioned hereafter: 1. All books, newspapers and reviews treating upon chemistry, physics, mechanics, metallurgy, etc. 2. Historical and philosophical works, classical works bearing upon art and literature, together with volumes of fiction of a high character."

Ontario, Canada. Travelling libraries. The report for 1901-2 of Rev. Alfred Fitzpatrick, of Nairn Centre, Ont., agent and secretary of the Reading Camp Movement of Ontario, Canada, appears in a pamphlet of 58 pages, with many illustrations. Much of the report is devoted to general description of the efforts made to secure not only library privileges, but regular medical attendance for the men in the Canadian lumber camps, and the gratifying results already assured. In his report Mr. Fitzpatrick says: "Last season three reading shanties were built, as an experiment, and small libraries were sent to a few other camps. These three reading shanties proved so attractive to the woodsmen, and seemed to the employers of so much value, that this year some 12 or 15 other employers have voluntarily put up such buildings for their men—some firms building three or more—so that this season there are in all 27 reading camps or reading rooms supplied with books, daily and weekly papers, magazines, games, etc. How much this means to those workmen, only persons familiar with the ordinary woodsman's and miner's life can fully appreciate." The librarian of the association is Mr. E. A. Hardy, librarian of the Lindsay Public Library, who reports that "34 boxes of books and magazines have been sent from 21 places to the camps in Ontario during the current winter. Nothing seems more certain than this, that this work ought to extend until it embraces every lumber and mining camp in the province. That would mean some 500 reading camps. This is unquestionably too much to ask of private effort, and should be undertaken by the Ontario government. Two ways are open, either to make it compulsory upon employers to provide these camps, or to extend the public libraries act to cover these camps. The latter appears much the better way. By treating the lumber or mining company as the trustees of the reading camp, a clause could be inserted in the public libraries' act, to extend its provisions to these camps, though limiting the grant to \$50 or \$75 for each camp, and, of

course, confining this provision to those companies who erect a reading camp."

While at first it was planned to use the travelling library as the special factor in this reading camp work, it has been found that the frequent possibility of contagious diseases in camps and the consequent possible transmission of disease through the books, and the hard wear to which books are subjected, make small permanent "reading camp" collections greatly preferable. For the work last year the Department of Education granted the sum of \$1200 for books, and "has placed an item of \$2000 more in the estimates for further extending library privileges to these and other isolated localities." while public contributions have amounted to over \$1800 additional. It is proposed "as soon as the funds warrant it" to pay Mr. Fitzpatrick from July 1, 1900, "at the rate of \$700 per year, at least, exclusive of board and travelling expenses." The report contains many letters from lumber camp owners, managers and foremen, approving of the movement and expressing their willingness to co-operate in it.

South Australia P. L., Museum and Art Gallery, Adelaide. (Rpt., 1900-01.) Added 1868; total 46,266. Statistics of use are not given, "because the public have free access to the shelves, and generally replace the books which they have used." There were 70,754 visitors on weekdays and 6522 on Sundays, an increase of 5936 over the previous year, attributed to the larger purchases of new books.

South Wellington (New Zealand) F. P. L. The library has moved into the new building, just completed, and formal opening exercises were held on May 7. The land upon which the library now stands was originally set apart by the government for a police station, but in 1878 its transfer for library purposes was effected. Although a site was thus secured, the library committee had no funds, and so for years no progress was made. In February, 1896, a gift of £500 for books was received from William Booth, and in March of that year the library committee offered to transfer to the city the site vested in it if the council would undertake to erect a building to cost not less than £1000. This offer was accepted in July, 1896, the council promising to erect a suitable building "as soon as possible." Nothing was done, however, until August, 1900, when a report was presented on the subject by the city council, and in February, 1901, the library committee of the council recommended the immediate erection of a library building in Reddeford street. The report was accepted, bids were promptly received and accepted in August, and in December last Herbert Baillie was appointed librarian. The new building is regarded as one of the most attractive libraries in the colony. The interior has been conveniently arranged,

and there is a brightness of appearance that immediately gives the visitor a pleasant impression. From the street the visitor enters a commodious vestibule (25 ft. x 16 ft.), off which, on the left, are the newspaper room (21 ft. x 15 ft.) and the librarian's office, and, on the right, the reading and magazine room (27 ft. x 15 ft.), and the boys' room (15 ft. x 15 ft.). The reading and magazine room is furnished with two upright desks for illustrated papers, two tables, and three low desks, over each of which is a separate light. Directly fronting the entrance door is the space set apart for the circulating library. The space occupied by the library proper is 27 ft. 6 in. x 11 ft. 6 in., and there is a barrier behind which the public cannot go. The volumes at present on the shelves number 1700, but there is accommodation for 8000. The librarian's office is so constructed as to command a view of all the other rooms on the ground floor. The whole of the upstairs portion of the building has been set apart for the giving of lectures and the holding of art, literary, and kindred exhibitions, and contains a large hall (47 ft. 6 in. x 27 ft. 3 in.) fitted with a platform and seating 150 to 200 people.

It is planned to hold a fortnightly series of lectures during the winter season. A boys' room is a feature of the building, where games, such as chess, dominoes, etc., may be enjoyed. No card games will be allowed.

Gifts and Bequests.

Harvard Divinity School L. The library has received, by bequest of the late Prof. J. H. Thayer, a collection of nearly 1000 volumes on New Testament study.

La Crosse (Wis.) L. Assoc. The library received on May 23 a gift of \$20,000 from the heirs of the late Charles L. Colman, made in accordance with the desire of the deceased. It is to be used as a permanent endowment fund.

Carnegie library gifts:

Ashland, Ky. May 8. \$25,000.

Columbus, Ga. April 28. \$25,000.

Dover, N. H. April 25. \$30,000.

London, Eng. May 22. £10,000 to Greenwich borough.

Manistee, Mich. May 12. \$35,000.

Middletown, O. April 1. \$20,000. Accepted, May 8.

Ogdensburg (N. Y.) P. L. By the will of the late Mrs. Mary D. Bean the library receives a bequest of \$5000.

Pittsfield, Mass. May 2. \$15,000.

Seaboard Air Line travelling libraries. May 8. \$1000.

Somersworth, N. H. May 22. \$15,000.

Taunton, Mass. April 26. \$60,000.

Librarians.

ADLER, Dr. Cyrus E., for several years custodian of the Smithsonian Institution deposit in the Library of Congress, has severed his connection with that library owing to pressure of other duties. He has been succeeded by Paul Brockett.

BARNES, Walter Lowrie, of the New York State Library School, 1901-02, has been appointed librarian of the Y. M. C. A. Library of Albany, succeeding A. A. Clarke, resigned.

CHILDS-SPRINGER. Miss May Z. Springer, of the New York State Library School, 1899-1900, and Dr. Alpha G. W. Childs, of Madison, Ind., were married May 14, 1902, at Indianapolis, Ind.

CONVERSE, Miss Minnie L., of the New York State Library School, 1900-1901, has been appointed librarian of the Central Normal School Library, Mt. Pleasant, Mich.

EBERLIN, Viggo C., formerly on the staff of the New York Public Library, has been appointed librarian of the Century Club, New York, succeeding J. Herbert Senter.

GLENN-BROWN. John Mark Glenn, one of the trustees of the endowment fund of the American Library Association, and well known to many of the members of the association, was married on May 21 to Miss Mary Wilcox Brown, at Baltimore, Md. Mr. Glenn was for some years general secretary of the Charity Organization Society of Baltimore. Mr. and Mrs. Glenn sailed for Europe on May 24.

HAYS, Miss Florence, assistant at the Oshkosh (Wis.) Public Library, has been appointed librarian of the Manitowoc (Wis.) Public Library, succeeding Miss Henrietta von Briesen, resigned.

STUNTZ, Stephen C., assistant in the library of the University of Wisconsin, has been appointed to a position in the Catalogue Division of the Library of Congress.

THURSTON, Miss Ada, special student of the Pratt Institute Library School, has been appointed librarian of the Public Library at Belmont, Mass. Miss Thurston is to assume the duties of the position Sept. 1.

WOODS, Henry F., librarian of the East St. Louis (Ill.) Public Library, has resigned that position, and has been succeeded by John E. Miller, principal of the East St. Louis High Grammar School. Mr. Woods' resignation came as a general surprise. He assumed charge of the library a little over a year ago, and had been active in developing it, particularly in relation with the public schools of the city. For nine years before coming to East St. Louis Mr. Woods had been first assistant in the St. Louis (Mo.) Public Library.

Cataloging and Classification.

BIBLIOTHÈQUE NATIONALE. Catalogue général des livres imprimés. Auteurs. Tome 8: Barrucand-Bauzon. Paris, Imp. nationale, 1902. 2 col. 1262 p. 8°.

CATALOGO GENERALE della libreria italiana dall' anno 1847 a tutto il 1899; compilato dal Attilio Pagliaini: A-D. Pubblicato a cura dell' Associazione tipografico-libreria italiana. Milan, 1901. 16+840 p. 4°.

The first part of this much-needed work contains about 70,000 titles. The whole work is to embrace upwards of 200,000 titles.

CLASSIFICATION OF LIBRARY ECONOMY AND BIBLIOGRAPHY. These subjects are now being revised for the Decimal classification, and every one interested is asked to send promptly any topics, subdivisions or suggestions. Mr. Dewey says: "The library school students feel the need of a minute classification of these subjects for their lecture notes and material, so that we shall provide for every topic which promises to be useful. An early response from those who have suggestions will be appreciated." Communications should be addressed to Melvil Dewey, State Library, Albany, N. Y.

CROUZEL, M. A. Etudes de bibliothéconomie: le classement des livres sur les rayons. Toulouse, Douladoure-Privat, 1901. 28 p. 8°.

ILLINOIS FARMERS' INSTITUTE F. L. S. List of books contained in the 111 libraries in use April 1, 1902; comp. by A. B. Hostetter, secretary. Springfield, Ill., 1902. 23 p. T. The New York P. L. Bulletin for May contains check lists of works on the theory of value, on wages, and on corn laws, recording only material to be found in the Astor branch.

NEWTON (Mass.) F. L. Catalogue of photographs of painting and sculpture. Newton, Mass., 1902.

An excellent, well-printed catalog, arranged in semi-historical order by schools, with sub-arrangement chronologically by artists. There is an alphabetic author index of artists and sculptors.

The SALEM (Mass.) P. L. Bulletin for May contains special reading lists on "The Balkan states, Turkey, and eastern question," and on Frank R. Stockton.

TUFTS L., Weymouth, Mass. Class list no. 2: Biography, history, travel, 1879-1902. Weymouth, 1902. 4+85 p. 1. O.

A clear, well-printed class list, followed by an author index.

WISCONSIN. List of books for township libraries; issued by the state superintendent. May, 1902. Madison, 1902. 344 p. O.

As usual, this list, while designed for teachers, is useful and interesting to librarians engaged in work with children or with schools. It is prefaced by the Wisconsin library law, and by brief suggestions regarding purchase and handling of books. The lists are graded, and classed under grades, each entry being numbered consecutively. There are annotations and useful references to specific subjects or chapters. The annotated list includes also a selection of books for the teacher and "good books for the farmer." It is followed by an author and title index and a subject index. The list is supplied free to all Wisconsin teachers; the price to people outside the state is 25 c.

FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress.

Beach, Elmer Henry, 1861- Thorne, William Winter, 1870- and Rouech, August Eugene, 1856- (The American and accounting encyclopædia. . .);
Becker, Frank Silvester, 1865, and Howe, Edwin Dewey, 1865- (New York civil and criminal justice. . .);
Brorup, Rasmus Peterson, 1851- (The race question in the United States);

Page, Charles Nash, 1860 (Canary breeding and training);
Peterson, Hans Christian (First steps in English composition);
Pinson, William Washington (In white and black. . .);
Powers, Harry Huntington, 1859- (The art of travel);
Pratt, Stephen Rensselaer, 1843- (Supplement to Pratt's mining laws of Colorado and locators' manual);
Riley, Cassius Marcellus, 1844- (Toxicology; the nature, effects and detection of poisons);
Savage, Giles Christopher, 1854- (Ophthalmic myology. . .)

Bibliography.

BALDWIN, James. The book lover: a guide to the best reading. Rev. ed., with new lists and additional matter. Chicago, A. C. McClurg & Co., 1902. 292 p. D.

A new edition of this useful little manual. Some of the chapters have been rewritten, the pedagogical features have been modified or omitted, and the book lists have been brought down to date.

B. BEHR'S VERLAG, Berlin W. 35, has begun the publication of an *Internationale Bibliographie der Kunstwissenschaft*, edited by Arthur L. Jellinek, of Vienna. The first number covers January and February, 1902, and records the titles of about 600 books and articles on the subject in periodicals, year books, etc., and, in some cases, in newspapers. The bibliography will be published bi-monthly. Each volume will contain a full subject index. (10 marks per year.)

COPYRIGHT. Gesetze über das Urheberrecht in allen Ländern nebst den darauf bezüglichen internationalen Verträgen und den Bestimmungen über das Verlagsrecht. 2 aufl., durch

gesehen von Prof. Ernst Röthlisbergen-Bern. Leipzig, G. Hedeler, 1902. 418 p. 8°, pap., 10 marks.

The most comprehensive and authoritative work in existence on the subject.

DE MORGAN, A: On the difficulty of correct descriptions of books. Chicago, [Bibliographical Society of Chicago,] 1902. 34 p. O. \$1. [300 copies.]

Originally printed in "Companion to the almanac; or, year-book of general information for 1853," London, p. 5-19, and now reissued for the first time. The essay, while interesting reading, does not so much point out the difficulties of correct description of books in general, as it notes the errors of some ignorant or careless bibliographers, so-called, in describing certain books. Mr. A. G. S. Josephson contributes an editor's note, giving biographic data of Professor De Morgan, and a list of such of his works as are of more or less interest bibliographically. A typographical error on p. 21-22, where several lines of text have been transferred, is rectified by the issue of a corrected impression of the page, which will be sent to purchasers.

DYEING. Garçon, J. Répertoire général ou dictionnaire méthodique de bibliographie des industries tinctoriales et des industries annexes depuis les origines jusqu'à la fin de l'année 1896: Technologie et chimie. Paris, Gauthier-Villars. 3 v. 8°, 100 fr.

ENGLAND, *Geology*. Avebury, Lord. The scenery of England and the causes to which it is due. New York, Macmillan, 1902. 26+534 p. il. 8°, net, \$2.50.

Contains a bibliographical appendix of 15 pages.

FICTION. Wegelin, Oscar, *comp.* Early American fiction, 1774-1830: a compilation of the titles of American novels, written by writers born or residing in America, and published previous to 1830. Stamford, Ct., published by the compiler, 1902. 32 p. 8°, pap. [150 copies.]

The work is complementary to the author's "Early American plays, 1774-1830," published by the Dunlap Society in 1900. The author has discovered about 150 titles.

INCUNABULA. Martin, J. B. Incunables de bibliothèques privées. Série 3. Paris, libr. Leclerc, 1902. 10 p. 8°.

Reprinted from *Bulletin du bibliophile*. (40 copies.)

MEDINA, J. T. Biblioteca hispano-americana

(1493-1810). Tomo 4: Santiago de Chile. f°, 50 fr.

MILK. Rothschild, Henri de. *Bibliographia lactaria*. Deuxième supplément (année 1901) à la *Bibliographie générale des travaux parus sur le lait et sur l'allaitement jusqu'en 1899*. Paris, Octave Doin, 1902. 4+106 p. 4°.

PANICS. Burton, Theodore E. Financial crises and periods of industrial and commercial depression. New York, Appleton, 1902. 9+392 p. 12°, net, \$1.40.

The bibliography, pages 347-377, is compiled by Mr. Hugh Williams, of the Library of Congress. It is confined to books and articles in periodicals which refer exclusively to the subject. The list of periodical articles is arranged chronologically, and it is curious to note that it contains the title of no article published before 1837.

POLITICAL THEORIES. Dunning, William Archibald. A history of political theories, ancient and mediæval. New York, Macmillan, 1902. 25+360 p. 8°, net, \$2.50.

Pages 327-345 contain a bibliography.

RELIGION. Jastrow, Morris, Jr. The study of religion. New York, Scribner, 1902. 14+451 p. 12°, (Contemporary science series.) \$1.50.

The bibliography (pages 399-415), selected, classified, and annotated, is composed almost entirely of works read by Dr. Jastrow himself. More than 400 titles are included.

INDEXES.

NUOVA ANTOLOGIA: rivista di lettere, scienze ed arti. Indici trentennali (1860-1895). aggiuntivi i sommari per gli anni 1896-1900. a cura di Guido Biagi. Roma, Paravia e c. 1901. 334 p. 16 frs.

Dr. Biagi has done an exceedingly useful piece of work in publishing these indexes to the first 30 years of the most valuable of Italian reviews. There are two parts, an author index and a subject index, the first occupying 128 and the last 168 pages. A summary of the contents from 1896-1900 brings the work for practical purposes reasonably down to date. The dates of articles are given with unusual and gratifying care. The article is cited first by the volume number; then if this volume chanced to be in the second or third series, this fact is noted in parentheses; and lastly both the page and the month and year are given. Such fulness is impossible in large indexes, but where considerations of expense permit, it is of great assistance to the reader.

W: W. B.

Boston-Magnolia Meeting

A. L. A.

MEMBERS of the A. L. A., visiting the Boston-Magnolia Meeting, are cordially invited to visit the offices of our Boston Branch, located in the Tremont Building at the Corner of Beacon and Tremont Streets. Those interested in the purchase of equipments for libraries will find this a convenient opportunity to inspect samples and secure prices or information of our lines.

The beautiful State House Library, the Congregational House Library on Beacon Street, the Boston Medical Association Library, and the Massachusetts Historical Library, both at Boylston Street and Fenway, all contain interesting examples of our "all steel" stack work. The modern stack rooms in Boston have been *exclusively* equipped with our product.

We shall also have at Magnolia an attractive and representative exhibit of our METALLIC LIBRARY FURNISHINGS to which the attention of visiting librarians is respectfully directed.

ART METAL CONSTRUCTION CO., .

Jamestown, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Just Ready. 100 Copies Printed for Subscribers Only.

B. F. STEVENS'S

Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, $6\frac{1}{2}$ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 *net*.

Unmounted, on 24 sheets in portfolio. \$25 *net*.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.
New York Agency, 45 William Street.

Books For Summer Reading

Two Editions Exhausted Within a Week

FACTS AND COMMENTS

By HERBERT SPENCER, author of "The Study of Sociology," "Education: Intellectual, Moral, Physical," etc. Uniform edition. 12mo. Cloth, \$1.20 *net*; postage, 12 cents additional.

On April 27 this venerable philosopher celebrated his eighty-second birthday. During the many years spent in writing various systematic works, there have arisen from time to time ideas not fitted, in his judgment, for incorporation in them, but which he felt reluctant to let pass unrecorded, and at intervals during the last two years he has set down these thoughts for the benefit of an eager world. The topics discussed are of general interest. At the hands of the unskilled they would be commonplace. From the analytical brain of a philosopher of the greatness of Herbert Spencer—a greatness that has extended over more than two generations—the subjects treated in this, his last volume, assume a commanding importance.

Kate Bonnet

The Romance of a Pirate's Daughter. By FRANK R. STOCKTON. Illustrated by A. I. Keller and H. S. Potter. 12mo. Cloth, \$1.50.

MESSRS. PUTNAM have peculiar facilities for handling all library business intelligently and to the best advantage of their customers.

Their Branch House in London (through which they receive English orders for American books) enables them to supply, promptly, English books, without the commission usually paid by American dealers.

Their extensive miscellaneous and retail business makes it practicable to buy all books at the lowest prices, to carry a large stock of standard books in every department of literature, and to keep in touch with the current publications of the day. Their business experience covers more than half a century.

THE BAKER & TAYLOR CO. LIBRARY DEPARTMENT

We have sold books to librarians for fifty years.

We have the largest stock in the largest book market of the country.

We fill orders promptly, completely, and intelligently.

We have classified our stock of books and knowledge, FOR YOUR CONVENIENCE, into

(1) A Standard Library Catalogue of 2500 Books—a model library.

(2) Semi-Annual Clearance Catalogues of Book Bargains.

We Make a Specialty of Pricing Lists.

JUST READY.

The Annual Literary Index, 1901

Including Periodicals, American and English; Essays, Book-Chapters, etc.; with Author-Index, Bibliographies, Necrology, and Index to Dates of Principal Events. Edited by W. I. FLETCHER and R. R. BOWKER, with the co-operation of members of the American Library Association and of the *Library Journal* staff.

THE ANNUAL LITERARY INDEX complements the "Annual American Catalogue" of books, published each year, by indexing (1) articles in periodicals published during the year of its issue; (2) essays and book-chapters in composite books; (3) authors of periodical articles and essays; (4) special bibliographies; (5) authors deceased; (6) dates of principal events during the year. The two volumes together make a complete record of the literary product of the year.

"Of great value to all who would keep advised of the topics and writers in the periodical literature of the day."
—*Universalist Quarterly*.

"Good indexing could no further go."—*The Nation*.

THE BURROWS BROTHERS COMPANY

133, 135 and 137 Euclid Avenue, Cleveland

1670 TO LIBRARIANS 1902

A reprint of the FIRST account in English of what is now NEW YORK. Daniel Denton's "BRIEF DESCRIPTION OF NEW YORK, FORMERLY CALLED NEW-NETHERLANDS," with a bibliographical introduction and many notes of interest by Felix Neumann of the Library of Congress, 250 copies numbered, \$1.50, net, 10 copies signed, (on Japan) \$3.00, net, 8vo, antique boards, uncut.

The excessive rarity of this in the original form and the extreme difficulty experienced in obtaining the reprint by Gowans or the Pennsylvania Historical Society has induced the Burrows Brothers Company of Cleveland to issue the above, which they feel sure will be appreciated by all of the smaller and the vast majority of the larger Libraries throughout the country. Your earliest order is solicited (and advised).

To Be Published July 1

For 1902
PUBLISHERS' TRADE LIST ANNUAL
 (Thirtieth Year)

The forthcoming issue of THE PUBLISHERS' TRADE LIST ANNUAL, to be ready in August, 1902,
 will contain

A COMPLETE INDEX

to the publishers' catalogues contained therein. The books will be indexed by author, title and, practically, by subject or class. The name of series, the price, and name of publisher will also be given, so that any book contained in the ANNUAL may be located at once by whatsoever clue the user may have. The Index will be printed in two columns to the page, in readable type, full face letters being used to make reference to authors' names more convenient.

THE TRADE LIST ANNUAL has been for upwards of a quarter of a century indispensable to every one who has any interest in the purchase or sale of books. With the reference index to the books listed in the publishers' catalogues its practical usefulness will be enhanced an hundred fold.

The work will be offered in two styles :

With the Index, \$5 00

Without the Index, 1 50

if ordered and paid for in advance of publication. Orders, stating whether the volume is desired with or without the index, should be registered at

As we guarantee quality and perfect accuracy, ample time is given to Librarians to test goods before payment is expected.

HENRY MALKAN,

Library Department.

TO LIBRARIANS:

Some important facts well worth remembering when you are about placing orders are that we carry in stock a large assortment of subscription books which we sell at sweeping reduction from publishers' prices. Discounts varying from 25 per cent. to 60 per cent., and what's more to the point we will gladly take back any book or set of books which do not give perfect satisfaction and come fully up to expectations. This we believe to be one of the most generous offers ever made by a bookseller, and gives conclusive proof of the faith we have in our prices and the books we sell; the offer is all the more striking when you consider the fact that it applies to subscription books, which are not generally carried in stock by the trade, and even when ordered very seldom furnished, the usual reply to such orders being, "sold by subscription only," "cannot furnish," "can furnish only at list price," etc., etc., as well as to current trade books. Another fact which we wish to impress upon your memory is that we furnish any book that may be in print, a great many out-of-print books, and almost any book that ever was printed, if given a reasonable amount of time to hunt it up. There are still a few librarians who seem to think that because we have not been in business for 50 years or so that we cannot fill orders as well as the longer established houses, and to all such we say, send us a trial order and you will become one of the large number of librarians who are our enthusiastic supporters, or correspond with us and we will send a formidable array of names of the most prominent librarians who will gladly vouch for what we say. Having correspondents in the various book centres of Europe, we are in a position to obtain, and consequently to furnish Books at the lowest prices. Books for libraries imported free of duty.

CONFERENCE OF LIBRARIANS.

BOSTON AND MAGNOLIA, MASS.

JUNE 16-20, 1902.

SOME LIBRARY PROBLEMS OF TO-MORROW: ADDRESS OF THE PRESIDENT.

By JOHN S. BILLINGS, *Director of the New York Public Library.*

WHEN the American Library Association was organized its object was declared to be "to promote the library interests of the country by exchanging views, reaching conclusions, and inducing co-operation in all departments of bibliothecal science and economy; by disposing the public mind to the founding and improving of libraries, and by cultivating good will among its members." When the constitution was revised in 1900, the object of the Association was declared to be "to promote the welfare of libraries in America."

This change is significant, not of a change in the purposes of the Association, but of a general opinion that verbose details of its purposes are now unnecessary. At first the Association undertook much direct missionary work, but this has gradually been taken in charge by state and local associations to such an extent that our work in this direction is now mainly to obtain records of the methods which have been found most successful, and to bring these to the attention of those directly engaged in interesting the people at large, and legislators and tax-payers in particular, in the establishment and support of free public libraries.

It is the welfare of the free public library, and especially the library intended mainly for the circulation of books for home use among the people, and supported from public funds, to which we have given the most attention. This is especially an American institution and it has seemed more important that its uses and needs should be understood and appreciated by the general public than those of purely reference libraries, since these last are fairly well understood by those who most need and use them.

The main argument in favor of the free public library is that it is an essential part of a

system of free public instruction which is a necessary foundation of a satisfactory system of self government. It is not true, however, that any and every system of education tends to produce a stable democracy, and there are great differences of opinion among professional educators, and still greater differences of opinion among other thinking men who know something of the methods and results of our public schools, as to whether our present system is the best one. If the main object of the school and of the teacher is to furnish information and cultivate the memory, there is good ground for objecting to both the quantity and quality of some of the kinds of information supplied. If the object of education is to develop the intellect, to teach the student how to judge as to what is true and to know where to look for it, to recognize wise thought, and to distinguish the man who is qualified to lead from the incompetent man who wants to lead, then our public school system is not well suited to its purpose.

The relations which should exist between the system of public libraries and the system of public schools in a state or city are not yet generally agreed upon by both librarians and teachers. In a general way it may be said that the librarian's view is that the public library should be entirely independent of the public school system as regards its funds and management, that special school libraries are apt to be badly managed, and inefficient for the purpose of interesting and instructing the children, that the librarian knows more about books than the teacher, and can supplement and broaden the teacher's work;—and that teachers should recognize these facts, should be willing and anxious to receive instruction and advice from librarians by listening to lectures and talks at the library and repeating to their classes

what they have been taught, and urging the children to make use of the library.

A few enthusiasts claim that the librarian ought to know more than any teacher, and should supplement the defects and ignorance of each instructor in his own branch, but treat them all kindly and tactfully, recognizing that it is not their fault that they do not know as much as librarians. Some librarians admit that some teachers may know more than they do as to the reading most desirable to supplement the particular instruction which a class is receiving, and will be glad to receive lists of books wanted. All librarians think it very important that the child should learn to use the public library and become acquainted with its attractions, methods, and resources, so that after leaving school he will continue to use it, and they do not consider that any mere school or class library can be a satisfactory substitute for the public library. Moreover, they want the children to come to the public library and use it because this is a means of bringing their parents and friends under the same influence.

Superintendents of schools, as a rule, take a somewhat different view of the matter, that is, if they have given any thought to it, but I am bound to say that many of them reply to questions on the subject, that they have never given it any special consideration. Some of those who have considered the matter say that, of course, the public library is a useful institution, that its chief use is educational, that it should be managed so as to help the public school as much as possible, but that it should not interfere with school methods. They believe that the school should have a library of its own, under its own management, selected with reference to the needs of the different classes and grades, that the teachers should see that the children use these books, and have a record of such use as a guide to dealing in the best way with the individual child. They say that the public library, in its recent arrangements for attracting children and especially those in the lower grades, tends to interfere with the school plans for reading, that the children find in the library much that is more attractive than the books which they can find

in the school library, but which is also less useful; that they acquire the habit of desultory reading, and are led off from the proper course. The junior teachers in the schools in our larger cities stand in somewhat the same relation to the superintendents that the junior assistants in the public library stand to the librarian, and the opinions of each, while interesting, are not conclusive. At present the majority of teachers in the lower grades know and care very little about the public libraries; they may use them to obtain current fiction, but it seldom occurs to them to take their classes to them or to tell the children what they can find there.

At present it appears that the librarians are more aggressive, energetic, and filled with the missionary and proselytizing spirit than are the teachers, possibly because the work of the latter is more monotonous and fatiguing.

I have several times been asked by legislators and jurists whether the public schools and the public libraries could not wisely be consolidated under one central management and thus be made to work harmoniously.

It is theoretically possible, but I think that the result would be that the libraries would lose much, the schools gain very little, and the public at large be profoundly dissatisfied.

The Library Association has a special committee on co-operation with the Library Department of the National Educational Association, and it is to be hoped that this committee will find a satisfactory solution to the problems connected with the relationship of the library to the school. No hard and fast rules can be established, but it would seem that the library, supported by public funds, should not interfere with the work of the public school. On the other hand, one of the most important functions of the school is to train the children to use books and libraries, and at the present time the chief obstacle to the proper performance of this function is that the teachers themselves are in great need of instruction about public libraries and how to use them. For the great majority of children story books and works on general literature of the right kind are not

only more interesting but more important means of education than the average textbooks.

The class which, at present, far outnumbered all other classes in this country is, as Professor Bryce says, the group of "thinly educated persons whose book knowledge is drawn from dry manuals in mechanically taught elementary schools, and who in after life read nothing but newspapers or cheap novels."¹

Those who have had practical experience in free circulating libraries know the truth of this characterization, and are trying to get the children interested in the library as early as possible; if the library proves more attractive than the school it is quite possible that the school methods should be changed. But whatever may be thought of elective studies in the high school and college course, the public library system of instruction must necessarily be largely elective; and mere amusement should not be the leading elective, as seems to be too often the case.

In recent years the subject of co-operation between libraries and librarians has been one to which much thought has been given and for which a great number of plans have been proposed. To secure the most useful co-operation, it is desirable to bring into the work many libraries which are not intended for the circulation of books, except, perhaps, among a limited class, and some of which are not supported by public funds. These include the libraries belonging to the general government and to the states, university libraries, and the larger libraries belonging to and managed by private corporations, either as reference libraries only, but for the use of the general public, or as reference and lending libraries for the use of members, stockholders, or subscribers only. Among these are many scientific, historical, and technical libraries.

The problems of these reference libraries have been receiving increasing attention in the Association in recent years, as is shown by the organization of a section devoted more

especially to their work, and the subject of co-operation will come up for discussion at this meeting in several ways and will, no doubt, be considered from several different points of view. The question, as it appears to most libraries, is, What can the greater libraries do for us in the way of cataloguing, bibliography, lending of books, etc., with the tacit assumption that whatever they can do, they ought to do.

It does not seem necessary to produce arguments in favor of this view, but perhaps a suggestion that the smaller libraries should, on their side, assist the larger ones so far as they can, may not be out of place.

The public library in this country, which now stands, or should stand, second, if not first, in interest to every librarian is the Library of Congress. I feel it to be a duty as well as a pleasure to report to you that the work of this library is being well done, and that Congress has recognized the wisdom and tact of its librarian by increased appropriations for books and for service. You are all familiar with the work being done by this central library for other libraries throughout the country by furnishing catalogue cards, bibliographical data, etc. I think it well, however, to remind you of your duties to this your National Library, and especially that the librarian of every city, town, or village in the country should make it his or her business to see that one copy of every local, non-copyrighted imprint, including all municipal reports and documents, all reports of local institutions, and all addresses, accounts of ceremonies, etc., which are not copyrighted and do not come into the book trade, is promptly sent to our National Library.

I cannot speak so positively and definitely about the state libraries or the great reference libraries of the country, but most of them will be glad to receive such local publications as I have indicated, and the New York Public Library especially desires assistance of this kind.

The controversy between the individualists and the collectivists which is going on in many fields of human activity exists also among those interested in library organiza-

¹James Bryce, "Studies in history and jurisprudence." N.Y., 1901, p. 200.

tion and management and is taking much the same course there as in commerce and manufactures. The tendency is towards organization and division of labor, at first by co-operation, later by consolidation. The free public library is tending to become a special industry by unification of methods for the purpose of securing the greatest product with the least expenditure. The general public, and many librarians, think that the measure of greatest product is the number of books circulated. This is the argument used with city officials to secure increased appropriations, and the kind of books which will circulate most rapidly and the methods of advertising which will increase the number of readers are matters of much interest to library trustees and managers. From this commercial point of view much remains to be done in the way of co-operation. It is probable that the co-operative cataloguing now under way could be much facilitated, and a considerable saving to individual libraries effected, if one small committee of experts selected all the books to be purchased for each and every library. These books could then be catalogued, with annotations on the most elaborate plan, classed, marked, and delivered to the several libraries, where, of course, they would go on open shelves and be advertised by co-operative short lists. The libraries could then discharge most of their cataloguers and experts. One-half the money now used for salaries could be devoted to buying books, the circulation would increase, and the business would flourish.

Moreover, this committee of experts for the selection of books to be purchased would naturally be consulted by publishers as to what particular varieties of literature are most in demand. It would suggest subjects and writers, read MSS. and indicate the pictures which would stimulate the circulation of the volume, and not be objectionable to any one. From this, it would be an easy step to undertake the publication of books for free public libraries and thus effect a wonderful reduction in cost; and if the librarians take up the business of bookselling the scheme will be still more neat and compact.

I need not go into further details, or show what might be effected for the world's progress by simply extending this scheme to an international system; no doubt you can all readily imagine the results which might be obtained by a great cosmopolitan free circulating library trust with the latest attachments and improvements. We should then have accomplished an important part, what some consider the most important part, of the original object of the Association, which, you will remember, was declared to be the "reaching conclusions and inducing co-operation in all departments of bibliothecal science and economy." Of course, in the formation of the expert Board of Managers, the demand for representation which will be made by the leaders and managers of different religious, political, and sociological sects and parties would require consideration, and there are some other important details to be considered by the Committee on Co-operation when it takes up this part of its work.

I do not think there is any immediate prospect of the formation of such a free public library trust as I have indicated, or that the cheapening of library service in this way is desirable, even if it were possible, but there are many things in the mechanical details of library economy in which co-operative work may be of service without checking or interfering with individual development.

Circulating libraries supported from public funds will naturally tend to greater uniformity in methods and scope than reference libraries supported by corporations, but each has something to learn from the other.

There are some men — and women — who have a great desire for uniformity, who think there is only one best way; they want codes, and rules, and creeds; they want all schools and high schools and universities to have one system, even to the periods of their vacations; they want a rule about fiction, and about classification, and about salaries for all libraries, and they want resolutions passed about all these things.

Concentration has its evils as well as its advantages. Some excellent library work in our large cities is done by institutions or societies

which use the library as a means to secure attention to their special end, which may be religious, sectarian, humanitarian, or sociological. The friendly rivalry of different libraries in the same city often has good results, though perhaps it may be a little wasteful of money. To secure the use of a library, the energy and enthusiasm of a propagandist are very useful, but the propagandist does not work to the best advantage in a systematic hierarchy. It is the old question of the individual worker or dealer versus the co-operative, or the consolidated establishment, and while the ultimate answer may be in favor of the latter as giving the greatest amount of useful results with the least expenditure of force, we can understand the feelings of the individual worker who fears that he will be crowded out, and who says that "the lion and the lamb *may* lie down together, but the same lamb don't do it again."

It must be remembered that almost every change in the manner of doing things is injurious to some individuals. Evolution affects not only the fittest, but also the unfit. If it be true that the public library is injuring the business of the bookseller, that the hustling administrator is crowding out the scholar in library positions, and that old-fashioned readers find their old resorts in the libraries less comfortable because of the crowd which now frequents them, it may still be true that the general result is satisfactory.

The question as to whether the public library shall undertake to do other work for the public benefit besides the supplying of literature has occasionally been raised, but has not been seriously discussed as a general proposition. When Mr. Carnegie's offer to provide branch library buildings for the city of New York was made public, many suggestions were made as to the desirability of making these buildings something more than libraries. For example, it was advised that they should be made social centres and substitutes for the saloon, that they should have lecture rooms, rooms for playing various kinds of games, smoking rooms, and billiard rooms; and even public baths in the basement were recommended. At the present time, in a large and crowded

city, the need and demand for public library facilities is so great that it has seemed best to confine the work of these buildings to library work proper, but in more scattered communities, where sites are not so costly, and meeting-rooms less easy to be obtained, some of these suggestions are worthy of careful consideration, and it might be well to collect the experience of the members of the Association bearing on this question, and make it a subject for discussion at a future meeting.

As usual, during the past year, there have been some public expressions of doubt as to the utility or expediency of circulating libraries. Mr. Howells suggests that we may be in danger of reading too much, "reading to stupidity." Lord Rosebery also warns us to beware lest much reading should destroy independence of thought, referring to the "immense fens of stagnant literature which can produce nothing but intellectual malaria." Of course, in some particular cases reading does produce bad results. It would, no doubt, be better for the public in general, and for their own families in particular, if some men and some women had never learned to read. "On a barren rock weeds do not grow—but neither does grass." It might also be better for the world if some sickly, deformed, degenerate children did not live, and the jail fevers of the eighteenth century probably disposed of some criminals to the best advantage; nevertheless it has been found to be wise economy to spend considerable sums of money in lessening the mortality of infants, and of jails, in the inspection and regulation of tenement houses, and in the compulsory restraint of contagious diseases, because the majority of the lives thus saved are worth saving, and they cannot be saved without preserving some others who from the mere utilitarian point of view may not be worth the cost.

The expenditure of public funds upon free libraries is in like manner justified by the general belief that it will do more good than harm. We cannot yet furnish satisfactory statistical evidence as to the results of the free public library experiment which we are trying on a large scale; there does not yet seem to be any

marked decrease in crime or increase in contentment among the people who have had most use of such libraries, and, while the physical welfare of the great mass of the people has been advanced during the last fifty years, it would be difficult to trace this to the free public library because we do not know what use of such libraries has been made by the few hundred inventors and captains of industry to whom this progress is mainly due.

It does seem, however, that the free public library has lessened the power of the demagogue and unscrupulous politician to control votes, and that in public life the steadily increasing influence of educated men is, in part, due to the reading facilities which the people now enjoy.

When the author of *Ecclesiasticus*¹ declared that he that holdeth the plow, the carpenter and workmaster, the smith also sitting by the anvil and considering the iron work, and the potter turning the wheel about, all these trust to their hands, without them cannot a city be inhabited, — they shall not be sought for in public counsel, they shall not sit on the judge's seat, and they shall not be found where parables are spoken, but they will maintain the state of the world, he did not foresee the effect of a system of public education including free public libraries, in a democratic government.

As regards Mr. Howells' suggestion about "reading to stupidity," that is precisely the object of many of the readers of current fiction. They are tired and worried, and they read to forget or to get asleep. The average novel will give this result in from six to ten minutes, and the after effects are not nearly so bad as those of chloral or sulfonal. The novels of five or six years ago will answer this purpose just as well, and twelve new novels a year is an ample allowance for the average free public library. But five-sixths of the other books which are produced — not because the author had anything to say, but because the publisher thought that a book on the beauties of brooks, or on the birds' nests of the Bronx, or on the homes of historical stepmothers or on the

lieutenant colonels of the Revolution, would sell well — are usually of little more value in the free public library than the novel; they count for circulation, but they are not read, but merely glanced over — mainly for the pictures.

At the present time public opinion in this country tolerates expressions of great differences of opinion with regard to religion and particular creeds. Recently a few Catholics have made objections to the free public library, upon much the same grounds as those upon which the Church objects to public schools, and demand that in both the school and the library the books provided shall be subject, directly or indirectly, to their censorship. Somewhat similar demands, although not so definite and systematic, are occasionally made in behalf of other sects, and they would no doubt come from a number of other religious and political organizations if it was supposed that there was any chance of their success. The question will usually be decided for each locality by political party requirements, which vary much at short intervals, and there is no immediate danger to the free public library system from this particular form of opposition, except possibly for a short time in some limited locality. It is necessary to bear in mind, however, that public opinion is much less tolerant in matters of morals and manners than it is in matters of religion, and that in selecting books for circulation this opinion should be considered and respected.

The librarian of the free public library has, as a citizen, the same rights and duties as any other citizen, including the right to express his opinions on religious or political questions, but as a general rule, his influence for good will be greatest when he is not a partisan of any particular policy of either church or state.

As regards the large reference libraries, the selection of books must be made much broader in scope, for even the most ardent propagandist of a particular creed or shade of opinion occasionally wants to see what his opponents are saying in order that he may specify their errors, and does not object to find their publications in the reference library,

¹ *Ecclesiasticus*, xxxviii, 25-34.

provided they are carefully put away for the use of experts like himself and are not placed on open shelves consulted by the general public.

The duties and problems of our great reference libraries are in many respects peculiar, but the limits of this address permit of only a brief reference to some of them. One of their duties is to preserve the literature of the day for the use of future scholars and students. Part of the business of the circulating library is to have its books worn out and destroyed in actual service, but the reference library has also another purpose, and the books which give it the greatest value and importance should be carefully preserved.

The relations which should exist between our great reference libraries located in large cities and the rapidly multiplying smaller libraries scattered all over the country merit careful consideration. The amount of public funds which can and should be devoted to public libraries is limited, and these funds should not be employed in doing comparatively unnecessary work. Many of the smaller libraries are now, or soon will be, complaining of want of shelf room, and are at the same time accepting and trying to preserve and catalogue everything that comes to them. All of them are preserving books that will not be used by any reader once in five years, and two or three copies of which in the large central reference libraries will be quite sufficient for the needs of the whole country. The remark of President Eliot in his last annual report that "the increasing rate at which large collections of books grow suggests strongly that some new policy is needed concerning the storage of these immense masses of printed matter" is very suggestive; and his idea that if the Congressional Library and the great reference libraries in a few of our largest cities would undertake to store any and all books turned over to them and make them accessible to scholars in all parts of the country, the functions of the other libraries might be considerably amplified, is no doubt a true one.

Whether the great reference libraries could undertake the work thus indicated would

depend upon the construction placed on the requirement that all books should be made accessible to scholars in all parts of the country. Whether the other libraries would be disposed to accept the suggestion to turn over their old books not in immediate use, merely because it might seem for the public good so to do, is much more doubtful, and the selection of the useless books involves some questions which would be good topics for discussion in the Trustees' Section of this Association.

It is always possible to show that any book or pamphlet, in any edition, might be called for by some reader, student, or professor if he knew it existed, and the difficulties in selecting books to be discarded are very considerable. Mrs. Toodles' state of mind about things that it might be handy to have in the house is one that librarians well understand. It is no doubt true that in the great majority of libraries of one hundred thousand volumes and upwards, one-fifth of the books are so little used that it would be wiser to dispose of them than to use a fund available for salaries or for the purchase of books for providing additional room. Just at present, in most communities, it seems easier to obtain funds for library buildings than it is to get the means to ensure good service.

Closely connected with this is the question as to the acceptance of gifts of books, especially when made with the condition that they are to be kept together to form a permanent memorial for the donor. While each case must be decided on its individual merits, it may be said in general that the desire for a memorial can be fully met by book-plates and catalogues without the unfortunate and unwise requirement that a certain group of books must always be kept together. Even gifts without restrictions, consisting of one or more cartloads of miscellaneous public documents, odd numbers of periodicals, imperfect files of newspapers, pamphlets of little interest, etc., involve some expense to the library, and very few libraries should try to retain and utilize more than a small part of such material.

General discussion as to what large reference libraries should do is of very little practical

interest. The interesting question is, "What should this particular library do?"

Should the Library of Congress obtain and preserve complete files of every newspaper published in North and South America?

Should the Boston Public Library try to obtain complete sets of the public documents of the Southern States?

Should the New York Public Library complete its collection of first editions of American authors by purchase at current prices?

Should the New York State Library try to make a complete collection in Genealogy?

Should the Chicago libraries attempt to make a complete collection of the reports of Insane Asylums?

There are many questions like these which require a knowledge not only of the present contents, the available funds, and the special needs of each library, but also a knowledge of what other libraries are doing, if proper answers are to be given.

The methods of co-operation between the great reference libraries, for the public good and for mutual benefit, are as yet rather local and rudimentary. Some points of agreement have been reached between the Congressional Library, the Boston Public Library, and the New York Public Library, as to the purchase of certain manuscripts and rare books; and in every large city there is more or less co-operation between the greater reference libraries, including the University library, as to purchases, — especially of periodicals. The chief subject thus far considered by them is that of Bibliography.

Many schemes for bibliographies, general, special, annotated, etc., have been suggested, and a few have been or are being tried. Each of these, from the universal bibliography to contain thirty millions of titles, to the bibliography of posters or of Podunk imprints, or of poems and essays condemned by their authors, has at least one admirer and advocate in the person who would like to have charge of the making of it; but when it comes to the question as to what has a commercial value there is great unanimity in the opinion that many of those bibliographies should be paid for,

not by the makers or the users, but by government or by some philanthropic individual.

A bibliography is very instructive and useful to the person who makes it, and it is well to give the person having a taste for such work as ample facilities as possible; but mere uncritical lists of all the books and journal articles relating to a given subject, from the commencement of printing to the present time, and without indication as to where the older ones are to be found, are of little use to most libraries or to their readers. Like some speakers, they are too much for the occasion.

A good bibliography can, in most cases, only be made from the books themselves; the labor of its preparation is almost equal to that of writing a critical history of the subject, and therefore the first question in considering it is, Where are the books?

One session of this meeting is to be devoted to this subject of Bibliography, which is an important one, and I hope that the papers presented, and the discussion to follow, will bring out some valuable suggestions. These will be especially interesting just now in view of the fact that a Bibliographical Department has been proposed as one of the special lines of work for the recently organized Carnegie Institution, and upon the scope and plan proposed for such a department will no doubt depend the action of the trustees of that corporation.

A considerable part of the bibliographies which would be most useful for reference libraries and those engaged in research work can only be prepared by experts in the different arts and sciences, and there is an increasing demand for such experts in the large reference libraries. Just now there are places for three or four well educated engineers who have the taste and the training required to enable them to do much needed work in the critical bibliography of their art. Every great reference library needs half a dozen such experts in different departments. Where are they?

In considering the questions as to the kinds of bibliographical work the results of which would be most useful to the great majority of the public libraries of this country and as to

the means of doing such work, it appears to me that it is best that it should be done under the direction of the Publishing Board of this Association, which has had practical experience in this line, and will always be well informed as to the needs of such libraries.

This opinion was brought to the attention of Mr. Carnegie, with the suggestion that he should give to the American Library Association a special fund, the income of which should be applied to the preparation and publication of such reading lists, indexes, and other bibliographical and library aids as would be specially useful in the circulating libraries of this country. The main part of the income would be expended in employing competent persons to prepare the lists, indexes, etc., and to read proofs. The cost of paper and printing would be met by sales to the libraries. It was represented that such a gift would be wisely administered by the Publishing Board of the Association, and that the results would be of great value in promoting the circulation of the best books.

In response to this suggestion a check for \$100,000 was sent to me as "a donation for the preparation and publication of reading lists, indexes, and other bibliographical and literary aids as per (your) letter of March 14th." I shall take great pleasure in turning over this money if the Association accepts it for the purposes and under the conditions stated. It is a unique gift from a unique man, who deserves our best thanks.

To diminish or destroy desires in the individual man is the object of one form of Oriental philosophy and of several forms of religion, the result hoped for being the doing away with anxiety, discontent, and fear, and the passive acceptance of what is and of what is to come.

Our work follows an opposite plan; the library aims to stimulate and increase desire as well as to satisfy it, and the general tendency of the free circulating library, as of public education, is to increase discontent rather than to diminish it. A competent librarian will be dissatisfied during most of his working hours, — he will want more books, or more readers, or more room, or a better loca-

tion, or more assistants, or means to pay better salaries, or all these things together. Some readers also will usually be dissatisfied with the library because of its deficiencies in books, or because of some books which it has, or because the librarian is not sufficiently attentive or is too attentive, or because of the hours, or the excess or want of heat or ventilation, or because of other readers. All this is an almost necessary part of the business; if neither the librarian nor the readers are dissatisfied, the library is probably dying, or dead. But there is a discontent which is stimulating and leads to something, and there is a discontent which is merely indicative of disease, a grumbling discontent, which resembles the muscular twitchings which occur in some cases of paralysis. A pessimist has been defined as a person who, having a choice of two evils, is so anxious to be right that he takes both. Don't be a pessimist. Life is short and art is long; you can earn your halos without making your library perfect, but halos are not to be had by waiting for them, nor, as a rule, by hunting for them. It will make very little difference to you fifty years hence whether you got your halo or not, or whether it was a plain ring halo or something solid, but it may make a great deal of difference to some of the men and women of that time, who are now coming to your children's reading rooms, as to whether you have deserved one or not. Each of you and each of your libraries is a thread in the warp of the wonderful web now passing through the loom of time, but a living thread is not altogether dependent on the shuttle of circumstance. It is wise to try to know something of the pattern and to guess at some of the problems of to-morrow, but in the meantime we may not fold our hands and wait because we do not see clearly the way we are to go. We must do our best to meet the plain demands of to-day, bearing in mind the warning of Ecclesiastes, "He that observeth the wind shall not sow, and he that regardeth the clouds shall not reap. . . . In the morning sow thy seed, and in the evening withhold not thine hand, for thou knowest not which shall prosper, whether this or that."

ORGANIZATION AND ADMINISTRATION OF UNIVERSITY LIBRARIES.

BY ANDERSON H. HOPKINS, *Assistant Librarian, The John Crerar Library, Chicago, Ill.*

LET me speak to you to-day not merely as librarians, but as educators; as members of a great and growing though somewhat formless body devoted to both the conservation and the advancement of learning; as members whose duties, while perhaps mainly administrative in character, are not without a tutorial side. Perhaps it would be better to say educationists, rather than educators, if thereby the meaning is made more clear. My object in thus hailing you is to indicate our viewpoint and enable us to enter upon the theme in its broader aspects and with widest sympathy.

I believe that no one who has given the subject unprejudiced consideration will deny that long strides have been taken in educational theory and practice within the last few decades. As a result of these movements demand is made upon us in the name of reason that within the memory of men yet young was undreamt of. You who sit before me are in part responsible for this demand because you and your predecessors have helped to create it. Therefore it is incumbent upon you that you shall help to meet such rational demand and satisfy its cravings. These cravings can be satisfied so far as university libraries are concerned only by certain necessary changes in organization, administration, and scope imperatively called for by the new education.

If in the course of my argument some of the things said seem harsh, I beg that you will understand that there is neither harshness nor animosity in them by any intent of mine. I am not now, and have not been for some six or seven years past, engaged in university library work. For twice as many years, however, it has been a favorite study with me and the sense of detachment arising from occupation in another kind of library work—a sense amounting almost to aloofness—enables me

to examine the field with a clarity of vision that otherwise might be lacking. This sense of detachment may have betrayed me into a greater freedom of speech than is permissible under the circumstances—but I hope this is not the fact.

We all admit, with what of cheer we may, that there are many things we do not know and therefore cannot make positive statements about, but in the same breath we may assert that there are some things we do know and are entitled to speak of with conviction. It is with this attitude that I have made positive statements concerning certain phases of the organization and administration of university libraries. If the form in which I have couched my message seems dogmatic, let me explain it at once by saying that the positive form of statement was chosen deliberately after having made an examination of the records as printed of the College Section of the American Library Association. This choice was not made through a wish either to be or to seem dogmatic, but because in that retrospective look my eye was impressed—not to say oppressed—by the vagueness and formlessness of a sea of woulds and shoulds that stretched away into the dim distance. I therefore chose the positive rather than the conditional form of statement as a medium for the expression of the ideas and opinions which I place before you and for which I ask your open-minded consideration, not merely as librarians, but as earnest students of educational matters.

Tearing down is much easier than building up, we are often told. I have therefore sought not to destroy, but to transform; and I trust that for every statement which you may regard as iconoclastic, in what follows, you may at least find another which may be regarded as having a constructive character.

Let it be stated at the outset that this dis-

cussion is confined strictly to the phenomena of the American university, or, more exactly, that it does not include a consideration of any set of university conditions other than those actually existent or nascent in the United States of America. This device lessens the scope of the subject, but even thus abridged it is so extensive that nothing more than a sketch can be presented within the necessary limits.

It is not necessary for me to present a definition of that indefinite but surely growing thing, the American university, — and I shall not do so. Others have already done that very well indeed, and a deal of nonsense has been uttered about it beside. But for the present purpose the word “university” is used to mean an institution of the higher learning maintained for the furtherance of education and research. It is not intended to enter into a discussion of even this definition. It is merely a definition, a finger-board, pointing out the direction the argument is to take.

Universities consist essentially of two organized bodies with their auxiliary equipments. These two bodies may be called, for want of better names, the Board of Trust and the Faculties. This discussion has to do with both of these bodies, because its specific subject forms an essential part of each of them, and because the relations of the library with the Board of Trust ought not to be less firm and close than with the Faculties, although the ramifications will be wider and more intricate with the Faculties. I shall try to illustrate this idea later, and ask to have it borne in mind with particularity.

The argument does not require that the organization of the Board of Trust be entered into at this time, but with the Faculties the case is different.

Because the Faculties have the work of instruction and of research in immediate charge, they are often thought of and spoken of as the university. At this point it would be convenient to use the term in that narrower sense, but for the sake of clearness let it be avoided even at the cost of circumlocution.

That body with its natural auxiliaries, then,

that body called the Faculties and having in immediate charge the work of instruction and research, consists of numerous parts the names of which are yet more numerous and confusing, namely: the college, the school, the library, the laboratory, the museum, the gymnasium, the shop, etc. But all these, when considered with regard to their essential functions, group into classes of departments few in number. These are the school, the library, and, possibly, the museum. If you ask what has become of the others I answer that they are each and every one either merely one of these last or else a part of one of them. If you find it impossible to assent to this view there is greater trouble to follow, because the position which I prefer to take is that they reduce to two, instead of three, and that these two are the school and the library.

It is not held that these are the best names for the departments under consideration, nor even that they are good names. Indeed, I fear that the last is no longer a good name for its department — and will tell you why without much delay.

I have spoken of the Faculties, considered as a body, and their auxiliary equipments. Now a school or college is one of these auxiliary equipments of the Faculties considered as a body. In turn a laboratory is one of the equipments of a school. And, in like manner, we may go on through the list until my position is justified, and no difficulty arises until the library and the museum are reached. The museum is often regarded as a laboratory, but there is a difference which may be made clear perhaps by considering the dissimilarity of their contents. The materials of education and research, which may be considered as a part of the auxiliary equipment of the Faculties, falls roughly into two classes according as it may or may not be used repeatedly. The first of these let us call the “permanent material of education” and the second “supplies.” Most of the material of a museum falls into the first class, while most of that of the laboratory falls into the second class.

The Faculties, in the course of their develop-

ment, need and have accumulated vast stores of the permanent material of education. This consists of books, maps, charts, manuscripts, photographs, lantern slides, drawings, statuary, paintings, and specimens of sorts innumerable, representing all the kingdoms of this world. The whole of this falls into the one category which I have called the "permanent material of education and research."

Economic administration calls for classification. Classification is putting like things together. It is not a long step to find that the museum logically goes *to* (not *with*) the library rather than *with* the laboratory. The two things, namely, library and museum, cover the same field more or less exactly. The difference is more one of form of content than of the content itself. The museum contains the text and the library its commentary. If the museum is to go *with* instead of *to* the library, then it must be erected into another department co-extensive with the university. But this would not be economic administration. The museum should go to the library and not the library to the museum, because organization in libraries is so much further advanced than in museums that the needs of both will be best served by this arrangement. But then the library must be no longer a mere "bookery," as its present name suggests, and classification is something else than what is commonly called by that name in libraries nowadays.

This, then, is the ideal to be sought. Coalesce the library and the museum. Bind them together in the closest possible relation. Let them be no longer a library and a museum, but an entity, a living organism whose two parts are as vital to each other as are flesh to bone and bone to flesh. But do not mix them. A mixture is not an organism. Bone and flesh do not mix while vitality remains — nor do they separate while vitality remains.

This brings us to the consideration of university library organization and the more immediate subject under discussion.

In the foregoing introduction, without having said it in words, the university, considered

in relation to its ultimate work, has been held to have two aspects voiced respectively by the two bodies comprising it. These two aspects are the External or general governmental voiced by the Board of Trust, and the Internal or immediate administrative voiced by the Faculties.

For convenience, in the consideration of the university library which is to follow, I shall choose to regard it also in these dual aspects because I shall hold what I have before implied, namely, that it is clearly co-extensive with the university not merely in the narrower sense defined by the Faculties, but in its broadest sense. It touches closely every interest of the university in its minutest ramifications — otherwise it is not the kind of library now under consideration.

Before going further I would like to have understood clearly the force of the term "co-extensive" as just applied to the university library. Of course I do not mean that it is the university, nor that it does, or can do, the work of the university, nor that it is greater than the university, nor that it is equal to the university. But I do mean that it is an integral part of the university, without which the university cannot exist; that it is as long and as broad though not as deep as the university, and that the university contains no other department save itself which has these attributes.

Then *the government of the university library reproduces in miniature the main features of the government of the university itself.* This statement may be taken as a basic principle. Upon it is built the structure I submit.

The library has an external and an internal administration and each of these has a breadth corresponding to its proper functions.

The external administration falls naturally into three groups. These groups form

- I. The directorate.
- II. Faculty representation.
- III. Representation of the Board of Trust.

The first of these, the directorate, is the external governing board having actual charge of the library and its policies. It properly con-

sists of three, and three only. These three are

- (a.) President of the university.
- (b.) President of the Board of Trust.
- (c.) Head of the library.

This statement is intended to mirror the normal state of things and must vary slightly with variations in the government of the university. To make my meaning more clear it may be said that in outlining the typical university I took no note of such a body, for instance, as the Board of Overseers of Harvard University, because it is not essential to the conception of the type. In the same way when I state that the external governing board of the university library consists of the foregoing three officers, I have not assumed that the President of the university and the President of the Board of Trust are one and the same person. Such a case, of course, requires a solution, which, however, is easily found in the election by the Board of Trust of a representative from among its members. The essential points are, first, that the external directorate of the university library shall exist; second, that it be constructed substantially as indicated; and third, that its purposes will be best conserved if it consists of three persons and these the three named.

A conspicuous lack of the element supplied by this form of directorate is the prime cause of much of the inefficiency generally chargeable to the university libraries of this country. And if it is not known to you it ought to be that there is no other one class of large libraries in the land that as a class is so generally and so hopelessly behind the times as are the university and college libraries. One of the gravest faults in the organization of university libraries is usually found here. It is common to see the functions of the directorate usurped by a committee from the Faculties. So serious and so far-reaching is the effect of this error that I am led to urge upon you a statement so pungent that it may awaken resentment. Nevertheless I am convinced that to commit the policies of the university library to a committee elected from and by the Faculties, or ap-

pointed from the Faculties, is to start the library if not on the downward path then on the path to comparative mediocrity. It is essentially, radically, wrong and cannot be righted except by undoing.

I cannot here enter into a detailed statement of reasons for the position taken, but because this is a point of deep interest to all concerned and peculiarly apt at causing heart-burnings, I must ask you to permit its discussion at a length which may, to those not concerned, seem disproportionate.

It is conceivable that the Faculties, or more likely the professors, may consider themselves aggrieved or even attacked by the assumption of such a position, but that attitude is not tenable, as it is only the system, if system it may be called, that is attacked. The position does not argue the moral obliquity of the professor nor of the Faculties, but it does point with significant finger to the fact that the individual personal interests of the professor as head of his immediate department clash with those of the library as a whole, and tend to make him not an impartial judge or counsellor.

There seems to be some peculiar element in ordinary professorial duties that militates against the administrative faculty and that too frequently blunts it or that even totally destroys it. Now, the head of the university library must be first of all an administrator — this without prejudice to either his breadth or depth of scholarship — and it is not more than fair to him that he should have associated with him in the management of his department others who are also administrators.

The accuracy of the statement about the administrative faculty among professors is easily enough verified in our universities and it is not uttered in derogation of a noble body of men. I recall an incident that occurred many years since which will perhaps be illustrative. A student was one day busy in the book-stack of the university library when his attention was attracted by the curious actions of a professor of the highest standing who was also busy in an adjoining aisle between the stacks. The professor was upon his knees in the aisle.

The light fell gently upon the silvery hair crowning his uncovered head. In his hand he held a volume and with upturned eyes he seemed anxiously searching for the proper place in which to put the book which he was returning to the shelf after having examined it. He carefully put the volume into an opening which seemed about the right size, but it did not quite fit. So he timidly withdrew the book and continued his search on the adjacent shelves until he found a hole that the volume seemed to fit more exactly — and there he left it. For thirty-five long years he had trod these halls, had studied and had taught, but had not yet learned the use of a shelf-mark of a simple description. You need not smile — far less laugh. He was a kindly and a cultured gentleman; a refined and scholarly man; and if I should speak his name to you every head would bow in assent. For all these years with ever-growing respect his voice had been heard touching all that classic memory holds dear; his pen had made his name revered in language and in art; and when his artistic soul bade his nimble fingers make the music that he loved so well the ears of those who heard him were delighted and their hearts were touched. And when at last the word was passed that he was dead more than one man who never had the great privilege of sitting under his instruction, but to whom his life had been, and yet is, an inspiration went in heaviness to look upon his dead face and pay high tribute.

With one other brief illustration of a different class I will pass on. It would seem a reasonable thing to expect that a university library, whose range is the whole field of literature, would arrange the apportionment of its funds for the purchase of literature in accordance with the relative productivity of the different fields of literature. But I am not aware of any instance in which this is done when the apportionment is controlled by a Faculty committee. The professorial chair is the unit instead. I am aware that there are makeshifts provided to get around the difficulty — but they are makeshifts; that is the trouble. It is

not a makeshift administration that we are seeking.

All this does not mean, however, that there should be no library committee of the Faculties. That would be perhaps quite as great a mistake as the other.

The second of the three groups named above is that formed by the library committee of the Faculties; and it should be elected from and by the Faculties, except that the active heads of such museums — or of such departments of the university as have museums organically related with the library — might be ex-officio members of the committee. Its duties are purely advisory and the number of members is not a vital matter; but the practical necessity for an active working committee of this kind is neither to be overlooked nor minified.

The third of the three groups is the library committee of the Board of Trust. It is created by and from within the Board and its duties are to provide adequate funds for the work and to audit, or direct the auditing, of their expenditure. This closes my sketch of the external aspect of the library.

Now is reached that point in my discussion where the subject opens out with fan-like sweep into infinite detail. As I touch upon internal administration, however, let it be remembered that I am speaking to past masters in the craft and it shall be my aim to avoid detail.

The university library has four chief functions. These are to collect, to prepare, to conserve, and to distribute the permanent material of education and research. To these four chief functions which have been long recognized others may be added that will not be conceded to be of first importance. But there is one which I would like to see added to rank with these and that is the creation or production of the permanent material of education and research. Then let us say the university library has five chief functions. These are to collect, to prepare, to conserve, to create, and to distribute the permanent material of education and research. You will be quick to see that the term "to distribute"

has taken on a new value. Whereas under the old statement it meant little more than to circulate books, under the new statement it means also to publish them. In other words, the university press becomes a part of the library.

Of course this recital of functions is more or less immediately suggestive of the lines into which the staff organization must fall. Aside from the general direction of the whole internal working of the library, each of these five functions calls for at least one division chief; and some of them may be so divided or inter-related as to call for more than one. For example, "to collect" calls for a chief of purchase division, but under this same head must be provided also for receipts. With receipts, however, shipments may well be allied and this belongs not under the function "to collect," but instead under that labelled "to distribute." Considerations of this kind are too numerous and too diverse to permit of any attempt here to more than indicate them by some such instance as that given, but when they have all been considered it is found that the whole work may be conveniently grouped under one head with about eight assistants of rank. The organization then takes this form:

- (a) Head of the Department.
- (b) Secretary of the Department (who may or may not be Vice Head).
- (c) Chief of Purchase Division.
- (d) Chief of Receipts and Shipments Division.
- (e) Chief of Catalogue Division.
- (f) Chief of Inspection Division.
- (g) Chief of Reference Division.
- (h) Chief of Circulation Division.
- (i) Chief of Publication Division.

This group of division chiefs forms the natural advisory body for the Head of the Department so far as the purely internal workings of the library are concerned. It is his cabinet, so to speak. Permit me to suggest that it is logically the natural and proper body to appportion the book fund.

Beyond this it is not my purpose to go. Of course it is seen at a glance that at least some

of these divisions call for subdivision and that all call for a number of assistants of lower grade. For instance, classification is taken care of under (e), Catalogue Division, although it might well be erected into a separate division with its own chief, particularly if the museum becomes a part of the library and classification is thereby raised in the way indicated at an earlier point in this discussion. In like manner binding and repairing are here included under (f), Inspection Division, and supplies under (c), Purchase Division, but these are matters of detail and are not particularly difficult of treatment if the object is the administration of a library merely as a "bookery."

But I wish to speak to you for a moment on a wider and a deeper topic — the coalescence of the library and the museum; the union of the commentary with its text. Let me first enter vigorous protest against a false conception of the scope and relations of museums, libraries, and laboratories, a conception which seems to have been gaining ground with university presidents and with professors in the departments of learning commonly called scientific. The term "museum" has been so often applied to some disrepute with scientific workers and the term "laboratory" has been magnified by them to fill not only its own right and proper place, but also that of the older and better name for the institution. There has been much loose talk to the effect that the library is a laboratory. The truth is that it is nothing of the sort; and statements to such effect are based upon a misconception. It is true that certain laboratory and museum methods may be used in the library to great advantage and should be used there; but the truth stops at that point. In brief, the laboratory is to the museum what the departmental library is to the university library. I have elsewhere entered more fully into the proper functions of the museum and will not here take your time for a more elaborate statement.

We know that the museum in this country is now chiefly a show-place, at its best, when

in truth it ought to be the touch-stone of vital growth. The difference in development between the library and the museum has been pointed out with friendly hand by Dr. A. B. Meyer,¹ of Dresden, in his recent monograph "On the Museums of the Eastern Part of the United States of America." Three statements in his preface to Part I. struck me with particular force in this connection. These are to the effect that in the United States libraries and museums are not always sharply divided; that, aside from this, libraries are on a higher plane of development than are museums; and that, in general, the museum in its essentials there stands upon a higher level than the European. In his phrase "aside from this" it seems to be implied that the library and museum should be kept sharply separated. I cannot assent to this general proposition, however. The vitality desired for the museum can be had only by its union with the library so that the book and the specimen illustrate

¹ Ueber Museen des Ostens der Vereinigten Staaten von Nord Amerika. Reisestudien von A. B. Meyer, Director des Königl. Zoologischen und Anthropologisch-Ethnographischen Museums zu Dresden.

each other, so that text and commentary are side by side, not merely for the earnest student, but even for the casual inquirer. In thus vitalizing the museum the library need lose none of its vigor. Nor will it if only the problem is grasped intelligently and with strength. The beginning of the work is neither difficult nor complicated and beginnings have been made already sufficient to demonstrate the worth of the plan. A carefully arranged set of references between the two things, the book and the specimen, paves the way and is of untold value; but before the whole work can be done there is one huge unsolved problem that must be faced and that is classification — not merely of books, but of things. I will not quarrel with you over classification. I am not looking for a perfect scheme of classification. The thing to be sought is a rational plan whereby the various classifications now in use in different sciences may be unified or brought into a working relation with each other and with book classification. Here is a fruitful field. Who will enter it?

INCIDENTS IN THE HISTORY OF THE BOSTON PUBLIC LIBRARY.

BY JAMES LYMAN WHITNEY, *Librarian.*

JUST now the University of Oxford is preparing to commemorate the three hundredth anniversary of the opening of Sir Thomas Bodley's Library.

Beside this ancient institution, American libraries may seem but infants, whose career is hardly worth commemorating. And yet I love to think of the Boston Public Library as really dating back to some indefinite, misty period of time, of which the exact record has not been found.

For we know that there are vague and puzzling allusions some two hundred and forty years ago to a Public Library as existing at Boston. One is found in the Prince collection deposited in the Boston Public Library, in a

copy in manuscript of the will of the Reverend John Oxenbridge, pastor of the First Church in Boston. It is dated "Boston in New-England, the 12 day of the first month 1673-4." The will begins, "I John Oxenbridge, a Sorry Man less than the least of all the mercies and Servants of Christ, am the most weak and worthless creature," and, after the disposal of much worldly estate — silver and many gold rings — for one so humble and dejected, bequeaths "To the publick Library in Boston or elsewhere as my Executrix and Overseers shall judge best, Augustins works in 6 volumes, the Century's in 8 volum's, the Catalogue of Oxford Library, Trithemius catalogue of Ecclesiastick writers, also Pareus' works in 2 vol-

umes, Pineda upon Job in 2 volumes, Euclid's Geometry, Willet on Leviticus, Davenant on the Colossians."

In the Boston Athenæum is a copy of Samuel Mather's "Testimony from the Scripture against Idolatry & Superstition" thought to be printed at Cambridge, Mass., by Samuel Green in 1670. It bears the manuscript inscription "for the publike Library at Boston 1674."

Of Robert Keayne, first commander of the Ancient and Honorable Artillery Company, every Boston person has heard, and of the Town House to which he contributed most liberally. By his lengthy will he provided that the proposed Town House should contain a "convenient roome for a Library & a gallery or some other handsome roome for the Elders to meete in and conferr together," and that it receive as a beginning "such of my Divinitie bookes and Comentaries, and of my written sermon bookes or of any others of them as they shall thinke profitable and usefull for such a Library (not simply for show, but properly for use), they being all English, none Lattine or Greeke."

A rather uninviting foundation for a public library, one would say, yet not unlike the beginnings of other American libraries at the time. Of the books given by John Harvard to the library at Cambridge, sixty-two per cent. consisted of theological books, while of the foundation books of Yale College, given by the little company of ministers at Branford, nearly all were theological works, and, strange to say, "there was not a single volume relating to classical literature or the sciences." And public libraries of the time were not less gloomy. The chief possession of the Town Library of Concord, Mass., in 1672, was "The Bookes of Marters" which the selectmen were instructed to keep from abusive usage and not lend to persons for more than one month at a time. Even at a much later date a similar state of things existed. Franklin in his Autobiography says, "My father's little library consisted chiefly of books in polemic divinity, most of which I read, and have since often regretted that, at a time when I had such a

thirst for knowledge, more proper books had not fallen in my way, since it was now resolved I should not be a clergyman."

From the records of the Selectmen we learn that Mr. John Barnard, Junr., was "desired to make a Cattalogue of all the books belonging to the Town Library and to Lodge the Same in ye sd Library," and later that "haveing at the request of the Select men Set the Towns Library in good order, he is allowed for sd Service two of those books of which there are in ye sd Library two of a Sort."¹

Richard Chiswell, an eminent bookseller of London, writing to Increase Mather at Boston, Feb. 16, 1676-7, says, "I have sent a few books to Mr. Usher without order, which I put in to fill up the Cask. You may see them at his shop, & I hope may help some of them off his hands, by recommending them to your publike Library."²

This Library is elsewhere alluded to as being at the East End of the Town House, and whatever it may have been it was probably the foundation of that accumulation of ancient books whose destruction was mentioned at the time of the burning of the Town House in 1747.³

Here we lose all trace of the Boston Public Library for a long time to come. May not its foundation have been laid again only perhaps to be overthrown in the troublous times which culminated in the siege of Boston?

Elsewhere, as we pass over into the eighteenth century, the mists seem to clear away and numerous libraries are seen. We are told that twenty-nine existed at the eve of the Revolution, and while none of them answers to a public library as we understand it, they may fairly be called in some sort such.⁴

A foreigner visiting this country at this time presents this roseate view: "In many towns, and in every city, they have publick libraries.

² Winsor's Memorial History of Boston, i., 501; Mass. Historical Society Collections, 4th series, viii., 576.

³ Winsor's Memorial History of Boston; Massachusetts Magazine, vol. 2, p. 467, August, 1791.

⁴ Winsor's Memorial History of Boston, iv., 281.

Not a tradesman but will find time to read. He acquires knowledge imperceptibly. He is amused with voyages and travels, and becomes acquainted with the geography, customs, and commerce of other countries. He reads political disquisitions, and learns the great outlines of his rights as a man and as a citizen. . . ."⁵

From this time on many libraries were established in Boston, by learned societies, and by individuals acting together as shareholders; some of them still exist. But for a Free Public Library the city was to wait for many years. When was its first foundation laid?

As one enters the Copley Square building of the Boston Public Library and passes to the stairway, he finds, imbedded in the pavement, a laurel wreath, encircling the names of those who have been regarded as the founders of the library. Before this wreath I have seen visitors standing perplexed at one name found there: Vattemare.

"Who is this man with the foreign name?" was asked. "He seems quite out of place in the company of these old Bostonians."⁶

If curiosity had led these visitors to further enquiry, they would not have found help in biographical dictionaries and encyclopædias in the great reading room of the library, only the brief mention in a German work that Vattemare was a "Französischer Bauchredner," that is, a French ventriloquist.⁶ This he was, to be sure, but, as we learn from manuscripts in the Boston Public Library, in the handwriting of his friend, Miss Eliza Susan Quincy, daughter of President Quincy of Harvard College, "in addition to this faculty of producing the most diverse voices and tones in every direction, and at every distance, he possessed uncommon mimetic talent and could represent persons of different sexes, ages, conditions,

and figures with such rapidity of change that it appeared like enchantment. This extraordinary talent, his modesty, and the benevolent object of his art everywhere gained him the warmest applause, and most flattering testimonials from crowned heads and other distinguished personages." Indeed, he appeared at the London theatres in plays in which he took all the parts, as may be seen in the play "Adventures of a ventriloquist; or the rogueries of Nicholas. . . . Entertainment in three parts, as embodied, illustrated and delivered by Monsieur Alexandre . . . at the Adelphi Theatre, Strand. Written and contrived by W. T. Moncrieff, London, 1822," with illustrations by Robert Cruikshank of the various parts assumed by Vattemare in the play.

"When Monsieur Alexandre (for this was the name by which Vattemare was known) was in Scotland in 1824," says a Scotch newspaper, "he paid a visit to Abbotsford, where he entertained his distinguished host and the other visitors with his unrivalled imitations. Next morning when he was about to depart, Sir Walter Scott felt a good deal embarrassed as to the sort of acknowledgment he should offer; but at length, resolving that it would probably be most agreeable to the young foreigner to be paid in professional coin, if in any, he stepped aside for a few minutes, and on returning, presented him with this epigram:—

'Of yore, in Old England, it was not thought good
To carry two visages under one hood;
What should folks say to you who have faces so plenty
That from under one hood you last night showed us twenty?
Stand forth, arch-deceiver, and tell us in truth
Are you handsome, or ugly? In age, or in youth?
Man, woman, or child? Or a dog or a mouse?
Or are you at once each live thing in the house?
Each live thing, did I ask, each dead implement too?
A workshop in your person — saw, chisel and screw.
Above all, are you one individual? I know
You must be, at the least, Alexandre and Co.
But I think you're a troop, an assemblage, a mob,
And that I, as the sheriff⁷ must take up the job;
And instead of rehearsing your wonders in verse,
Must read you the riot act and bid you disperse.
' Abbotsford, 23 April, 1824. Walter Scott.'

⁵ Force's American Archives, 5th series, 1776, col. 1049: Translation of a letter written by a foreigner on his travels, dated Dec. 3, 1776.

⁶ Curiously, a brief account of Vattemare is in Appleton's "Cyclopædia of American biography," perhaps as entitled to American citizenship from his interest in the United States.

⁷ Sir Walter Scott held the office of sheriff of the County of Selkirk.

But all this would not have brought to Vattemare enduring fame or secured him a place in our Valhalla.

In the pursuit of his profession, visiting the cities of Europe, and becoming acquainted with their treasures of books and works of art, he was interested, first of all, as a private collector, to increase his own stores. Afterwards the thought came to him, why might there not be between nations an exchange of literary and artistic treasures, whereby all might benefit?

This idea, having gained possession of him, never relaxed its hold; he abandoned his profession about the year 1827 and devoted the remainder of his life to its realization. Journeying over two continents, he made his persistent appeal, year after year, to governments, until, we are told, induced by his contagious energy, state after state succumbed to his representations, so that by 1853 he had brought one hundred and thirty libraries within his operations, and between 1847 and 1851 had brought from France for American libraries 30,655 volumes, besides maps, engravings, and other objects of interest.⁹

Full of ambition (as expressed in his own words) to give the intellectual treasures of the cultivated world the same dissemination and equalization which commerce had already given to its material ones, whose outcome was to be "the establishment in every quarter of the world of free public libraries and museums ever open to the people," he came to America at various times between 1839 and 1850. Of his visit to Boston an interesting account by Josiah Phillips Quincy is to be found in the *Proceedings of the Massachusetts Historical Society* for November, 1884.

Through the influence of President Quincy, and of his son, later mayor, and others, a meeting of the young men of Boston, favoring the project of Vattemare, was held on April 24, 1841. This was followed by a general meeting of citizens on May 5.

The enthusiasm at that time elicited did not result in any immediate action beyond the ex-

change of gifts of books between the cities of Paris and Boston.

On a visit to America in 1847 Vattemare found that the time for action had arrived. Mayor Quincy in a letter to the city council offered the sum of five thousand dollars for the furtherance of the plans of Vattemare through the establishment of a Public Library and museum, provided that ten thousand dollars be contributed by others for this purpose. This offer was never met.

The city council voted to appropriate a room in the city hall to receive gifts from the city of Paris and other sources and appointed a committee to consider the expediency of establishing a Public Library.

In March, 1848, on the petition of the city council, the legislature passed the necessary act authorizing the establishment of such a library.

You see, then, why it is that within the laurel wreath the name of Vattemare is seen. If not the founder of the Boston Public Library he was at least the suggestor and the inspirer, and, as such, may he not be regarded as a pioneer of the free library movement in this country?

As Mr. Winsor has said, "His scheme and its production are now mostly forgotten. The Public Library of Boston would doubtless have come without it; yet in the agitation which Vattemare incited we must look for the earliest movements which can be linked connectedly with the fruition now enjoyed by so many."⁹

The movement for a Public Library has now begun to assume shape, if for a time vaguely. For three or four years nothing appears to have been done by the city council to carry out the provisions of the act of the legislature.

The facts, however, that petitions were presented requesting action and that John P. Bigelow, then mayor, offered on August 5, 1850, one thousand dollars (the first gift of

⁹ Additional information in regard to Vattemare may be found in a biographical sketch by William E. Foster, in volume five of the "Memorial biographies of the New England Historic Genealogical Society," published in 1894, which sketch refers to other sources of information.

⁸ Winsor's *Memorial History of Boston*, iv., 286.

money received for the proposed library) show that the scheme had not been forgotten.

The publication of the will of John Jacob Astor, by the provisions of which a princely sum of money was bequeathed for a Public Library in New York City, created a deep impression in Boston, and tended to crystallize public opinion into definite action.

First of all, a site for a library was to be chosen. Members of the city council advocated the erection of a building in connection with a new city hall. Others favored the public garden. A piece of land on Somerset street was finally bought, but quickly sold, by reason of the opposition raised to a site so near the Boston Athenæum and so far from the centre of population, of which the trend was in the direction of the South End. Sites on Temple place and Boylston street were considered. The committee were authorized to buy either; the choice fell on the Boylston street lot.

From time to time the question had arisen as to a union between the Boston Athenæum and the Public Library. The heated controversy which arose revived interest in the Athenæum (at that time thought to be moribund), and it was decided that each institution could occupy its own field, and that there was room for both—an opinion which in the lapse of time has been justified.

In the meantime additional shipments from Vattemare had been received to which citizens of Boston, Mr. Edward Everett and others, made additions. In a letter accompanying Mr. Everett's gift of about one thousand volumes of the priceless early public documents of the United States government, he said, "I cannot but think that a Public Library, well supplied with books in the various departments of art and science, and open at all times for consultation and study to the citizens at large, is absolutely needed to make our admirable system of public education complete; and to continue in some good degree through life that happy equality of intellectual privileges, which now exists in our schools, but terminates with them. And I feel confident that with such

moderate co-operation as I have indicated, on the part of the city, reliance may be safely placed upon individuals to do the rest. The Public Library would soon become an object of pride to the citizens of Boston; and every one would feel it an honor to do something for its increase."

These words were prophetic. On the formation of the first board of trustees, in 1852, Mr. Everett was elected as president. The preliminary report, drawn up by him and George Ticknor, at the request of the city, upon the objects to be attained by the establishment of a Public Library and the best mode of effecting them, is a document which will always remain a classic.

We think of the Boston Public Library as an institution to whose foundation but little of romance can be attached. Yet not unlike a fairy tale is the story of the Weymouth boy, Joshua Bates, who, step by step, found his way to the position of one of the great bankers of the world. How strange the chance that just at this time Boston, the city of the lad's first adoption, should seek him out in London for his aid in carrying out its financial projects, and that a copy of the report just mentioned should have fallen into his hands. If all the books that have come to the library through Mr. Bates's gift of one hundred thousand dollars and accumulated interest could be placed before you they would seem to rival the treasures of Aladdin's palace.

The success of the library was now assured. How the horizon must have lifted when it was seen that it was no local, circulating library that was to be, but an institution to which students were to come the world over!

The reading room and library were opened in the building on Mason street, on March 20 and May 2, 1854.

Commissioners to erect a building were appointed, and plans were invited, of which twenty-four were received. The books accumulated at the city hall were moved to the building of the Girls' High and Normal School on Mason street. Great interest was shown in hastening the opening of the library, the

girls of the school offering their services as volunteers.

The laying of the corner-stone of the new building on Sept. 17, 1855, was made the occasion of a public display and procession, with addresses by Robert C. Winthrop and Mayor J. V. C. Smith, with singing by the school children.

The dedication of the library on Jan. 1, 1858, was an affair of more pomp and circumstance, officers of the United States government, state and city officials, and representatives of learned bodies marching under military escort to the library building. The addresses by Mr. Winthrop, Mr. Everett, and Mayor Alexander H. Rice, were listened to by 3,000 spectators. On Sept. 17, 1858, the Reading room was opened and on December 20 the Lower Hall library of some 15,000 volumes was ready for use, with a printed index or catalogue.

There was no more interested or satisfied spectator than Mr. Ticknor who watched through the day until evening all that was done, without seeing a moment's trouble or confusion, and felt sure that this great enterprise was to be a success.

A red-letter day this must have been in the history of Boston. As the great oak door swung open, how fortunate they who could press in with the happy crowd who had been waiting long and impatiently for this event. And yet a feeling of disappointment must have set in, as, gazing about, they found no spacious, lofty halls; only a Delivery room with a low ceiling and two reading rooms of limited size, and a collection of popular books only, such as any town library might begin with. This Lower Hall library, as it was called, under the charge of Edward Capen, was the only collection of books accessible. For the opening of the main collection in its more splendid setting the people were to wait for over two years, while the work of preparation went forward with all diligence. Specialists prepared the titles of many thousand volumes, whose purchase was entrusted to Mr. Ticknor, who

spent fifteen months in Europe at his own expense for this purpose.

The books as received were placed in buildings near by, where they could be conveniently handled.

Public interest in the new library was intense and the generosity of the citizens knew no bounds.

The late Mr. Edward Edwards, the distinguished English librarian, has attributed the great success of the Boston Public Library to the "co-operation between corporate functionaries on the one hand and independent citizens on the other," which he says has always existed here. In the case of libraries in course of formation in his own country he said that it would not be safe to place any great reliance on the acquisition of books by gift.

The stream of gifts to this library has been constant. When the Bates Hall was opened for use and its first Index published it contained over 74,000 volumes, nearly all of which were gifts. In 1900 the library received 27,174 volumes, pamphlets, etc., from 2,450 different givers. These gifts have included the great sums of money given by Joshua Bates, Jonathan Phillips, the Bowditch family, the Scholfields, William C. Todd, and others, and the lesser amounts from many givers, while private collections of priceless value have found their way here.

To plan the first great Free Public Library in this country was a difficult undertaking. Nowadays delegations from towns planning public libraries visit other libraries far and near, while pictures and plans of such institutions are within reach. The founders of our Free Public Library were pioneers and had no such models before them. They proceeded carefully and tentatively, even at times with timidity, fearing lest their desires might seem too magnificent for public support and bind the city for all time to greater burdens than it might be willing to assume. But they found, as their successors have found, that public opinion has not only sustained but has led the

way, and the city government has always been proud of its library and most generous. That there should have been much difference of opinion among the founders as to the construction of the building might be expected. A new party had just then come into power — Know-Nothings, so-called, who were eager to prove that they knew all things — which was very trying to the old-fashioned Bostonian. Even as to what should be the scope and function of the new library they were not entirely agreed, as may be seen in the "Life, letters and journals of George Ticknor." Most important of all, was it to be a popular institution with the free circulation of its books, or one mainly for scholars, like other libraries then in existence? It must be both these was the wise conclusion.

The office of Superintendent having been created by an ordinance of the city, the library was most fortunate in securing the services of Mr. Charles Coffin Jewett, who had been the librarian of Brown University and the Smithsonian Institution, a most skilled bibliographer and energetic administrator. A card catalogue having been prepared, the books were placed upon the shelves, arranged after the Decimal System of Nathaniel B. Shurtleff, one of the trustees of the library and afterwards mayor of the city of Boston.

It was called the Decimal System because the alcoves were multiples of ten, and each subdivided so as to contain exactly ten ranges of shelves, and each range to contain ten shelves, making, barring exceptions, one hundred shelves to each alcove.

Whether or not this system was what its designer intended it to be, namely, "comprehensive, positive, intelligible, and immutable," it was at least cunningly devised and quickly mastered. The runner for books on his first day's service learned that the entry 2345.7 meant the twenty-third alcove, the fourth range, the fifth shelf, and the seventh book on the shelf, and he never fumbled or forgot it. When the library was moved to Copley square all this fair and immutable fabric came near tumbling to pieces, at least all the self-ex-

planatory part of it, and the strain on the memory became great.

Work was next begun on a printed catalogue for the Upper Hall collection. The two volumes published in 1861 and 1866 were planned on the dictionary system, author, subject, and title being in one alphabet, and were called Indexes, as pointing to the card catalogue for fuller entries. Mr. Winsor says that it was the most advanced specimen of library cataloguing which had then been produced in America,¹⁰ and, as Agassiz predicted, it has had a lasting influence upon the general culture of our community.

A glance at these catalogues will show that the books were for the use of scholars and were selected by scholars who were inspired by high ideals.

In 1854, soon after the opening of the Astor Library, Dr. Cogswell, the superintendent, wrote,¹¹ "I never want to see a reader who does not come for a valuable purpose" . . . and he abhorred all who read "the trashy, as Scott, Cooper, Dickens, *Punch*, and the *Illustrated News*."

In our own Index Cooper and Dickens are hardly represented at all, or Irving, or for that matter, Shelley, or Keats, or even Wordsworth. They were to be looked for in the collection in the Lower Hall. Later, when it was decided that the Upper Hall collection should be a lending library and not one for consultation only, it took on a more popular character.

The whole library was now equipped and started upon its course, when, suddenly, Mr. Jewett died; the death of Mr. William E. Jillson, the assistant superintendent, followed a little later. Mr. Everett had died some time before and Mr. Ticknor had given up active duty by reason of advancing age.

At this critical time, the four pillars of the library removed, two men appeared who were to influence profoundly its future. One was Mr. William Whitwell Greenough, a trustee of the library for thirty-two years, for twenty-two of which he was the president of the board. Mr.

¹⁰ Winsor's Memorial history, iv., 290.

¹¹ Life of Joseph Green Cogswell, pp. 264, 265.

Greenough, bred as a scholar and literary man, was later called to be the president of a great business corporation. He brought to the service of the library a wide acquaintance with books, together with a knowledge of men and of affairs. Almost daily for thirty-two years he came to the library and gave its affairs his closest attention.

In the year 1867 appeared a report of the committee appointed to examine the library, which attracted wide attention. Written by Justin Winsor, a newly appointed trustee, it showed a grasp as of one long trained in the service. It was evident that a master librarian was at hand. Mr. Winsor was at once put in charge of the library and a little later made its Superintendent and began an administration of great vigor.

The library building, planned to last through the century, already in ten years had outgrown its limits. In the specifications of the commissioners there was no mention of working rooms; cataloguers and binders worked in the alcoves. Rooms for the business of the library had to be provided and much additional shelf room.

The original Act of the General Court of Massachusetts in 1851 authorized cities and towns to establish and maintain public libraries with or without branches. In the report of the Boston Public Library for 1859 the hope is expressed that the central library might in time "become the parent of a circle of district libraries scattered about the city, each with separate resources."

The first of such branches was opened in East Boston in 1870; another in Roxbury followed in 1873, in a building erected by the Fellows Athenæum; and this movement has kept on steadily, until now the library has ten branch libraries, with large collections of books and 107 reading-rooms, stations, and other agencies.

From the beginning it had been seen that so great had become the growth of the library that the publication of its general catalogue in book form could not be continued. Class lists were prepared, and in 1867 a bulletin of

new accessions was begun, which publication, with changes of form, has continued until now. In time these catalogues and bulletins had become so numerous as to choke all approach to the books.

Mr. Jewett had affirmed as far back as 1861 that "Nothing short of what a card catalogue is in plan can ever be regarded as entirely satisfactory for a great public library." This opinion was confirmed as time went on. In the year 1871 the foundations were laid of a card catalogue, the idea of which was borrowed from the Library of the University of Leyden, and intended to give, under author and subject, full entries for all the books in the library.¹²

This collection of cards, printed within the library building, has gone on increasing day by day for thirty years until it now includes two general catalogues for the central library, with duplicates for each of the special departmental libraries, and independent catalogues for each of the branches. The number of cards placed last year in their catalogues was 265,000.

The attempt was now made to guide readers in the selection and use of books by means of annotated catalogues which proved to be most helpful.

Mr. Winsor resigned the office of Superintendent Oct. 1, 1877. Under his management the library increased from 144,000 volumes to 320,000; the home and library use of books increased from 209,000 to nearly 1,200,000.

The library was placed in charge of Dr. Samuel A. Green, one of the trustees, for a year; the trustees of the library were made a corporation in 1878; and Mellen Chamberlain was chosen the librarian (as the office was now called), Oct. 1, 1878.

Judge Chamberlain was especially interested in American history, and the development of the library during his administration was largely in this direction. To this end the

¹² The planning of this catalogue fell largely upon William A. Wheeler, the Assistant Superintendent, a scholar of accuracy and wide knowledge, whose death in 1874 was a severe loss to the library.

coming of the Barlow and John A. Lewis collections and the Franklin collection of Dr. Samuel A. Green contributed. He also desired a closer co-operation between the library and the public schools. His plans, long delayed, have been effectively revived recently. Judge Chamberlain's chief monument, however, will be the collection of manuscripts which he bequeathed to the library. In his time the scholarly side of the library was shown by the publication of the catalogues of the Ticknor and the Barton libraries.

The library, during the last two years of the occupancy of the Boylston street building, was under the charge of Theodore F. Dwight.

On April 22, 1880, the General Court gave to the city of Boston a parcel of land, situated on the southerly corner of Dartmouth street and Boylston street, for a building for the Public Library.

In 1883 additional land was bought and the sum of \$450,000 was granted by the city council for a building. Plans were invited, of which twenty were received, of various degrees of merit. One had a tall chimney, like a factory, or brewery, with a large room labelled "Beer," thus anticipating notions which are in the air just now. Another room was for "Supernumeraries." Just what this room was to be used for did not appear — possibly for a sort of doctor's waiting-room for applicants for positions in the library. On March 30, 1885, the city architect was directed to prepare plans to submit to the trustees. In these five years of waiting there had arisen a growing sense that a building of greater dignity and beauty was required than could be provided with the means at the disposal of the library. In 1887

an act was passed giving the trustees full power in the matter, and Messrs. McKim, Mead, and White were chosen to design and supervise the construction of the new building, for which ample means were supplied by the city.

On the resignation of Mr. Greenough in 1888, Mr. Samuel A. B. Abbott was chosen president of the Board of Trustees. To these gentlemen and their associates the city of Boston is deeply indebted for the successful carrying out of an enterprise of great magnitude and difficulty.

On Nov. 28, 1888, the corner-stone of the new building was laid, with addresses, and a poem by Dr. Oliver Wendell Holmes.

The special collections, beginning with the Allen A. Brown Music Library, were moved in the autumn of 1894; on December 14 the removal of the main body of books was begun. On the 28th of January, 1895, all the books belonging to the library were on the shelves of the new building.

It was a sad day when the dear old Boylston street library was given up to an "Eden Musée," with its exhibitions of wild beasts and "Chamber of Horrors." No wonder that those who later tore down the building were confronted by an immense python, sent there by the avenging gods.

The new library was opened to the public without ceremony on March 11, 1895. Mr. Herbert Putnam was appointed librarian, and to him was entrusted the important work of reorganization.

Its history since that time is outlined in the annual reports as well as in the new Handbook prepared for this Conference.

THE CATALOGUE OF THE PUBLIC LIBRARY OF THE CITY OF BOSTON.

By E. B. HUNT, *Chief Cataloguer, Boston Public Library.*

A REAL catalogue is the opposite of a poet, *fit non nascitur*. It is, I believe, always an evolution more or less rapid and successful, and I suspect that a slow growth brings about a more trustworthy and sturdy result than a more rapid and pyrotechnic development. The oak grows slowly, but it outlasts many a maple.

The foundations of the catalogue of the Boston Public Library were laid broad and deep by that excellent librarian Charles C. Jewett. There have been times of halting and even of retrogression, but they have been not for long, and the catalogue has grown very largely on lines laid down by Mr. Jewett.

The first catalogue of our library is a small octavo volume published in 1854. It is entitled, "Catalogue of the Public Library of the City of Boston," and in the preface it is called "A condensed index of the contents of the Public Library, giving the title of each book only once and having no object but to render all the books useful. The whole number of volumes in the library somewhat exceeds 12,000."

In 1858 was published, in large octavo, the Index to the catalogue of a portion of the Public Library arranged in the Lower Hall. This Index "contains the titles of about 15,000 volumes, all placed in the Lower Hall. As a popular circulating library, therefore, the collection now offered to the public contains probably three times as many desirable books as the one offered four or five years ago." Supplements to this catalogue were published at short intervals, eight having appeared up to 1865.

The Index to the catalogue of books in the Upper Hall of the Public Library of the city of Boston was published in 1861; a fat volume of 900 pages, two columns brevier to the page, embracing about 55,000 volumes, all in the Upper Hall. From this it appears that be-

tween 1854 and 1860 the collection grew from 12,000 to 74,000 volumes.

1866. This year was published the First Supplement to the Index of 1861. This Index embraces about 34,000 volumes, which brings the number of volumes in the library in July, 1866, up to about 105,000.

In the preface to the Index of 1858 the trustees state: "It will be observed that the catalogue now published is entitled 'An Index.' The larger one, when published, will probably offer a title of no higher pretensions. The main catalogue . . . is much more ample and important, and is to be found in manuscript, alphabetically arranged on separate cards, indicating the contents of the library with as much minuteness of detail, both by subjects and by authors, as the means at the disposition of the trustees have permitted them to make it." Then follow these words of wisdom: "Next to the collection of its books, the trustees look upon the catalogue as the most important part of the library, for it is the part by which the whole mass of its resources is opened for easy use — the key by which all its treasures are unlocked to the many who . . . are asking for them so often and so earnestly. A large library without good catalogues has sometimes been compared to a Polyphemus without an eye, and more frequently to chaos, which it certainly too much resembles. This reproach the trustees hope to avoid for the Public Library, which they desire, above everything else, to render useful." That is the key-note of the Boston Public Library.

Please note the date at which it is said that "the main catalogue is to be found in manuscript alphabetically arranged on separate cards," October, 1858.

This fact, and the additional fact that Ezra Abbot had a card catalogue of subjects in the Harvard library equipped with blocks, rods,

etc., in 1861, would seem to militate somewhat against the statement made on current note-paper and bill-heads of the Library Bureau, a corporation established in 1876, that the Bureau is the inventor of the card system.

There is another expression in the trustees' preface regarding the main card catalogue, namely, that it is more ample and important than the printed indexes. The word "ample" is a most happy one. Those cards were about $5\frac{1}{2} \times 6\frac{3}{4}$ inches in size, and when it became necessary, from length of title or contents, to use more than the face of one card, it was turned over and the back was utilized. This catalogue was not open to the public, but could be consulted under the guidance of the superintendent or his deputies. It served as the basis of all the indexes and lists published in book form from 1855 to 1866, when the first supplement appeared. As this title indicates, the intention was to print other supplements as they should be necessary, say once in five years. But the nuisance of so many alphabets, and new light on the merits of card catalogues for public as well as official use, led the trustees to abandon the attempt to keep up the main catalogue in book form. Promises of a forthcoming supplement appear in the annual reports of the Trustees from 1867-1872. At the latter date, however, is a definite statement that there would be no further attempt to print another supplement, and that the main catalogue would be on cards, printed so far as possible, and accessible to all uses of the library.

These "printed" cards were made by pasting titles on cards. The titles were printed on long galley strips, about one hundred titles to the form. Thirty impressions were generally taken, and were used for special lists, etc., in addition to those which were mounted and placed in the Public and Official catalogues. Gradually the index and first supplement were cut up and mounted on cards and placed in the Public catalogue, also the Bulletins, which had been published between the printing of the first supplement and the

establishment of the card catalogue, were mounted and placed in the Public catalogue. These pasted titles from the index and supplement were never inserted in the Official catalogue and now only those which have been reprinted are to be found in that catalogue; probably 60 per cent. now appear on printed cards in both the Public and Official catalogues. During the year 1875 about 70,000 cards were added to these two catalogues.

In the year 1869, Mr. Justin Winsor being superintendent, a new departure was made in the method of dealing with pamphlets. Mr. Winsor's own description of it is as follows: "Instead of treating each pamphlet of a bound volume separately, as if it were a book by itself, the volume has been treated as a whole, the entry being made under the author or subject, — just as one or the other was the bond of union between the pamphlets, — with full cross references from a table of contents. The gain in compactness — more and more necessary as our library increases — was thought to warrant a departure from the principles so well laid down by my predecessor [Mr. Jewett] in his manual on catalogue work."

This is what is called in poetry the Lumping system; and with all respect to Mr. Winsor and the many good things he did for our library and others, it is a system of which the "craft and subtilty of the Devil" might well be proud. Certainly the mind of man could not, unaided by infernal powers, devise a worse. Of course it knocked the alphabet under both author and subject galley west. Then in his rage for historical pamphlet-volumes the same pamphlet was used over and over again. For instance, a volume on the history of Charlestown must needs contain Webster's Oration at the Bunker Hill Monument, so must a volume of Boston history, also, Bunker Hill Battle; Siege of Boston; Bunker Hill Monument Association; Webster himself; Orations, Collected; New England, History, Revolution; United States History, Revolution; Concord, Battle of; Lexington, Battle of; and so on almost without limit. At

all events, we had at one time on the shelves and catalogued in one way or another thirty-three copies of this oration. Mr. Winsor for years poured these pamphlet volumes on to the shelves, and the "compact" cards for them into the catalogue. At length, about twenty years ago, largely through the efforts of Mr. Whitney and Mr. Swift, this sort of so-called cataloging was stopped and we have been trying to do over what is worth preserving of this mass of stuff, and get rid of the burdensome duplicates and purge the catalogues of the pamphlet-volume cards. It has been a woefully expensive piece of work, and the end is not yet.

To return to the evolution of the catalogue. In August, 1876, a change was made, "by which it was calculated that half the cost and half the delay would be saved. The titles were written with prepared ink, 20 to a sheet, and by a new process the autograph was transferred upon either a lithographer's stone or a gelatine plate, from which impressions were taken with ordinary printers' ink upon the necessary number of sheets of Bristol board. These being cut up by a machine were converted at once without the labor of dissecting and pasting sheets into cards ready for the catalogue, so far as the main entries were concerned, and only needing the inscription of the cross-reference heading for the others." During this year, 1876, 71,345 cards were placed in the catalogues.

The use of these process sheets continued until 1879. In that year the printing of cards directly on sheets of board was undertaken by a printer who furnished his own plant and was paid so much a title, the library furnishing the stock. This was the beginning of our present style of cards. There have been many changes as to faces of type, measure of the lines, etc., but no radical change. In the beginning, and for many years, the main entry gave no hint of the subject headings, but these were added in manuscript on the backs of the main or author cards. Since 1877 the revision of the catalogue has been going on with greater or less regularity and is still progressing. As indica-

tive of the amount of work which is doing in this way, I will remark that in 1899-1900 there were re-catalogued 13,382 volumes and parts of volumes; in 1900-01, 22,583 volumes and parts were re-catalogued. The hope is to reprint all the pasted and manuscript cards and bring the whole catalogue up to the present standard.

The printing of the cards within the Library building has continued since 1879. Shortly after our removal to the present building the Printing Department was much enlarged. Two linotypes were purchased and three presses of different sorts, and all the printing of the library, including cards, annual lists, bulletins, class catalogues, finding lists, forms, call-slips, etc., etc., is done within the building. The annual report of the library, being a city document is, of course, published by the city. The output of cards has grown steadily since the establishment of the Printing Department, and the number filed this last year, including Branches, was over 265,000; of this number 232,000 were put in the catalogues of the Central Library. The Public catalogue, that in Bates Hall, contains approximately 1,200,000 cards. Our cards run about 70 to the inch, and at that rate there are in the Public catalogue 1,428 linear feet, or something over a quarter of a mile of cards standing on edge.

It has been found expedient to multiply our departmental catalogues. The Fine Arts Department, the Brown Music Library, and the Map Collection has each its own catalogue which is duplicated in the Bates Hall catalogue. The cards of the other special collections, such as the Ticknor, Barton, Bowditch, Prince, and others, are filed in one alphabet in cases in the Barton-Ticknor room, on the third floor. The Statistical Department has its own catalogue. About 60 per cent. of all titles are placed in three catalogues, that is, in the Public catalogue in Bates Hall, the Official, in the Catalogue Department, and in at least one of the Special libraries catalogues. The total number of cards in all the catalogues cannot be less than two and one-half millions.

Many men have made their impress on the catalogue: Mr. Jewett, *clarum et venerabile nomen*! Mr. Winsor, Mr. W. A. Wheeler, Mr. James M. Hubbard, and most of all since Mr. Jewett, Mr. James L. Whitney, our present Librarian.

So much for the growth of the catalogue. As for the sort of catalogue it is, I suppose every one in this audience knows that it is a dictionary catalogue. It is built on lines of common sense, and utility has always overborne consistency in its making. Many of us who have worked longest upon it have had much opportunity to deal directly with the public and to get a good notion of how the average man approaches a big catalogue. If we can hit the subject heading that the average man will look for, we adopt it, and care very little whether it is scientifically consistent with the rest of our allied subject headings. Of course we always mean to make a *see* reference from the logically scientific heading to the one which we adopt, if different, and we also try to keep all our allied subject-headings connected together by full and minute cross-references.

There are many points which, were we making the catalogue *de novo*, we should probably change. I think perhaps one of the worst of our faults is the geographical arrangement of subjects, particularly those of a scientific sort, such as botany or geology. At present it is impossible for the specialist to find everything we have on such a subject as botany, for each monograph on the botany of any particular place was for many years entered under the name of the place only. For the last six or eight years we have tried to remedy this defect by putting these titles under both the local and general subject-headings, and inasmuch as the bulk of this sort of writings is in pamphlet form and is on

pasted or manuscript cards which will sooner or later be reprinted, the specialist will be able when that is done to find all of our material on such subjects in one place.

We treat every separate publication, whether a broadside or a book of a thousand pages, as a volume, and we do all the analysis work that we can. Collections of monographs by different writers we always analyze, and we try to do this work on the publications of academies and learned societies all the world over. Nothing, I believe, enriches a catalogue so much or makes its material so accessible as this analysis work. For the last five years we have done on the average between five thousand and six thousand such titles yearly.

But I do not intend to apologize for the catalogue. It was a pioneer in catalogue work in this country, and with all its inconsistencies and short-comings, of which no one is so conscious as we who have given our lives, or the best part of them, to its upbuilding, it is the best catalogue, bulk for bulk, in the world. This is not an official opinion, but is one expressed in my hearing within a month by the ripest scholar I know, who has used libraries and catalogues not only in Europe, but in all parts of this country. Mr. Alleyne Ireland, a thorough Englishman who is now on a mission to the Far East, sent by the University of Chicago, expressed in almost the same words his admiration of our catalogue. He had been using it steadily for nearly a year, when, last summer, he returned to England, and while in London tried to continue his work at the British Museum. He tried it for nearly a week, and then, as he told me, he went to a high official and said: "My time is too valuable for me to work in this library; what you should do is to take your entire force over to the States and learn how to run a library and make a catalogue."

PAINS AND PENALTIES IN LIBRARY WORK.

BY ARTHUR E. BOSTWICK, *Chief of the Circulation Department, New York Public Library.*

IN somewhat the same way as Irving makes Diedrich Knickerbocker begin his history of New York with the creation of the world, so we may open a discussion of this subject with a word on the theory of punishment. We all know that neither moral philosophers nor penologists are agreed in this matter. Do we inflict punishment to satisfy our eternal sense of justice, to prevent further wrong-doing on the part of the person punished, as an example to others, or to reform the delinquent? So far as the justicial theory goes, it is unnecessary here to discuss whether it is founded merely on the old savage feeling of revenge, which having done its part in ensuring punishment to the wrong-doer in the uncivilized past, should now be put aside. As a matter of fact the rule, "Let no guilty man escape," is a very good one for practical purposes, whatever its theoretical implications. Why should it be necessary to proceed according to any one theory in administering punishment? Practically in the home, at school, and in the courtroom the simple administration of justice does very well for us, and when we go a little farther into the matter we see that each of the other elements enters into consideration. Certainly it is so in the library.

Penalties for the infraction of our rules should be so inflicted that future wrong-doing both on the part of the culprit and on that of the remainder of the public becomes less likely than before. Whether we always do this in the most satisfactory way may be queried.

Punishable acts committed in a library may be divided, according to the old ecclesiastical classification, into *mala prohibita* and *mala in se*; in other words, into acts that are simply contrary to library regulations and those that are absolutely wrong. To steal a book is wrong anywhere and does not become so merely because the act is committed in a library; but the retention of a borrowed book for

fifteen instead of fourteen days is not absolutely wrong, but simply contrary to library regulations.

The keeping of books overtime is a purely library offence, committed against the library and to be punished by the library; and with it may be classed such infractions of the rules as failure to charge or discharge a book, loud talking or misbehavior below the rank of really disorderly conduct, such injury to books as does not constitute wilful mutilation, the giving of a fictitious name at the application desk, etc.

For all these strictly library offences the favorite penalties seem to be two in number — the exaction of a fine and exclusion from library privileges — temporary or permanent. The former is more used than the latter, and I venture to think unjustly so. From the sole standpoint of punishment the great advantage of a fine is that it touches people in their most sensitive point — the pocket. But this is a ganglion whose sensitiveness is in inverse proportion to its size; in one case the exaction of a cent means the confiscation of the possessor's entire fortune; in another the delinquent could part with a hundred dollars without depriving himself of a necessity or a pleasure. Of course this lack of adaptability to the conditions of the person to be punished is not confined to this one method. Imprisonment, for instance, may be the ruin of a life to the hitherto respectable person, while to the tramp it may simply mean a month's shelter and food. But in the case of a money penalty the lack of adaptability is particularly noticeable, and hence wherever it is exacted a large portion of the public comes to forget that it is a penalty at all. Instead of a punishment exacted in return for the commission of a misdemeanor and intended to discourage the repetition thereof, it is looked upon as payment for the privilege of committing the misdemeanor, and it in fact

becomes this very thing. Thus, in states where there is a prohibitory law, and periodical raids are made on saloons with the resulting fines, these fines often become in effect license fees, and are so regarded by both delinquents and authorities. Where a municipality provides that automobiles shall not be speeded in its streets under penalty of a heavy fine, the wealthy owners of motor-carriages too often regard this as permission to speed on payment of a stated amount, and act accordingly. So in the library, the fine for keeping books overtime is widely regarded as a charge for the privilege of keeping the books longer than the formal rules allow. Being so regarded, the fine loses a great part of its punitive effect, and largely becomes in fact what it is popularly thought to be. Thus we have a free public library granting extra privileges to those who can afford to pay for them and withholding the same from those who cannot afford to pay—an extremely objectional state of things.

In making this characterization I am aware that the sale of additional facilities and privileges by a free library is regarded as proper by a large number of librarians, and that the extension of systems of which it is a feature is widely urged. It is found in the St. Louis plan for fiction, which has been so successful, and still more in Mr. Dewey's proposed library bookstore. That all these plans are admirable in many ways may be freely acknowledged. In so far as they may be adopted by endowed libraries they are certainly unobjectionable. But in spite of their advantages, it seems to me that their use in an institution supported from the public funds is a mistake. The direct payment of money to any institution so supported, even if such payment is logically justifiable, is open to so much misconstruction and is so commonly misunderstood or misinterpreted, that I would hold up as an ideal the total abolition of all money transactions between the individual members of a public and institutions supported by that public as a whole.

The present subject evidently does not

justify further discussion of this point, but its mention here is proper because if library fines have become in many cases payments for a privilege, that very fact should lead those who agree with what has been said above to strive for their abolition.

Another objection to the fine, which is, curiously enough, also the chief reason why it is almost hopeless to look for its abolition, is the fact that wherever fines have been applied they have become a source of revenue that cannot well be neglected. In a village not far from New York the receipts from bicycle fines at one time nearly paid the running expenses of the place. Agitation in favor of substituting other methods of punishing the cyclists who ride on the sidewalks and fail to light their lamps at sundown would evidently be hopeless here. In the same way receipts from fines have become a very considerable source of income in large libraries, and are not to be neglected even in small ones. This is apparent in the following table:

	<i>Income.</i>	<i>Fines.</i>
Boston	\$309,417.52	\$4,621.45
Chicago	285,951.22	7,131.19
Philadelphia	141,954.45	2,385.52
Brooklyn	105,081.19	4,013.26
N. Y. F. C. L.	91,613.12	4,648.98
Buffalo	87,946.85	2,951.21
Milwaukee	71,328.80	1,295.99
San Francisco	64,066.31	2,250.85
Newark	43,760.36	1,905.17

Evidently the abolition of fines in these cases would mean a reduction of income that would make itself felt at once.

Now, of course, the knowledge that the detection of wrongdoing is financially profitable to the detector results in increased vigilance. So far, that is a good thing. But it goes farther than this: it makes the authorities strict regarding technicalities; it may even lead to the encouragement of infraction of the law in order that the penalties may reach a larger amount. In the town that is supported by bicycle fines we may fairly conclude that no resident calls the attention of the unwary cyclist to the warning sign, past which he wheels toward the sidewalk. To do so would de-

crease the village revenue and raise taxes. So too, what librarian would wish to adopt any course that will certainly reduce the money at his disposal for salaries and books?

Supposing, however, that this loss can be made up in some way, is there anything that can be substituted for the fine? It has already been stated that suspension from library privileges is in use as a penalty to a considerable extent, and there seems to be no reason why this should not be extended to the case of overdue books. There might, for instance, be a rule that for every day of illegal retention of a book the holder should be suspended from library privileges for one week. The date of expiration of the suspension would be noted on the holder's card, and the card would not be returned to him before that date.

This plan would probably have interesting results which there is not time to anticipate here. But as long as books cost money and librarians refuse to work altogether for love, financial considerations must play a large part in library changes. The only way in which fines can be abolished without decreasing income is to make the abolition a condition of an increased appropriation, which, of course, could be done by the appropriating body. The making of such a condition is extremely unlikely. Hence, if we agree that fines are undesirable we must regard their abolition as an unattainable ideal. We may, however, treat them so as to minimize their bad effect, and this, I believe, may be done in either or both of the following two ways:

(1) We may emphasize the punitive value of the fine and at the same time increase its value as a source of revenue by making it larger. This would doubtless decrease the number of overdue books, and the exact point where the increase should stop would be the point where this decrease should so balance the increase of fines as to make the total receipts a maximum; or, if this maximum should greatly exceed the revenue received from fines under the old arrangement, then the rate could be still farther increased until the total receipts fell to the old amount. The practi-

cal method would be to increase the fines by a fraction of a cent per day at intervals of several months, comparing the total receipts for each interval with that of the corresponding period under the old arrangement; and stopping when this sum showed signs of decrease.

(2) We may give the librarian the option of substituting suspension for the fine whenever, in his judgment, this is advisable. This is the course pursued by the law when it gives to the trial judge the option of fining or imprisoning an offender. In cases where a fine is no punishment at all, and where books are kept overtime deliberately, suspension from library privileges would probably prove salutary. A variant of the second plan would be to allow the culprit himself to substitute suspension for his fine. This in effect is what the offender in the police court does when he avows that he has not the money to pay his fine and is sent to jail to work it off. At present when a library offender is manifestly unable to pay his fine there is usually no alternative but to remit it or to deny the culprit access to the library until it is paid — in many cases an unreasonably heavy punishment.

Of course there is no reason why all these modifications of existing rules should not be made together. According to this plan fines would be raised and suspension would be substituted in any case at the librarian's option and in all cases where the person fined avows that he is unable to pay his fine. The rates can be so adjusted that under this plan there is no decrease of revenue, but rather a net increase.

Of course the adoption of such rules would be regarded by a large portion of the public as a curtailment of privileges, but such an outcry as it would probably raise ought not to be objectionable as it is a necessary step in the instruction of the users of a library regarding the proper function of penalties for infraction of its rules. These rules are for the benefit of the majority and the good sense of that majority ought to, and doubtless would, come to the rescue of the library authorities on short notice.

As long as the library fine is a recognized

penalty, numerous petty questions will continue to arise regarding its collection, registration, and use. Any exhaustive treatment of these is impossible in the limits of a single paper and I have chosen to neglect most of them in order to dwell on the question in its larger aspects. It is the exaction of the fine, after all, that is the library penalty — the money is part of the library income and its collection and disposition are properly questions of finance. One point, however, regarding the disposition of the fines bears directly on what has been said. In municipal public libraries like that of Boston, where the city requires that the fines shall be turned directly into the public treasury and not retained for library use, the substitution of a different penalty would presumably involve no diminution of income. From ordinary considerations of equity, however, it seems to me that this disposition of the fines is objectionable. If the fines are to be turned into the city treasury they should be placed to the credit of the library appropriation as they are in Brooklyn.

Regarding the collection of fines there are one or two points that bear directly on their efficiency as a punitive measure. First, shall fines be charged? It seems a hardship to refuse a well-known member a book because he does not happen to have with him the change to pay a 15 cent fine. This point of view, however, loses sight again of the element of punishment. When the delinquent who is fined a dollar in the police court does not have the money with him, does he request the magistrate to charge it and send in a bill for the month's penalties all at once? The true method, I am convinced, is to insist on cash payment of fines, and if this is done promptly their character as penalties will be more generally recognized.

Another point in regard to the collection of fines is their effect on the assistants themselves. In every library a stream of money passes in at the desk in very small amounts. This must all be accounted for, and we have the alternative of requiring vouchers for every cent or of simply keeping a memorandum

account and seeing that the cash corresponds with it at the close of the day.

This latter plan, in some form, is usually adopted. To misappropriate funds under these circumstances is not difficult, and I submit that it is not right to place a large number of young girls in a situation where such misappropriation is easy and safe. In spite of Mark Twain, who prays that he may be led into temptation early and often, that he may get accustomed to it, I do not believe that this is a good general policy to pursue. We all know of cases where assistants have fallen into temptation, and we should not hold the library altogether blameless in the matter. But on general principles such a plan is not good business. Every one who is responsible for money collected must show vouchers that he turns over every cent that has been given to him. Why should the library assistant be an exception? I look to see some form of cash register on every charging desk in the ideal library of the future, nor can I see that its use would be a reflection on the honesty of the assistants any more than the refusal of a bank to cash an improperly endorsed check is a reflection on the honesty of the holder.

This is on the supposition that we are to retain the fine as a penalty. Such considerations, of course, weigh down the balance still more strongly in favor of its abolition.

I have devoted so much space to the penalty for keeping books overtime because the rule on this subject is the one that is chiefly broken in a free public library. Other offences are usually dealt with by suspension, and very properly so. For the loss or accidental injury of a book, however, a fine is again the penalty, and here, as the offence is the causing of a definite money loss to the library, there is more reason for it. The money in this case, indeed, is to be regarded as damages, and its payment is rather restitution than punishment. Even here, however, the argument against money transactions with a free institution seems to hold good. There is no reason in the majority of cases why he who loses or destroys a book should not give to the library

a new copy instead of the price thereof, and for minor injury suspension is surely an adequate penalty.

Here we may pause for a moment to ask: What right has a library to inflict any penalties at all? I must leave the full discussion of this question to the lawyers, but I am quite sure that libraries, like some other corporations, often enact and enforce rules that they have no legal right to make. To cite an instance that came under my own observation, the Brooklyn Public Library's rules were for more than a year, according to good authority, absolutely invalid because they had not been enacted by the Municipal Assembly, and that library had no right to collect a single fine. Yet during this time it did collect fines amounting to several thousand dollars, and not a word of protest was heard from the public. In this and similar cases we are getting down to first principles — the consent of the governed; which, whether based on ignorance or knowledge, is what we must rely on in the end for the enforcement of law in self-governing communities. I am afraid that it is this general consent, in a good many instances, that is enabling us to enforce our regulations, rather than any right derived from positive law. To take a related instance, it is by no means certain that libraries are not breaking the law of libel every time they send out an overdue postal notice. The courts have held that a dun on a postal is libellous, and our overdue cards specifically inform the person to whom they are addressed that he owes money to the library, and threaten him with punishment if the debt is not paid. Yet although occasional delinquents remark that the law is violated by these postals, public libraries in all parts of the United States continue to send them out by thousands daily with few protests. This seems clearly a case where the public consents to a punitive measure of doubtful legality, and approves it for the public good.

The second of the two classes into which we have divided infractions of library rules consists of those that are also contrary to statute

law or municipal regulation. How far shall these be dealt with purely from the library standpoint, and when shall they be turned over to the public authorities? If a small boy yells at the desk-assistant through door or window he is a disturber of the peace; if he throws at her some handy missile, such as a vegetable or a tin can, as occasionally happens in certain sections of unregenerate New York, he is technically committing an assault; shall he be handed over to the police?

Of course one must not treat trifles too seriously. Yet probably libraries have been somewhat too timid about dealing with petty offences. There is an unwillingness to drag the library into the police reports that seems to be a relic of the days when all libraries were haunts of scholarly seclusion.

The modern public library cannot afford to be considered an "easy mark" by those who wish to indulge in horse play or commit petty misdemeanors, and in some cases it is in danger of getting this reputation.

When we come to more serious offences, the library's duty is clearer. Theft, wilful mutilation of books, or grave disorder must of course be punished. In many cases, however, the detection of the first two offences is very difficult. Theft from open shelves is easy. For the thousands of books lost yearly in this way hardly a culprit meets punishment. I have known a professional detective to confess that the open shelf baffled him. "If you will only shut the books up," he said, "I can find out who takes 'em; but here everybody is taking out books and walking around with them." When the professional acknowledges himself beaten, what shall the librarian do? Mutilation is even harder to detect. In both these cases the offender has simply to wait his opportunity. Sooner or later there will be a second or two when no assistant is looking, even if the man is under long-standing suspicion, and in that brief time the book is slipped into the pocket or the leaf is torn out. Even when the offender is caught in the act, the magistrate may not hold, or the jury may fail to convict. A persistent mutilator of

books in one of our branch libraries escaped punishment last winter because the custodian of the reading-room where he was caught did not wait until the leaf on which he was working was actually severed. The man asserted that the sharp lead pencil that he was using to separate the leaf was merely being employed to mark a place, and thus by confessing to a minor defacement he escaped the penalty of the more serious offence.

For a library that is thus forced to appeal continually to the law to protect its assistants, its users, and its collections, a manual of library law would be useful, and I am not sure that the appointment of a committee of this

Association to take the matter in charge would not be eminently justified.

It is the misfortune of this paper that it has been obliged to dwell on the darker side of library work. It is hardly necessary to remind an audience of librarians that this is not the prominent side. All users of a library are not delinquents or law-breakers, and the assistants have other and better work than to act as fine-collectors and detectives. The sombre effect of what you have just heard should have been dispelled by a paper on "Rewards and delights of library work," but this the Program Committee has seen fit to omit, probably because it is not necessary to emphasize the obvious.

THE GIFT EXTREMELY RARE.

BY ISABEL ELY LORD, *Librarian of Bryn Mawr College.*

IT is whispered, with what authority I cannot myself determine, that the day of textual criticism is past, and since librarianship is, we are somewhat insistently told, the profession of the future, it would hardly be fitting to attempt such work in this particular place. But fortunately exposition is still possible and useful. It is true that we should read great literature itself, but equally true that exposition of certain specimens of great literature is very helpful. Plato, indeed, remains Plato, and the source of all philosophy except what can be dug up out of Aristotle, and the expositor remains only an expositor; but it is equally true that by diligence and devotion the latter may be of much more value to the world than he could possibly be by any attempt to produce original work. Moreover, it is not well that all the serious thinking that has been done about the world's great philosophies and poems should be lost to that world. It is for these reasons that the present scribe diffidently presents certain researches on what she has grown to believe a really great poem. The analysis and comments are open to criticism and emendation; they are offered as suggestive

rather than final. This is, is it not, the true spirit of research?

The poem, then, is one undoubtedly known to all this audience, so accustomed to hear itself called literary and learned, but with your kind tolerance I will repeat it, begging you to note it carefully as a whole before it is considered in detail. It runs as follows:

"THE CHA-ME-LE-ON.

"A use-ful les-son you may con,
My child, from the Cha-me-le-on.
He has the gift, ex-treme-ly rare
In an-i-mals, of *sa-voir faire*,
And if the se-cret you would guess
Of the Cha-me-le-on's suc-cess,
A-dapt your-self with great-est care
To your sur-round-ings ev-er-y-where,
And then, un-less your sex pre-vent,
Some day you may be Pre-si-dent."

The author of the poem, I hardly need to say, is Mr. Oliver Herford.

As the substance of the lines is our especial subject, I shall not dwell upon the style, except to point out how admirable it is. There are no flourishes, no unnecessary words, no padding. It has the simplicity and directness of all great poetry. Its theme may perhaps be most clearly expressed in the following words:

It is one of the great laws of nature that adaptability is necessary to achieve true success. Such a bald and unpoetical statement is inadequate, but sufficiently clear. To illustrate this vital truth Mr. Herford has turned to the animal world, and, like a new Esop, has found us an example among the humbler creations. It is easily to be seen that no other animal in the zoölogies — and there are a great many more there than anywhere else — could illustrate this point at all convincingly. We all see this now, but only the imagination of the poet could have soared to seize it first.

To set forth the theme, the poet takes refuge in no artifice. He does not need allusion or illusion, but relies only on simplicity and sincerity. He gives, too, a noble example, shining among the decadent poets of the day like the good deed that lights a naughty world, when he boldly declares in the first words he utters that he has a directly moral aim. There is no art for art's sake in question with Mr. Herford; he uses his art to convey great moral truths. Thus begin the potent words:

"A use-ful les-son you may con,
My child, from the Cha-me-le-on."

There is no command, no force. You *may* con, if you will. It is possible that some careless readers may have been misled by the words "my child" into thinking that the poem was not written for adult minds. Disabuse yourselves of that notion at once, I beg. They indicate only the attitude of the moral teacher. Thus Socrates might have addressed his pupils; thus Mrs. Eddy addresses those who have read all that she has written.

The moral purpose of the poem, and the object from which the lesson is to be drawn, being thus clearly placed before the reader, the poet continues, with exquisite economy of words, to give the reasons for his exhortation. He might well have interpolated here a beautiful description or some far-fetched simile to suggest the ideal he holds aloft, but he prefers rather to concentrate the mind more and more on the great facts he enunciates. To turn again for a moment to style, perhaps there is no better place than this to point out how

direct Mr. Herford's method is. He never leaves you guessing. The subject comes when and where you expect it, and the verb is never far to seek. It is remarkable, also, to note that the proportion of words derived from any source but the pure fount of Anglo-Saxon is singularly small.

This last fact makes all the more striking Mr. Herford's bold and original use of two words of an absolutely foreign tongue, introduced in the next two lines:

"He has the gift, ex-treme-ly rare
In an-i-mals, of *sa-voir faire*."

Why has the poet here used two words from the French language? The reason is plain, after a moment's reflection. French has been for centuries, and still is, the one language known to the polite societies of the civilized nations of the earth. In old-fashioned phraseology, it is the "polite language." And the words he takes from it make up an expression that, although it means literally "to know how to do," has come to mean, as we all recognize, the right outward manner of doing any given thing, especially any social act. It is said, by the way, that a stupid man could never become a saint; it is certain that a gleam of intelligence is required for the cultivation of *savoir faire*. But to return. The tremendous significance of all this grows as we meditate upon it, and when we read the next four lines —

"And if the se-cret you would guess
Of the Cha-me-le-on's suc-cess,
A-dapt your-self with great-est care
To your sur-round-ings ev-er-y-where,"

we find absolute confirmation that the poet is talking of manners and only of manners. The chameleon does not change his character under different circumstances; he does not become a lion when he crawls upon a tawny leaf; he only changes the color of his skin — an unessential trifle as regards his mental and moral being — in order to get into harmony with his surroundings. He loses nothing, he gains that effectiveness that could never be his while, in the colloquial phrase, he "swore at" the things about him.

Now it is well known that a great preacher makes every person in a huge congregation feel that the sermon was meant for him or her particularly. The mediocre preacher gives you a comfortable feeling that he is talking about the sins and follies of your neighbor, but the really great one makes you distinctly uncomfortable by holding up the mirror to yourself. It cannot be, of course, that the great preacher actually has in mind your or any one else's peculiarities. It is only that he knows the human heart. And so it cannot of course be that Mr. Herford intended this poem for librarians only, but it is very hard for the serious-minded librarian to become convinced that it is not especially intended for him or her. The poem is founded on a poet's knowledge of human nature, but surely the human beings that can learn most from it are the professional librarians.

Our highest success in any community, then, depends on our manners. That is a very broad term. It covers all outward manifestations of one's thought and attitude toward the world. It means the kind of English we speak, and the way we speak it, the way we dress, — with a large majority of us the way we wear our hair, — and the way we conform to the social laws and customs of the people with whom we are thrown. If a man is perfect in all these respects, he will not become a good librarian, naturally, unless he has intelligence and faith in his work and uses them both. But without the additional grace of manners, it matters not how much faith and intelligence he has, he will never do the work that he could otherwise — he will never, therefore, attain the highest success. And, incidentally, the average library trustees judge much more by the outward and visible signs than by the inward and spiritual grace. They see your manners much more than they do your brains, and infer much about the one from the other. Intelligence they expect, manners they delight in. And theirs is generally no bad indication of the general public judgment.

Perhaps it is a little stretch to include knowledge of one's community under the head

of manners, but if you are going to adapt yourself to it you have to get to know it first. If it is your desire to get the right book to the right person, knowledge of one is not sufficient — you must know both, otherwise you will hardly adapt either properly. It is not an uncommon mistake to attempt to accomplish something for which the community is not ready, and so to waste time and force irrevocably. There are some other lines of Mr. Herford's, written on the dachshund, that are not without their application here:

"Observe the air
Of lackadaisical despair!
I think he finds it does not pay
To wag a tail so far away."

There is no more crucial test in this matter of manners than the way in which information is imparted. There is an attitude of conscious superiority that would adapt nobody to anybody under any possible circumstances, and it is currently reported that librarians adopt this manner early and often. Probably the only way to avoid this difficulty is the fundamental one of acquiring a little humility, and to do this it is only necessary to face the facts. It is not true that a librarian knows any one thing better than every one else or as well as some one else. It is a lamentable necessity that his knowledge should be superficial. Superficial means on the surface, and it is obvious that one who has to cover such a vast deal of ground cannot dig down very far at many places. A librarian may know thoroughly some one branch of human knowledge, — fortunately for the profession there are a few such, — but of the other thousands of subjects he has only glimpses, and these quite likely from the wrong point of view. The fact that he knows more than somebody who knows nothing or very little is not one on which to found great hopes of becoming an authority. And there is no reason to suppose that a librarian's judgment is *by virtue of his office* better in any given direction than any other man's. It was a very wise observer of facts and of human nature — it was the great Dr. Jowett who said:

"Not one of us is infallible, not even the youngest!"

I am led suddenly to a side-path here, by this word of Dr. Jowett's. We have all heard it proclaimed, more or less openly, that this air of assumed infallibility is found more frequently in those librarians who have received formal training—those who have had that part of library training to be got from books and lectures—than it is in those who have become librarians as the fat old lady played whist, by the grace of God. I wonder if this difference really exists? It would be an excellent opportunity to suggest the collection of statistics, but I heroically refrain. It is, however, evident that those who have received the formal training need to be doubly careful not to acquire the manner, and should, indeed, from the very advantages they have received, be expected to keep clear of it.

The matter of dress is not one that can be dealt with in detail. It might, perhaps, be well to point out that however loudly we may sing "The man's the man for a' that," we are naturally drawn, every one of us, to the people who are attractively and appropriately clad rather than toward those who wear what are technically known as "freak" clothes. Dress is to one side of one's work exactly what technical training is to another—neither is an end in itself; both are important only to make our real work easier to do and more effective when done.

Neither is there need to dwell on the observance of social laws. Age brings experience. When we are young and madly democratic we proclaim—some of us—that it makes no difference whether pie is eaten with a knife, a fork, or a spoon; but when the years have brought the philosophic mind we know that it does. This is not because of any natural law as to the physical, mental, or moral injury resulting from an unorthodox method of eating pie, but because we know that such non-observance shows a serious lack in the person concerned, whether lack of observation, lack

of sense, or lack of courtesy. None of these things count because they are intrinsically important, but all of them count, and count very much, because of what they indicate. They are forgiven in those who have proved themselves, but all the force of early impressions, a more potent force in library work than almost anywhere else, is lost.

I cannot bring myself to dwell on the last lines of Mr. Herford's poem:

"And then, un-less your sex pre-vent,
Some day you may be pre-si-dent."

They raise such painful questions and problems for the great majority of those who are engaged in library work. These may indeed win all rewards—"unless your sex prevent."

But you will note that Mr. Herford in first bringing out his lesson referred to the quality of adaptability as "the gift extremely rare."

"He has the gift, ex-treme-ly rare
In an-i-mals, of sa-voir faire."

It is a relief that he confines the rarity to animals. Just how far he intends to infer that it is rare in librarians—I mean in human beings—the humble commentator cannot affirm. But from observation it will be found that the gift is a talent given to every one in some measure, and hid in a napkin only because its great value is not recognized. Any one can cultivate the gift. But the only possible way to do it is to change the convictions or lack of convictions on which its absence depends. The gift is not developed in the librarian who believes himself or herself in some subtle sense, in some indefinable—and usually invisible—way, better than the people he or she serves. Only to those who adopt the attitude of Christian charity—for you will note that St. Paul was the first to exhort us, through his example, to be all things to all men—only to these comes in its perfection that which gives the power of the chameleon to fill with satisfaction to himself and every one who sees him his appointed place in the universe—the gift extremely rare.

BRANCH LIBRARIES: PLANNING AND EQUIPMENT.

By EDWIN H. ANDERSON, *Librarian, Carnegie Library of Pittsburgh.*

[T will be taken for granted, I think, that in planning a branch library building the librarian and the architect should work together, each suppressing for the time being his air of omniscience. As Mr. Foster aptly says, the librarian and architect should enter into a "temporary partnership." Such an association should prove pleasant and profitable to both, and secure the best results. The floor plan should be the librarian's special charge, and this ought to be determined upon, in consultation with the architect, before any elevations are drawn. The exterior and the decoration of the interior should be left to the architect. Such, it seems to me, should be the conditions, if librarian and architect are both thoroughly competent in their separate spheres.*

There are few general principles for planning branch libraries which will apply in all cases. The size, shape, and slope, if any, of the lot, the climate and the character of the soil, the population to be served, etc., all have their part in determining what the plan shall be. I will confine myself to three or four types, variations of which will meet the ordinary conditions in most of the states of the Union. In the warmer climate of the Gulf States a different arrangement of windows and doors might perhaps be necessary. In some localities the water in the soil makes it impracticable to put the basement even partly under ground.

A branch library should be planned, first, for the convenience of the public, second, for convenience, efficiency, and economy of administration from the point of view of the staff, and third, for architectural effect. I shall assume that the members of this association are practically agreed that the first two conditions are best secured by giving the public free access to the shelves. Personally, I feel that there can be no question about this if, with free access, *complete supervision* is secured. From the standpoint of administration, effective supervision from a central desk is certainly desirable, if not absolutely necessary. Where the size of the lot permits it, the three essentials of a branch library—a reading room for adults, a children's room, and sufficient shelf capacity—should be provided on one floor, which should be the first, or ground, floor. If you have a lot 75 or 100 feet square and you need shelf capacity for only 12,000 to 15,000 volumes, the simplest plan which will secure these essentials is a plain parallelogram with the long side at the front, with the entrance in the middle, and the loan desk in the centre of the room, opposite the entrance. Three of the branches of the Carnegie Library of Pittsburgh are of this type, varied slightly in two of them by a small wing extension at the back of the central desk. In this plan the main floor may be simply one large room, with reading tables and wall cases for adults in one end, with tables and wall cases for children in the other end, and with rails separating these from the loan lobby in the middle. Entrance is through the loan lobby and between the central desk and the rail at the right, and the exit is between the central desk and the rail at the left. This is the plan of our West End branch. For these rails, however, we propose to substitute floor cases about three-and-a-half feet high with shelves on the side away from the

* For the approved principles of planning and equipping libraries in general the reader is referred to the files of the *Library Journal*, *Public Libraries*, and various architectural journals, particularly to Mr. Foster's article, "Planning a library," *Brochure Series*, Nov., 1897, Mr. Eastman's paper, "Library buildings," Waukesha Conference, 1901, Mr. Soule's Paper, "Points of agreement among librarians as to library architecture," San Francisco Conference, 1891, and to the latter's pamphlet, "Library rooms and buildings," recently published as "Library tract no. 4," by the Publishing Board of this Association.

lobby only. The plan of our Mount Washington and Hazelwood branches is practically the same as that of the West End branch, except that glass partitions take the place of the railings. The purpose of these glass partitions is to secure greater quiet in the reading rooms.

Another type of floor plan which secures all the advantages attained in our West End branch, is that of the South Side branch of the Cleveland Public Library. This consists, briefly, of two parallelograms placed at right angles to each other, with the entrance at the inner angle, with the central desk opposite the entrance, and with rails leading from the entrance to the desk. This plan seems to me admirably adapted to a corner lot, where, as at Cleveland, you may provide a walk through a grass plot at the corner to the entrance at the inner angle of the building, with the outer end of each parallelogram reaching to one of the streets. The effect at Cleveland is very pleasing inside and out.

In the plans mentioned thus far all the books are shelved in wooden wall cases, under high windows, around the room or rooms. There is no waste room because the floor spaces are utilized for reading-room purposes. Where large shelf capacity is not required, there is only one objection to this plan—the browsing of the readers at the wall cases sometimes disturbs the readers at the tables, especially in the adult reading room. Another objection has been urged, that the high windows give a prison-like effect inside and out. But you cannot have your cake and eat it. The windows are high to make room for the necessary wall cases and provide the best light. Moreover, so eminent an authority as Mr. Russell Sturgis has intimated that books are the most beautiful wall decoration a room can have.

When the population of the district to be served by the branch is dense, and more people and more books are to be provided for, some other type of floor plan must be used. If you have a lot which has a frontage of 90 to 140 feet and a depth of 75 to 100 feet, I

should solve the problem by some variation of a plan which my friend, Mr. Eastman, calls my pet,—the plan of our Lawrenceville branch in Pittsburgh. This, as you know, is an adaptation of the “trefoil” or “butterfly” plan that has been so generally adopted of late years. The plans of this branch have been printed in the *Library Journal* for September, 1897, in our own third annual report, and in various other places. It will not be necessary, therefore, to give a detailed description of it here. It consists, briefly, of a reading-room for adults and a children's room of the same size, on either side of the entrance and delivery lobby, and back of these a book wing, which in this case is semicircular in form, but may be polygonal, five-sided, or three-sided. The loan desk is built around a central point, which is on a line with the partitions between the book wing and the reading rooms; and the floor cases in the book wing are on radial lines which, when projected, converge at this central point. The reading rooms are separated from the book wing and the delivery lobby by glass partitions and doors. There are doors leading from the delivery lobby to the reading rooms, but these doors are closed except on Sunday, when only the reading rooms are open to the public. Entrance from the lobby is through the turnstile at the right of the loan desk, thence from the book wing through doors near the turnstiles, to the reading rooms. Exit is through the turnstile at the left of the loan desk. Each of these turnstiles works only in the direction indicated. This arrangement makes it necessary for every one to pass the discharging counter on entering, and the charging counter on leaving.

This floor plan provides large shelf capacity in the book room, and secures complete supervision from the central desk of every department on one floor. I know of no other way in which such supervision can be combined with so large book capacity. Mr. Eastman, in his paper on “Library buildings” at the Waukesha conference, says: “For public access passages between cases should be five feet wide. Cases have sometimes been set

on radial lines so as to bring all parts under supervision from the center. This arrangement, especially if bounded by a semicircular wall, is expensive, wasteful of space, and of doubtful value, except in peculiar conditions. It is not adapted to further extension of the building." Let us examine these statements a moment. If we substitute for the semicircular book wing at Lawrenceville a parallelogram of the same superficial area, with parallel floor cases five feet apart, we shall gain something in shelf capacity and lose supervision of *five-sixths* of the book room. At the inner ends the Lawrenceville floor cases are three and a half feet apart, which we find to be ample, and eight and a half feet at the outer ends, an average of six feet apart. In the wider spaces between the outer ends we place small tables and chairs, which give the reader an opportunity to sit down and "sample" the books before he makes his decision, and also provide places to put the books he has taken from the cases and which we prefer to have the assistants return to the shelves. So, you see, not one square foot of space is wasted in the book wing of our Lawrenceville branch. And what practical librarian doubts the value of effective supervision of the book room? You may think I take an extreme position when I say that free access is not entirely successful without complete supervision from a central loan desk, if economy of administration is to be considered. I have had some experience with free access to parallel floor cases. Boys and girls of from fourteen to twenty years are inclined to get behind parallel floor cases and talk, laugh, and carry on flirtations, where they cannot be seen by the library assistants. The book room becomes a sort of rendezvous for the young people of the neighborhood, and parents soon learn that their sons and daughters have a meeting place where there is no proper supervision. The idea gets abroad that the influence of the library on the young people of the community is baleful rather than beneficial, and its energies are crippled in a hundred ways and its influence weakened. The test of a thing is in its use, not in mere

academic discussion. The radial floor case plan has given entire satisfaction in Pittsburgh, both to the public and to those who administer the branch libraries. This does not mean that we consider it beyond criticism. We hope to improve on the Lawrenceville plan in a new branch for which tentative plans have been drawn. But the general plan will remain the same, with larger reading rooms, and with two small reference rooms inserted between these reading rooms and the book room. Experience has taught us that these additions are desirable.

There can be no question that a square book room can be built for less money than any other form. But should all the advantages of another form be sacrificed to save a slight additional cost in construction? It is true, also, that the radial floor case plan is not adapted to further extension, except upward. For what purpose do you want to extend the book room of a branch library, if you have a shelf capacity of 25,000 or 30,000 volumes? A branch library should not be expected to perform the reservoir function of a main library. Only live books have a place on the shelves. And are not 25,000 or 30,000 live books enough for a branch library?

Under any of the first floors described above, a basement eight or nine feet high may be placed, in which should be the heating plant, a small lecture, or study club, room, and storage rooms. Under the semicircular book wing it is also possible to put an auditorium, if one is needed, with a seating capacity of five hundred.

Thus far I have confined myself to the discussion of types of branch libraries with which I am familiar. Naturally, I know best the two types we have in Pittsburgh. This must be my excuse for talking so much about our own branches. There is, however, a very important type with which we have so far had no experience in Pittsburgh—the type required on a narrow city lot between two high buildings. Not having had this problem to deal with, I feel some timidity about discussing it. What strikes me as an admirable solution of such

a problem will be found in the plans for the new Yorkville branch of the New York Public Library, which are well described in the *Library Journal* for May of this year. The three essentials of a branch library — a room for an open-shelf lending collection for adults, a children's room, and a general reading room — are here placed on three separate floors, one above the other. There are no partitions, each floor being simply one large room. This is a sort of triplication of the type of branch library described in the earlier part of this paper.

There is little time to discuss equipment, or furniture and fixtures. I shall, therefore, note briefly only a few of the more important points.

Where there is a delivery lobby it need not be large, if there is free access to the shelves. Such a lobby is like the platform of a street car or of a political party — it is "to get in on, not to stand on."

The delivery desk may be circular, octagonal, or square. The octagonal and square present better sides for the entrance and exit passages. Turnstiles may, or may not, be placed in these passages. The desk should have an exterior diameter of not less than 15 feet, to provide working space on the inside. The counter top should have a width of two feet or more. This counter should be 40 inches high. Many desks are 42 inches high. This does very well for men, but is too high for women.

The shelving in the adult room and the children's room may be built to the ordinary height, and the two upper shelf spaces in the children's room used for a bulletin frieze around the room. This imparts symmetry to the appearance of the two rooms as seen from a central lobby, and provides a useful addition to the children's room.

We have used three heights of tables and chairs in our children's rooms, but have come to the conclusion that only two are necessary, 26 and 22 inches for the tables, and 16½ and 14½ inches for the chairs.

Floor coverings may be of hard wood, cork carpet, marble, or interlocking rubber tile. Cork carpet is comparatively noiseless, and has

proved satisfactory in most localities. Owing to the dirt in Pittsburgh, however, so much water has to be used in cleaning that the superintendent of our buildings and our architects thought it would be unsightly and unsanitary. Our floor coverings are marble, which meets other requirements admirably, but is cold and noisy. In our next branch we expect to use interlocking rubber tile on the floors of the reading rooms. It has all the advantages of cork carpet, and in addition, is free from leaky seams and is practically indestructible. Unfortunately, it is very expensive.

Where electricity is used the general illumination of the rooms should come from lights in the ceiling, rather than from chandeliers or other pendants, which are unsightly. Table lights, as well as those for floor cases, should be wired from below. The question has lately occurred to me why in our reading rooms we are always arranging to have readers sit at tables. Would any one think of sitting down to read at his own home in the evening, with his book resting on the table before him and with the light in front, however well shaded? At home we sit in armchairs with the light at our backs, the table serving merely as a pedestal for the lamp. Why not provide similar comfort in library reading rooms? Instead of so many reading tables, why not have a few lamp standards, or posts, with four-branch fixtures at the top, four or five feet from the floor, and with half a dozen light armchairs arranged round each standard with their backs toward the light?

I cannot close this paper without emphasizing the fact that, after all is said and done, the most important thing about a branch library is the librarian directly in charge of it. No mechanical devices or arrangements can take the place of the intelligence and enthusiasm of a good branch librarian. Next in importance to the librarian comes the collection of books and periodicals. Of course it is important that the workshop be as well planned as possible; but after all the building is a tertiary consideration.

BRANCH LIBRARIES: FUNCTIONS AND RESOURCES.

BY LANGDON L. WARD, *Supervisor of Branches, Boston Public Library.*

BRANCH systems are in the making, in a peculiar sense, so that a résumé of the functions of a branch or of its resources represents rather what ought to be, or may be proved to be wise in the future, than what actually exists in any large library at present.

There is no generally accepted nomenclature for branches and stations, though the whole subject was discussed quite fully and clearly at the conference of 1898, and it may be assumed that all are familiar with the distinctions between the different types as they were defined then. I am in fair agreement with others if I call a branch a subordinate and auxiliary library with a considerable fixed collection of books, a delivery station an agency of the central library without any books for direct circulation, a delivery and deposit station an agency of the central library with a shifting collection of books which are circulated directly from the station, but with no permanent books, or very few. It would be possible to call a deposit and delivery station a branch, since it has books upon its shelves, but this is not generally done. Still more, such a station, with the addition of reference books and a very small permanent collection, — say of 1,000 volumes, — may be called a branch, and this is done in some libraries. The definition given above includes such small branches as these, though in certain libraries they would be called reading-rooms.

The delivery station pure and simple has been a success in some cities where there is a strong central library with no branches. It is, however, merely a mechanical agency for distributing books to the public. All that is to be got in visits to a branch, namely, the stimulus of the crowd engaged in the same pursuit, the sight and handling of other books than the one wanted, the use of reference books and periodicals, the influence of pictures, the information to be gained from the attendants and

from the bulletins and card catalogues — all this is lacking. And while the home use of a popular library is chiefly fiction and light literature, the hall use may be quite a different thing. A system of house-to-house delivery is essentially of the same nature as the delivery station, though of wider scope. Except for those confined to their houses, car tickets at reduced rates, to the central library or the nearest branch, would be far better. I do not know if these are yet provided anywhere, though I have no doubt they will be in time. But a little place must be left for individual effort, for people may be pauperized intellectually as well as materially.

If progress is from the homogeneous to the heterogeneous, from simple to complex functions, the correct development would seem to be from delivery stations to branches, through delivery and deposit stations and reading-rooms or small branches. In the Boston Public Library there are no simple delivery stations, and the shop stations, which have both delivery and deposit features, are slowly being eliminated in favor of what are called service stations, in charge of a library employé. The reason is, of course, the more complex functions of which the latter type is capable. Cost is the drawback to the service station and the branch, but the results justify the expense. It is the branch only, and generally the one of larger type, which is to be specifically considered here. For its functions are comprehensive.

A branch should be a distributing agency for the central library. By this means the branch resources are supplemented and its efficiency increased. It is relieved from carrying books on its shelves which it would otherwise find necessary. In the most effective type of system, central and branches are so linked together that the same borrowers' card is good everywhere and books taken at one point may

be returned at any other in the system. The central library is the clearing house. This arrangement is possible only with a daily wagon service. But, further, the branch should be an advertising agency for the central library, making its resources known to the local constituency. For no branch ought ever to consider itself a substitute for the main library.

The branch may very effectively be the agent of the central library in carrying out special enterprises for which the central corps of assistants is inadequate. For example, in Boston the plans of the library for work with schools have been carried out very largely through the personal labor of the custodians of branches and reading-rooms, and the enterprise of taking applications for library cards in all the schools of the city could never have been accomplished except by using the force of branch employees.

In its more independent functions the branch should not only be a reservoir of books, large enough to answer the reasonable general demands of a community, but also in many cases a reservoir of books for schools and a distributing centre with regard to them. Duplicates should be multiplied for this purpose. There are over seventy grammar and high schools in Boston, and when it was found three years ago that the Central Library was not equipped for supplying more than a small portion of them with deposits of books, the branch collections were brought into requisition. The deeper reason was that the schools were thus made better acquainted with their natural centre, the branch. The Boston schools are now divided among the branches and reading-rooms of the city, from two to six schools being allotted to each branch. The Central Library supplies certain schools, and supplements and directs in the case of all. If the great aim of a branch should be to enlarge its constituency, the most effective means is a system that will attract and secure the school children of its own district. The parochial schools are in every essential point public schools and should be so treated by librarians.

But the branch ought also to be in touch

with every educational institution in its district—with social settlements, study clubs, and other such enterprises. The churches should, of course, be included. Such a close relationship is good for the branch and good for the institution, and co-operation has been found to be a remarkably stimulating word when used in this sense. There should be compiled a list of the educational institutions of the city, arranged according to the districts represented by the branches, and each branch should be held responsible for new information.

In fact the branch should be the intellectual centre of the district as far as possible. Its local character should be emphasized. In one branch that I know in a poor quarter, people come for advice, to learn the spelling of words, to have letters written, to settle the point at issue in a bet. A group of old soldiers gathers there to read books on the Civil War. A central library is not local or personal, but with the proper attendants the branch is both.

In the case of the full-grown and unwilling man, educational results must be chiefly looked for as a by-product of the whole library activity. It is, however, of the first importance that the branch should make its reputation as an advisory agency for that part of a community which will accept direction. And here tact, persistence, and good nature play their part. It is astonishing how an un-failing and smiling eagerness to assist will win over a community.

But if a branch system is to be efficient, its agencies must cover the ground for which the library is responsible. Large branches are expensive, and are practicable only at the more important centres, but they may be supplemented by reading-rooms or small branches at the lesser centres of business and population, located also with reference to the steam and electric railroads and the flow of travel. The ideal in a large city is to have these occur at intervals of half a mile. People will not go so far as a mile or even three-quarters of a mile. If their own gratification only were concerned, they might be left to suffer, but

for the good of the municipality they should be provided with library agencies where they will use them.

To perform the functions which have just been outlined, a remarkably well-equipped corps of assistants is necessary. Now the ordinary library, though it may have one or two assistants of high grade at each branch, cannot usually have more. It has faithful grammar or high school graduates. It may even have persons with the educational equipment and ideas of the palæolithic period of library science. Yet with the small body of assistants at any branch—ordinarily from three to five—there must be an interchange of duties. The second assistant must take charge of the branch on certain evenings, the repair clerk must on occasion do reference work. Since library school graduates, however, are not available for positions paying from \$5 to \$7 a week, the only remedy is for the library to educate its own assistants—not in a desultory way in the course of the regular work, but by some definite system. This may be done by meetings or classes, by encouraging the study of Mr. Dana's, Mr. Spofford's, Mr. Fletcher's, and Miss Plummer's books, by circulating library periodicals, or by a system of written questions. The latter plan is not new in the Boston Public Library. At present in its branch department there is being issued from time to time a series of examination questions designed to cover all the points of library science which a branch assistant needs to know. Answers are distributed after a little interval, for the object is not, primarily, to test ability. The questions have the peculiarity of being specific, and of dealing with library science as applied to the branches of one library. Since all branch assistants must be on occasion reference librarians, a large part of these papers will probably be taken up with questions on the books of the branch collections, so that the assistant will not give Kitchin's "*History of France*" to a person who is studying the Revolution of 1848, nor recommend Macaulay for the period of the Norman Conquest, nor consider Hume an

equal authority on fact with Mandell Creighton. So that she will know what translations of Homer the branch has, whether Butcher and Lang's *Odyssey* is in verse or prose, and which is the best translation into English of Dante, though she may never have read a line of any of these books. For it is well known to librarians that you can train assistants of ordinary education to do wonderful things with books, so that they may show others what they have no real knowledge or appreciation of themselves. Librarians-in-chief often have the same faculty of adaptation. These papers when collected will form a sort of *vade mecum* or branch assistant's guide, and though the method of question and answer is somewhat antiquated, it is very orderly and unambiguous. The problem remains to be worked out, but it is hoped that these papers will materially assist in giving employes an enlarged knowledge, and especially a certitude of knowledge. Of the head of a branch all this is already expected, and in addition executive ability and initiative.

With regard to the resources of a branch in books, it might at first appear that the greater they are the better. But considerations of cost, space, and time make it desirable to keep most collections within moderate limits. Every superfluous book hinders the efficiency of the branch.

What is the proper number of volumes for a branch collection? Mr. Putnam considered 15,000 volumes to be the limit for a branch in an important centre, and with a circulation of 50,000 volumes or more yearly. A new branch should have several thousand less to begin with. This applies only to branches which draw daily from a central library. In order to keep this limit, or any limit, if there is a plentiful supply of new books, replacements must be carefully considered and with some system, and once every five years or so the branch must be weeded out.

There will not, however, usually be 15,000 titles in a branch, for from 1,000 to 2,000 volumes will be duplicates. In a large city a reluctance to duplicate is fatal to the usefulness

of a branch, for continual disappointments will alienate the members of its constituency, especially the school teachers. The problem of the proper proportion of the different classes in such a collection has not yet, so far as I know, been worked out in any branch libraries with a central delivery, with sufficient thoroughness to justify dogmatism. There should be a supply of juvenile books adequate to the actual use, which is probably from 35 to 40 per cent. of the whole use, and half of the juvenile books may properly be fiction. There should be from 400 to 600 volumes of reference books, and these should always include a separate children's reference collection. There should be several hundred volumes of bound periodicals primarily for use with Poole's Index.

Most branches to-day are overstocked with fiction; for in some of them there are from three thousand to four thousand titles. But the cutting down which is inevitable may easily be carried too far. If we are honest with ourselves we know that a perfectly natural craving for variety leads cultivated as well as illiterate people to prefer the mediocre new book to the old one of the first rank. And those who are familiar with the illiterate class know that, as Mr. Cutter says, "there is in such people an incapacity of mind which makes a book two degrees above them a sealed book." Yet this class must be provided for. A mediocre novel is not necessarily a silly novel. Most things are mediocre; most of us are mediocre librarians. And it is a fallacy that there is a direct and exclusive connection between the best literature and ethics. The essential thing for a public library, one of whose functions is to furnish recreation, is to look for and make use of the wholesome novels. One of the most radical instances on record of the condemnation of works of the imagination is "the pleasant and careful search" which the curate and the barber made of the library of Don Quixote. Circumstances went far to justify them, it is true, but the case will not do for a precedent.

In the branch collections there will necessarily be a fixed element and a shifting element,

the latter representing the current purchases which must be made in order to retain the interest of the public, or books which were for a time the best but have been superseded. It is not always possible to combine opportuneness and durability, and popular novels and books about the Dreyfus case must be had though it is certain that the demand will cease. But in all shops a portion of the goods becomes spoiled or shopworn, or goes out of fashion. And experience has proved that the superfluous fiction, at least, will find a use if it is shifted from one to another of the smaller branches and displayed on open shelves.

In a library where there are several branches and the system is highly centralized, the same books should be bought for each branch. The administrative advantages of this are apparent, and while theoretically every district differs from every other, practically this is not of much importance, with a central library to rely upon for special calls. Each branch has one or more peculiarities which must now and then be taken into account, so that each must have a few books in addition to the common stock, but these are surprisingly few. Further, if you have the same books, you will print the same finding list for all, following in principle the example of the seven libraries of Hamburg quoted by Mr. Winsor in 1876, at Philadelphia, — for there is nothing absolutely new.

To the one who chooses or recommends books for a branch library comes what may be called the *a priori* temptation, that is, the inclination to use the intuitive method in selecting, and to aim at completeness because of its intrinsic propriety. But branch collections should be made on empirical principles, and completeness should be quite disregarded. For nothing produces such disappointing results as intuition, and nothing so devours money and time and space as completeness.

It has been often said that there is nothing so delightful as to plan reading for other people, and the fascination is well illustrated in the numerous lists which were made once upon a time by noted people by way of sub-

stitutes for Sir John Lubbock's list of one hundred books. The extreme divergence of the makers' views may be noted by the way. It is, however, quite proper that a limited number of standard books which are not eagerly read should be placed in a branch library, for such books impart information by their mere presence, and they nourish a high ideal. All of the books of the Lubbock list are in the branches of the Boston Public Library, and nearly all the authors of Mr. Foster's standard library are represented. But the rule of choice is otherwise. English literature is naturally of greater excellence than American, nevertheless American authors must be multiplied in our branch collections. Books on English history will bear a ridiculously small proportion there to those on American history. In the latter class there need be little hesitation in choice. Anything respectable is useful. But the history of certain countries and periods will hardly be needed at all, because our schools do not study precisely these. The demand must rule, and however it may be in philosophy, with regard to the

make-up of branch collections all the librarian's ideas are derived from experience.

It is evident that the time is close at hand when in this matter the experience of libraries will be combined, and as a result of experiment and report there will be a certain uniformity in the branch libraries all over the United States. If librarianship were ever to become mechanical, all would be over; for personality and mistakes are far better than mechanism and the dead level of accuracy. But I do not see that this identical element need interfere with individuality. If seventy-five per cent. of the titles in branch collections at any given time were the same in various places, the margin of twenty-five per cent. would be sufficient for local and individual need and choice.

In the Branch Department of the Boston Public Library a plan for weighing and estimating the use-value of all the books in the branches has been for a long time among the memoranda of "agenda" awaiting the completion of other special enterprises.

BRANCH LIBRARIES: ADMINISTRATION.

BY FRANK P. HILL, *Librarian Brooklyn (N. Y.) Public Library.*

AT present only a few libraries have branches, but the time is not distant when these accessories will be required in every city of any considerable size.

A whole session might profitably be devoted to the consideration of the organization, equipment, and administration of branch libraries. Instead, the representatives of three libraries have been given the task of presenting the subject in fifteen-minute papers, consequently it is possible to take no more than a cursory view.

Mr. Anderson has looked at the physical side, as it were, and set forth the architectural requirements of branch buildings. Mr. Ward has dwelt particularly upon the functions and resources; and it falls to the lot of the newest recruit in this line of work to say something of the organization and conduct of a branch

library system. One of more experience would have hesitated before accepting the responsibility, and the writer's appearance is accounted for only by quoting the familiar line of Pope: "For fools rush in where angels fear to tread."

In the early library history of this country a library started with one central building, and as the demands increased, branches were established as needed, or as suburban towns were brought within the city limits the libraries established in these towns became a part of the system. Boston and Chicago are good examples of this growth. Cleveland, Baltimore, and Pittsburgh began by having a Central Building and developing the branch system gradually, neither city having any old library to absorb. Without doubt this is the ideal way, because there is a centre to work from,

and because a consistent and cohesive plan can be developed. Latterly, Philadelphia, New York (the old Free Circulating Library), and Brooklyn opened branches in response to pressing needs of particular localities, looking forward to the time when public sentiment would be sufficiently aroused to secure appropriations large enough to provide a Central Building.

If branches are started first, and particularly if many at a time, there is likely to be divergence of opinion among those in charge unless a thorough organization has been effected. Libraries taken in by absorption are pretty sure to have such different methods that the question of how much effort should be made to change their schemes of classification and cataloguing is sometimes a difficult one to decide.

Each library so absorbed has grown up in its own way and believes that way the best — and undoubtedly it was up to the moment of consolidation. It is easier to tear down than to build up; to criticise than to originate; so we must step cautiously and carefully. A safe motto for librarians to adopt is contained in the words of Hamilton Wright Mabie: "There is a genius in knowing what to discard as well as what to keep."

Whether in a single building or scattered as branches over the whole city, it is essential that the institution be placed upon a sound business basis and the work centralized. To accomplish this desideratum a library without a central building must provide adequate administration quarters with offices under one roof for all heads of departments. This arrangement establishes a centre about which the whole system clusters, admits of frequent consultation, and forms the natural source of information pertaining to any of the branches. Here the policy of the library is determined, practical co-operation made possible, and that centralization and unification which are absolutely necessary to harmonious and effective administration insured. This is the key to the situation, but it is sometimes difficult to secure. Take the Brooklyn Public Library, for example. Some months ago a series of questions was sent to the seventeen branch librarians. The answers were tabulated and the result was

so surprising that I will only state that in some instances the same kind of work was being done in as many ways as there were branches. Other libraries have had similar experience; but we are on the up grade now, and all striving for that uniformity which will fit in with local environments. Of the advantages of centralization, I can do no better than quote from one of our librarians-in-charge:

"That such a plan [of centralization] frequently involves the sacrifice of individual ideas and methods of work is inevitable; and the plea is sometimes urged that the ultimate result will be to destroy originality; so far as routine goes this is undoubtedly true, but there are many features of library work incident to the personal contact with the public, making of bulletins, preparation of reading lists, etc., that offer an inviting field to every librarian in charge as varied and resourceful as the individual personalities themselves. When this feeling that we are each an integral part of a great library system, as closely linked in purpose and methods to the administration department and to each other as if all were gathered together under a single roof, has superseded purely selfish interest in our respective charges, then and not till then will the full measure of united action be realized. Without such a conception of the task before us the best individual effort, no matter how zealously pursued, will avail little. This phase of the question invites serious reflection on the part of every one of us, and a keen sense of our own personal responsibility to the trust imposed in us. I like to think of the branch not as a limited, independent collection of books, more or less arbitrarily selected and placed conveniently for the public, but rather as a local representative of a great system, never a mere substitute for it."

The first requisite for an orderly and systematic administration of a library is a staff so organized as to work effectively in every direction.

A suggested organization is:

GENERAL ADMINISTRATION.

Chief Librarian.

First Assistant Librarian.

Second Assistant Librarian.
 Librarian's Secretary.
 Chief Clerk.
 Financial Secretary.

HEADS OF DEPARTMENTS.

Superintendent of Branches.
 Superintendent of Children's Department.
 Superintendent of Book Order Department.
 Superintendent of Cataloguing Department.
 Superintendent of Traveling Libraries.
 Superintendent of Supplies.

Under these would follow Librarians-in-charge of Branches, Assistants, Apprentices, Fine collectors, Messengers, and Janitors.

A word as to the several divisions recommended. The heads of departments should be selected for their special fitness for the work required and paid accordingly. Of the duties of Librarian and Assistant Librarians and Secretary it is unnecessary to speak, but it may be helpful to indicate briefly those attached to some of the other positions.

The duties of the chief clerk and financial secretary are chiefly of a clerical nature.

SUPERINTENDENT OF BRANCHES.

Among the supervisors the Superintendent of Branches is mentioned first, because under the chief librarian the one occupying this position must keep in touch with the needs and personnel of the several branches. As one has well said: The Superintendent of Branches should keep in view the following objects: (*a.*) To save the time of the chief librarian by acting as an intermediary between him and members of the staffs of branches, attending to all such matters as can be acted upon without specific authority, and sifting out for his attention only such cases as seem of special significance. (*b.*) To view the work of the branches from a comparative standpoint, comparing their equipment, the conditions under which their work is carried on and the results obtained, with the object that all may be treated with fairness in the furnishing of books, supplies, and service. (*c.*) To bring about centralization in all cases where it would increase the usefulness or decrease the expense of the several branches. (*d.*) To promote co-operation and

develop *esprit de corps*. (*e.*) To give apprentices instruction in methods and practical work at the branches.

CHILDREN'S DEPARTMENT.

Next in importance on this faculty should be named the Superintendent of the Children's Department. We can at least concede that she (and I use the pronoun advisedly) occupies a most responsible place, for upon the success of this department largely depends the success of the library. There are not many people equipped for this post. The occupant must combine the qualities which go to make up the best sort of teacher, librarian, and mother, and must have the executive ability to originate plans for the extension of the work, exercise general supervision over all children's rooms, their management and discipline, select and distribute juvenile literature throughout the system, and superintend the preparation of bulletins and kindred illustrative work.

BOOK ORDER DEPARTMENT.

All accessions to the library by gift or purchase should be handled by the Book Order Department.

Everything connected with the entering of gifts, checking of bills, order slips, auction and trade catalogues, recommendations of librarians and readers, and exchange of books between branches should be attended to here.

Having a union catalogue and shelf-list at a central place, it is easy to check up orders, prevent unnecessary duplication, and indicate for which branches a book is intended, as it is not desirable to place copies of all books purchased in every branch.

The selection of books for the different branches depends in a measure upon the recommendations of the librarians-in-charge, who know what the branches need in the way of new books and "shorts."

CATALOGUING DEPARTMENT.

A greater degree of uniformity not otherwise attainable is secured if all cataloguing is done by the central cataloguing staff. All the accessioning, classification, and assignment of numbers not only for the union catalogue,

but for branches should be done at one place, leaving to the branches the further preparation of the book for circulation.

It is somewhat expensive but quite necessary that a union catalogue and a union shelf-list showing resources of the whole institution be kept by the Cataloguing Department, so that information concerning any book at any branch may be supplied on the instant.

A card catalogue and shelf list should be kept at each branch, showing just what books are in the branch.

A great deal of time and labor will be saved by ordering cards from the Library of Congress and using them for the union and branch catalogues.

A satisfactory division of work seems to be something like this:

WORK DONE BY CATALOGUE DEPARTMENT.

1. Looked up in union card catalogue.
2. Books plated.
3. Accessioned.
4. Classified.
5. Numbered.
6. Subject headings indicated.
7. Entries made in union card catalogue and union shelf list for duplicates.
8. Work revised.
9. Cards filed.
10. Books counted and listed.
11. Books sent to branches.
12. Branch catalogue cards revised.
13. Monthly bulletin work.

WORK DONE BY BRANCHES.

1. Books stamped.
2. Leaves cut.
3. Books pasted (pockets and dating slips).
4. Book cards made.
5. Books, shelf, list, and catalogue cards written.

TRAVELING LIBRARIES.

The Traveling Library is an acknowledged factor in a modern library. It goes into the club, the home, the school, the factory, and public institutions, and reaches people who do not ordinarily visit a library.

The opportunities for splendid work in this

department are limitless, and an able, scholarly, tactful, and conscientious person is needed for Superintendent.

The home libraries which are coming into greater prominence should be under the management of this department.

The collection of books ought to be as distinct as at a branch.

DEPARTMENT OF SUPPLIES.

The Superintendent of Supplies should be a man of large business capacity. Supplies for the year should be purchased at one time in large quantities and stored at a central depot and drawn upon from time to time by requisitions made by the librarians-in-charge. The amount of stock, such as janitors' supplies, cards, printing, stationery, etc., needed during the year may be easily ascertained from estimates submitted by the branch librarians at the beginning of the year.

The purchase of books should be left to the Book Order Department.

Except for incidental expenses no money need be expended by branch librarians.

BINDERY.

The question of the advantages of a bindery under the control of the library authorities is a debatable one. Given a central building, the problem is easy of solution, as the books are then in the same building and under library supervision. It is perhaps as convenient and satisfactory to establish a certain standard for binding and then distribute the work among several firms, requiring the same grade of work, paying therefor uniform prices. The details of management should come under responsible supervision and not be left to the binder to regulate.

RESERVOIR FOR BOOKS.

The library of to-day must place some restrictions upon the purchase of books. Fiction by a little known writer may safely lie over for six months. Those of us who have tried this experiment are pleasantly surprised to find that at the end of the probationary period there is little demand for the books. Regarding other literature it is not necessary to purchase a copy

of a new book for each branch, but there should be a reservoir to serve as a receptacle for dead or unused books from which they could be drawn for the branches when there is a demand. I quote again from the same librarian-in-charge:

"We need a central reservoir from which to draw books which for many reasons cannot be duplicated in every branch. Into such a reservoir might well be sent all volumes exclusive of reference works and others to be noted later not circulating in the several branches. The branch has no room for books rarely used, and, what is more vital, no money to spend in their acquisition. Certainly we cannot afford to buy books never taken out, and at the same time plead lack of funds as an excuse for not obtaining books sadly needed. In this as in all public matters the greatest good for the greatest number must be our guide, and the occasional seeker must depend upon this central source for his occasional book. The branch must contain live and active books, books that will be read and re-read, rebound, worn out, and replaced. That, briefly, should be the book's 'biography.' By a process of elimination and survival of the fittest the stock of material should be kept a living force. In apparent contradiction to what I have just written I would exempt from exportation to the central reservoir 'books of power' so called. I believe we should always have before the eyes of the reader the best there is in literature, and if after a year, such books having offered themselves appealingly to the public, the dating slips remain blank, I think we might be justified in concluding that something was the matter with the public, or possibly with the librarian in charge. But beyond these claims of the world's best literature I would make no further exemptions. Ancient text-books, obsolete scientific treatises, worn-out theological discussions, and all other dust-gatherers surely can be of no value to the general reader and seldom to the student except as a basis of comparison. Actual experience will of course be the final test. If a book does not circulate and cannot be made to circulate, send it to this

common reservoir. It will still be always accessible, and it is possible that from the combined demands of the several branches it may be of occasional service."

Thus far we have been considering the administration of the whole system, from a central point, but the real power lies in the

BRANCH LIBRARIANS.

A librarian-in-charge should possess peculiar qualifications for the position. The foundation should be a liberal education, added to which one should be broad-minded, far-seeing, and progressive. The mission of a librarian is only partly accomplished when the merely perfunctory service of circulating books and keeping records is done. It needs enthusiasm and force in the individual at the head to stimulate the assistants and do effective work with the public.

Freedom of action should be accorded heads of branches; they should be held to a degree responsible for building up their particular libraries. They should not be treated as mere machines, but be given an opportunity to broaden and develop the work in their own neighborhood, and be made to feel their importance to the entire city system. To this end there should be frequent meetings of the staff for the purpose of comparing notes, deciding upon methods, defining the scope of work, discussing books, relations with the public, etc., and to increase the efficiency of the assistants they may be given instruction of a higher grade than that given apprentices.

There are other things which add to the effectiveness and smoothness of administration. Among them may be mentioned frequent visits of the chief librarian and superintendents to the branches, interchange of books and cards among branches; special express delivery to branches and delivery stations, and telephone communication throughout the system.

An outline only of how a branch library may be administered has been given, but it may serve the purpose at a time when librarians are becoming more generally interested in the subject.

THE DIVISION OF A LIBRARY INTO BOOKS IN USE, AND BOOKS NOT IN USE, WITH DIFFERENT STORAGE METHODS FOR THE TWO CLASSES OF BOOKS.

BY CHARLES WILLIAM ELIOT, *President of Harvard University.*

BEFORE this assembly of experts it is proper that I should describe the past experiences and present conditions which have lately led me to study the library question anew, and have caused me, who am not an expert, to venture to write on the subject.

When Gore Hall was built in 1840, my predecessor, President Josiah Quincy, supposed that the building had sufficient capacity to hold the probable accumulation of books during the remainder of the century; yet within thirty-five years it was necessary to construct an extension which held many more books than the original building. Within twenty years more it became necessary to reconstruct the interior of the original Gore Hall in such a manner as greatly to increase its book capacity; and now, within six years of the last enlargement, a further enlargement, more considerable than either of the preceding, is declared to be absolutely necessary. The city of Boston erected about forty years ago what was then considered a very large library building on Boylston Street. Within less than forty years that building had to be replaced by a building of vastly greater capacity at the cost of several millions of dollars; and this new building is so placed with reference to the surrounding streets that it will be almost impossible in time to come to more than double its capacity. Only thirteen years ago Cambridge built a public library; but the city has already been obliged to make a considerable extension of the building. In the meantime many new public libraries have been erected in the various cities and towns which constitute the metropolitan district of Boston. I have, therefore, witnessed a very extraordinary increase in the number of books kept accessible to readers in the communities which fall under my immediate observation; and I have also witnessed frequent enlargements of the buildings used for storing these collections, enlarge-

ments repeated at always diminishing intervals. All over the country, but especially in Massachusetts, local public libraries have been rapidly established within a single generation; so that the centres from which books are distributed, or at which books are read, have multiplied extraordinarily. Since Gore Hall was planned—that is, quite within the life-time of many persons here present—the production of books and other printed matter has increased at an unprecedented rate; until now there is no library, however rich, which pretends to keep pace with the annual publications of the world; and all libraries, large and small alike, are compelled to exercise close selection in the purchasing and acceptance of books. No existing library can dream of providing two miles and more of new shelving every year. Completeness can no longer be the ideal of any library. Judicious selection for local and present use is the ideal.

At a university which employs a large number of specialists as teachers, the books selected for purchase will be those which the university specialists decide are most needed at the passing moment by themselves or their pupils; and since these specialists change somewhat rapidly by death or transfer to other fields of labor, the direction of purchases in a given university library will probably change considerably from generation to generation; so that even in a university library the selection of the books must be called variable and almost casual, unless an unchanging policy of purchasing only in certain specified departments of knowledge be adopted and persistently maintained. I know no instance of the long maintenance of such a policy for a public collection not professional.

The prodigious annual output of books and magazines is by no means all original matter. A large proportion of it is matter which has only been revised or recast. Each generation

makes its own treatises, gazeteers, bibliographies, indices, dictionaries, and cyclopædias, re-edits the famous books come down from preceding generations, and writes its own biographies of the heroic personages of the past. It is impossible to discern any limit to this portentous flood of reproduction. Yet in each generation this immense mass of revised or recast matter invalidates much of the printed work of former generations or throws it out of use. Moreover, all signs indicate that the flood of printed matter has by no means reached its height. Indeed there is every reason to suppose that printing and publishing will become cheaper and cheaper, and the facilities for authorship and the number of authors greater and greater. The ease with which books are made has altered the character of the printed book. It is plain that great masses of new books have only an ephemeral interest, like the monthly magazines and the weekly papers.

Under these conditions the great need of means of discriminating between books which may fairly be said to be in use and books which may fairly be said to be not in use has been forced on me, and on many other persons nearly concerned with the largest, readiest, and most profitable use of libraries, and with the promotion of sound reading among pupils at school, students at college or university, and the people at large. The problem is essentially an economic one. It is not a good use of the precious educational resources of a community, or an institution, to enlarge at frequent intervals its library building, if the new space needed for books in use can be secured by discarding books not in use; and it is not frugal policy to permit the presence of thousands or millions of dead books to increase the cost of service, care, and cleaning in a much-frequented library.

I admit at once that the means of just discrimination between books in use and books not in use are not easy to discern or to apply; but I maintain, nevertheless, that the search for these means should be diligently prosecuted, and that every reasonable suggestion of means of discrimination deserves careful attention. It is obvious that no one man is compe-

tent to discriminate, on principles of judgment which his own mind elaborates, between a dead book and a living book in all departments of learning. The only satisfactory test is the actual demand or absence of demand for the book in question. Thus, it might naturally be suspected that a book which had not been called for in a university library for twenty years possessed but a faint vitality; whereas a book that was called for every year would certainly be considered alive. The fact of disuse seems to me an effective criterion, and the question for librarians is how to determine that fact of disuse. In libraries where no person has access to the shelves except the librarian and his assistants, so that every book used is ordered by a written slip, and passes the delivery desk, the fact of disuse can certainly be satisfactorily determined. In libraries where some thousands of books, say from five thousand to a hundred thousand, are kept on open shelves, accessible to all users or all privileged users of the library, there must be some principle of selection which assigns books to those open shelves. No judicious librarian will keep on open shelves books which are never touched. There already exists, therefore, a satisfactory criterion for large numbers of live books. The real difficulty in determining disuse arises in libraries which permit access to all their shelves to a considerable number of readers who may handle the books at their pleasure, and remove any of them temporarily to neighboring tables where they can be conveniently read. This permission has no value except in a classified library, or, rather, except in those parts of a library which are classified. There are many libraries in which the "browsing" process is not permitted, and in them this difficulty in determining the disuse of a book does not exist. Moreover, where the difficulty exists now it would be removed by enforcing the simple rule that the reader admitted to the shelves may take a book down, but shall not put it up; and this rule would have other obvious advantages. I shall have something to say later concerning the value of the process of browsing in a library.

I have found on inquiry that the discrimination between books in use and books not in use

has already been made in some libraries of widely different character as regards size, rate of growth, and general purpose. Thus the British Museum has already made large discriminations. The Medical Library of Boston, although it has lately procured a new building much larger than its first, has still large numbers of books stored in the suburbs of Boston. The Harvard Library has been forced to box thousands of books, and store them in the cellars of other buildings — a very inconvenient method. The Boston Athenæum has for some years put its most used books in its lower stories, and its least used in the upper, for the convenience of its attendants, and of its proprietors who have access to the shelves. Many town libraries have found no difficulty in deciding upon those books which are so seldom called for that they may be put in out-of-the-way places.

But what should be done with disused books, when once the means of discrimination between the used and the disused have been found? It seems to me clear that a book which is worth keeping at all ought to be kept accessible; that is, where it can be found, on demand, with a reasonable expenditure of time and labor. The problem, then, is to devise a mode of storing disused books, so that they may be kept safe and accessible, and yet at a low cost for shelter and annual care. The most obvious considerations of economy demand that disused books, or books very seldom used, should be stored in inexpensive buildings on cheap land. There is frightful waste in storing little-used books on land worth a million dollars an acre, if land worth a hundred dollars an acre would answer all reasonable purposes. Next, no unnecessary number of copies should be stored for one and the same community. If, for instance, there are thirty public or semi-public libraries within twelve miles of the State House in Boston, it is wasteful for each of those libraries to be storing disused books, for many of the books so preserved would be duplicates. There should be one store-house for disused books for the entire district, wherein not more than two copies of any book should be preserved. Thirdly, the interior construction of such a building should

differ in important respects from the construction of the ordinary book-stack in use to-day. A stack like that of the Harvard Library, which was the first stack constructed of the type now common, or that of the Congressional Library, a more recent and far more costly type, provides a passageway between each two rows of books; and in order to get good daylight into the middle of these narrow aisles or passageways, the lengths of the rows are very moderate, and there are often passageways along the ends of the rows of books between these ends and the walls. The result of this arrangement is that not more than one-fifth of the cubical contents of the building which covers the stack is really occupied by books. In order to secure compact stowage, all books in such a store-house as we are contemplating should, in the first place, be assorted by size. They should next be marked by a label at the top of the back to receive only a serial letter and number. No classification of the books should be permitted; for a classified library occupies more space than one which is not classified. The books having been assorted by size should be placed three deep on the shelves, and on the edge of each shelf should stand fixed-location shelf-marks bearing the numbers of the three books behind each mark. The serial number once assigned to a book should never be changed, and the place of each book once fixed should never be changed. The passage-ways should be long, and should end against the walls, and only one passage-way down the middle of the stack should afford access to the passage-ways between the rows of books. In this way nearly two-thirds of the building might be actually occupied by books. The roof should be flat, and so constructed as to defend the upper stories from the heat of the summer sun. All windows should be double, to exclude dust and cold. In winter the temperature of the entire building should be kept low, and by the use of gratings for floors the whole building should be treated as one room for purposes of heating and ventilating. None but the attendants should ever be allowed in the stacks. They would find the books called for by their serial numbers only, and would bring them to the

reading-room and studies which should be attached to the building. It ought, of course, to be possible for any student who desired a large number of books to have them brought to him in a separate room where he could examine them at his leisure, and retain the use of them for a definite period. It should also be possible for any library in the district which used this store-house to procure any books from the store-house on written or telephoned orders, the cards corresponding to all the books in the store-house being kept at all the libraries which were large enough to accommodate such a catalogue. Such a building could be a regular polygon, like a square, and so have a shorter perimeter than any irregular polygon of the same area, like a long rectangle, for instance.

The books in such a store-house would be reasonably accessible to real students. They would no longer encumber the libraries from which they had been dismissed. They need no longer encumber the card catalogues in ordinary use at the libraries from which they had been dismissed. The discharge of disused books from the thirty or more libraries of the whole district into this common receptacle would be intermittent, perhaps, by weeks or months, but fairly continuous by long periods, such as five-year or ten-year periods. The libraries of books in use would themselves be more economically and effectively administered if relieved of the burden of the dead books; and they would be under no necessity of extending their buildings at short intervals over new areas of more and more expensive land.

The treatment of the library catalogue under these new conditions would deserve careful consideration and experimentation. In libraries which contained a well-classified subject catalogue, it might, or might not, be best to keep in the classified catalogue the titles of disused books. By retaining all the titles which had ever found place in the classified catalogue, a student unacquainted with the literature of his subject would be supplied with an important bibliographical guide; but on the other hand by keeping in the catalogue the titles of disused books the bulk of the catalogue would be increased in a progressive measure, and the

daily use of the catalogue would therefore be made more difficult and more time-consuming for everybody resorting to it.

These last considerations lead naturally to the interesting subject of "browsing." There can be no doubt that the inexperienced student gets some advantage from looking over the books in a classified library on a subject in which he has an intelligent interest; but of course his chief advantage is procured from those books which have still so much life in them as to be sometimes read. Browsing on good books is often helpful, but browsing on poor books, and particularly on books which have been so replaced by better ones as to have gone out of use, is a very questionable advantage for the ordinary student. I am not suggesting that browsing on live books should be prevented, but only that browsing on dead books might be made less convenient than it now is by requiring that the dead books to be examined should be ordered and brought together for the browser in a reading-room or study. For the advanced student, who wishes to make a really thorough study of the literature of a given subject, the examination of the books on that subject which happen to stand on the shelves of a given library ought not to be satisfactory. He may be quite certain that the collection is not complete, and that it may even be described as casual. He ought to make acquaintance with a thorough bibliography of his subject, or he ought at least to examine thoroughly several classified catalogues of books on his subject. He should never be content with the selection of books which happens to have been made in a single library, but should examine the contents of several libraries. In short, he ought to regard browsing in one collection not as thorough study at all, but only as a pleasing gratification of curiosity in comparatively leisure moments.

It is obvious that the economical advantages of the division of books which has been here suggested would be numerous. In the first place, the trustees of libraries would not have to hold vacant large pieces of expensive land all about their present library buildings, in order to provide for enlargements of those buildings in successive generations. In the

second place, they would not be put to the expense of building these successive enlargements, but would always keep in a sufficient building that number of books for which it had originally been designed, the older books which had proved to be disused being constantly replaced by newer books which are to be put to the test of use, and the whole collection being actually alive. Again, the maintenance of the store-house for disused books would be far less costly than the maintenance of the building for the active library as regards heat, light, number of attendants, and cleaning. Finally, the handling of the catalogues and the delivery of books at the active library would be quicker and easier, and the service of that library would, therefore, be less expensive and more efficient. Every hundred thousand books in a much-used library and every million cards in its catalogue increase the cost of service and care, because they add to the difficulties of the service, and the extent of the care-taking.

It seems to me that emphasis should be laid henceforth not on the number of volumes which a library contains, but on the wise selection of its books, and on the facilities for the daily use of its treasures. It is much more important that adequate provision of reading-rooms, large and small, should be made, than that browsing be permitted, or that every book owned by the library should be obtainable on demand within a few minutes. It is not unreasonable that an interval of twenty-four hours should elapse between the receipt of an order for a book and its delivery. Commercial circulating libraries both in England and in this country are highly successful, although they often require a much longer interval than this between the receipt of an order and the delivery. As the facilities for the safe delivery of books by mail, parcel deliveries, or expresses increase, the habit of borrowing books from a distance ought likewise to become common. The student and the general reader alike should be willing to await the delivery of the book he wants for hours or even days, just as a naturalist waits for the season at which his particular material is to be found, or for the time of year when his plant flowers, or his moths escape from the chrysalis, or his chickens or his trout hatch.

The real student ought to be capable of some forelooking, and of a certain deliberation in reading.

Whenever the distinction between books in use and books out of use, and between a library of live books and a store-house for dead books, comes to be admitted and applied, it will be possible to return to spacious and handsome halls and rooms for the permanent active library. The modern steel stack is not a decorative or inspiring structure, and we should all be glad to advocate with a good conscience more beautiful and interesting forms of construction for the library of books in use.

It is an interesting but not an urgent question how many depositories of dead books might reasonably be provided in the United States. If the general conception should be accepted, the interests of different localities will in time determine the number of places of deposit for books out of use. In my report on Harvard University for the year 1900-01, I mentioned three appropriate places of deposit — Washington, New York, and Chicago; but I can see great convenience in having one place of deposit for Eastern Massachusetts; and doubtless the Pacific coast and the eastern slopes of the Rocky Mountains would some day need others.

It has been said that the present generation cannot determine the taste in books which any future generation will manifest, and therefore that present disuse of a book is not to be accepted as evidence that it is dead outright and forever. This suggestion has some truth in it, but it does not go far. There are few books now in use which have been resurrected after long burial; but if there were such books, their temporary storage in the house of disused books would not prevent their restoration to some of the active libraries when the new generation had discovered or rediscovered their merits. I am not proposing a crematory for dead books, but only a receiving-tomb. Neither am I proposing that the bibliophile or the antiquarian should be absolutely deprived of his idols, but only that his access to them should be made somewhat less convenient and attractive.

Another mode of selection in the purchase

and holding of books by different libraries within some territory of moderate extent has often been suggested, — namely, the assignment to different libraries of different subjects to which they shall severally confine themselves in the purchase of their books. There is a great deal to be said for this mode of selection, if the interests of a large community like the Boston metropolitan district, for example, rather than those of a single town or city, or a single university, are to be considered. But it ought to be observed that this method of selecting the books which any given library shall own involves the same willingness on the part of readers to wait a reasonable time for the books they want, as must be assumed if the line of division in any one library shall be between books in use and books not in use. If European history were assigned as one of its subjects to the Boston Public Library and American history to the Harvard Library, the historical student in Cambridge might have to wait for his book until it could be brought from Boston, and vice versa. No principle of selection can be applied to a group of libraries, which does not involve, though infrequently, some reasonable delay in the delivery to the reader of the book he wants; yet it is indispensable that some principle of selection or other

shall be adopted. It is also to be observed that books will inevitably come to be disused in the several departments assigned to each separate library.

What I have wished, and still wish, to urge upon the attention of professional librarians — solely in the interest of the best use of the best books — is the need of determining beforehand the general policy which is to be adopted with regard to the storage and most convenient use of the overwhelming masses of books which are pouring forth at all the large centres of book-making in the world, masses which each decade bids fair to double. At present most of the libraries of the country are vaguely contemplating an indefinite enlargement of their buildings, and an indefinite increase in the cost of maintaining, caring for, and serving out their growing collections of books. The present buildings of many libraries may now look adequate for years to come; but surprisingly soon their vacant shelves will be filled, and the pinch we have felt three times within sixty years at the Harvard Library will afflict them also. There seems to me to be an urgent need of settling soon on a clear and feasible policy for the future; and I know no body of persons more competent than that I now address to discover and promulgate such a policy.

THE SELECTION OF TECHNICAL AND SCIENTIFIC BOOKS.

BY CHARLES F. BURGESS, *University of Wisconsin.*

IT is my purpose as the unofficial representative of the American Society for the Promotion of Engineering Education to submit to your consideration a line of work which has been taken up as one of the possible means for furthering the interests of technical education, and one which cannot be made effective without the coöperation of the library interests.

Those who are actively interested in engineering education cannot help but feel a certain sense of responsibility for the remarkable record of industrial development which the last few decades have made. For substantiation of such claim attention need but be called to the captains and other officers of industry who have

been trained in the technical schools of the country.

The inadequacy of the engineering education of thirty years ago for present conditions is scarcely more obvious than the fact that engineering education of the present will not suffice for the future. Present methods, continued indefinitely, would develop leaders as they have done in the past, but the question of a debatable nature may be raised: Is the country better off with a few great engineers, or a large number who are capable?

Perhaps the most serious limitation upon engineering education at the present time is its failure to reach the rank and file of industrial

workers, a limitation which is steadily increasing in degree. In spite of the fact that some of our advanced technical schools are free from tuition charges, it is evident that only a very small percentage of the inhabitants seem to be endowed with the privilege or opportunity of attending such institutions. It has been estimated that but one per cent. of the pupils of the grade schools continue their work beyond the high school.

It seems to be the predominating idea at present that increase in efficiency of engineering education lies mostly with reference to the instruction of the favored minority who are able to attend technical schools. This is shown by the action of the leading engineering schools in increasing the height of the barrier commonly termed entrance requirements, thus more noticeably decreasing the percentage of those permitted to attend. A college education gives to its possessor an advantage over his fellow men and almost ensures for him promotion to the more important positions, thus serving in a considerable degree to remove the less fortunate from the line of promotion. This stratification which appears to be developing, placing the technical graduate in the upper layer and creating an engineering aristocracy, is to be deplored as contrary to the American doctrine of equal opportunity for all. By the very progress of the technical graduate the outlook for the shop man or machine laborer is darkened, for, seeing the higher positions apparently closed to him, he will lose that incentive which is the underlying foundation of American enterprise — hope of advancement. He will feel that he is born to a position in life from which he cannot rise.

The solution of this problem as to how such condition may be avoided is perhaps the most difficult and important task which those interested in technical education have to undertake; but there is no doubt that American ingenuity will find a way of satisfactorily solving this, as it has done other great problems. Various experimental solutions are now under trial and others have been proposed. Among the former are the so-called correspondence schools, summer schools for artisans which at least one of our universities has instituted, night schools, classes conducted by the Y.M.C.A., instruc-

tion offered by manufacturers, and various other methods, each of which has its own advantages and disadvantages which it is not my purpose to discuss.

The great school for the industrial worker is the shop or the factory. The worker in this school is in a laboratory of the most efficient sort in which he can develop efficiently if he will develop his brain together with manual skill and dexterity.

The workman must first be taught to realize that unthinking skill can never hold its own against brain training. After instilling this feeling every possible opportunity should be given to make the work of brain training as simple and efficient as possible. The correspondence schools, in having enrolled over a quarter of a million students, have demonstrated the state of intellectual hunger which prevails among the industrial workers of the country. In addition to demonstrating the existence of this hunger, at least some of the schools have done much toward satisfying the same.

The proficiency of the industrial worker lies largely in his knowledge of the laws of nature and their applications and limitations, and an ignorance of such laws determines to a large extent the difference between the mechanic and the engineer. Such laws and applications may be learned from books, and in this fact lies the opportunity which the libraries have for furthering industrial progress.

There are various ways in which the librarian's work may be to the advantage of engineering education, by which term is meant the dissemination of knowledge which bears upon and influences industrial development.

The library may supply such scientific and technical literature as will meet the requirements of those who wish to use the same for recreation or for general information, and therefore including writings of a popular nature.

The library may stimulate interest in scientific and technical matters among high school students and others who are to choose their life's work.

The means may also be offered to technical men for continuing their studies, or in carrying on investigation, for which purpose a good reference equipment is requisite.

The library, in placing at the disposal of the

workman-artisan class the literature best suited to the needs, may accomplish results of inestimable value. "The vast number of workers, so important to the future welfare of the republic, deserve and are in need of more consideration and encouragement for self education than are those who constitute what are known as our educated classes." It is to the means of giving aid to this class that I wish especially to point.

Libraries have been and are at the present time very inefficiently dealing with this matter, the following remark recently made by a prominent technical man emphasizing this point: "Instruction in engineering literature is not organized, it is not looked after, it is not cared for, yet it is one of the most important questions. On entering a modern public library one finds excellent reading lists upon almost any topic in history, art, literature, and some science, but none on engineering or technical subjects."

A study of methods of increasing the efficiency reveals some of the causes of inefficiency, principal among which is the lack of a sufficient number of books, and, what is equally harmful, the presence on the shelves of books whose influence is not only indifferent but actually harmful. A great improvement can undoubtedly be effected by the judicious application of the process of subtraction from, as well as addition to, the shelves. The unsatisfactory selections so commonly made, and the requests which are frequently put to its individual members for book lists, have furnished the incentive to the Society for the Promotion of Engineering Education in appointing a committee of seven members, representing various lines of technical and engineering work, naming as the duties of such committee the compilation of a list of scientific and technical books which could be recommended for library use.

It has appeared to our committee that for various good reasons it would be best to confine our work, at the beginning at least, to the selection of books for the smaller libraries, and including perhaps not more than one hundred and fifty titles. In this way it was thought that the best results with the time at our disposal could be accomplished.

I had hoped to present at this time such

a list, but, owing to the time necessary and the difficulty in arriving at an agreement which the geographical distributions of this committee involves, I am, unfortunately, unable to carry out my expectations; and the publication of the same will, therefore, have to be postponed to a later day.

From expressions of opinion which have come to my attention, I incline to the belief that many librarians may not view our efforts with favor, and will repeat with unkind accent, "another bibliography prepared by experts." I admit that there is some ground for the assertion that a specialist will usually make a poor selection, for general library purposes, of books dealing even with his line of work, having his nose buried so deeply into his subject that he is unable to obtain a fair perspective. It is difficult for him to judge of the value or even to see any value whatever in the elementary books which are most important from the library standpoint, and, in fact, many specialists are totally unfamiliar with the elementary literature in their lines. The objection that professional prejudices and jealousies are likely to be detrimental to proper selection might also be a factor, though certainly a minor one. A scientific and technical library, chosen by lists made independently by specialists in various lines, is liable to be unbalanced by reason of the various ideals which different men have as to library requirements.

Braving such criticism, our committee has undertaken the work, and it is hoped that the librarian may look with favor upon the results, especially when considering the fact that various difficulties, limitations, and faults are realized by the committee, and attempts have been made to remedy or minimize them.

In examining the engineering literature various factors, which must be taken into account in making proper selection, become apparent.

Certain branches of engineering and science, especially those capable of spectacular treatment, have been subjected to a flood of literature during recent years. The greater part of such literature, in spite of its popularity, is not only unreliable and worthless, but is actually harmful and a hindrance to true progress in

engineering education. Many of these books have been written solely for the purpose of financial profit, and consequently have been manufactured as cheaply as the employment of cheap brain labor would permit. A number of books on electrical subjects may be readily named, which bear evidence of having been written by authors who know very little of the branches upon which they claim to instruct. Another deficiency in technical books, especially in those of elementary nature, is caused by the author's endeavor to place facts and laws in the most elementary manner possible, which is often done at the expense of truth and accuracy.

It is to be deplored that those who represent the most advanced learning in their profession seldom indulge in the writing of elementary books, since the financial reward for such work is not comparable to that which may be received in more strictly professional work. The writing of the elementary book is often therefore left to the amateur engineer.

The public demand may seem to make it necessary to place many undesirable books on the shelves, but it seems to me that just as much care should be used in barring misleading books in science and engineering as in excluding those which are detrimental from the moral standpoint. A book recently issued, written evidently with the sole hope of large sales, deals with the telephone. Many statements made therein show the author's ignorance of fundamental science, or his total depravity in trying to pass them off as elementary science to the uninitiated; yet this is a book for which there is a large demand, due to a general desire for the information which such work purports to give. On the score of inaccuracy and simplicity carried too far, the majority of the books belonging to the A B C class of publication should be rejected.

In scientific and engineering lines the steady and rapid progress has made the need of revision of its literature especially great, and there is perhaps no other department where books so soon become of the antiquated order as here. For this reason a selection may safely be confined almost entirely to publications of the last few years.

In arguing for the organization and more efficient operation of scientific and engineering departments in the public library with the view of helping especially the working class I am well aware that nothing new or heretofore untried is being presented. I will anticipate some of the objections which may be raised against this system for industrial betterment. It will be argued that certain libraries have maintained technical departments at considerable expenditure of capital and labor, but that little interest has been manifested in the same by the people who were to be benefited.

It is true that only a small percentage of the industrial workers seem to have an ambition to rise, strange as this statement may seem, and even if possessed of such, few have the enterprise to do the extra work necessary to further this ambition. The results, however, which can be effected by ministering to the requirements of those who have both ambition and enterprise, even though such number be small at present, is a sufficient argument for carrying on the work. In this way the library may serve as a net spread wide to catch the talent which the country produces.

It is argued that the man who works eight hours a day is not eager or in good condition to put in his little spare time with books; but, with the better class of such men, their minds are, after their day's manual work, fresh and eager for mental work which they may be given at night. If literature having some bearing on their daily work be placed in their hands they will be bound to become interested.

Further it may be said that manufacturers have installed libraries in connection with their works and have even offered free instruction to their employees. The indifferent success which such attempts to improve the men have met points to possible failure for public libraries if they take up this work. It has been a matter of common experience, however, that advantages such as gratuitous instruction offered by employers are seldom appreciated by employees, for the majority become suspicious of the intentions, feeling that such efforts are being made in the interests of capital rather than labor. To the library this is a matter of less moment, for the public may be

made to have a feeling of ownership, which is synonymous with a feeling of interest. There may be means whereby the library may increase such interest. An experiment with this in view is to be tried by the Public Library at Madison, Wis., during the coming winter. It is proposed to have a series of informal talks or lectures given to the employees of local factories upon technical subjects which may be of interest to them, a small charge to be made for the course. The proceeds are to be used for the benefit of the technical library, books and periodicals being purchased which will be of most service to the contributors. Experience has shown that a free course of lectures will not retain the interest of the audience as will a course in which money is invested, and in addition to retaining such interest it is thought that the investment of the proceeds as before mentioned will increase the interest in the library. The lectures are to be given by local engineers and professors of the College of Engineering of the University of Wisconsin, and almost any public library can easily get up such a course of talks, as the technical men of the community will readily lend their assistance.

The library, to be a place of study, requires a good list of reference books and journals. Current technical and trade periodicals would be a drawing card, and those who possess, even to a minor degree, the ability of self-education will find here their mental nourishment. In almost every industry there are now technical books and trade journals and catalogues of very high educational value which may be acquired at a very small cost. A most valuable part of engineering and scientific literature is in such publications, and with bound volumes of the same the librarian might readily compile reading lists for those who desire to look up any particular line.

Other reference books should be available,

such as Kent's "Mechanical engineer's pocket book," Foster's "Pocket book on mechanical engineering," Trautwine on civil engineering, electrical and mechanical dictionaries, books for self-instructing in drafting, an excellent example of which is Davis' "Mechanical drawing and machine design."

Books which are in many ways ideal for such reference library are those published by the International Correspondence Schools of Scranton, Pa., consisting of bound volumes of their lesson sheets on subjects such as electrical engineering, mechanical engineering, civil engineering, shop practice, steam engineering, and various other lines. Each subject is treated in several volumes, taking it up from the very elementary point and gradually developing it through a comparatively advanced stage. A student may therefore take up a subject at any point to suit his preparation, and since the works are fairly complete, supplementary books are necessary. The books have been prepared by specialists and authorities in various lines, and have been successfully designed to meet the requirements of those seeking self-education. These works have in the past been available only to those who paid the fee as correspondence students, but the International Correspondence Schools have recently changed their policy to the extent of allowing public libraries to obtain their publications.

If study of drafting and designing is to be carried on it might be advisable to place at the student's disposal drafting boards or tables. Other facilities might also be made available, but an enumeration of such extension work would carry me beyond my intended destination.

By suitable scientific instruction the usefulness of the industrial worker to society is increased, his horizon is broadened, the dignity of his calling is developed; and no other agency seems as universally suited for furnishing such instruction as does the public library.

PLAN FOR THE ORGANIZATION OF AN INSTITUTE FOR BIBLIOGRAPHICAL RESEARCH.

BY AKSEL G. S. JOSEPHSON, *The John Crerar Library, Chicago, Ill.*

DURING the days of the discussion of the co-operative cataloging scheme a couple of years ago I presented to the Co-operation Committee of this Association a plan for a complete American bibliography. This plan was based on the same mechanical principle as the cataloging plan presented by the committee at the Montreal conference, and provided for electrotypes to be made for single entries from which cards could be printed and which also could be used for printing of bibliographies in book form, to be kept up to date by cumulative supplements and cumulative new editions. My scheme for carrying on the work was also largely the same as that suggested by the committee. The entries were in all cases to be made from the books or articles themselves, not from other bibliographies, and the work, it was suggested, might be done in co-operation by a number of leading libraries, the field of work to be divided according to the particular strength of each co-operating library. For instance: the literature previous to 1700 might be recorded by the New York Public Library, the copyrighted books after 1870 by the Library of Congress, the literature of medicine by the Surgeon General's Library, that of geology by the United States Geological Survey, etc. A central bureau was to be established for the supervision of the work, for revision as well as for the printing and distribution of the cards and other publications. The cost of organization and maintenance until the undertaking would be self-supporting should be borne, it was suggested, by such national scientific societies as might be interested in a scheme for an American bibliography.

The Co-operation Committee expressed in its report to the Montreal conference the hope that the plans for the co-operative cataloging of books for libraries might pave the way for this plan. The Bibliographical Committee of the American Historical Association to which it had also been presented did not see its way to make any recommendation.

Now, the failure of the scheme was inherent

in the proposition that institutions, libraries and societies, founded to further certain defined interests, should spend a part of their income in the interest of an undertaking which, while touching their own interests at more than one point, could not be said to be part and parcel of their work. And it soon became clear to me that the only way to solve the problem would be through the establishment of a separate richly endowed institution, unaffiliated but working in harmony and co-operation with other institutions of learning. There are institutes established for chemical, medical, archaeological research. The bibliographical needs of American scholarship require the foundation of an institute for bibliographical research to be a centre for investigation and publication in the field of bibliography. The chief undertaking of such an institute, around which all its other work should centre, would naturally be the American bibliography, conceived in its very broadest sense, not merely covering literary productions printed in America, but also such dealing with American subjects and written by American authors, even though printed elsewhere. It would naturally be divided in two parts, the bibliography of current literature and the retrospective bibliography of the past. The retrospective work should be taken up piecemeal, so that the most useful and so far most inadequately treated subjects be undertaken first. For instance, to attempt a complete bibliography of medicine, of American ethnology or geology, would be futile; on the other hand, bibliographies of photography, of education, of fine art, of engineering, of bibliography, would be invaluable. All the work of the Institute should be conceived as parts of its American bibliography and as far as non-American publications are recorded, as parts of the universal bibliography which for centuries has been the dream of bibliographers and librarians. If I claim that this universal catalog is possible I base this assertion on the mechanical principle of electrotype plates for single entries. By using such plates, as much

of the work as is completed will always be ready for use, and nothing will ever be out of print.

The bibliographical problem is international. An attempt to solve it from the standpoint of a single country, without proper attention to its international aspects, will invite failure. If a bibliographical institute be founded in this country it must seek co-operation with similar institutions in other countries. Such institutions are the International Council for the "Catalogue of scientific literature" in London, the Institut International de Bibliographie in Brussels, the Concilium Bibliographicum in Zurich. In this country various independent undertakings might be co-ordinated with each other and with the work of the Institute; for instance, the bibliographical work of the Library of Congress and the various government bureaus at Washington, the co-operative cataloging of articles in serials carried out under the auspices of the A. L. A. Publishing Board, the several bibliographies of individual states in the Union published by the American Historical Association.

The functions of an institute for bibliographical research would by no means be exhausted with the preparation and publication of bibliographies according to a preconceived plan. Arrangements should be made by which students engaged in research might have special bibliographies prepared for them. It is highly important that literary investigators be relieved from the preliminary work of compiling bibliographies of the subject they intend to investigate, thus saving valuable time that would be more profitably spent in productive labor. There should also be provision for temporary employment of students and bibliographers, desirous of carrying out some special bibliographical work under the auspices of the institute. These would be paid on the basis of the salaries of the permanent officers of the institute and the result of their work published by it in its regular style, on cards and in books, printed from electrotypes. And societies such as the proposed American bibliographical society might make arrangements to have the institute issue their bibliographical monographs.

These are the three functions of modern bibliography: recording, classification, and

evaluation. And the organization of the institute should be planned so as to include all three. For each publication recorded there should be supplied

(1.) A bibliographically accurate copy of the title, with collation and other descriptive notes, such as contents.

(2.) The indication of its place in some recognized system of scientific classification.

(3.) A note of evaluation telling the bias of the author, whether the work be based on original research or is a compilation from secondary sources, and whether it is a popular account or intended for students only.

The staff of the institute would ultimately consist of a director, a chief clerk or business manager, a number of special bibliographers, scientific men, each a specialist in some field of research, and also trained in bibliographical method, with catalogers, indexers, and other clerical assistants.

The cost of an institution of this kind must be considerable. The only way to establish it must be by a large endowment and by its utilizing existing institutions in all ways possible. The Co-operation Committee estimated in its report to the Montreal conference the cost of preparing and printing cards at 85c. per title including electrotypes; if the work of the proposed bibliographical institute be estimated on the same basis, we might calculate the cost from \$1 to \$1.50 per title. While the ultimate endowment must be considerable, the work should begin in a moderate way. There must be a great deal of experimenting, a great deal of feeling one's way, before the sure path be found and an adequate basis made for the work. Some revenue might be expected from the sale of cards and book publications. The institute would, however, not be a commercial undertaking, and the prices of its publications should cover only the cost of stock, printing, and distribution.

Perhaps the first step towards founding the institute would be to offer post-graduate instruction in bibliography to scientists who desire to make it their life work, whether they be candidates for positions with the institute or wish to prepare themselves for bibliographical work in general or for leading positions in libraries.

THE WORK OF THE DIVISION OF BIBLIOGRAPHY, LIBRARY OF CONGRESS.

BY W. DAWSON JOHNSTON, *Library of Congress.*

SOME ONE has said that the American student spends in copying title-pages the time that other people give to reading books. Perhaps this is true; other people may not give much time to reading, or, the American student may get more from title-pages than other students get from books. But if it is true that we have devoted so much attention to bibliography, why have we so much still to do, and why has so much of our work been of merely local and temporary value? The reason, I believe, may be this: we have been inclined to regard bibliography as we have been accustomed to regard the older sciences with which we have been familiar; we have looked upon it as we have looked upon them, as the natural product of the intellect of the individual and the proper province of speculative thought. Little by little we are learning, however, that bibliography is a *descriptive* science, that its value as a science is in proportion to its completeness and exactness, and that its completeness and exactness are dependent upon the systematic co-operation of professional bibliographers. In other words, we are recognizing that it is no longer sufficient to leave our study about books to chance, to arrive at our knowledge of books by guess-work, to entrust our information concerning books to the memory. We are no longer content to print our books and turn them out into the world trusting that they will come back when needed; we are no longer content to take the first book or any book on a subject from the shelves; we are no longer content to trust our own opinion or that of our neighbor regarding what we should read. Books that are interesting we have learned may be misinforming, and books that have at one time informed us may now be misleading. We must be instructed about books by the bibliographer, just as we are instructed concerning other things by specialists, we have concluded. It is these things that have led us to see the importance of the organization of bibliographical agencies and the consequent systematiza-

tion of bibliographical knowledge — for in all the descriptive sciences the one is the necessary condition of the other. Economic, geological, and archæological surveys are already recognized as the function of the state, and the individual who should undertake a census of the United States would simply amuse. And now we are beginning to see that the bibliographical survey of the country is also the function of the state.

In the middle of the last century librarians planned to make the Smithsonian the bibliographical center of the country. That institution, with the co-operation of Henry Stevens, undertook the compilation of a *Bibliographia Americana*, and at the same time inaugurated the co-operative cataloguing of American libraries by the preparation and printing, according to the Jewett plan, of a catalogue of the collection of ancient history in the Library of Congress. In 1854, however, the Regents withdrew their support from the library and all the librarian's bibliographical undertakings fell to the ground.

After the failure of these plans at the Smithsonian, a "Student of American bibliography" suggested in the *Historical Magazine* (vol. 2, p. 335, November, 1859) the formation of an American Bibliographical Association, the object of which should be the preparation of a complete national bibliography. With a board of government, library, and bibliographical collections at some central point, he said, and with the coöperation of the members of the Association, and the publication of quarterly or semi-annual bulletins, much, very much, might be done towards the accomplishment of the desired result. It was not, however, until 1876 that such an association, the American Library Association, was formed. And it was not until 1886 that the Association recognized the importance of its bibliographical functions by the establishment of the Publishing Section, and not until 1897 that the Association fully recognized the pos-

sibilities of its relations with the national library, and sought re-incorporation under the laws of the United States, with headquarters at Washington. During the early history of the Association all the bibliographical work of the Association was published in its official organ, the *Library Journal*. With the establishment of the Publishing Section, however, more elaborate bibliographical undertakings were planned for the Association. Among these the report upon the organization of the Section mentioned, (1) the printing of catalogue cards of leading new publications, (2) the essay index, (3) the indexing of scientific serials, transactions, and monographs, and (4) an index to bibliographical lists; and concluded with the following remark—"One of the most important functions of the Publishing Section will be the establishing of an understanding between the many librarians who are engaged on one or another bibliographical undertaking, often covering the same ground, or at least overlapping, where a mutual understanding would lead to an equitable division of the field. And it is believed that more of this special work would be intelligently done in one and another library if there were some central agency through which a proper division of labor could be arranged."

These plans were for the most part realized during the decade following the establishment of the Section: catalogue cards for current books, the "A. L. A. index to general literature," and cards for current periodicals were published, and annotated lists issued of books on fine art, American and British history. The carrying on of these undertakings by this Association was an important step in the history of American libraries. They were, however, so far dependent upon the beneficence of individuals that their continuation appeared problematical. At this juncture the possibilities of the national library, then recently reorganized, began to be felt. After the accession of the present librarian they were recognized by the state also, and during the past year the first and most practical of the bibliographical functions of the Association, the cataloging of current literature, has been delegated to the Library of Congress. Doubtless it will soon delegate to

the library other bibliographical functions also, and require other bibliographical duties. So that while the Association will remain the legislative body of American librarians, its administrative duties will be more and more discharged, under its direction, at the national library, and the dream of Professor Jewett and of that anonymous "Student of American bibliography" at last be realized: an association of American bibliographers, and that association the trustee of the greatest bibliographical institution the world has known, a body which never dies, a treasury which is never empty.

It is not for me at this time to speak of the extent, the character, and the significance of all the bibliographical work of the national library; the great bibliographical collections may be described at another time, the value of service in the library as an education in scientific bibliography is patent to all, and the inestimable value of the work of the large corps of specialists attached to the library staff can best be demonstrated by themselves.

Neither is this the place to describe and comment upon the bibliographical work of the country at large—to speak, for example, of the value of such local bibliographical work as is being done by the United States Government, the Virginia Historical Society, the Ohio State Library, the New York Public Library, the Kansas City Public Library, Columbia University, and Cornell University. This may be described elsewhere. I may be allowed, however, to say something about the character of the Division of Bibliography of the Library of Congress, because that is the only bibliographical institution in the country, and a distinctive feature of the organization of the national library.

The policy of the librarian regarding this branch of the service of the library is defined in his published statements to be, the pursuit of investigations involving research too elaborate for the attendants in the reading-room, or in form inconvenient for them to handle expeditiously, the compilation of lists of references on topics of current interest, particularly upon topics which are the subject of investigation, discussion, or possible legislation by Congress, the recommendation for acquisition by the

library of such useful books as in the course of the foregoing duties and from specific examination of bibliographies and reviews, the Division discovers to be lacking, and, in the last place, the coöperation with other libraries in all useful bibliographic undertakings.

In the pursuit of this policy the Division, under the direction of Mr. Griffin, has since its establishment answered 2,125 communications asking for bibliographical information. In the investigation of the questions thus presented, and particularly in the course of the investigations which have led to the published lists of references upon the questions of the day, the deficiencies in the library's collections have been discovered and recommendations which would lead to the supply of these deficiencies made by the Division. These recommendations have numbered 11,197 since the establishment of the Division. These are the most important functions of the Division — the answer of bibliographical questions presented to the library, and the systematic building up of a collection of books at the capital which will make possible the answer to all such questions.

In answering some of the questions which have been referred to this Division it has been necessary to compile extended lists of references. Of these the most complete have been printed; the selected lists are either in typewritten form or on cards.

Of the first class are the following:

Lists on Colonies and Trusts, each of which has gone through two editions.

Lists on Reciprocity, Mercantile marine subsidies, the Danish West Indies, Porto Rico, and Samoa and Guam, and a list on Irrigation, which is in press.

The following lists remain in typewritten form:

Lists on the Monroe Doctrine, the Trans-Siberian railway, Immigration, Cabinets of England and America, Jury system, American invasion of British commerce, Anglo-Saxon alliance, Postal service of the United States, Educational qualifications for suffrage, Study and teaching of history, State banks and banking, Universal postal union and parcel post, Popular election of senators, Chinese in

America, Municipal affairs, the Navy, Industrial arbitration, Iron industry in Sweden and Russia, Liquor question, Gothenburg system, Municipal ownership of street railways, Mormonism, Party system, Presidential inaugurations, Cuban campaign of the Spanish-American war, Constitution of the United States, Postal savings banks, Highway improvements, Annexation of Cuba, Compulsory education, Compulsory voting, Convict labor, Expansion.

These are selected lists intended for the use of the library, but if needed for use elsewhere may be expanded and published.

In addition to these published and typewritten lists are lists still on cards. Among these are:

Lists on Alaska, American State Archives, Anarchy, British Columbia, The Budget, the Clayton-Bulwer Treaty, Commerce, Comparative legislation, Constitutional law, Eight-hour day, Genealogy, English local history, Far west, Indian names, International arbitration, International law, Land tenures, Library training, National university, the Negro, Nineteenth century, The Philippines, Proportional representation, Railroad finance, Siberia, Spain, Sugar, Transportation, and Triumphal arches.

These lists are accessible within the Division, and when required will be either typewritten or printed and published.

An advance upon the mere list of references has been made in treating the subjects of apportionment and the treaty-making power. The Division has prepared an analytical and digested list of documents and discussions upon the apportionment of representatives from the first apportionment in 1879 to the present time.

There has also been prepared a bibliographical account of the treaty-making power of the United States, giving the authorities on international law and constitutional law which set forth the various views of the powers of the state in its foreign relations and which afford a comparison between the methods of making treaties in the United States and Great Britain. The references included likewise trace the

history of the growth of the treaty-making power under the Confederation and Constitution and point out the sources dealing with the discussions that have arisen over the constitutionality of special treaties. A chronological conspectus of the latter is given in addition to an enumeration of general discussions of the subject.

The Division also has in preparation a bibliographical account of the origins and development of the Senate.

These papers are in the nature of bibliographical histories.

The Division has also coöperated with libraries and bibliographers in useful bibliographical enterprises. Among these may be mentioned the preparation of the "Union list of periodicals currently received in the libraries of the District of Columbia," published last year, the preparation of lists of American editions of Milton, works on the metric system, works on local history, etc.

In this way the Division is of service to the student and the reference librarian.

But the Division seeks to be of special service to the bibliographer. It has access to the largest collection of bibliographical material on the continent, and therefore has in preparation a list of special bibliographies; it has also full information regarding such bibliographical work as is in progress. Some of this was published in an article on "Present bibliographical undertakings in the United States," in the *Library Journal*, September, 1901. This information regarding bibliography both retrospective and current should prove of special value to the bibliographer.

The significance of this branch of the work of the national library may be pointed out in a few words. First, it should make unnecessary much of the work now expended on reference lists by smaller libraries; second, together with the work of the other branches of the library, it should make possible the ultimate correlation and completion of the bibliographical work of the country. Of some 1,225 lists recorded in Miss Newman's "Index to subject bibliographies in library bulletins," about one-half are duplicates. Of these lists, 11 related to municipal government, 12 to education, 13 to music, 13 to botany, 13 to electricity,

and 14 to Christmas, and of the 45 libraries referred to, in 1895, 7 prepared lists on the Armenian question; in 1896, 6 prepared lists on South Africa and the Boer question, 10 lists on Cuba, and 34 lists on the currency question; in 1897, 9 prepared lists on the Cretan rebellion, and 14 lists on the Alaskan gold fields. And this enormous waste of labor still goes on, as the quarterly index to reference lists published by libraries, compiled by the Providence Public Library, shows. In 1899, for example, 10 more lists on South Africa and the Boer question were compiled in addition to the 6 compiled in 1896, and in 1900, 17 lists were published upon the subject of China and the Far Eastern question. Much of this waste of labor, time, and money on the part of local libraries may, perhaps, be saved by the use of the publications of this bibliographical bureau and by the preparation and publication by this bureau of comprehensive lists of references upon all questions which are at once of popular interest and practical value. Such lists would serve the double purpose, when checked up, of indicating both the resources and the wants of the library in which they were used, and so prove, potentially, many times as valuable as the lists now printed by the local library.* At the same time this would give the local library the freedom in which to carry on the bibliographical work which the national library cannot do and which the local library, or the library possessing collections of unique value, can do.

I need not dwell upon the influence of local bibliographical work upon local library interests, and upon the possibilities of coöperation between the local librarian and the local printer, journalist, and man-of-letters in the preservation of the local literature. I must, however, emphasize the fact that the local collection and record of local literature is essential to a complete collection and record of the national literature, and that while the results of the work done by local libraries may be brought

* I do not mean by this that these lists are bibliographies, but that those which are of value represent bibliographical work and an expenditure of time which would better be employed in the study of such bibliographical lists as may or should be published by such a bibliographical bureau as I have referred to. — W. D. J.

together at the national library, — while there may be a bibliographical clearing-house at Washington, — the initial bibliographical work of the country, work similar to that done by the New York Public Library, for example, must be done by the local libraries.

Nor need I more than refer to the fact that bibliographical catalogues of special collections, like the Avery collection at Columbia University, or the Dante collection at Cornell, are essential not only to their extended usefulness to the student, but also to the organic development of such collections, for by such a catalogue only can a collection, what it has, and what it lacks, be made known to those collectors who can, perhaps, best supply its wants. The bibliographical work of the local collector and of the special scientific collector are thus both essential.

The addition and multiplication of the results of their work may be the work of the national library; this work it has sought to accomplish in the past and will, under the

librarian's direction, seek to accomplish in the future, in these three ways, — and under these three heads the bibliographical work of the library may be summarized: —

- (1) By keeping a record of all bibliographical work, past and present;
- (2) By preparing lists of references upon all popular questions; and,
- (3) Through the Catalogue Division, by preparing and publishing a bibliographical record of every book which should find a place on the shelves of the national library, that is, on the shelves of the libraries of the United States.

These things are indicative of the bibliographical work which the National Library has already undertaken; what further work it will undertake depends upon the needs and wishes of the students of the United States, and their representatives in Congress assembled, and especially upon the wishes and advice of the members of this Association.

THE CARD DISTRIBUTION WORK OF THE LIBRARY OF CONGRESS.

BY C. H. HASTINGS, *Library of Congress.*

THE work of distributing printed catalogue cards to libraries was commenced by the Library of Congress about Nov. 1, 1901. Up to June 14, 1902, 170 libraries had subscribed for cards. In addition to these there were on the list of subscribers seven individuals, mostly university professors, who subscribe for cards in their special lines.

The libraries using the cards may be classified as follows:

Public libraries of 100,000 volumes or more, 16; public libraries of from 25,000 to 100,000 volumes, 44; public libraries of from 10,000 to 25,000 volumes, 30; public libraries of less than 10,000 volumes, 28; university libraries, 12; college libraries, 14; high school and normal school libraries, 4; libraries of departments and bureaus of the United States government, 4; state libraries, 7; theological libraries, 2; law libraries, 2; technological libraries, 3;

libraries of historical societies, 2; one art institute library, one bibliographical society.

Up to June 16th 20 depository libraries had been selected, namely: Atlanta Carnegie, Brooklyn Public, Cleveland Public, Denver Public, Fiske Free and Public (New Orleans), Illinois State, John Crerar (Chicago), Johns Hopkins University (Baltimore), McGill University (Montreal), Mechanics' Institute (San Francisco), Massachusetts State, New York Public, New York State, Philadelphia Free, St. Louis Public, University of Minnesota, University of Nebraska, University of Pennsylvania, University of Texas, Wisconsin State Historical.

Statistics in detail of each order filled during the month of May show that during that month about one-half of the cards sold were to fill orders by serial number. It goes without saying that, except for an occasional card out

of print, cards can always be furnished when ordered by serial number. The test comes in filling orders submitted by author and title. During May cards were supplied for approximately three-fourths of the titles submitted in this form. The proportion, then, of sets of cards supplied to titles ordered, reckoning both serial number and author and title orders, was approximately seven-eighths.

The experience of the libraries using the cards has been so well summed up in the report of the Committee on Library Administration, and in the paper on the subject in the June number of the *Library Journal*, that further statistics in regard to the matter seem unnecessary. Accordingly I shall devote the rest of the paper mainly to a discussion of some of the chief difficulties in the card distribution work, with a statement of what is being done by the Library of Congress to overcome the difficulties, and wherein the libraries subscribing for cards may assist in their solution.

1. *Delay in receiving the copyrighted books.*

—The framers of the present copyright law evidently had no provision as to card distribution work. The law simply requires, as to deposit of copies, that "on or before the day of publication in this or any foreign country two copies be delivered at the office of the Librarian of Congress or deposited in the mails within the United States addressed to the Librarian of Congress." As the law now stands, it is entirely possible for a New York publisher to conform to it and yet place copies of a publication in the hands of individuals and libraries one day before the deposit copies reach the Copyright Office at Washington. There are excellent reasons for supposing that publishers sometimes give themselves at least three days of grace, after the publication of a book, before sending in the copies to the Copyright Office. In addition to this there are usually a few books each month, probably less than one per cent. of the whole, which through carelessness on the part of publishers or authors come to hand weeks after publication, or do not come at all, unless a letter of inquiry is sent out by the Copyright Office.

Another provision of the law that causes trouble is one requiring that there shall be de-

posited a copy of every subsequent edition of a book "wherein any substantial changes shall be made." The question as to how much constitutes a substantial change and who is to be the judge as to the same not being settled by the law, room is left for a variety of interpretation with the result that the later edition may or may not come to the Copyright Office, while reprints bearing a new date and requiring a new card quite as much as a new edition, are not sent in at all. The non-copyrighting of new editions is especially noticeable and annoying in the case of law books.

In spite, however, of disturbing exceptions, the fact remains that the great majority of copyright books come to hand promptly after publication, so that, after allowing for the time that it takes to catalogue the books and get the cards into stock, 90 per cent. of the cards for current copyrighted books, on the average, are ready when orders are received for them. But the question remains what can be done about the other ten per cent. The Copyright Office has changed its routine so that books are sent to the catalogue department as soon as they are received, and it stands ready at any time to investigate a case of failure to send in the deposit copies. Clearly the Copyright Office is doing all it can under the present law to facilitate the prompt production of cards for copyrighted books.

After the books are received in the Catalogue Division, two weeks, on the average, are required to produce printed cards from them. Several days might be saved here were it not for the necessity of holding titles to get a form of five which can be given a subject heading in the proof. It is possible that ways will yet be devised to materially reduce the time required for cataloguing.

As far as the filling of the orders by the Card Distribution Section is concerned, excepting in the case of very large orders, it seldom happens that the order remains unfilled for over two days. This much delay has been necessary owing to the fact that orders come in very irregularly. After the 1st of July, when the overflow in the catalogue room will be placed in the card distribution room, we expect to have a force sufficiently elastic to

enable us to fill almost any order within twenty-four hours.

In spite of what has been done and can be done to expedite the work, there is likely to remain always a percentage of copyrighted books for which cards cannot be furnished if a library orders them immediately after the publication of the book.

A wait of two weeks, according to the report of the Committee on Library Administration and according to our own experience, will usually enable the library to obtain most of the others, probably nine out of ten per cent. We prefer to have the waiting done at the other end of the line, it saves checking and filing on our part, and it would seem that it ought to be a saving to the library ordering cards. However, if libraries do not choose to wait a couple of weeks for the 90 per cent. in order to get the 99 per cent. all at once, we will continue to hold titles for cards just as we have done in the past. We will also hold titles longer in order to secure the hundredth per cent., but we do not advise libraries to wait for this last per cent., as it is sometimes a very elusive quantity.

2. *The number and variety of current non-copyrighted books ordered by American libraries.*

—The number of very important books in this class for which cards are ordered by libraries is of course not large. The Library of Congress might easily buy all of them, and by waiting a year or two it would probably become apparent in one way or another what the most important books were. This seems to have been, to some extent at least, the old way of selecting books at the Library of Congress. But when the card distribution work began the Library of Congress was all at once called upon to be as up-to-date as all the up-to-date libraries on the list of subscribers to the cards. It was expected to have cards not only for the most important books, but for all of the books which chanced to strike the fancy of librarians. The result can be inferred.

The attempt to reduce the time necessary to secure cards for books ordered to a matter of definite periods with definite checks, which worked very well in the case of copyrighted books, has been more or less unsuccessful in

the case of non-copyrighted books. The time set has often proved too short, and not infrequently a book which we thoroughly expected would be ordered, has for some reason not been ordered.

The fact is recognized by those having to do with the ordering of books at the Library of Congress that it, being primarily a reference library, can never hope to buy and never ought to buy many books which may properly be bought by public libraries. At the same time there is a disposition to buy such books as we care to have promptly on their appearance and to send the books on to the catalogue department as quickly as possible. Books of this class for which there seems likely to be a large current demand for cards are now bought in New York, have a "hasten" slip inserted in them, and are sent to the Catalogue Division within two days after being received. In the Catalogue Division they are pushed through along with the copyright books, and cards are ready for them within two weeks.

To facilitate the prompt selection of such books the work of selecting them has recently been organized in such a way as to give the heads of Divisions, and others interested, a certain portion of the field and a certain number of critical journals for which each is held responsible.

The percentage of cards for non-copyrighted books which we have been able to furnish thus far is admitted to be small. Fifteen per cent. of those ordered would probably be an outside estimate. Unless there should be a marked gain in the number of volumes received and in the promptness with which they are received, the conclusion of the Committee on Library Administration, that the percentage of cards supplied for orders relating to this class of books is so small that it does not pay to order them except by serial number, is manifestly true of libraries which cannot wait; but the reward for waiting here is much greater than in the case of copyrighted books. One large library, the best waiter on our list, reports that it gets cards for sixty-eight per cent. of the titles which it submits for foreign books; another large library which submits its orders in the same way, but is a poor waiter, gets apparently only five per

cent. of the cards ordered. In view of the present effort being made by the Library of Congress to get a respectable number of this class of books on its shelves promptly we trust that some of the libraries, even though much disappointed in regard to the percentage of cards furnished in this class, will continue to experiment in ordering them a while longer.

3. *Ordering cards for books announced, but not yet published.*—This practice is a source of expense to us, and the advantage to the library ordering cards for such books must be a doubtful one. Orders for cards for Larned's "Guide to the literature of American history" have been coming in ever since the card distribution work began in November. Marconi's "Wireless telegraphy" is another old offender. Orders are constantly being received for books in series, some of which we believe are still in a nebulous state in the mind of the author. After the publication of the spring announcement number of the *Publishers' Weekly* the proportion of titles of books announced in the orders received was something alarming, in view of the fact that no charge could be made for looking them up. This has been remedied in the new price list, but we earnestly hope that the up-to-date libraries on our list will remain satisfied with being up-to-date and cease to speculate in futures.

4. *The smallness of the orders.*—The average size of the orders received amounts to less than one dollar; each order must be put through from half a dozen to a dozen processes according to circumstances. It is easily possible to come out the loser in handling the smaller packages. A few libraries on the list have inclined to the idea at times that a small daily order is the thing. From our point of view a weekly order is much more proper.

In connection with small orders a word may be said in regard to other small items in the book-keeping. In order to dispense with the services of a special book-keeper it is necessary to keep the accounts as few and as simple as possible. While we cheerfully give credit for cards returned on which we have made a mistake, we cannot give credit with the same cheerfulness, or at all, on cards in the case of

which the mistake was made by the library ordering the cards. Two or three cards, once they are removed from the stock, are poor property. We do not wish them returned even as a gift, much less can we give credit for them and write a polite note of acknowledgement.

5. *The fixed expenses of the card distribution work.*—For the satisfactory carrying on of the work four complete catalogues of the printed cards are now in use or are being prepared. In addition to these a catalogue of copyrighted books in the process of cataloguing, a catalogue of books ordered for which cards are wanted, and a catalogue of oddities and suspects for which we haven't cards and are trying to find out why not, are required. These catalogues must be kept up-to-date to the hour or they cannot be relied upon for filling current orders.

The work of the assistant in charge of distribution, and of the stenographer, is to a large extent not productive of direct returns in the way of cards sold. Add to these expenses about a thousand dollars a year for the storage of cards and it will be seen that the fixed expenses are at present large. If the amount of cards sold should increase to two or three times what it is at present, the fixed expenses, inasmuch as they will remain practically the same, will not be so formidable, but just at present they are an important and disturbing factor in the work from the financial point of view.

In the new regulation as to the sale of cards which we have distributed to such of the subscribers to cards as are present at Magnolia, I wish to call attention to a few points:

Notice that the regulations are in the form of proof sheets merely and are not to be accepted as final. The purpose of distributing them here is to enable subscribers to make suggestions to members of the Library of Congress staff present if they care to do so, or to submit them in writing at any time before June 27.

The chief changes made in the method of distribution appear most plainly in the price list.

In view of the fact that the working catalogues necessary for carrying on the business have

not yet been completed, that cards are still stored for the most part on temporary tables, and that the force required to carry on the work when at a normal, can as yet only be estimated approximately, it is recognized that any scale of prices fixed on at this time must still be tentative. A year later it may be practicable to announce a relatively permanent price list, but for the present we have contented ourselves with a readjustment of the old prices so as to make them correspond more nearly to the cost of cards, including the expense of handling them under different circumstances. The price for orders submitted in the form of serial numbers remains exactly the same, but in the price for orders submitted by author and title, one half cent has been added to the price of the first card to cover the cost of looking up the serial number and other items of work involved in handling orders by author and title. Provision is also made for extra charges in the case of lists which are not made out in the required form.

The proper subscription price for the proof sheets is still under debate, and it is not unlikely that the price indicated on the proof sheets will be changed in the final issue of the regulations. It is obvious that the proof sheets are issued to furnish a convenient means of ordering cards. If used for that purpose, notice that there is a provision for a rebate in the price up to the full cost of the proof. If not used for that purpose they should bear a much larger share of the cost of typesetting and fixed expenses of the card distribution work than is indicated by the price given.

In the price of cards subscribed for by classes and subjects there has been a very marked reduction. Instead of paying two cents each for cards on his specialty, the specialist can now get them for less than one cent if he will take the whole group.

The first six classes of cards offered for subscription are designed to be used by

libraries in place of proof sheets if they so prefer.

Class four, representing cards for a selection of the more important books printed in English and the most important books in other languages, and Class five, representing current non-copyrighted books printed in English, are especially designed for the smaller libraries. It is true that either selection will cost more than the proofs; but cataloging is a comparatively expensive process at best, and it is thought that the selection of cards will be found superior to the proof sheets in so many respects that they will well repay the extra cost.

The points of superiority may be briefly summed up as follows:

1. No further expenditure of time is required for preparing them for filing in a card case, as is required in the case of proof sheets;
2. in case a book is received which is catalogued by one of the cards, one card is ready at hand to be used in the main author catalogue or in some other way as a check on the book;
3. the same card furnishes the means of ordering more cards by serial number with the least expenditure of time and money;
4. the collection of cards not used at once can be regarded as a bibliography of books which the library may wish to buy in future, as well as a selection of titles which may interest some of its readers;
5. the non-current titles in the proof sheets are for most purposes an objection, in that each must be scanned in order to ascertain that it is not wanted. In the case of cards, on the other hand, the non-current cards need not be received at all.

The demand that the proof sheets be continued is so positive that there is no chance of their being suspended for the present. At the same time, it seems probable that enough libraries will be interested in the plan of subscription to cards in place of proof sheets to make it worth while to sort the cards in the way required by such subscriptions.

HOME LIBRARIES AND READING CLUBS.

By GERTRUDE SACKETT, *Supervisor of Home Libraries, Carnegie Library, Pittsburgh, Pa.*

STATISTICS show that the majority of a large city's population will not come to the library, and a progressive librarian feels his responsibility greatest toward those whose ignorance keeps them from understanding their own need. A part of the mission of the modern library is to awaken a knowledge of this need and then to meet it adequately. If to do this is necessary and important in the case of adults it becomes doubly so with children, who are in the most important habit-forming period of life.

In the city of Pittsburgh with its population of 321,000 there are about 100,000 children of a reading age. Of these not one-half are drawing books from our six children's rooms, and only a small number find it possible to get them from our deposit collections in the schools. What then of the remainder, to the most of whom the moral and educational influence of good books is denied, whose conceptions of life are allowed to form according to the precarious standards of their homes and neighborhoods? For the majority of these children are found nested in our crowded tenement districts or in the cheapest outskirts of our cities. There they live unnatural lives full of unchildlike scenes and lawless excitement.

Of the children who may be said to form our non-library attending public — excluding a small proportion who find food for the imaginative and investigative mind within their own homes — we may make three broad classes:

1. Those who wish to read, but to whom books are inaccessible.
2. Those who have no interest in books because they do not know them.
3. Those who are omnivorous readers, but of the worst, most pernicious type of literature.

In the first class are children who living at a distance cannot afford car-fare, or those children whose early life of drudgery at home, in the mill, factory, or shop, renders their over-tired bodies unable to make any extra physical exertion. To such the desire to read — either inherited or acquired — soon, through lack of

nourishment, grows into indifference and finally dies. The cravings of the imagination are deadened, imagination which in its different stages brings with it the joy and beauty of our lives, and without which life is reduced to the dull monotony of hard facts.

In the second group are placed those children in whose lives books have no place, whose interest is lacking because books are unknown. Such children we have found playing in the very shadow of a library building; a library, yes, but what that word represented, that it had any significance for them, they knew not nor cared. Perhaps their curiosity may have carried them beyond its portals, but the beauty, order, and quiet of the building, so different from their own disordered lives and homes, awed and embarrassed them, bringing to them a keen consciousness of their own unkempt condition. This can often be successfully overcome by the children's librarian if she is able to give them sufficient attention; if not, it may prove to the children an experience not to be lightly encountered a second time. And in this case interest must be aroused in some simple personal way, usually in their own home.

But by far the largest, most dangerous, and hopeless class are those who are already insatiable readers, but of most pernicious literature. I do not refer to that class of reading which is in itself harmless, but which wastes time, and demanding no thought, stupefies the mental faculties. I refer to that which is positively harmful, which makes crime attractive and dresses immorality in enviable luxury. It is a fallacy to think that the poorer classes are not reading. They are, how much we cannot adequately estimate; if we could, I think we would be startled out of our complacent inactivity in the matter. Go, as I have, week after week on Saturday evening to a stationer's in one of the crowded portions of the city and watch the steady stream of people who seek the tiers of illy assorted novels and the rows of cheap magazines and newspapers. Note

their selections. Watch what the messenger boys on the street cars and the shop girls at noon hours read. Examine the books you find under the bed, on the dressers, trunks, or kitchen tables — rarely in the parlors — of their homes, — and then marvel that human nature is so innately good, that we have as high a standard of morals and citizenship as we have.

Pittsburgh — I speak of it only as the city I know best — has eight well-equipped book stores. In fearful opposition are the uncounted hundreds of little stores where cigars, bad candy, and worse literature are alluringly displayed. There books may be rented for the nominal sum of one to ten cents, or purchased at a price ranging anywhere from five to fifty cents. Unfortunately, the worse the book the lower the price. "I like Conan Doyle," said a lad of fifteen, "but he comes high. You can get a lot of this for a nickel," indicating a second-hand copy of *Jesse James*. That boy lives within short walking distance of a public library. He is now an enthusiastic member of a library club. Occasionally *Jesse James* or the *Old Sleuth* still peeps from his pocket while he pores over the books on the club table. Lately he asked for the "*Last days of Pompeii*," and another boy, a club member, complained that he had not time to read "*Rip Van Winkle*" during the week, as his friend had borrowed it. A taste for exciting and immoral literature once firmly established is hard to counteract, but taken in time is easily guided into other channels. Not poverty of food and clothes, but poverty of higher ideals and better standards of living is the greatest need from which these children suffer. Believing as we do in the elevating power of books, how can we best bring them to these children to make their lives broader, fuller, and richer, thus leading them to a better citizenship and a higher civilization?

Mr. C. W. Birtwell, of the Children's Aid Society of Boston, found a solution for this problem when, seventeen years ago in a tenement house, he gathered a group of children about him and nailed upon the wall the first home library. Since then a complete system of travelling home libraries has sprung up in Boston under his thoughtful supervision, and the work is spreading throughout the country. Mrs. E. M. Fairchild, of the New York State

Library, was the first to realize the importance of this work in connection with libraries, and to introduce it into the city of Albany.

In response to ninety-five letters sent to the libraries and charitable organizations of the principal cities of the United States, we have received twelve answers reporting the introduction of home libraries. These answers show four different methods of administration: The administration of home libraries under charitable institutions, under libraries, under charitable institutions and libraries in conjunction, or under library schools and associations. Of those supervised by charitable institutions, Boston has 60 home libraries, Baltimore 30, Chicago 30, and Philadelphia 4; of those under public libraries, the New York Public Library reports 25, Cincinnati 15, Helena 2, and Pittsburgh 31. Under charitable associations and libraries combined, Providence reports 10. Under library schools and associations, Chicago 10, Brooklyn 5, and Buffalo 8. Much work is being done under the direction of university students and social settlements, which in its aim is akin to that of the home libraries. As yet Boston and Pittsburgh are the only cities having supervisors whose entire time is given to furthering the work of the home libraries. This special supervision is certainly important, as overtaxed librarians or philanthropic workers have not adequate time and strength apart from their regular duties for the problems constantly presenting themselves in home library work.

Books for the home libraries are either gifts of public-spirited citizens, as in Albany, Baltimore, Boston, Brooklyn, Helena, and Pittsburgh, or they are taken directly from the shelves of the public library as at Buffalo, Cincinnati, New York, and Providence. The selection of the books, whether donated or taken from the shelves of the public library, should rest with the supervisor or a specially appointed committee familiar with both books and children. Twenty-five dollars buys a neat little case and twenty volumes. Editions well illustrated, with attractive covers, should be chosen. In making up a library to be sent to a group, the sex, ages, and tastes of the children should be consulted. In many cities the libraries are kept intact, and pass progressively from group to group. This has

its drawbacks, as you cannot remove the books that are not being used and replace them by others. Then if you have aroused your children to an interest in animals by a trip to the zoo or circus; in flowers or birds by a walk in the fields and woods; or in foreign lands by a visit to the museum, you cannot immediately supply them with a number of books on the subject.

Records should be kept at the headquarters of the home libraries of donors of home libraries, books purchased, visitors of groups (including names of visitors, members, hour and place of meeting, and books charged to the groups), of individual children (including name, address, age, and general remarks), of books, pictures, and games loaned to group, and also a record of their circulation among individual children. A written report should be sent in monthly by the visitor of each group. These reports should be filed away for reference.

Two of the greatest problems in home library work are: 1st, how to secure the right kind of a home library visitor, and 2d, how to obtain access to the homes or districts most requiring the influence of the home library and the home library visitor. Books by themselves will do but a limited amount of good in these homes. The children's interest in them must be aroused through their interest in an individual. Primarily then the success of a home library group depends upon the visitor. They should be persons of tact, refinement, and culture, having not only a love for childhood, but an intuitive understanding of it. With this must be also a deep sense of responsibility in the task undertaken — and a spirit of sympathetic rational helpfulness. Such a visitor becomes the children's companion and friend, and later a helper and counsellor to the whole neighborhood, where little courtesies, hitherto foreign to the lives of the people, spring into being, and a greater carefulness in speech, dress, and the appointments of the home become apparent. The ideal visitor is hard to find, yet I firmly believe that if we have enthusiasm ourselves we will awaken it in others. We do not want temporary visitors, but we do want the young men and women who are willing to grow with the neighborhoods in which they have centred their interests to study the needs of the people, individually and collec-

tively, and be the medium for helpfulness between them and all the cities' civil and philanthropic institutions which can better their conditions.

There is still another side to the visitor problem. Interest may not be hard to arouse, but it is certainly at times difficult to sustain, and the home library work is so full of discouragements that a visitor, especially an inexperienced one in work with children, may feel herself unable to cope with it, and give up in despair. Monthly meetings of the visitors for discussions, reports, and helpful suggestions are invaluable, but I doubt if this is sufficient, as there are always those who cannot attend them. There should be some one having a practical knowledge of the work, and whose whole time is devoted to its cause, — some one to whom the visitors can go in moments of keenest discouragement, and discuss their perplexities. Sometimes the visitors fail to realize that the supervisor is anxious to discuss these problems with them, giving them as far as possible the benefit of the experiences of others. Until this is clearly understood and a stronger feeling of co-operation established, it is advisable that the supervisor make personal calls on the visitors.

Mrs. E. M. Fairchild, in an article on home libraries, suggests a class for the study of practical philanthropy under competent leadership. The idea is excellent, and would certainly create a corps of ideal home library visitors, if we could make one qualification, and that is that no one should be admitted to membership who is not willing to put her study to practical use — not only in investigating conditions, but in actually working to combat them.

Finding homes for the libraries in districts where they will do the most good is the second great difficulty. Lack of appreciation upon the part of parents who do not wish to be bothered with other people's children, but are perfectly willing that their own should reap all the advantages possible, is often met with; and neighborhood quarrels and jealousies, and the hopelessly crowded condition of the tenement houses, where boarders sleep by day as well as by night, often makes it hard to establish a group. But we rarely give up trying. One earnest home librarian said, "I worked a year to place a library in a certain district, devoting all my spare time to friendly calls there, — and I suc-

ceeded." Sometimes we have requests for home libraries, most often from localities where there is already one. Occasionally a visitor finds her strongest impulse for good work in the help given her by some one in the neighborhood.

Group meetings should be conducted in various ways, the method depending upon the class of children with whom the visitor is working. Though these methods may differ widely, the home library hour should always be one of genuine enjoyment, and yet everything the visitor plans, whether it be games, or reading aloud, or physical exercises, or classes in sewing and basket-making—everything should tend toward developing the children into happy, wholesome boys and girls. The visitor should not forget that through all this enjoyment she is giving the children a love for good books which will become their life-long friends and helpers, and whose influence will be felt long after hers has become a thing of the past.

Except in the case of very young children, boys and girls should be in separate groups, for the interests and requirements of boys soon outgrow that of girls, and it is hard to keep them happy with mutual profit. Home groups are adequate only to the needs of girls and young boys. A girl's social instincts, under moral conditions, never outgrow her home, and we should try to keep them centred there. The home library should come into their lives as early as possible,—even at the picture book and big print age,—for two reasons: because the earliest years of childhood are the most plastic and impressionable, and in the case of boys the home group satisfies them but for a short time, as the natural gregarious instinct which comes to a boy at about the age of twelve draws him from the family circle into a larger social world. It is this instinct which leads him to form clubs and gangs. Since boys must have club life, we should organize for them clubs which will be beneficial rather than allow them to form for themselves those which will be degrading.

Why should not libraries recognize their opportunity and form library clubs? In Pittsburgh this has been done as a natural outgrowth of the home library work. We now have twelve clubs. These differ in membership and organization. In some cases a room for club meetings has been obtained

at a small monthly rental; other clubs meet in school-rooms; while the boys of one have built a house for themselves. One city school board, realizing the educational factor of the club in the neighborhood, has equipped for our use a room in the school building and provided janitor service, heat, and light. As an experiment we have lately rented three rooms on the ground floor of a tenement house and opened a large club library. Here, with the consent of his parents, any child in the neighborhood may draw books, and enjoy the privileges of the reading room. Small clubs of ten or twelve members each, among both boys and girls, are being formed under the leadership of volunteer workers. Club members pay weekly dues of from one to four cents, a part of which has been voted to the general treasury of the library reading room, to help defray running expenses, the remainder to be used as needed by the individual clubs. In thus contributing to the general funds, an interest in the whole organization is fostered. The work as outlined for the coming year includes clubs for reading, story telling and games, basketry, wrought-iron work, mechanical drawing, carpentry, cooking, and sewing. Much of the work of discharging and arranging the books upon the shelves has been done by the children themselves. Money having been given us for the support of these rooms, and the work of the club leaders being voluntary, the central library is at little expense, except that of providing books and supervision.

As a general rule, boys' clubs should be conducted according to parliamentary laws, no matter what their special line of interest is. Parliamentary rule and military discipline call forth and deepen in the boy a keener sense of his responsibility, and therefore of his own manhood. In the home library groups, however, we should on the whole avoid organization which tends to destroy that social home spirit so vital to this part of the work.

We do not aim to establish permanent clubs. When they have outgrown their usefulness in one district, they are reorganized in a new neighborhood. The club is but to serve as a transition from the more limited home life to the wider life of the world, and to prepare the boy or girl to enter his or her larger social and civic relationships.

THE EVALUATION OF CHILDREN'S BOOKS FROM THE POINT OF VIEW OF THE HISTORY OF LITERATURE FOR CHILDREN.

By CHARLES WELSH.

"THE child himself must determine what his books shall be," "Children invariably prefer the classic form of the story to the text which has been specially written for them," "There is no need to adapt the classics to the children, because the children are adapted to the classics," are three statements which I think will be amply substantiated by a brief glance at the history of books for children, and it will be instructive and helpful in connection with much that has been put forward about children's reading and children's libraries if we consider for a moment the children's books that have lived, and examine the elements that give them their genuine and abiding interest, and have placed them in the ranks of the books which never wear out. To study, however briefly, some of the oldest and best tried books, and to try to define the qualities which have given them their permanent hold on the child mind, may be useful as a means of comparison, and perhaps as furnishing some standards of value.

The making of books for children — except lesson books and books of manners and courtesies — is a comparatively modern idea, not much more than one hundred and fifty years old, and yet the children have been selecting for themselves for centuries from a literature which is as old as that of the race itself. Long before the folklore of the world was ever written, the child had made its choice from among the fairy tales and folk stories with which older people amused each other, and as Thackeray says: "Many of these stories have been related in their present shape thousands of years ago to little copper-colored Sanskrit children. The very same tale has been heard by the Northern Vikings as they lay on their shields on deck, and by the Arabs crouching under the stars on the Syrian plains, when the flocks were gathered in, and the mares were picketed by their tents."*

To go back only as far as the period of the romances, there is no doubt that many a well-born child of the Middle Ages has listened to

and enjoyed the Chansons de Geste, the legends of Arthur and the Knights of the Round Table, Charlemagne, the Twelve Peers and Amadis of Gaul, while knights and ladies, squires and dames were pleasantly beguiling the hours by reading them aloud; and among the popular stories which from this time on were the delight of the common people generally there were many that proved to be especially suited to the tastes and mental needs of the children, and upon which they were not slow to fasten and stamp their approval.

The earliest reduction of these stories to writing in a form which brought them within the reach of the common people in England was that of the chap-book. These chap-books flourished to their greatest extent during the sixteenth, seventeenth, and eighteenth centuries. They were printed in the rudest manner on paper of the coarsest character; and decorated with cuts which as often as not had no reference to the text whatever, or a very remote one indeed. They were mostly sold for a penny each, but there were farthing and half penny ones, too, which now, as Sir Walter Scott said, "would be cheaply purchased at their weight in gold." They were the only literature for the people for certainly two hundred and fifty years, and were published primarily for the amusement and education of the grown-ups among the common folk.

Chap-books, generally, received their death-blow in the middle of the eighteenth century, but they lingered until well on into the first half of the nineteenth. Among the tens of thousands of them which have well-nigh disappeared from the face of the earth, there are some few which are familiar in our ears as household words, because the children have fastened on them, made them their own, and have thus given them an inheritance of everlasting life.

Bevis of Southampton, Adam Bell, Fryer Bacon, William of Cloudeley, Cam Wood the Cook, Clim of the Clough, Bellianis and Flores of Greece, and hosts of others, are to-day

* *Fraser's Magazine* for 1846.

known only to scholars and students of folklore, but *Beauty and the Beast*, *Bluebeard*, *Cinderella*, *Jack and the Beanstalk*, *Jack the Giant Killer*, *Little Red Riding Hood*, *Reynard the Fox*, *Sleeping Beauty*, *Cock Robin*, *the House that Jack Built*, *Tom Thumb*, and *Dick Whittington* are read with as much eagerness by the little ones to-day as they listened to them hundreds of years ago.

As with the popular stories in the chap-books, so with the rhymes and jingles of *Mother Goose*, which some one has called "the rich deposit of the centuries." They have come down to us from the childhood of the race and have become the literature of the childhood of the individual. The unerring instinct of the mother has seized upon those ditties and jingles which were best suited to the awakening senses of the child, and without knowing that she was obeying a great psycho-pedagogical law, she has for centuries been stimulating the sense of rhythm and exciting the wonder, fancy, and imagination of her babe with the material which awakens the best response and which has the greatest educative value at this early stage.

The first collection of the rhymes and jingles of *Mother Goose* was published by John Newbery about 1780, but they were found scattered in chap-books and had been current orally for centuries.

At this time Oliver Goldsmith was in the constant employ of the publisher Newbery, editing his little books, concocting his advertisements, writing his prefaces, devising his title-pages, etc.; there is as little doubt that he was the compiler of this collection as that he was the author of "*Goody Two Shoes*," and there is something extremely significant in this connection in the fact that the gentle Goldsmith, who "touched nothing that he did not adorn," should, by the unerring sympathy of his child-like and simple mind, have been the first to select from the lore of the people those songs of the nursery which lie nearest to the heart of the mother, and most readily appeal to the babe, and that he should have written the first book directly intended for children which has become a classic.

During the two hundred years which closed with the eighteenth century there came four

books which, though not intended for children, were eagerly appropriated by them. "The pilgrim's progress," which, as some one has finely said, was written in 1688 for grown-up saints, happily fell into the hands of little sinners, who found in its direct, simple, and dramatic story elements which appealed to them, without caring for the theological doctrines it was intended to inculcate or the controversies with which it was concerned. Then, when the Puritan influence was growing fainter, and before the rekindling of interest in child life in the eighteenth century, came "*Robinson Crusoe*," which, in 1714, stumbled upon immortality by reason of its adoption by the children.

In like manner the children have appropriated "*Gulliver's travels*," which appeared in 1726, knowing nothing, and caring less, about the stinging and biting satire with which it was permeated. And later on, in 1785, they made "*Munchausen's travels*" their own, which were intended to bring the then prevailing exaggeration of traveller's tales into ridicule.

The "Arabian nights," that great storehouse of oriental romance enshrining the folklore of the people, found its way piece-meal into the literature of the nursery, for which, however, it was never intended.

Æsop's fables, too, of which Dr. Thomas Fuller, the famous author of the "*Worthies of England*," writing in the seventeenth century, said: "Children cannot read an easier, nor men a wiser book," have never ceased to have their charm for children, although their intent was simply moral and political and their aim was directed to their elders, but the elements which interest, of which we shall speak later, are never over-shadowed by the teaching they convey.

Most of this took place before John Newbery began to publish books for children. If we survey the books of the period from the time he began to publish, in 1744, until the end of the eighteenth century—the "age of prose and reason" as it has been called—we shall find ourselves fully justified in characterizing it as the period of the didactic story book. In the story books we can trace the effect of the earlier books of education, and the endeavor to combine instruction with amusement was their

prevailing characteristic. The Newberys published over three hundred books, written primarily for children by contemporary authors. The two which have lived are "The melodies of Mother Goose," first collected by Oliver Goldsmith, and "Goody Two Shoes," written by him in conjunction with Newbery himself. This was probably the dreariest period in the whole history of children's literature.

Then we come to the Jane and Ann Taylor, Maria Edgeworth, and Mrs. Barbauld period, in which we get a little further away from the directly instructive, and find in them the effort to infuse principles of morality rather than to furnish detailed rules for guidance. This period is only a little less dreary than that which preceded it. But a few of the stories of that period survive to-day. Probably the best known of them are: "Eyes and no eyes," "The discontented pendulum," and some of the verses of Jane and Ann Taylor.

After that we come to the Sunday school book period, and I only refer to it here because the history of Sunday school books so strikingly illustrates the view that it is the child itself who, in all time, has been the sole arbiter of what shall be called a classic among his books. He alone in the final outcome accepts or rejects what is provided for him and he does it upon principles which are as unchangeable and eternal as the child himself. The history of Sunday school books has been a curious one, reflecting in a striking manner the tendencies of the age in which they flourished. At first they contained very distinct sectarian teaching, and each denomination, or group of denominations, had its own set of authors who introduced such dogma into their books as was in accordance with its views and would insure their acceptance. Later on distinct sectarian teaching was gradually dropped and those books had the best sale which were colorless in that respect, while inculcating only the broad religious principles on which all sects alike were agreed. Very keen indeed was the scrutiny to which the publishers submitted the books they put forth for this market, lest any bit of dogmatic teaching should drop in unawares.

Then at a later period those books were most in favor which illustrated by example

rather than by direct teaching rules of conduct and of morals to be approved and followed. But Sunday school books, professedly put forward as such, are no longer in such demand as formerly. The old-fashioned Sunday school book is banished, never to return unless to be examined as a curiosity.

As soon as the rich collection of stories of Hans Andersen and the Brothers Grimm were made available to English speaking children they recognized in them the witchery of a magician which will never fail to charm; and the operation of the same instinct which then guided them has placed Ruskin's "King of the Golden River," Thackeray's "Rose and the ring," Kingsley's "Water babies," and "Alice in Wonderland" in the ranks of classics for children — while the result of bringing within their reach in recent years the wonder world of classic myth and story, in which no one did greater work than Charles Lamb in his "Cruise of Ulysses," and Hawthorne in his "Wonder book," furnishes abundant proof of the statement that "the children are adapted to the classics."

Sir Walter Scott and Charles Dickens, Mayne Reid and Fenimore Cooper, did not write for youth, but with never failing instinct the young people of two English-speaking continents have found suitable mental food in most of their stories.

If we now examine for a moment the elements in the books which have survived — and of course I have not attempted to enumerate all of them — it may perhaps help us to explain some of the causes of their never wearing out. You are aware of the experiments which have been made during recent years in order to ascertain the elements in stories which interest children, and they are found to be in the order of their preference as follows: *Action, names, speech, description, place, time, possession, feeling, dress, æsthetic details, sentiment, and moral qualities*. This is, however, but restating in our modern quasi-scientific way what many writers out of their sympathy with and insight into the child mind have said long ago. Lady Eastlake wrote over sixty years since, "The real secret of a child's book consists not merely in its being less dry and less difficult, but more rich in interest — more true to nature

— more exquisite in art — more abundant in every quality that replies to childhood's keener and fresher perceptions. Such being the case, the best of juvenile reading will be found in libraries belonging to their elders, while the best juvenile writing will not fail to delight those who are no longer children. 'Robinson Crusoe,' the standing favorite of above a century, was not originally written for children; and Sir Walter Scott's 'Tales of a grandfather' addressed solely to them, are the pleasure and profit of every age, from childhood upwards. Our little friends tear Pope's 'Odyssey' from mamma's hands, while she takes up their 'Agathos' with an admiration which no child's can exceed."

All this brings us back to the point from

which I started, and confirms in a remarkable degree the statements with which I began. "The real touchstone," as Lady Eastlake said, "is the child himself." He has sturdily rejected the "juveniles" by the ton and by the hundred thousands, and the reason for this is obvious in the light of the foregoing. We are at last beginning to recognize this great principle, and the study of the history of children's literature should do immense good by bringing out the truth of it more strongly. It shows that it is the birthright of the child to enter into the domain of the world's best literature, and to choose therefrom what is best suited to its needs, and it shows too that the children of all ages, when they have had the opportunity to do so, have exercised that right.

REPORT ON LIST OF CHILDREN'S BOOKS WITH CHILDREN'S ANNOTATIONS.

BY CAROLINE M. HEWINS, *Librarian, Hartford (Ct.) Public Library.*

IT is four or five years since Mr. R. R. Bowker suggested that there could be no more interesting and useful "evaluations" for the American Library Association to publish than comments on children's books made by children themselves. Miss Moore and I at the Chautauqua Conference in 1898 undertook the preparation of such a list, and she asked in the *Library Journal* and *Public Libraries* for comments arranged on cards of uniform size, stating the age, sex, and nationality of the child making them. The public immediately inferred that our list was in print, and the requests which we received for it would fill a much larger pigeon-hole than the answers from librarians. At the Montreal conference we reported a few comments. Since that time we have received no contributions, and no report was presented at the last conference.

Our present report is largely based on a consideration of about twelve hundred papers, written by boys and girls in the sixth, seventh, eighth, and ninth grades of grammar schools. A part of them are in the form of familiar letters to a librarian, and the rest in answer to questions prepared in a public library and presented to the same grades.

The man who went about lecturing on

temperance in the middle of the nineteenth century used to take another man with him to appear as the "awful example." In the following report the general statements were kindly prepared by Miss Moore to save me time, and the "awful examples" come from the other end of the line.

The letters and lists may be summed up like the themes in Elsie Venner. They have the same "stringing together of the good old traditional copy-book phrases," the same "occasional gushes of sentiment" and "profound estimates of the world." Out of twenty or thirty which poor overworked Helen Darley read, "there were two or three that had something of individual flavor about them." That proportion is much larger than we have found.

"There is a marked difference in the degree of spontaneity manifest in the familiar letter written at the personal request of the librarian and the paper written as an exercise required by the teacher. Both reveal a pathetic scarcity of vocabulary in relation to the subject, due in large measure to the fact that an exercise of this kind is an unrelated and infrequent experience to the majority of children. It is only by frequent repetition that we gain power in self expression in any line. It is hardly to

be expected, therefore, that children should be able to talk or to write familiarly about books and reading until they have made the connection and found the habit of doing so.

"From the twelve hundred papers we have selected, less than fifty are worth considering for our purpose. The great mass of material rejected shows the influence of the schoolroom in the selection of the books mentioned (chiefly school-duplicates) in the evident desire to please the teacher in expressing a preference and in a stereotyped form of expression, a form which varies slightly in different schools and in different grades of the same school."

The questions were as follows:

1. Name as many books as you can that you have read this school year.

2. Mark the names of the books that you like best with X and tell how many times you have read each one.

(No reliance could be placed on the X mark to denote books liked best, it was so often obviously used for books the children thought that they ought to like. They guessed at the number of times they had read them and at the number of hours they spent every week in reading.)

3. Why do you like these books and how do you think any of them have helped you?

Very few boys and girls can express the way in which a book has helped them. Once in a while a child says something which shows that the book has become a part of his life, as in this:

"I think that they all helped me, for I saw in nearly every one a different side of life: life of the old times, life of to-day, life of the poor, life of the rich, life of royalty, life of paupers, life on the border, life in the cities, and every kind of life.

"Some of these books have very good characters in them and when I get a hold on some book which does have a good character I read the author's life if I can. I do this because the author who writes about good characters must be a character himself.

"In many books I make friends with most of the characters that take principal parts, and try to imagine myself with them.

"In some books are many things which are historical or witty, or something of the like.

When I run across one of these I make a note of it."

The following is by a Jewish boy who is interested in the Jewish character, whether seen from the standpoint of another faith or his own:

"I like Shakespeare's book because it is very exciting and he gives a fine account how the Jews were treated in olden times. He gives us a very fine account of Portia and Shylock. I feel sorry because he lost all his money. I do not blame him for wanting a pound of flesh from Antonio. Everybody would like to take revenge on a man who would borrow money from you and would not pay it back. He clung to his religion.

"Scott represents Isaac of York, the Jew in 'Ivanhoe,' the same as Shakespeare represents Shylock in the 'Merchant of Venice.'"

A few children have the idea that books help them by enlarging their world or their vocabulary, or developing their imagination, and others that outside reading is an aid to lessons or examinations, but most of the answers recognize nothing that books do for a reader.

The contrast between rich and poor children appeals to boy-and-girl readers, and wealth and material success play a large part in their estimates of books. One boy with a fondness for drawing likes to read about poor boys who became rich artists, and a girl expresses the sentiment of many others when she writes:

"I like all of Meade's books because she always has a poor girl who at the end rises far above the rich one that had at one time looked down upon her, or if the rich girl helps a poor girl she always does some noble thing to repay her before the end."

These are fair specimens of many of the lists written by girls of thirteen in the ninth grade:

"I like Dotty Dimple because she was kind, and it helped me to be kind. I like Ragged Tom because he was brave and good and it helped me to be brave and kind. Laddie I like because he would help others. It helped me to help others. Black Beauty I liked because it taught me to treat animals kind."

"I liked 'The partners' best because it was neither too old for me nor too young. I liked 'Barberry Bush and other stories' because it helped me to pass away my time. I liked

'Ivanhoe,' 'Lady of the Lake,' and 'Július Cæsar,' because being read in class they were easy to understand. I do not know why I liked *The Katy* and *Bessie* books and 'Little men' and 'Little women.'

The fourth question is:

4. What friends do you make in them (the books), and why do you think you should like to know some of them?

The answers to this question show lack of thought, lack of imagination, and lack of proportion. Very often the only book-friends whom a child remembers are in the last book that he has read. Many boys and girls honestly say things like these:

"I didn't make any friends in them because I never seen their faces only on pictures in the books."

"I like all the books in the same way as I like any books. They give me pleasure and take up time when you are sick or haven't anything to do."

"I have never thought of liking any of the characters for friends."

"I thought *Portia* in 'Merchant of Venice' and *Mary* in 'Mary Queen of Scots,' with *Josephine* in 'Little women' would make good friends, but never thought of them as friends for me or anybody of this time."

The lack of sense of proportion in estimating books and choosing book friends is seen in this example from the sixth grade:

"The friends I have made are Jack and Jill, and Dan, Allie Fairweather, Philip, Oliver, Mr. Brownlow, Denise, Rose, Agnes, Harry, Widow Greshome, Worth Bagley, Dewey, Sampson, Massasoit, Anthony Wayne, General Schuyler, George Washington, Jesus, Robinson, and Aladdin."

A lack of interest in what is read is shown in this:

"In all books some people appear agreeable and some appear disagreeable. It is a pleasure sometimes when one is tired to take a good book and read a chapter or two. In all books you have a friendly feeling toward some character."

It is a pleasure after reading through a roomful of such letters to find one like this:

"I am not very fond of books, although I think there are many things or facts which can

be learned out of books. I have often started a book and have gotten along through the middle of it when it became very dry and uninteresting and would drop it and never pick it up again.

"The trail of the Sandhill stag' is the only book that I have ever finished. It was written by E. S. Thomson. There were many beautiful pictures in the book, but I do not know the artists who drew them. This book was quite short and interesting and I liked it very much, as I am fond of outdoor sports, although I only read it once. The book spoke of a boy named Yan who had chased up and down the hills about his home for years after the track of a deer. At last he came face to face with the deer and raised his rifle to shoot it, but the deer had such a sad expression on its face which seemed to have stunned the boy and he turned back and went home without injuring the stag. I think that it has helped me to think twice before I act."

In answer to the question, "Do you copy in a book sentences or lines of poetry that you like from books that you are reading, and learn them by heart afterwards?" the same boy writes:

"I copy into a blank-book quotations from books and learn them afterwards. I have copied and learned quotations from *Cæsar*, 'Merchant of Venice,' 'Autocrat of the breakfast-table,' and 'House of seven gables.' I have also copied and learned Tennyson's 'Lotus-eaters,' Gray's 'Elegy,' Lincoln's speech at Gettysburg, and a part of Webster's speech in reply to Hayne."

Do such exercises tend to make children self-conscious, and can we depend upon the spontaneity of written replies? Everything depends on the person who conducts the exercise and on the question asked.

There are very few teachers whose own knowledge of books can be depended upon to draw out children into talking about them. I had tried in one schoolroom to make children understand the pleasure of finding out from one book something about a character who is mentioned in another, and when the letters came, every child in that room had given as a reason for knowing what book to read, "a book that there was something about in the

last book I read." Evidently the teacher had impressed on the children that that was what they ought to write. Teachers are not, as a rule, well-read.

This year I have not asked for letters, and did not let the children know that I was going to give my yearly talk. They took pencil and paper to the hall, and I asked the four upper grades to tell me something about a book, not a school duplicate, that they had read lately and somebody whom they liked in it, but not to say that anybody was "kind." Then I gave them the question from the March *St. Nicholas*, "If you were going to have a birthday party, what characters from books should you like best to invite?" Here are some of the lists, which show the same lack of proportion that we have found before and the influence of books lately read:

Benjamin Franklin, George Washington, Falconer, Crane in "David Harum," John Eliot, Shakespeare, Rafial, Evangeline, Tom Thayer, Sir Walter Scott.

Ellen Douglas, George Washington, Lady Rowena, Rebecca the Jewess, Malcolm Graeme, Janice Meredith, Julius Caesar, Abraham Lincoln, The Douglas, Dorothy Arden.

Cæsar, King Alfred, Sitting Bull, Red Cloud, Washington, Dickens, Alexander, Daniel Boone, Plato, Socrates.

Washington, Shakespeare, King Alfred the Great, Jane Eyre, Stephen Brice, Portia, King Arthur, Joan of Arc, Ellen Terry, Ellen of Ellen's Isle.

Sir William Wallace, King Robert the Bruce, Mary Queen of Scots, Ellen Douglas, Beethoven, Jo March, Nigel Bruce, Lady Isoline, Rebecca, Pegasus.

Julius Cæsar, Antony, Marcus Brutus, Oliver Bright, Janice Meredith, Sitting Bull, Roderick Dhu, Grizzly, James Fitz James, Michel Angelo.

Cæsar, Garibaldi, Washington, Livingston, Roosevelt, Narian, Cronje, Hanna, Green, Jesse James, Frank James, Brutus, Cassius.

"The most valuable kind of comment undoubtedly is to be gathered from the off-hand statements of the boys and girls as they exchange their books or meet for informal book-talks at the library. There are great difficulties in the way of gathering a body of available material of this kind. While it is true that every children's librarian is constantly receiving communications from the children with re-

gard to the books they are reading, it would be exceedingly difficult and quite undesirable for her to transcribe their comments with the necessary data. If a child should see her writing down what he had said, or suspect that she meant to do so, she would lose his confidence forever. According to his nature he would either never volunteer another expression of pleasure or distaste, or he would make a sensational statement if possible in order to gain prominence in her eyes. Even if it were possible for the children's librarian to make these records of spontaneous comment it is probable that a very small proportion of them would justify publication. (That comment which fails to impress itself with sufficient clearness for her to write it from memory is not likely to be worth much, since it has not entered so actively into her day's experience as to have become a part of her resources.)

"Will such a list as this justify by its value the expenditure of time and labor involved in its compilation?

"Are we justified in going on with it, and what may we expect to get from it?"

A list of children's comments must be made slowly. At times I have thought that it would be impossible to get honest opinions enough for an annotated list, but in looking over my collection I find that I have more than I supposed.

Teachers often ask for lists in a perfunctory way, and care more about neat writing and correct spelling than about what impression a book has made on a child. I think that in another four years, with the help of some of our unsuccessful experiments, and with the aid of visitors in home libraries and children's librarians, we may get results that are worth having.

If every children's librarian would send us within the next six months from five to ten of the best and most natural expressions of opinion received from children, we could take the best of them and gradually, by eliminating the less striking, get a number large enough to be worth printing. It is to be desired that we have the opinions of more than one child to a book, the point of view of a boy and a girl if possible.

REPORT OF THE A. L. A. PUBLISHING BOARD.

BY W. I. FLETCHER, *Chairman*.

CHANGES in the personnel of the Publishing Board during the year covered by this report were as follows: the term of Melvil Dewey expired in 1901, and he was re-elected by the A. L. A. Executive Board for three years. Mr. George Iles resigned from the Board owing to the pressure of other engagements, and Mr. Charles C. Soule was chosen in his place. Mr. Soule was also made treasurer in place of Mr. E. H. Anderson who was appointed last year, but who resigned on account of the difficulty of attending to the business while located so far from the office of the Board. Miss Nina E. Browne, who faithfully served the Board for several years as assistant secretary, was this year appointed secretary, her office remaining at 10½ Beacon Street in the building of the Boston Athenæum.

The work of the Board has gone forward steadily although less rapidly than we could wish. The following brief review of the progress of its various publications will serve to elucidate the financial account appended to this statement, and to show how extensive and important its work has become.

1. *Printed Cards for Books*. — The transfer, under promising conditions, of this undertaking to the Library of Congress relieves the Board of further effort in that direction and marks the happy ending of one chapter of its work.

2. *A. L. A. Index*. — The new edition of this book, in press at our last meeting, was issued in October. It is almost exactly double the size of the former edition and is correspondingly more useful, a necessary tool in every library.

3. *Guide to the Literature of American History*. — Owing to long delays connected with the completion of the editorial work, and particularly of the very elaborate and useful index, this book is but just off the press.

As was stated last year, our former associate, Mr. George Iles, has assumed the expense of

the preparation of this most important work, to the extent of ten thousand dollars, a most liberal endowment of historical research. The book has cost more than this, but it is expected that the sales will soon cover this additional cost.

4. *Guide to the Study and Use of Reference Books*, by Miss Alice B. Kroeger. — This book is all in type, and it was hoped that it might be actually published before this meeting. This will be found a most valuable, as it is the only, library help in connection with reference work.
